22, Ludgate-street, March 20, 1843.

On the 31st of March will be published the First Number, price 6d., of

THE STORY-TELLER; or, TABLE-BOOK of POPULAR LITERATURE. A Collection of Tales, Traditions, and Legends of all Nations; forming a comprehensive LIBRARY of MINOR FICTION.
Edited by ROBERT BELL,
Author of 'Lives of the Poets,' 'Mothers and Daughters,' &c.
With Incidental Notes, Critical and Illustrative.
The object of this publication is to collect and preserve the best specimens of the fugitive literature of Europe—those exquisite gems which so rarely find their way into the large collections of National Fiction, and so often perish in the evanescent periodicals to which they are consigned. It is scarcely necessary to observe, that such productions have a peculiar value as illustrations of the customs, manners, social characteristics, and poetical spirit of the age; that they frequently discover more profound and condensed literary vitality, more dramatic power, and more delicate beauty, than many of the elaborate works which supersede them in notoriety by the mere force of voluminous expansion; and that the sources from whence they will be derived, including the range of all the living languages, are sufficiently extensive to ensure continuous excellence in the choice of materials.
Every nook of literature, ancient and modern, will be explored for the means of conferring a permanent grace on the pages of this Anthology—the haunted places of Moorish romance—the allegories of oriental fable, full of passionate beauty and moral truth—the traditions of chivalry—the lays of the Minnesingers and Troubadours—the picturesque reliques of our old English literature—the fresh springs of poetry that have of late years gushed forth in the North of Europe—the fictions of Italy and Spain—the ballads and weird tales of Germany, teeming with intellectual superstitions—and the fanciful metaphysics of the Romantic School in France, now scattered through a multitude of ephemeral journals. The field is so vast that its landmarks can only be vaguely indicated.
The plan of the 'Story-Teller' will admit—Sketches of Society and Scenery—Real Narratives of remarkable Actions and Events—and occasional Episodes from large and costly works. Original Tales will also form a distinct feature.
The selected papers will be accompanied by notes, or introductions. Sometimes taking the shape of criticism, and sometimes that of biographical or historical annotation; but always with a view to heighten and refine, rather than to interrupt, the pleasure of the reader.
The 'Story-Teller' will be published every Saturday, and will consist of 36 pages, imperial extra, printed in double columns with care and elegance;—price 6d. Monthly parts will be issued in a wrapper with the Magazine, and an index will be supplied half-yearly for binding into Volumes.
Each number will be equal in solid contents to an ordinary Octavo Volume.
Advertisements will be received till Thursday of every week.
London: Cunningham & Mortimer, Publishers, Adelaide-street, Trafalgar-square.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

THE DISSENTERS' and GENERAL LIFE and FIRE ASSURANCE COMPANY. Empowered by Special Act of Parliament, 3rd Vic. cap. 20., 62, King William-street, London Bridge, London.—Capital, ONE MILLION.

Trustees and Directors.

George Bousfield, Esq.	Thomas Piper, Esq.
Thomas Challis, Esq.	Sir John Pirie, Bart. and Ald.
Sir John Easthope, Bt. M.P.	Thomas B. Simpson, Esq.
Peter Ellis, Esq.	Edward Smith, Esq.
Joseph Fletcher, Esq.	Hon. C. P. Villiers, M.P.
Richard Hollier, Esq.	John Wilks, Esq.
Charles Hindley, Esq. M.P.	Edward Wilson, Esq.

Thomas Wilson, Esq.

On the return of the Lady Day Quarter, the Directors beg to remind their Friends and the Public, that in the FIRE DEPARTMENT they receive risks of all descriptions, including Chapels, School-Rooms, Mills, Goods and Shipping in Dock, Farming Stock, &c., at the same reduced rates as other respectable Companies; and in the LIFE DEPARTMENT they continue to transact all business relating to Life Assurances, Annuities, and Family Endowments, upon the most liberal terms consistent with sound principles and public security.

No charge made for Fire Policies transferred from other offices.

The usual liberal allowance to Solicitors, Surveyors, and others. By order of the Board,

THOMAS PRICE, Secretary.

LONG ANNUITIES, & ANNUITIES TERMINABLE IN 1859.

THE FAMILY ENDOWMENT and LIFE ASSURANCE and ANNUITY SOCIETY, continue the above Annuities after their expiration, on payment of an annual Premium until 1859 inclusive.—Particulars may be had at the office, No. 12, Chatham-place, Blackfriars, London.

Capital 500,000*l.*

Trustees—William Butterworth Bayley, Esq.
Henry Porcher, Esq. | Martin Tucker Smith, Esq.
John Cazenove, Secretary.

COMMERCIAL and GENERAL LIFE ASSURANCE, ANNUITY, FAMILY ENDOWMENT, and LOAN ASSOCIATION, 113, Cheapside, London.

Every description of Life Assurance entertained, premiums payable quarterly, half-yearly, or yearly; loans advanced from 25*l.* to 500*l.* for three or more years, on approved personal or other security, on the borrower assuring his or her life for a moderate amount.

Endowments for children to receive a stated sum of money on arriving at 14 or 21; in case of death the whole of the money returned to the parents. Annuities, immediate or deferred. Prospectuses and every information to be had of

FRED. LAWRANCE, Resident Sec. 113, Cheapside.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 34, Bridge-street, Blackfriars, London: established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

ENGLISH AND SCOTTISH LAW LIFE ASSURANCE and LOAN ASSOCIATION. Offices, 147, Strand, London; and 119, Princes-street, Edinburgh.—Subscribed Capital, 1,000,000*l.*

This Association embraces every description of risk contingent upon Life.

A liberal system of Loan.

An extensive legal connexion, and a direction and proprietary composed of all classes.

A union of the English and Scotch systems of Assurance.

For tables of Rates of Assurance, Annuities, and Endowments, or any other information, apply at the Offices, or to the Agents of the Association.

J. S. PIDGEON, Actuary.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.*

This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.

The *extra Premium* discontinued on restoration of the Assured to permanent health.

Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease.

Members of Consumptive Families assured at Equitable Rates.

Healthy Lives are assured at *Lower Rates* than at most other Offices.

F. G. P. NEISON, Actuary.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.

Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

BASS'S EAST INDIA PALE ALE.—This particular kind of Ale is prescribed by the most celebrated Physicians. Dr. Prout, who has examined it, in his work upon diseases of the stomach, &c., after condemning common ales, especially recommends this to weakly persons. In excellent condition, in casks or bottles, at their appointed Agents, Henry Barry & Co. 3, St. James's-street.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

LOOKING GLASS and PICTURE FRAME MANUFACTORY, 13 and 14, LONG-ACRE.—JAMES RYAN begs to call the attention of those who may favour him with their orders to his splendid Stock of Looking Glass, Picture and Print Frames, Girandoles, Console Tables, Cornices, Candelabras, Screens, Brackets, and every article connected in the above line, made to any pattern or design, at such prices as will defy competition. Fancy Wood Frames in every variety of pattern, at his Wholesale and Retail Manufactory, 13 and 14, Long-acre.

GILDING REVIVED.

ROSSELET'S INSTANTANEOUS GOLD, GILT, and SILVER REVIVER, effects the immediate Restoration of Gold, Or-moulu, and Silver, Gilt and Silvered Articles, without heat, mercury, friction, or acid; Chimney and Table Ornaments, Glass and Picture Frames, Consoles, Cornices, Jewelry, Military Accoutrements, Buttons, &c., whether the gilding is bright or frosted (*mat*), and however discoloured, are, by a single application, instantly revived.—Specimens and particulars at 207, 205, Regent-street, and 24, Haymarket. In Bottles, 5*s.* 6*d.* for wood, and 7*s.* 6*d.* for metals

H. PAPE, Pianoforte-maker to his Majesty the King of the French, 100, New Bond-street.—PATENT GRAND, SQUARE, CONSOLE, and TABLE PIANOFORTES.—H. PAPE, in opening the above establishment, trusts that his instruments will command in this country the same preference they have enjoyed on the Continent for the last 25 years. The sale of nearly 4,000 of them is the best proof of the superiority of his new system of construction, in which the hammer, contrary to the usual mode, strikes the string downwards. The excellence of these instruments for keeping well in tune, for obedience and elasticity of touch, and for their great solidity, is now well known, and a FAIR examination will prove that they are also far superior to all pianofortes of the ordinary construction in power and sweetness of tone. Amongst those at present in the ware-rooms may be seen a Grand Piano of eight octaves, as well as a very remarkable Square, covered with one single sheet of ivory. This was the most remarkable pianoforte present at the Grand National Exhibition at Paris; and for it H. Pape obtained the Gold Medal, and was created, by His Majesty, Chevalier of the Legion of Honour.

DR. GREEN'S SULPHUR, FUME, MEDICATED, and VAPOUR BATHS, 40, Great Marlborough-street.—For more than twenty years Dr. Green's attention has been directed to the remedial agency of baths of different kinds upon the human body; and for the same length of time he has superintended an Establishment for their due and proper administration.

Judiciously employed, Fume and Vapour Baths are beyond all question, invaluable as principal or auxiliary means in the treatment of many kinds of chronic disease, particularly Rheumatism and Rheumatic Gout. Affections of the Skin, and impaired functions of the great Abdominal Viscera.

These Baths are accessible at all hours of the day to the public at large, and to members of the medical profession, with their patients, in cases where it is desirable that the medical attendant should witness and direct the administration of the bath.

CARD-PLATE ENGRAVED TO ANY PATTERN 2*s.*, and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and Name, 5*s.* Note paper 4*s.*, 6*s.*, 8*s.*, and 10*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 1*s.* 6*d.* per quire: no charge for the die. Wafers from the die, 1*s.* per 100, or 8*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY—Terms: 3*l.* 3*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headache, Bilious and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without, and nearly all Medicine Venders.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.* 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

TO LADIES.

ROWLAND'S KALYDOR, under the *special patronage of Her Most Gracious Majesty* and the *Royal Family*.—A creamy, odoriferous preparation from *Oriental Herbs*, is now universally known as the *only* safe and efficient *protector* and *beautifier* of the Skin and Complexion. Its virtues are commonly displayed in thoroughly eradicating all *pimples, spots, redness, tan, freckles*, and other unsightly *cutaneous defects*, in healing chilblains, chaps, and in rendering the most rough and uneven skin pleasantly soft and smooth. To the *complexion*, it imparts a juvenile roseate hue, and to the *neck, hands*, and *arms*, a delicacy and fairness unrivalled. To Gentlemen, it allays the irritation of the skin after shaving. Price 4*s.* 6*d.* and 8*s.* 6*d.* per bottle, duty included.

CAUTION.—Ask for "ROWLAND'S KALYDOR," and see that these words are on the envelope, as much *pernicious* trash is now offered to the Public as "KALYDOR" by Perfumers of *apparent* respectability.

*** To protect the Public from fraud, the *Hon. Commissioners of Stamps* have authorized the Proprietors' signature to be engraven on the Government Stamp thus—A. ROWLAND & SON, 20, Hatton-garden; sold by them, and by Chemists and Perfumers.

MESSRS. HERING & REMINGTON, having been appointed sole Agents in Great Britain for the several Art-Unions of Germany, and also for the leading Continental Publishers of Works of Art, have the honour to submit their List of a few of the Publications recently issued in the various states of Europe. It contains the most popular and admirable productions of the respective Schools, and impressions have been selected with exceeding care. The personal inspection of the Artist and the Amateur is respectfully invited at the Depôt, No. 153, REGENT STREET, where any production of the foreign burin, either of recent or remote date, may be procured from its authentic source. In their late visit to the Continent, Messrs. H. & R. have entered into engagements with the principal Publishers, which will afford greater advantages and facilities than have hitherto been given for the transmission and the sale of Foreign Works of Art in England.

'The INTRODUCTION of the ARTS into GERMANY by CHRISTIANITY,' and 'ITALY and GERMANY;' engraved by ED. SCHAEFFER, from the celebrated Frescos in the Gallery at Frankfort; painted by VEIT.

The ORIGIN of MUSIC, painted by Professor VON KLOEBER, of Berlin.

The SCHOOL of RAPHAEL—size 30 by 24 inches.

"It is in process of engraving in mezzotinto by JAZET, from a painting by HORACE VERNET, and will undoubtedly be classed as a *chef-d'œuvre* of the art. Raphael is pictured surrounded by his pupils; the fair model with her child, from whom he is painting the virgin mother, is seated in the centre of his school. The leading incident of the picture, however, is that which depicts his great rival, Michael Angelo, departing in jealous wrath, and throwing a bitterly angry glance upon the young and triumphing competitor—a look that is returned by Raphael with gentle and tender goodness. The back ground is filled by eager and anxious watchers, among whom is the Pope. The subject is a full one—perhaps too full—yet the interest is not scattered; it concentrates upon the main object. In all respects this is a work of extraordinary merit. In design, grouping, and, more especially, in character, it will be regarded as one of the chief glories of modern art, and cannot fail to elevate the honoured name of the great French painter even higher than it has yet stood—removing, at once, all our preconceived notions that he can attain excellence only in one particular walk. The Engraving, although not yet finished, promises to be one of corresponding excellence; and, as we understand the print is to be dedicated to the Marquis of Northampton, we presume it is intended to issue it simultaneously in England and France. If our space permitted, we should notice the work at greater length, for it is entitled to very elaborate criticism."—*Art-Union Journal.*

POPE LEO X., after RAPHAEL, engraved in line by JESI.

In imp. folio, No. I. to XXVII. of the celebrated Pictures of

The ROYAL GALLERY at DRESDEN. Drawn on stone, from the Originals, by FRANZ HANFSTAENGEL; with Descriptions of the Pictures, Biographies of the Masters, &c. in French and German.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 805. LONDON, SATURDAY, APRIL 1, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition. [JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

UNIVERSITY COLLEGE, London.
ELEMENTARY COURSE of BOTANY.
Professor LINDLEY will commence a Course of LECTURES on BOTANY to a Junior Class, on MONDAY, April 3. Subject—The Distinctions between the Principal Natural Classes and Orders of Plants belonging to the Flora of Europe. The Course is adapted for persons commencing the study of Botany, and for Students preparing for the Matriculation Examination at the University of London. Fee, 2l.
The COURSE to the SENIOR CLASS will commence early in May.
GEORGE LONG, A.M., Dean of the Faculty of Arts.
THOMAS GRAHAM, Dean of the Faculty of Medicine.
CHAS. C. ATKINSON, Secretary to the Council.
March 24, 1843.

ROYAL COMMISSION OF FINE ARTS.
Whitehall, 24th March, 1843.
HER MAJESTY'S Commissioners hereby give Notice:—
1. That the cartoons or drawings intended for competition, according to the notices published in April and July, 1843, will be exhibited in Westminster Hall, whither they are to be sent between the hours of ten and five on any day, Sunday excepted, during the first week in June next, when agents will be in attendance to receive them: but no drawing will be received after Wednesday, the 7th of June.
2. Each candidate is required to put a motto or mark on the back of his drawing, and to send, together with his drawing, a sealed letter containing his name and address, and having on the outside of its cover a motto or mark similar to that on the back of the drawing. The letters belonging to the drawings to which no premium shall have been awarded will be returned unopened.
3. The title of the subject of each drawing, together with the quotation, if any, to illustrate it, must be affixed either to the back or front of the drawing.
4. Each drawing is to be sent upon, or accompanied by, a stretching-frame; but no ornamental frames in addition to the stretching-frame will be admissible.
5. The artists or their agents may attend to examine the works sent by them, and to re-stretch such drawings as shall have been detached from their stretching-frames and rolled for the convenience of carriage.
6. No drawing will be allowed to be retouched after having been received, except to repair an injury occasioned by accident, and then only by the artist himself.
7. Every possible care will be taken of the works sent, but in case of injury or loss the Commissioners will not be responsible.
8. All the drawings will be exhibited, and catalogues will be published.
9. The names of the judges appointed to award the premiums will be made known.
By command of the Commissioners,
C. L. EASTLAKE, Secretary.

PRIVATE PUPIL.—A CLERGYMAN, for many years Tutor to a Nobleman, and subsequently receiving six Pupils into his house, a moderate distance from London, would be glad to fill a VACANCY with a GENTLEMAN'S SON whose education or health may require more than common attention.—Letters addressed to the Rev. J. C. C., Post-office, Hampton Court, Middlesex, will be forwarded to him.

SCHOLASTIC.—A most eligible opportunity now offers for a Gentleman desirous of establishing himself in a profitable Classical, Commercial, and Mathematical Academy.—The Principal of a School for Young Gentlemen, many years established near a rail-road station, is desirous of retiring from the profession after the Midsummer Vacation, and would, therefore, be glad to find a SUCCESSOR highly qualified to conduct such an Establishment. The situation is admitted to be particularly healthy, and the premises are in every respect of a superior description, in good repair, and well arranged. As advantages very rarely combined are here presented, no one should apply who is not prepared to advance an adequate sum for premium, school furniture, and fixtures. Most satisfactory reasons will be given for the present Proprietor's wish to dispose of it.—Apply by letter (post paid) to A. B., care of Mr. Robertson, Solicitor, Southampton-buildings, Chancery-lane, London.

LIVERPOOL COLLEGIATE INSTITUTION.
Principal.
The Rev. W. J. CONYBEARE, M.A., Fellow of Trin. Coll. Cam.
Vice-Principals.
The Rev. J. BOOTH, L.L.D. M.R.I.A.
The Rev. J. H. BROWN, M.A., of Trin. Coll. Cam.
Terms per Annum, payable quarterly in advance.
The Quarter Days are 1st April, 1st July, 1st Oct., and 1st Jan.
Upper School .....20 guineas.
Or the Sons of Clergymen .....16 guineas.
The Son, Brother, or Nephew of a Donor of 100l., do. do.
A free nomination to this School has been given by the Right Honourable Lord Francis Egerton, to be competed for among the pupils.
Several University Exhibitions will shortly be founded in connexion with this School.
The course of instruction is similar to that pursued at King's College, London, and the other great public schools.
The exercises of the day are commenced and terminated with prayer; and the reading and exposition of the Holy Scriptures form an essential portion of the instruction.
Several of the Professors and Masters receive boarders into their houses.
Any further information will be supplied by
J. GREGORY JONES, Secretary.
Liverpool, March 28, 1843.

BOOKSELLERS' PROVIDENT RETREAT.—A PUBLIC MEETING of BOOKSELLERS and Others will be held at the ALBION TAVERN, Aldersgate-street, on TUESDAY, April 4, at Three o'clock precisely, for the purpose of forming a Society for the establishment of a BOOKSELLERS' PROVIDENT RETREAT. This retreat is intended for the reception of aged booksellers, booksellers' assistants, and their widows, being annuitants of the Booksellers' Provident Institution; and every person subscribing one guinea a year, or giving a donation of ten guineas at one time, will be entitled to vote at all elections, and will also be eligible to become a Director of the Society.
Subscriptions or donations for this important object will be received by Thomas Brown, Esq. Treasurer, 30, Paternoster-row; or by Mr. Ives, Honorary Secretary, 14, Paternoster-row.

T. D. BENNETT, Bookseller and Mineralogist, 4, Copthall Buildings, back of the Bank of England.

PLAIN HINTS FOR READING SOCIETIES.
Now ready, gratis, and post free,
HINTS FOR THE FORMATION OF READING SOCIETIES.—The plan advocated in the little pamphlet will effect two important objects, that of adding to the supply of the current literature the choice of all the most valuable works in the various languages, and that of extending the choice of New Books to the entire productions of the Press, it is especially adapted to provincial readers, as, by a small annual subscription, the perusal of all the New Works as they appear may be obtained.
Saunders & Otley, Publishers, Conduit-street.
*** THE NEW LIBRARY TERMS on which *single* families are supplied with all the new and standard works for perusal, are as follows,—
Five Guineas per annum,
Six Guineas, or ——
Eight Guineas ——
All extras are included in the above, and to each Subscriber is furnished monthly, and without charge, 'The Library Circular, or Guide to the choice of new Publications,' application as above.

LITERARY.
WANTED, SERMON-WRITING, or other LITERARY or EDITORIAL EMPLOYMENT, by a CLERGYMAN of ability and practice, who has much time at command.—N.B. Manuscripts prepared for publication.—Address, by post or railway, the Rev. H. B., the Park, near Nottingham.

DOUGLAS JERROLD'S MAGAZINE.

Were we simply to follow our own wish, this page would contain no syllable beyond the subjoined brevity; (namely, that)—

On the 1st of MAY will be published,
NUMBER I.
OF THE
ILLUMINATED MAGAZINE,
Price One Shilling.
EDITED
By DOUGLAS JERROLD.

YES; we would content ourselves with the above laconic sentence, in the bigoted belief that no minute and radiant painting of the work to come—no harmonious promise of its future excellence ever yet—so wayward is the human heart!—secured a reader past the experimental NUMBER ONE.

A PROSPECTUS may be likened to the miniatures of kings and queens exchanged preliminary to marriage. It may present a fascinating promise of grace and loveliness, and so bring the parties together; but once brought, their after goodliking must depend upon themselves. It is provoking, however, that the simile does not hold throughout; inasmuch as the reader is only wedded to a book (surely this evil calls for statutable remedy!) just so long as the said book shall content him. Thus, we shall endeavour to portray the features of our work, with the conviction, that however glowingly they may be painted in this miniature page, their welcome must entirely depend upon their own flesh and blood, and the healthful spirit that shall animate them.

And first, "to make our title good." It has been said—"Ha! the *Illuminated* Magazine! Of course, 'twill be a thing like a cardinal's missal, enriched and adorned with painted figures?" No, IT WILL NOT. Figures and objects of every kind there assuredly will be, ILLUSTRATIVE OF THE TEXT IN ITS EVERY VARIETY OF ESSAY—NARRATIVE—HISTORY—OF SOCIAL RIGHT AND WRONG—OF THE TRAGEDY OF REAL LIFE, AS OF ITS FOLLY, ITS WHIM, ITS MERE BURLESQUE. These "Illuminations"—for we use the word in its original, and not in its conventional sense—though colourless, will be so placed and scattered, that Literature may, it is hoped, reveal new graces by the pure light of Art.

We have already almost indicated the literary contents of the work. Pens, stained with honourable ink—quills that have already "made the grove harmonious"—are employed for us. Our prime object will be variety of matter; so that the readers of THE ILLUMINATED MAGAZINE, like the lovers of pine-apples, may choose us, some for one flavour, some for another, and some, and, we trust, the greater number, for all.

We shall endeavour to assert a strong and healthful constitution. Thus we shall give no encouragement to literature when she presents herself with the mincing grace and holiday phrase of a consumptive prude,—but a hearty welcome to her with truth and nature upon her side, though her talk be no loftier than a milk-maid's. We care not for the civet of very fine boudoir-writing, preferring—such is our homeliness—the odour of the mere hawthorn.

Whilst, however, we hope to enlist upon our side the graces of fiction—of that fiction born of truth, as the "bright consummate flower" owes its scent and radiance to the hidden root—so shall we endeavour to look warily at the real world that lies about us. We shall not shrink from any subject with a social wrong at its core; shall certainly not imitate the easy benevolence of these very virtuous and tender folk who think they pay the best homage to what they deem the right, by carefully blinding themselves to the wrong; who, putting cotton in their ears that they may not listen to the cry of the wretched, strike the psaltery and timbrel in praise of their own vehement content.

THE ILLUMINATED MAGAZINE will contain ample reviews of the literature of the day. Without—bashaw-like—dismissing some fifty books per page with Turkish fashion, a line about the necks of each—it will address itself to a consideration of the principal works of the past month, of those few that aspire to standard worth and duration.

THE ILLUMINATED MAGAZINE will be printed on a handsome 4to. page, such size being considered best adapted to an illustrated text;—and will consist of eight sheets, in double columns.

The Artists engaged upon the work—to register their names will it is thought, be a sufficient guarantee of its graphic character, are—
KENNY MEADOWS, LEECH, HINE, BROWNE, and SARGENT.

London: published at the Office of THE ILLUMINATED MAGAZINE, No. 2, Crane-court, Fleet-street—where all communications are requested to be addressed; sold also by Messrs. Longman and Co., Whittaker and Co., Simpkin and Co., and Sherwood and Co.; and by all Booksellers in town and country.

THE LONDON REVIEW: a Monthly Digest of Literature, Science, and Public Affairs. Price 1s. No. II. for APRIL, contains:—I. The Last of the Barons—II. Kohl's Russia—III. Voltaic Electricity—IV. Report of the Children's Employment Commission—V. Life and Letters of Francis Horner—VI. A Sporting Novel: The Spa Hunt—VII. Southey's Life and Works—Miscellaneous Notices, &c.
Published at the Office, 10, Bolt-court, Fleet-street; sold also by Messrs. Simpkin, Marshall & Co. Stationers'-court; and all Booksellers in Town and Country.

THE NEW NUMBER OF
THE METROPOLITAN
for APRIL,
Will contain the Continuation of Mr. RAFTER'S New ORIENTAL ROMANCE, 'SAVINDROOG.'

Oliver & Boyd, Edinburgh; Simpkin, Marshall & Co. London.

Geographical Works.

Published this day, price 6s. PART I. of
A NEW EDITION OF
BLACK'S GENERAL ATLAS OF THE WORLD.
To be completed in Eight Monthly Parts,
Comprehending Sixty-one Folio Maps, engraved on Steel in the first style of the art, by SIDNEY HALL, HUGHES, and others; with Geographical Descriptions, Statistical Tables, and an Index of all the Names occurring in the several Maps, amounting to upwards of 50,000, with their Latitude and Longitude, and the number of the Map in which they will be found.
To the present edition have been added a NEW MAP of INDIA on a large scale, with the scene of the recent warlike operations West of the Indus; MAPS of CHINA, NEW ZEALAND, VAN DIEMEN'S LAND, WESTERN AUSTRALIA, SWAN RIVER, and NEW SOUTH WALES. For the accommodation of the readers of Ancient and Scripture History, there have also been added, TWO MAPS OF THE WORLD AS KNOWN TO THE ANCIENTS, MAPS OF THE TRAVELS OF ST. PAUL and LOWER EGYPT; while important improvements have also been made on the MAP OF PALESTINE.
The work having been revised and corrected throughout, the Publishers are satisfied that in every respect it is accommodated to the present advanced state of geographical research, and *whether on the ground of accuracy, beauty of execution, or cheapness, they invite a comparison with any other work of the class.*

Published this day, price 3s. PART I. of
A NEW EDITION OF
A SYSTEM OF UNIVERSAL GEOGRAPHY.
Founded on the Works of MALTE-BRUN and BALBI.
To be completed in Ten Monthly Parts.
This Work having now received the general approbation of the Press, as one of the most comprehensive and best compiled System of Geography in the English language, the Publishers are induced to bring out the new and improved Edition in a form which renders it accessible to all classes.
The volume embraces a Historical Sketch of the Progress of Geographical Discovery, the Principles of Mathematical and Physical Geography, and a complete Description, from the most recent sources, of all the Countries in the World, with numerous Statistical Tables, and an alphabetical Index of 12,000 names.
"Executed with masterly ability."—*Atlas.*
"The most complete existing book upon geography in one volume. We strongly recommend it as a book of reference."—*Examiner.*
"One of the most comprehensive and best compiled books of the class ever published."—*Britannia.*
"The task of reducing, within just limits, the somewhat prolix eloquence of the learned Dane has been ably executed by the Editor of this volume, which, though we have styled it an abridgment, yet extends to more than 1000 closely printed pages. It has an index also which contains more names than are to be found in most Gazetteers."...."A work the careful elaboration of which is equal to its utility."—*Athenæum.*

In post 8vo. price 6s. cloth, with Woodcuts, Maps, and other Engravings,
PHYSICAL GEOGRAPHY.
By THOMAS STUART TRAILL, F.R.S.E.
Regius Professor of Medical Jurisprudence in the University of Edinburgh, &c.
"A most elaborate digest of facts judiciously arranged, and, as a great exposition, perhaps the most complete that has yet appeared."—*Leeds Mercury.*

In the press,
THE
HISTORY AND GEOGRAPHY OF PALESTINE,
For the Use of Schools.
By JOHN KITTO,
Editor of 'The Pictorial Bible,' 'The Pictorial History of Palestine,' &c.
Adapted to the purposes of Tuition by ALEX. REID, A.M. Rector of the Circus Place School, Edinburgh.
The volume will be illustrated with a Map of Palestine, and with numerous Engravings on Wood; and although prepared with the special view of being used as a School Book, it will form a handsome and acceptable volume as a present to the young.
ADAM & CHARLES BLACK, Edinburgh;
LONGMAN, BROWN, GREEN, & LONGMANS, London;
and sold by all Booksellers.

Just published,

Also, 15th edition,
Family Prayers, in a Series for a Month. 1 vol. 12mo. price 3s. cloth.
London: J. Hatchard & Son, 187, Piccadilly.

In 12mo. price 6s. the 2nd edition of
AN APOLOGY for the DOCTRINE of APOSTOLICAL SUCCESSION: with an Appendix, on the English Orders.
By the Hon. and Rev. A. P. PERCEVAL, B.C.L.
Chaplain in Ordinary to the Queen.
* * The Appendix includes a Chronological List of the Names of 439 English Bishops (from Archbishop Cranmer), with the Dates of their Consecration, and the Names of the Consecrators: together with a Table of the Episcopal Descent of the present Archbishop of Canterbury for four Successions.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

In small 8vo. price 8s. the 2nd edition of
THE GOSPEL NARRATIVE of the PASSION of OUR LORD HARMONIZED. With Reflections.
By the Rev. ISAAC WILLIAMS, B.D.
Fellow of Trinity College, Oxford.
Rivingtons, St. Paul's Churchyard, and Waterloo-place; and Parker, Oxford. Of whom may be had, by the same Author,
Thoughts on the Study of the Holy Gospels. Intended as an Introduction to a Harmony and Commentary. In small 8vo. 8s.

In 4 vols. 8vo. price 2l. 2s. the 2nd edition of
CHRISTIAN INSTITUTES:
A Series of Discourses and Tracts, selected, arranged systematically, and illustrated with Notes.
By CHRISTOPHER WORDSWORTH, D.D.
Rector of Buxted with Uckfield, Sussex, and formerly Master of Trinity College, Cambridge.
This work is designed to be subservient to the Religious Portion of a liberal Education for the Upper Classes and the Learned Professions. The Selections are chiefly from the following Writers: Dr. Isaac Barrow—Bishop Jeremy Taylor—Dr. South—Richard Hooker—Bishop Butler—Richard Baxter—Burke—Bishop Jewell—Lord Clarendon—and F. Mason.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.
Lately published, by the same Editor, (uniformly printed,)
Ecclesiastical Biography; or, Lives of Eminent Men connected with the History of Religion in England, from the commencement of the Reformation to the Revolution. Selected and illustrated with Notes. 3rd edition, enlarged. In 4 vols. 8vo. 2l. 2s.

CYCLOPÆDIA of BIBLICAL LITERATURE. By JOHN KITTO, Editor of 'The Pictorial Bible,' assisted by numerous able Scholars and Divines.
Notice to the Trade and Subscribers.
* * The Publishers, having made arrangements with Messrs. DAYTON & NEWMAN, of NEW YORK, to republish the present Work in America, have found it necessary to postpone the appearance of the First Part till after the departure of the American Steamer and Packet, the anticipation of the value of the book being so general in that country, that several houses have expressed a determination to reprint it as soon as they can get possession of the sheets, and thus deprive the Proprietors of any advantage to be derived from the sale of the book in the United States. The First Part, therefore, though now ready, will not be issued till Saturday, the 8th of April.
Adam & Charles Black, Edinburgh.

Under the Sanction and Patronage of the Masters of the Bench of the Hon. Societies of the Inner and Middle Temple.
MR. R. H. ESSEX has just published a Lithographic Print of the Interior of the Temple Church, London, from a Drawing he has made by order of the above Societies. To be had of the Artist, Mr. R. H. Essex, 12, Yorkbuildings, New-road; of the Publishers, Mr. W. Pickering, 177, Piccadilly; Mr. Dickinson, 114, New Bond-street; and the principal Printsellers in general. Price 10s. 6d. plain. Coloured impressions will be ready in about a month, price One Guinea.

DOUBLEY'S AND RIVINGTON'S ANNUAL REGISTER.
Lately published, in 8vo. price 16s.
THE ANNUAL REGISTER; or, a View of the History and Politics of the Year 1841.
Rivingtons; Longman & Co.; J. M. Richardson; Hamilton & Co.; Simpkin & Co.; J. Rodwell; Houlston & Co.; G. Lawford; J. Dowding; J. Bumpus; Cowie & Co.; Capes & Co.; Smith, Elder & Co.; H. Washbourne; C. Dolman; H. G. Bohn; W. H. Reid; Houlston & Hughes; Waller & Son; J. Green; J. Thomas; J. Booth; W. J. Cleaver; and G. Routledge.

MR. JAMES'S NEW ROMANCE.
Now ready, in 3 vols. post 8vo.
FOREST DAYS,
A ROMANCE of OLD TIMES.
By G. P. R. JAMES, Esq.
Author of 'Morley Ernstein,' 'The Robber,' &c.
...."Into this host of gallant things—the splendid pageantry of silt and tournament—this association of knight and ladye—this concentration of all that charms and fascinates us in our retrospection of olden times has Mr. James here carried us..... Scene after scene of vivid and vigorous interest succeeds each each other, while village life is portrayed with such a May-day freshness that we seem to linger over the sweet odour almost unwilling to be lured away by even the pomp of chivalry or the grandeur of baronial castle."—*Metropolitan.*
Also, lately published, Mr. James's last New Novel,
MORLEY ERNSTEIN;
Or, The Tenants of the Heart.
AND
THE LIFE AND TIMES OF
RICHARD CŒUR DE LION.
Saunders & Otley, Publishers, Conduit-street.

EARLY LESSONS ON

REASONING. The attention of Parents, Teachers, and others, who take an interest in the formation of the youthful mind, is invited to a Series of Papers, now in course of publication in the *Saturday Magazine*, entitled

EASY LESSONS on REASONING.

The Series commenced on the 18th of March. (*Saturday Magazine*, No. 687,) and will be completed in about eighteen consecutive numbers of that work. In the *Saturday Magazine* also appeared, during the Year 1833-34, the popular Papers entitled

EASY LESSONS on MONEY MATTERS; since collected into a little Volume, with Illustrations, (price 1*s.*), and, in the Year 1837-38, the Original Series of

EASY LESSONS on CHRISTIAN EVIDENCES, republished with the Author's corrections, 6*d.*

A SYSTEM of LOGIC, Ratiocinative and Inductive; being a Connected View of the Principles of Evidence, and the Methods of Scientific Investigation. In Six Books. By JOHN STUART MILL. 2 vols. 8vo. 30*s.*

AN INTRODUCTION TO THE STUDY OF

CHEMICAL PHILOSOPHY; being a Preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN FREDERICK DANIELL, F.R.S., Prof. of Chemistry in King's College, London. With numerous Illustrations, the Second Edition, revised and much enlarged, 21*s.*

FIVE SERMONS, preached before the University of Cambridge in January, 1843. By the Rev. RICHARD CHENEVIX TRENCH, M.A. 8vo. 2*s.* 6*d.*

By the same Author, 8vo. 12*s.*

NOTES on the PARABLES.

A MANUAL of CHRISTIAN ANTIQUITIES; or, an Account of the Constitution, Ministers, Worship, Discipline, and Customs of the Early Church; with an Introduction, containing a complete Chronological Analysis of the Works of the Antenicene Fathers. By the Rev. J. E. RIDDLE, M.A., Author of 'Luther and his Times,' 'First Sundays at Church.' SECOND EDITION, 8vo. 18*s.*

BIBLE CYCLOPÆDIA, a Comprehensive Digest of the Civil and Natural History, Geography, Statistics, and General Literary Information, connected with the Sacred Writings. Complete in 2 vols. 2*l.* 10*s.*, illustrated by several Hundred Woodcuts.

The FOURTH VOLUME, 4*s.* 6*d.*, with Portraits, of

LIVES of EMINENT CHRISTIANS.

By the Rev. R. B. HONE, M.A., Vicar of Hales Owen. Containing Lives of John Bradford, Archbishop Grindal, and Judge Hale.

The FIRST VOLUME contains the Lives of Archbishop Usher, Dr. Hammond, John Evelyn, and Bishop Wilson. The SECOND VOLUME, Bernard Gilpin, Philip de Mornay, Bishop Bedell, and Anthony Horneck. The THIRD VOLUME, Bishop Ridley, Bishop Hall, and Robert Boyle.

A THEORETICAL AND PRACTICAL SYSTEM OF

ARITHMETIC; comprising all the usual Rules, with their Proofs; Scales of Notation; the Construction and Use of Logarithms; Mensuration of Superficies and Solids; Formula for Calculating the Horse-power of Steam-Engines, Water-Wheels, &c., together with much useful Information never before introduced into Treatises on Arithmetic. Designed for the Use of Schools and self-taught Students. By W. H. CRANK, Mathematical Master, St. Mark's College, Chelsea. Strongly bound, 4*s.*

BY AUTHORITY.

A MANUAL FOR TEACHING

MODEL-DRAWING from SOLID FORMS; the Models founded on those of M. DUPUIS, combined with a POPULAR VIEW OF PERSPECTIVE, and adapted to the Elementary Instruction of Classes in Schools and Public Institutions, as taught under the Sanction of the Committee of Council on Education.

By BUTLER WILLIAMS, C.E. F.G.S., Director of the Drawing Classes at Exeter Hall. Handsomely printed in 8vo., and illustrated by Shaded Engravings of the Models, and numerous Woodcuts, 15*s.*

II.

INSTRUCTIONS in DRAWING, for the Use of Elementary Schools, Abridged from the foregoing 'Manual.' By BUTLER WILLIAMS. With numerous Illustrative Woodcuts and Outline Figures of the Models, 2*s.*

London: JOHN W. PARKER, West Strand.

REVIEWS

The Temple Church—An Account of its Restoration and Repairs. By William Burge, Esq. of the Inner Temple, &c. Pickering.

Mr. Burge, one of the most active and zealous members of the Committee who have conducted the restorations at the Temple, has published this pamphlet for the purpose of making known that these restorations consisted of very extensive repairs, absolutely required for sustaining the edifice; (repairs, however, effected in the manner, and style, and character, of the Temple Church of 1185 and 1240, and with materials of the same kind, worked with the same ornaments, as those with which it was then constructed). He has done this, in order to correct any misapprehension which might exist as to the expense of executing the works.

The publication of this pamphlet, and the rumour that the works will shortly be brought to a close, though some important objects still remain to be effected, suggest a few observations in addition to those which we have from time to time expressed on this subject. Exceptions to the details of these restorations might, we think, be justly taken, and we shall not scruple to allude to some of them; yet, on the whole, they appear to us the best of the kind which our age has yet accomplished,—right in spirit, and well executed, considering the sort of mixed tribunal which superintended them. It has been said that the cost has been disproportionately great, and that half a dozen chapels or churches might have been erected with the money spent in decoration. It has also been said, that it is absurd to attempt to restore the works of a past age so literally as in the present case: that we might as well dress the benchers like Knights Templars, with white flowing mantles and red crosses, as decorate their church in its ancient guise. Believing, as we do, that morals and taste may be much influenced by the character of religious ceremonies, we cannot look scornfully on any works which, like those at the Temple, at least set people thinking. We are sure that not a score of miserable, tasteless, barn-like chapels, plagiarized from classical temples or Gothic cathedrals, would have produced one tithe of the good in the creation of a taste for decoration, or even in the way of mere discussion, as the works at the Temple Church. We do not defend extravagance,—and that there has been some, arising from neglect, there is too much reason to believe,—but we contend, that if the church was to be restored, it was the wise and proper course to restore it in the best possible way, without reference to questions of economy, or different modes of appropriating the money. What the twelfth century did, regardless of the cost of labour and material, we surely can imitate without being ruined. We dislike that niggardly captious spirit which looks askance at all things, accomplishing nothing itself, and always busy in cavils and deterioration. The Temple Church was to be restored. The work has been done well, and there ends the matter. The second objection seems to us somewhat illogical. The objectors condemn whitewash: they affect to appreciate consistencies: they admit that painted vaultings were appropriate in the twelfth century, and yet protest against the arabesques now adorning the Temple Church, whilst they would preserve the characteristic forms and outlines of the architecture, which, without colour, would be imperfect.

The Temple Church was worthy of being restored, so far as was practicable:—

"The building," says Mr. Cottingham, in some suggestive observations on its architectural features which Mr. Burge has printed, "at once decides the long disputed point about the origin of the pointed style of architecture, at least in this country. This structure alone is quite sufficient to prove that the pointed style was not imported into England in a perfect state. The transition from the round to the pointed arch was by no means sudden. In the round part of the Temple Church we find the architect endeavouring to obtain an altitude and lightness in the character of his building, which compelled him to trespass on the solemn grandeur of the Norman style; for although the circular arch prevails throughout the exterior of the rotunda, it is evidently of a lighter character than the preceding Norman style. The carved work in the beautiful entrance door-way, and in the capitals of the window columns, fully shows that a transition was taking place. No doubt the circular colonnade in the interior greatly favoured the object in view, namely, that of obtaining by its elevation a greater quantity of light than the Norman style would admit. There is every appearance that one and the same master mind designed both the round and square parts of the church. The central archway into the choir was not an after-thought; it was carried up with the original circular wall work, and the lightness and elevation obtained by this dexterous movement from the circular to the pointed style, led to the entire adoption of the latter in the square or choir part. Besides it is very doubtful whether any of the round churches in this country were originally complete rotundas. Certainly the Temple Church was not; for the oblong building on the south side, pulled down a few years ago, was undoubtedly a portion of the original design. The beautiful Norman Chapel at Ludlow, built soon after the Conquest, had a square choir attached to the circular part, carried up with it in a similar manner to this church; and the later specimen of the kind at Maplestead had the square and the round parts built at the same time. It appears that the Temple Church was upwards of fifty years in building. This was not an unusual length of time for such a splendid edifice; but a much less period would undoubtedly have been sufficient to establish the pointed style of architecture; for the elevated effect produced by the most simple examples of the pointed arch was not lost to the keen observation of the Norman Ecclesiastics, who were the principal architects of that period. They soon made themselves masters of its powers, and by adopting it, threw a flood of light into their buildings which enables them to complete the inimitable *coup d'œil* of a Gothic church by the introduction of stained glass, which the great thickness of the walls and smallness of the windows in a Norman building did not encourage. Having thus slightly described the leading features of the new style in the Temple Church, it is curious to contemplate the struggle which took place in the minor details of the round church. All the windows are circular headed, and ornamented at the angles with slender columns, terminated by foliated capitals of a transition character, similar to those at the entrance door-way. The recesses formed by a series of columns above the stone bench in the aisle on the north and south sides of the entrance are decidedly pointed, retaining the Norman square abacus in the capitals of the columns, and the billetted moulding in the arches. The triforium is ornamented by an arcade of interlaced arches, a portion of Norman decoration, retained long after the ascendancy of the pointed style. I am inclined to think that the circular part of the oak ribs, and the richly carved oak boss in the centre of the ceiling, are portions of the original work, which might have been cut down from the top to accommodate a new roof. It was not at all unusual for the ribs of wood groining to have stone springers to a certain height, which is the case here; the boss and mouldings of the present ribs are decidedly of very early pointed character. The ceiling was probably finished in a domical form originally. No building in existence so completely developes the gradual and delicate advances of the pointed style over the Norman, as this church, being commenced in the latter, and finished in the highest perfection of the former; the choir, or square part of the church, is decidedly the most exquisite specimen of pointed architecture existing. There is a boldness in the conception, and a lightness in the execution, which charm every beholder. The groining of the ceiling is in perfect unison with the whole design. The ribs, light and elegantly moulded, rise from the caps of the slender marble columns, and branch out in such palmy and graceful lines, that the mind is quite prepared to meet the flowery canopy which they are made to support."

Before we speak of the restorations, our readers should be reminded of the former general appearance of the church. Little indeed of its original character was apparent; and like most of our ecclesiastical buildings, it had been "beautified" with classical anachronisms:—

"The screen of 'right wainscoat,' which in 1682 was erected at the west end of the oblong church, and between that and the round church, was adorned with ten pilasters of the Corinthian order, also three portals and pediments; and the organ gallery over the central entrance was supported by two fluted columns of the Corinthian order, and adorned with entablature and compass pediment. The intercolumns were large panels in carved frames, with an enrichment of cherubims near the pediment on the south side. The screen extended completely across the church. The central archway was occupied by the organ, the ornamented front of which was carried up nearly to the ceiling of the nave. The side archways were, above the screen, carefully plastered up, so that their form was rendered invisible. The lower parts of these, and the centre archways, were filled up with glass doors and windows. * * The beautiful columns and shafts of Purbeck marble, their foliated capitals, and the cornice or string course of Purbeck marble, were enveloped in whitewash and plaster. The clustered columns were concealed by an encasement of wainscoting, reaching above the band which connected them at the centre, and they were further concealed by large massive monuments, which were affixed to them above their centre. * * In the oblong part of the church, the Purbeck marble pillars were encrusted with coats of plaster and whitewash. A floor was raised, nine inches above the original pavement, and the intermediate space between was filled with loose earth, saturated with water, flowing from the graves in the churchyard. The height of the building was thus diminished. This raised floor, and the wainscoting and pewing of the whole church completely concealed, not only the bases, but eight feet of the columns. * * The monuments affixed to these columns still further contributed to impair their intrinsic beauty and effect on the edifice. Cumbrous and heavy monuments were also affixed to the sides, so as to encroach considerably on the beautiful lancet-shaped windows, conceal their character, and affect the whole appearance of the aisle. The altar-piece extended still higher than the wainscoting; it was finely carved, adorned with four pilasters, and between them two columns with entablature of the Corinthian order, and enrichment of cherubims; a shield, festoon, fruit, and leaves, enclosed with handsome rail and banister. It covered not only the Purbeck cornice or string course, but concealed from view a considerable portion of the beautiful central window at the east end."

The first step towards the repair of the church was taken in 1825; when Sir Robert Smirke restored the whole exterior of the south side, and the lower part of the Round Church. Little was done to the interior of the Round, and nothing to the Oblong Church. We cannot agree with Mr. Burge, that Sir R. Smirke's restorations were "executed with the greatest skill and the best taste." We should say that they were conducted in a cold unsympathetic taste, the very reverse of Mr. Burge's eulogium. Besides, Sir Robert Smirke committed an unpardonable outrage by removing the little chapel attached to the south side of the circular church. He did it, too, as we believe, in spite of entreaties to spare it. It was dedicated to St. Anne, and was reputed to have been the shrine at which, in the days of the Templars, childless wives prayed to become mothers.

We will now, as briefly as possible, mention the principal and the most expensive works

Digitized by Google

which have been executed. The ancient entrance, with its magnificent doorway, has been restored to its original state. The whole of the interior of the Round Church, excepting the stone seat and arcade in the aisle, has been renovated. The roof, the marble shafts, the pavement, are all new. The organ and all its screen-work, which filled up the arches connecting the square and round churches, has been entirely removed, and the forms of the arches displayed. All the monuments have been transported from both churches up into the Triforium of the Round Church. The Crusaders' effigies, in all their original forms, have been carefully restored. All the marble and stone work in the Oblong Church have been likewise repaired thoroughly. A new chamber has been erected in the centre of the north aisle, to receive the organ, which was built by Father Schmidt, and it has been located there without any sacrifice of its effect. The pews have been entirely removed, and oaken benches, profusely and richly carved, have been substituted for them. These are somewhat too many, too heavy, and too high, to our taste. The pavement has been lowered considerably, in order to exhibit the whole of the bases of the marble shafts.

Mr. Burge gives the particulars of the progress of these works. We do not propose to follow him, either through his account of the dilapidated state of the fabric, or the repairs performed; not because we are unmindful of the necessity which existed for a large expenditure on substantial repairs, or that we are unobservant of the excellent manner in which they have been executed. The curious in these matters should betake themselves to the church itself, and they will be puzzled to distinguish between what is new and what is old, so harmoniously have the two been blended in material and in form. But these, the more essential works, are comparatively unseen, whilst those which may be classed under the head of decorations obviously excite most notice; and it is rather to the decorations, which, though revivals, in fact assume the character of novelties, that we prefer to devote the space at our disposal. And here we cannot but express our regret that the works are to be suspended—the resumption of them being somewhat a matter of doubt—and the church left in its present unfinished state. The Committee would surely have done wisely not to have commenced any measures unless they had first made up their minds to carry them out completely. To place a single stained glass window in the Round Church, and decorate the roof only, leaving the greater part of the superficies in all nakedness, seems to us a mistake. If you begin a system of bright and strong colouring in decoration, there is no stopping half-way, or rather quarter-way, as in the present case. It is not a question of more or less—it is one of all or none. The Committee should either complete what they have begun, or undo it and revert to a consistent white ceiling. They should not deliver up their credentials to their parliament, as the legislative department of these Inns is called, until they are able to say that the Round Church is completely decorated. This halting before the journey is ended, coupled with a number of experiments which we have observed from time to time to be going on in the church, satisfy us that there is no consistent scheme to be realized. The knowledge that *two* architects are now superintending the works does not weaken this opinion. One result of this extraordinary arrangement is, that there is no responsibility. Inquire by whose direction something odd has been done, and all you can learn is, that it was no part of Mr. Savage's original design, and further that the responsibility of it does not rest either with Mr. Sidney Smirke or Mr. Burton. Thus we objected to the altar, not only as interrupting the string course which is carried round the church, but as belonging to a style of architecture later than that of the Church. No one is found willing to father the design. Ask, who raised the benches close to the aisle-walls? Nobody. Who the ponderous uncouth altar railings? Nobody. Whose work are the squatty altar chairs? Nobody's. Again, no one knows by whom the Bishop of Everdon's monument was choked up and hidden by the benches, or who invented the hideous model of square railing which was lately raised beside the crusaders' effigies, or who it is that recommends the suspension of the works whilst the Round Church remains undecorated.

We have said that the decorations appear as novelties, and so in fact they are to our times. Since the days of the Reformation, the decoration of architecture by means of colour has been positively discouraged, and many who do not know that it was indispensable to the full effect of all the styles of Gothic architecture are startled to find it here. The ignorance is excusable, as scarce a remnant of coloured decoration can be found in our churches which is not hidden beneath wash or behind panelling. We highly esteem the ornamental colouring which Mr. Willement has introduced in the vaultings, altar, &c.—so judiciously and temperately that we regret its absence in all bare places—not only for its intrinsic merits, but because we believe it will give an impetus to the restoration of colour generally in architectural decoration—a consummation devoutly to be wished in our cheerless climate. Mr. Willement has here shown how tastefully the use of bright positive colours—vermillions, cobalts, &c.—may be employed to produce an effect of rich harmony. We must find room for a few passages from Mr. Willement's report on the works conducted by him:—

"In the Norman architecture, colour was much used within the churches, of which many examples may be found in the early illuminations. In the early buildings in the pointed style, the ceilings partook of the same richness which was spread over the windows, walls, and pavements. In some cases the vaultings were made resplendent by stars and rosettes in gold, on a rich ground of azure, but more frequently by flowing ornaments drawn with decision in powerful colours strongly contrasted, on a ground tinted to represent the hue of ancient vellum, or perhaps nearer to the rich tone of the Normandy stone when first raised. * * The colours most affected were yellow or gold, bright blue, and scarlet, which were taken mystically to represent, light, air, and heat; to these were cautiously added a bright green, emblematic of fecundity. Black, which was understood to represent darkness or evil, was very seldom introduced. * * Considerable remains were discovered on the ribs and vaultings of the Temple Church, which proved that these had been originally painted in powerful colours, but they were not of sufficient extent to warrant a restoration of any particular pattern. The manner in which the ceiling is executed is founded on examples of the same period, and which strongly assimilate with the decorations of the illuminated manuscripts, coeval with the church."

Stained glass has been introduced with very fine effect into all the windows of the east end, into one on the south aisle, opposite to the organ, and into one window of the Round Church: this latter window being a present from the artist. We think there will be found few dissentients among those who have considered the principles on which fenestral decoration is based, that these windows are certainly the finest specimens which have been executed in modern times, constructed upon the true principles of ornament; and that even the ruby colour in the window of the Round Church has perhaps never been surpassed. But it occurs to us, without being hypercritical, that the mosaic patterns in the east windows are somewhat too small to develope the colours in full brilliancy. To our eye, the intense blue, which is very abundant, seems to lessen the purity of the reds, rather inclining them in appearance towards purple, and also deadening the brilliancy of the yellows. We have no doubt that Mr. Willement has authority for the employment of these mosaic patterns; but we rather question if they were used on so small a scale as the narrowness of these lancet windows has made necessary. Still the work, with all exceptions that may be taken to it, is one to be proud of and grateful for, and especially with the recollection of the misdeeds in this department of art which were perpetrated at New College, Oxford, and at St. George's Chapel, Windsor, both under the sanction of two Presidents of the Royal Academy, the first under Reynolds, the latter under West. The lawyers, in these works, have set an example which we hope the clergy will not be slow to follow. There is scarcely a humble parish church in the kingdom which, if restored to its pristine state, might not become, in addition to its religious aims, the promoter of good taste and refinement among the people.

Critical and Historical Essays, contributed to the Edinburgh Review. By T. B. Macaulay. 3 vols. Longman & Co.

Mr. Macaulay has thought it necessary to apologize for the republication of these Essays—a necessity which no one, we believe, will acknowledge but himself. It will not be easy to name three thick octavo volumes from among the mass of modern publications, which possess equal claims on the reader's attention. The immediate occasion for thus coming forward is, that the Essays have been pirated in America, and that the publishers of the Edinburgh Review are anxious to protect their home market from such dishonesty. It is no small aggravation of the outrage done upon authors by the pirate, that he is not always content with reproducing *verbatim* the original, and so striking only at the pocket of the literary man: he must also go marauding through periodicals and miscellanies, to reproduce, in a collective form, the *disjecta membra* of celebrated writers, without pausing to consult their wishes on the subject. He thus arrogates to himself the right of bringing into notice what the true owner may wish to be forgotten; of reproducing opinions, as actually entertained, which the writer may have modified or abandoned; of reviving hostilities over which time had exercised its cooling influence; and of bringing within the focus of a bound volume, papers which were written for isolated publication, and with a knowledge that they would stand severally disconnected, by long intervals of time, and by the intercalation of many subjects, many styles, and many interests. That these considerations must have exercised a distinct influence on the original composition of Mr. Macaulay's papers, both as to the selection of thoughts to be presented to the reader, and to the mode in which they should be embodied, is self-evident. The hasty skimmer of multitudinous periodicals, and the closet student, are personages of a different stamp, and each loves to be addressed, like Shakspeare's citizen of London, by his own Recorder. Topics that are well fitted to moments of political and polemical excitement, may assume an air of gratuitous malignity by their re-appearance when the occasion is past; and as far as criticism is concerned, the coolest and most forbearing writers will

Digitized by Google

occasionally be betrayed by the controversial spirit, into asperities for which maturer consideration must grieve.

Independently of these considerations, we rejoice that Mr. Macaulay has determined on the step he has taken; for, whatever may be the legitimate expectations formed of some possible work proceeding from his pen, we are still inclined to estimate more highly the positive utility of these shorter and more popular essays, which, being addressed to a wider circle of readers, will act more immediately on public opinion, and more effectually assist in dragging the inert and reluctant masses of mankind to a nearer level with the few in advance of their age. Without pledging ourselves to all the opinions put forward by the author, on points either of political or of literary criticism, we acknowledge that his writings abound in incidental truths, tending to develope a sounder state of the public mind. We have often envied the more ample scope and more sufficient verge of the trimestrial journals, which, while they permit their writers to do full justice to a subject, are yet restricted enough to compel some effort at condensation of thought, and to determine the choice of language, concise, vigorous, picturesque, and lucid. Of these peculiarities of thinking and of expression, Mr. Macaulay is a great master; and whatever may be deemed of the scope and tendency of his historical articles, few, we imagine, will deny that the pictures they present of especial epochs are well calculated to convey to the general reader clearer and more comprehensive notions, than those he could pick up in his scattered perusal of the professed historians. In this author's critical writings, too, even when his judgment of a work may be less than dispassionate, when they may be either somewhat tinted by a capricious idiosyncracy of taste, or stained by party or coterie prejudice, there is still a constant recurrence to first principles, to philosophical illustrations of cause and effect, well adapted to nourish and excite the intellect of the reader, to awaken inquiry, and to develope taste. Mr. Macaulay is less remarkable for that happy power of illustrating absurdity by an image, of pointing a maxim by a *bon mot*, and of giving wings to a withering sarcasm, or an overwhelming refutation, by an epigram not to be forgotten, which form the peculiar charm of Sydney Smith's controversial style. But he possesses, in an eminent degree, the power of grasping and commanding a subject, a sustained force of demonstration, an aptitude for insinuating into his reader the elements and the habit of independent thought. If Mr. Sydney Smith is more suggestive to the practised thinker, Mr. Macaulay is a more laborious pioneer to the half-educated man of the world, desirous of forming honest opinions for himself. Both impregnate popular topics with the rich and fertilizing germs of their own genius; both present novel views of subjects in themselves more or less familiar; but each contributes to the progress of truth by separate means and in different directions.

Having said thus much, we purposely abstain from any specific observations on the multifarious contents of the volumes. Among the courts of criticism there is no appellate jurisdiction; and from essays so condensed and consecutive, it would be impossible to quote with any satisfaction either to ourselves or our readers. Otherwise we might break a friendly lance with the author, touching his estimate of Horace Walpole, question his opinion of the probable duration of Popery as an establishment and a power, or laugh, with him, at Mr. Croker's dates and classicalities. But we must forbear, and simply refer to the volumes themselves such of our readers as possess the information and the taste for critical and historical speculations of no ordinary depth and originality.

A Narrative of a Visit to the Australian Colonies. By James Backhouse. Hamilton & Co.

It was no love of trade or of travel, but the impulse called, according to the phraseology of the Society of Friends, "a religious concern," which led Mr. Backhouse to undertake a voyage to Van Diemen's Land, "on the third of the ninth month 1831." Hence his observations were necessarily narrowed within the circle of his benevolent cares, and the record of his residence in the new country, is enormously swollen by notices of his missionary operations. The style of his book is amusing, as offering a fair specimen of the verbal circumlocution and formality into which the respectable body to which the author belongs is driven by its anxiety to observe a literal precision. To appreciate this fully, the reader should have some preparatory acquaintance with the literature of Dissent; nevertheless, we think, that few will refuse a smile to the following travelling adventure, which befell the worthy Friend shortly after his disembarkation at Port Davey:—

"I once ascended Spring Hill alone, taking the rocky part of it, which is composed of projections of white quartz, sometimes tinged with pink or blue, amongst which I could climb as on a rude stair-case. Being sheltered from observation by the rocky spires, I came among a flock of White Cockatoos, which are too shy knowingly to admit the presence of a stranger: they chattered to each other, and shook their beautiful lemon-coloured crests with an amusing degree of consequence, until at length I threw a stick among them, which dispersed the assembly."

After breaking up the meeting of the Cockatoos —the courage of Friend Backhouse was put to the proof as follows:—

"The top of the peak was composed of large blocks of white quartz, with thick scrub between them. From one to another of these I skipped to the opposite side of the peak; and from thence descending, passed through a thick scrub as high as my shoulders, hoping to reach the vessel by a nearer cut; but I had not proceeded far, before a deep woody ravine obstructed my course. * * Evening was drawing on, I was alone and several miles from my companions; the scrub through which I had come had closed as I had left it, and it was necessary to retrace my steps. * * Losing little time in observations, and being favoured to find my way across the rocks in safety, I took to my heels upon the more open ground, and came in sight of the Tamar before the sun had set. I was much surprised not to see the boat off, as I had requested the men who came on shore for water in the morning, to come for me in the evening, saying, they might then expect to see me somewhere on the face of Spring Hill. Like men of their class, they had so little regarded the instructions, that when inquired of, a few hours after, they could give no account of me. My companion had become uneasy at my absence; and, at length, I saw him with some seamen leave the vessel in a boat and come toward the shore, and heard the V. D. Land cry of Cooey, borrowed from the Aborigines, to which I answered; but to my dismay, saw the boat again pushed from the land. Not having taken into account that sound does not readily descend, they had concluded, as they did not hear me, that I was not there. No time was to be lost. I left the rocky part of the mountain for a slope on which I hoped to run; but on reaching it, my feet slipped among a fungus resembling moistened glue—a species of *Tremella?*—with which the ground had become covered during the rain. I arose and fell until my legs shook under me; and giving up the hope of standing, I launched off in a sitting posture; and besmeared with this slimy vegetable, passed rapidly to the bottom of the hill. Here again I ran and shouted: my voice reached far over the still water, and the boat, to my great comfort, returned. I met it in the sea, for the purpose of washing my clothes, that previously, for several hours, had been soaked with rain, which fell at times so heavily that I had no occasion to stoop to drink during the whole day."

The whole narrative is in a like strain. Our author's exertions to improve the convict population, and to encourage temperance and economy, deserve recognition, for they appear to have been unwearied, judicious, and devoid of fanatical excitement. From a long account of Macquarie Harbour, one of the penal settlements, some extracts may be taken:—

"Notwithstanding the fine scenery of Macquarie Harbour, it was a gloomy place in the eyes of a prisoner, from the privations he suffered there, in being shut out from the rest of the world, and restricted to a limited quantity of food, which did not include fresh meat; from being kept under a military guard; from the hardship he endured, in toiling almost constantly in the wet, at felling timber and rolling it to the water, and from other severe labour, without wages, as well as from the liability to be flogged or subjected to solitary confinement, for small offences. Out of 85 deaths that occurred here in eleven years, commencing with 1822, only 35 were from natural causes; of the remainder, 27 were drowned, 8 killed accidentally, chiefly by the falling of trees, 3 were shot by the military, and twelve murdered by their comrades. There is reason to believe that some of these murders were committed for the purpose of obtaining for the murderers, and those who might be called upon as witnesses on their trials, a removal from this place, though at the ultimate cost of the life of the murderers, and without a prospect of liberation on the part of the others! Some of the prisoners who returned hither with us in the Tamar, had been witnesses in such a case; but they had had the privilege of the change, for a time, to the penitentiary at Hobart Town! These circumstances, with the fact, that within the eleven years, 112 prisoners had eloped from this settlement, proved also that its privations were felt to be very great. Escape from Macquarie Harbour was well known to be a difficult and very hazardous undertaking, and very few who attempted it, reached the settled parts of the Colony. Out of the 112 who eloped, 62 were supposed to have perished in the bush, and 9 were murdered by their comrades on the journey, for a supply of food. For this purpose, the party proposing to attempt traversing the formidable forest, selected a weak minded man, and persuaded him to accompany them; and when the slender stock of provisions which they had contrived to save from their scanty rations, was exhausted, they laid violent hands on their victim. One party when lately apprehended near the settled districts, had in their possession, along with the flesh of a Kangaroo, a portion of that of one of their comrades."

Mr. Backhouse considers that in the early days of the settlement, the reform of the prisoners was retarded by the employment of flagellation as a punishment:—

"The first missionary sent here found a chief officer living in open profligacy, and saw so little prospect, under such circumstances, of being able to do any good among the prisoners, that he returned by the same vessel to Hobart Town. Of latter time the administration of corporal punishment was much diminished, and that of solitary confinement increased, with evident advantage. Major Baylee also expostulated with the parties, and convinced them that he would not administer punishment without cause: this greatly increased his influence, and obtained for him such respect and esteem, that he could go about the settlement, unattended, with perfect confidence. * * The removal of a few prisoners from Macquarie Harbour, on account of good conduct, before the expiration of their sentence, had a decidedly good effect upon the others. * * On conversing with some of the reformed prisoners, they said, that the change of heart they had undergone had altered the face of the settlement in their eyes: it had ceased to wear the gloom by which it was formerly overcast. Two, to whom it had been so irksome as to tempt them to run away, said, they were now well satisfied, and thankful they had been sent there. Others who had been placed in the less laborious part of the establishment, because of good conduct, were, at their own request, allowed to return to their old employments, which they preferred on account of being less exposed to temptation; saying, they were less afraid of labour than of sin. * * The number of prisoners at the settlement at the time of our visit, including the out-gangs,

Digitized by Google

was 177; formerly it was about 300. Many of them were employed on Sarahs Island, in ship-building, and others at out-stations, chiefly as a wood-cutting gang at Phillips Creek, where they were superintended by a constable, and lodged in huts of the humblest construction; but these, being furnished with good fires, were not very uncomfortable, particularly when the inmates whitewashed them, and kept them clean. On conversing with the men of this gang respecting the hope of remission of sentence on good conduct, one man, with tears in his eyes, said, he had been there 10 years: he seemed cast down almost below hope. We assured them of the pleasure it gave the Lieutenant Governor, to remit their sentence, when they gained a character to warrant his doing so. On being asked, one man said, that their ration of provision was not sufficient for them at such hard work; and though their general appearance was healthy, yet when they were engaged in heaving timber, and rolling it down to the water, and other fatiguing labour, it might often fail in appeasing the cravings of exhausted nature. The timber they cut was chiefly Huon Pine. No beasts of burden were allowed at Macquarie Harbour. In order to get the felled timber to the water, a way had to be cleared, and to be formed with logs and branches; over this, straight trunks of trees were laid in the manner of the slips or skids, used in launching ships. Upon these the timber was rolled by the prisoners, sometimes to a great distance. These roads were termed Pine-roads.—If any of the men proved unruly at the out-stations, the constable lit a fire, the smoke of which was observed by the sentinel at the settlement, from whence assistance was promptly sent. Except sometimes as a punishment, the men were not in irons, for if they had been, they could not have performed their work. * * The general health of the prisoners at Macquarie Harbour was good. Seldom more than three of them were in the hospital at a time. The average of deaths did not amount to more than one in 35 per annum, including those by violence and accident. These circumstances, the more remarkable in men whose habits had been dissipated, might reasonably be attributed to spare diet and hard labour, in a mild though humid climate, and seclusion from strong drink. But whether from the limited supply of food, or from being restricted to the use of salt meat, or from some other cause, the surgeon remarked, that when the men became ill, the tone of their constitution was so low that they were difficult to recover. Some of them were affected with scurvy for long after leaving the settlement. The common temperature of the winter at Macquarie Harbour, was 43° in clear weather, when the wind was from the south, and 52° when cloudy with the wind from the north. Frost and great heat were of rare occurrence. Rain is said to have fallen on five days out of the seven, during ten months in the year, from the formation of the settlement in 1822. The prisoners had no allowance of spirits at this station; but rewards for little extra services were sometimes given them by the officers, in this pernicious article; the allowance of which to the latter and to the military generally, was a great evil, and the source of much misconduct."

The humanity of Mr. Backhouse extended itself to the aborigines. Hard, indeed, is the fate of the children of the soil, and one of the darkest enigmas of Life lies in the degradation and decay wrought by the very civilization which should succour, teach, and improve. But the publication of Mr. Backhouse's volume has been delayed until it has lost much of its interest: he arrived in Australia early in 1832 and left in 1838, five years since—a century, judged by events in the history of a young settlement. The work, therefore, will be of little value to those who seek for information relating to the Australian colonies; but those who delight to study human nature, may find amusement in it. Our author, of course, lost no opportunity of bearing testimony against card-playing, music and dancing; but there is nothing stable, even in the world of scruple. The Society of Friends has advanced a step, since the days when one tenderly-conscienced elder was made uneasy by the sight of a field of red clover; and another was cut to the heart, on being present at the packing of a box full of dressed dolls, believing that the same savoured of idolatry. Though Music is still tabooed, Drawing is recognized—nor are the flowers of the field thought stumbling blocks because they are clad in garments gayer than the gayest worn by the world's people. It is evident, from Mr. Backhouse's pages, that he is a well instructed botanist: and his journal is illustrated by some etchings, from the pencil of a brother missionary, which, if not surprising as works of art, at least appear to us faithful representations of Nature.

A casual note respecting poor Glover, who, unfortunately for our Water Colour Exhibitions, emigrated to the newest world some fifteen years since, will be read with interest by those whom his landscapes delighted:—

"We visited John Glover, a celebrated painter, who came to this country when advanced in life, to depict the novel scenery: his aged wife has been so tried with the convict female servants, that she has herself undertaken the house-work. We generally find that females prefer England to Tasmania, on account of this annoyance."

History of the Pillar of Infamy, by Alexander Manzoni; with *Observations on the Use of Torture*, by Pietro Verri—[*Storia della Colonna Infame, &c.*]. Paris, Baudry.

The author of the 'Promessi Sposi' is understood to have for some time forgotten the charms of poetry and romance in the raptures of religious seclusion, and a premature silence has fallen on the voice that once promised a new dramatic era to Italy. It is fortunate, therefore, that he has yielded so far to secular impulses as to publish the historical treatise of which some expectation was given in that remarkable part of the 'Promessi Sposi' which described the plague of 1630, in Milan. Amongst the terrible circumstances of that event, which has been fully narrated in this Journal (No. 644), will be remembered the popular belief in the propagation of the disease by the *untori*, a body of purely imaginary miscreants, who were supposed to have anointed the walls of houses throughout the city with some new poison, fatal to all who touched it. This absurd notion, originating with the vulgar, was rather encouraged than repressed by the magistrates. They received the vague depositions of some ignorant women, maddened by stupid fear; proceeded against the innocent persons denounced, as if their guilt had been inevitably proved; forced them—some by tortures, others, more resolute, by cajolery and promises of safety—to accuse themselves, and point out others, which seems to have been done by the miserable wretches at random, merely to escape from their extremity of torments; and at the close of this horrible mockery of justice, consummated their guilt, by devoting the whole of these innocent victims to a death of the most appalling cruelty. As if this were not sufficient, the judges decreed that the house of one of the accused persons, a barber named Mora (whom the first victim was driven to denounce as the preparer of the imaginary poison) should be razed to the ground, and a column erected on the site, with an inscription commemorating the circumstance. This monument remained standing until 1778, near the Porta Ticinense, and was known as the *Colonna Infame*, or Pillar of Infamy; which gives the name to Manzoni's treatise.

This iniquitous proceeding had already been discussed in the 'Observations on the Use of Torture,' written by Count Pietro Verri, in 1778, when "the question" was still recognized in Italy as a legal process. The main object of his dissertation, now appended to the Paris edition of Manzoni's work, was to promote the banishment of this wicked absurdity from the tribunals of Lombardy. This object naturally led the author to enforce his arguments by citing a notorious instance, in which, perhaps, of all recorded cases, the torture was most keenly administered, on the slightest grounds, with the most evident failure as a discoverer of truth, and the utmost injustice to the accused. His special deduction from these premises, however masterly, is happily one which little concerns any European community in the present day. It is no longer needful to demonstrate the folly and wickedness of torture as a means of obtaining evidence; nor is there much danger of this particular abuse being ever restored.

Manzoni's commentary on the same subject is therefore more interesting and valuable, because its conclusions, derived from another view of the facts, are more general, and may serve as a lesson for all times, while passion and fear can disturb the rectitude of public justice. He proves, by an acute dissection of the evidence, and by numerous legal authorities, that even admitting the possibility of the crime alleged, and the right of torturing, as defined by the legal principles of that time, there was in this case neither any inchoate ground for the prosecution, nor any excuse for the cruelty exhibited in its progress and conclusion. "I have sought," he says, "to exhibit clearly the true aspect of this proceeding; to prove that these judges condemned innocent persons; whom these judges, even with the firm persuasion of the efficacy of the alleged *unctions*, and with a code that permitted torture, should have acknowledged to be innocent; and that, consequently, to prove them guilty, to suppress the truth, which re-appeared every moment, in a thousand forms and on a thousand sides, in characters as legible then as now, they were forced to practise continual efforts of cunning, and employ expedients the injustice of which they could not but know. I do not, certainly, wish (wicked, indeed, would be the attempt) to take from ignorance and the torture their several parts in this horrible transaction; the one was the lamentable occasion, the other a cruel and active means; but neither the sole nor the chief one. But I deem it important to distinguish the true and efficient cause, which was an iniquitous manner of action: and how originating?—in the wicked passions of man."

With this object in view, Manzoni pursues his argument through the incidents of the history, with equal address and logical power; pausing at times to relieve his feelings in bursts of manly indignation, uttered with all his wonted eloquence. The tale is related with a power equal to any displayed in his former efforts; but the details are so revolting, that we shall not harrow the reader's feelings by a fruitless display of such cruelties. It is impossible to dwell without abhorrence on these instances of the oppression which man has delighted in practising on his fellow-creatures. They are the shameful parts of history, on which it is almost pollution to gaze. We turn with humiliation from the last scene of the wretched Munster fanatics, the miseries which exterminated whole races in New Spain, or the spectacle of science prolonging the agonies of Damien. In passing over such *opprobria generis humani*, we may truly rejoice that England has ever been purer than any other nation from such abominations, and was the first to cast them utterly away. And seeing how a century has changed the moral features of all Europe in this single point, one may boast that even from hence alone the superiority of present over past times might be victoriously demonstrated.

One singular trait which occurs in the account of these trials, may perhaps deserve to be

Digitized by Google

mentioned. The first prisoner examined, one Guglielmo Piazza, protested his innocence throughout the most trying severity of "the question." Before administering it a second time, the judges ordered him to be shaved and purged, lest he should have some talisman concealed in his hair, or recently swallowed, whereby the efficacy of the torments might be destroyed. And in the extract of another's trial, one Vedano's, we find him taken down, during the progress of the examination, because he steadfastly persisted in his denials, and shaved in the inquisitor's presence, evidently for the purpose of depriving him of any such means of endurance. A belief in the application of these existed in Germany down to the eighteenth century. A singular book, published at Celle, in Hanover, with the sanction of the authorities, in 1718, describing the trials and execution of a formidable gang of robbers, the leader of which was one Lips Tullian, makes repeated mention of a charm or specific which seems to have been regarded as infallible. Instances are cited of the apparent impassiveness of many of the criminals under torture, ascribed to their possession of some secret of the kind, so direct and surprising, as almost to render it probable that a recipe for producing temporary stupor was then known to malefactors; although the effects described exceed those of any opiate we now possess. But such ancient testimonies we would by no means assume to be more than curious.

A VISIT TO COZUMEL AND TULOOM.

Incidents of Travel in Yucatan. By J. L. Stephens.

[Second Notice.]

In our former account of this delightful work, we bore the author sufficiently close company to give our readers an idea of the wherefore and the whereabouts of his wanderings. To follow him throughout the circuit recorded in his second volume, is rendered unnecessary by the recent space devoted to Mr. Norman's book, in which the remains of Chi-chen, Zayi, &c. &c., were not only described, but presented by the aid of wood-cuts. But though we would avoid "the tediousness of a twice-told tale," we have not yet done with Mr. Stephens; we will, therefore, start with him on an excursion, in which he had no predecessor, and leaving the mounds and pyramids of the heart of Yucatan, at once bring him down to the port of Yalahao:—

"In our journey to the coast (says our author) we had entered a region of novel and exciting interest. On the road we had heard of quondam pirates, having small sugar ranchos, and enjoying reputations but little the worse for wear, in fact, much respected, and looked upon with a sort of compassion, as men who had been unfortunate and broken up in business. We had now reached the focus of their operations. It is not many years since the coast of Cuba and the adjacent continent were infested by bands of desperadoes, the common enemies of mankind, and doomed to be hung and shot without trial, wherever caught. Tales of piracies and murders which make the blood run cold are fresh in the remembrance of many. The sailor still repeats or listens to them with shuddering interest, and in those times of rapine and blood, this port was notorious as a rendezvous for these robbers of the sea."

Mr. Stephens came, however, yet more directly into contact with the buccaneers of Yalahao than by tradition:—

"Immediately on our arrival we had visiters, some of whom were silent and uncommunicative upon the historical associations of the place; and when they went away their good-natured neighbours spoke of them as los pobres, who had good reason to be silent. All spoke with kindness and good feeling of the leaders, and particularly of one Don Juan, the captain, a dashing, generous fellow, whose death was a great public loss. Individuals were named, then living in the place, and the principal men, who had been notoriously pirates; one had been several years in prison and under sentence of death, and a canoa was pointed out, lying in front of our door, which had been often used in pirate service."

A more interesting visitor was Don Vicente Albino, for he had established a rancho on the island of Cozumel, whither our travellers were bound: and they looked to him for information. It does not seem, however, that they gained much. We should here say, that Mr. Stephens had, before leaving the United States, determined to make this voyage; with the object "in following the track of the Spaniards along this coast, to discover vestiges or remains of the great buildings of lime and stone which, according to the historical accounts, surprised and astonished them." To put his adventurous plan into execution, he hired, at Yalahao, "El Sol," or the Sun, a well-known canoa, commanded by a middle-aged Mestizo fisherman,—a craft, thirty-five feet long, and six feet wide at the top, but curving towards the bottom, carrying two sails, and with a "space of eight or ten feet clear in the stern," all the rest being filled with luggage, provisions, &c. &c. These "last were chocolate, sweetened bread, beef and pork in strings, two turtles, three bushels of corn, and implements for making tortillas"—no scanty store this! and, taken conjointly with the dimensions of El Sol, the reader will hardly be surprised to hear, *apropos* of the discoverers' sleeping arrangements on the first night, that they made "so tight a fit in the canoa, that if the bottom had fallen out, they could have hardly gone through."

Mr. Stephens touched for a moment at a wretched island, about two leagues distant from Yalahao, being compelled so to do by the bad sailing of El Sol, which was prevented by a strong wind from doubling a certain headland:—

"This desolate point was Cape Catoche, the memorable spot on the Continent of America at which the Spaniards first landed, and approaching which, says Bernal Dias, we saw at the distance of two leagues a large town, which, from its size exceeding any town in Cuba, we named Grand Cairo. The Spaniards set out for it, and passing by some thick woods, were attacked by Indians in ambuscade. Near the place of this ambuscade, he adds, were three buildings of lime and stone, wherein were idols of clay, with diabolical countenances, &c."

At last, however, El Sol accomplished the feat, and proceeded on her way, past other places of antiquarian curiosity. Mr. Stephens had set his heart on visiting the ruins of a Spanish church, belonging to a town destroyed by the buccaneers: but the Mestizo informed him, that disembarkation at the Boca de Iglesia was impossible, the beach being flat and muddy, and the difficulties of landing not to be overcome by wading. Disappointed in this, our author made sail for the island of Contoy:—

"At eleven o'clock we reached the island of Mugeres, notorious in that region as the resort of Lafitte the pirate. Monsieur Lafitta, as our skipper called him, bore a good character in these parts; he was always good to the fishermen, and paid them well for all he took from them. At a short distance beyond the point we passed a small bay, in which he moored his little navy. The mouth was narrow, and protected by ledges of broken rocks, on which, as the patron told us, he had batteries constantly manned. On the farther point of the island we had a distant view of one of those stone buildings which were our inducement to this voyage along the coast. While looking at it from the prow of the canoa, with the patron by my side, he broke from me, seized a harpoon, and pointing with it to indicate the direction to the helmsman, we came silently upon a large turtle, apparently asleep, which must have been somewhat surprized on waking up with three or four inches of cold steel in his back. The patron and sailors looked upon him as upon a bag of dollars snatched from the deep. There are three kinds of turtles which inhabit these seas; the Cahuamo, the eggs of which serve for food, and which is useful besides only for its oil; the Tortuga, of which the meat as well as the eggs is eaten, which also produces oil, and of which the shell is worth two reales the pound; and the Karé, of which the shell is worth ten dollars a pound. It was one of this kind, being the rarest, that had crossed our path. I would not make any man unhappy, but the fishermen say that the turtle which forms the delight of the gourmand is of the commonest kind, not worth killing for the sake of the shell, and therefore sent away alive. The karé he has never tasted."

Some of the sea-creatures which haunt this out-of-the-world coast, are less pleasant to encounter than the Karé. While bathing under the lee of the point of Nesuc, Mr. Stephens and his comrades were watched by a pair of large sharks. The coast, too, swarms with mosquitoes: and the party was glad fairly to put to sea for Cozumel, though, when once fairly out in the strait, it became obvious, that El Sol was not calculated for a blue-water voyage. Another discovery, little more comfortable, was, that the Mestizo proved to be ignorant of the coast of the island, which abounds in reefs, making disembarkation hazardous. At length, after a night and half a day of uncertainty, El Sol came to anchor at the desired spot, "the little bay of Don Miguel, on which stood the rancho of Don Vicente." This "had been broken up by the mutiny of the Indians," who had attempted to murder the proprietor. It seemed a very Eden of comfort and luxury after the canoa:—

"Our act of taking possession was unusually exciting. It was an immense relief to escape from the confinement of the canoa. The situation commanded a view of the sea, and, barely distinguishable, in the distance was the coast of Yucatan. On the bank were large forest trees which had been spared in the clearing, and orange and cocoa-nut trees planted by Molas. The place had a sort of piratical aspect. In the hut were doors and green blinds from the cabin of some unlucky vessel, and reeving blocks, tar buckets, halliards, drinking gourds, fragments of rope, fishing nets, and two old hatches were scattered on the ground. Above all, the first object we discovered, which would have given a charm to a barren sand bank, was a well of pure and abundant water, which we fell upon at the moment of landing, and were almost like the Spanish soldier in the expedition of Cordova, who drank till he swelled and died. And, besides the relief of a pressing want, this well had a higher interest, for it assured us that our visit was not bootless. We saw in it, at the first glance, the work of the same builders with whose labours on the mainland we were so familiar, being, like the subterranean chambers at Uxmal, dome shaped, but larger both at the mouth and in the interior. This well was shaded by a large cocoa-nut tree. We hauled up under it one of the hatches, and, sitting around it on blocks, had served up the turtle which had been accomplishing its destiny on board the canoa. With our guns resting against the trees, long beards, and canoa costume, we were, perhaps, as piratical-seeming a trio as ever scuttled a ship at sea."

The attention of Mr. Stephens had first been directed to Cozumel by the republication, in Paris, of a journal kept by the chaplain of Don Juan de Grijalva, who discovered the island in 1518. The Island of Swallows (for such is its Indian name) was at that time thickly inhabited. Multitudes of Indians, "who made a great noise with their drums," came down to gaze upon the intruders. Fourteen small towers, or houses, "about eight palms in length, and the height of a man," were also seen. On Friday, the 6th of May, 1518, a solemn disembarkation was made: the array of the Spaniards, however, terrified the Indians, who hid themselves, so that upon reaching one of the towers aforesaid, for the purpose of planting the royal standard, not a single man was to be seen:—

"The ascent to this tower was by eighteen steps; the base was very massive, one hundred and eighty feet in circumference. At the top rose a small tower of *the height of two men placed* one upon the other. Within were figures, bones, and idols that they adored. From these marks we supposed they were idolaters.

Digitized by Google

While the commandant was at the top of the tower with many of our people, an Indian, followed by three others who kept the doors, put in the interior a vase with very odoriferous perfumes, which seemed of storax. This Indian was old; he burnt many perfumes before the idols which were in the tower, and sang in a loud voice a song, which was always in the same tone. We supposed that he was invoking his idols. * * * * These Indians carried our commandant with ten or twelve Spaniards, and gave them to eat in a hall constructed of stones very close together, and covered with straw. Before the hall was a large well, from which everybody drank. * * * They then left us alone, and we entered the village, where all the houses were built of stone. Among others, we saw five very well made, and commanded by small towers. The *base* of these edifices is *very large* and *massive*; the *building is very small at the top*. They appear to have been built a long time, but there are also *modern ones*."

Subsequently Cozumel was visited by Cortez, who caused a crucifix and an image of the Holy Virgin to be erected on one of the high places, from which its idols were thrown down, to the great terror of the Indian priests. Gomarra, too, describes the sacred buildings of the island circumstantially; and other later historians "speak of Cozumel as a place containing many adoratorios and temples, as a principal sanctuary and place of pilgrimage, standing to Yucatan in the same relation as Rome to the Catholic world." But the shrines are now utterly laid waste, and the descendants of the worshippers have forsaken the spot:—

"The whole island (says Mr. Stephens) was overgrown with trees, and, except along the shore or within the clearing around the hut, it was impossible to move in any direction without cutting a path. We had only our two sailors, and if we should cut by the compass through the heart of the island, we might pass within a few feet of a building without perceiving it. Fortunately, however, on the borders of the clearing there were vestiges of ancient population, which, from the directions of Don Vicente Albino, we had no difficulty in finding. One of them, standing about two hundred feet distant from the sea, is even now visible above the tops of the trees to vessels sailing by. It stands on a terrace, and has steps on all four of its sides. The building measures sixteen feet square; it had four doors facing the cardinal points, and is very low. The exterior is of plain stone, but was formerly stuccoed and painted, traces of which are still visible. The doorways open into a narrow corridor only twenty inches wide, which encompasses a small room eight feet six inches long and five feet wide, having a doorway opening to the centre. South-southeast from this, near an opposite angle of the clearing, and five or six hundred feet from the sea, stands another building raised upon a terrace, consisting of a single apartment, twenty feet front and six feet ten inches deep, having two doorways and a back wall seven feet thick. The height is ten feet, the arch is triangular, and on the walls are the remains of paintings. These were the only buildings in the clearing, and though, doubtless, many more lie buried in the woods, we saw no other on the island; but to us these were pregnant with instruction. The building standing close to the sea, answers, in all its general features, the description of the 'towers' seen by Grijalva and his companions as they sailed along the coast."

A modern ruin, of great interest, was also found by the discoverers—the ruins of a Spanish church, sixty or seventy feet front, and two hundred feet deep:—

"The front wall has almost wholly fallen, but the side walls are standing to the height of about twenty feet. The plastering remains, and along the base is a line of painted ornaments. The interior is encumbered with the ruins of the fallen roof, overgrown with bushes; a tree is growing out of the great altar, and the whole is a scene of irrecoverable destruction."

Few traditions remain to throw light on the story of this building, beyond the general fact, that Cozumel was, in the days of the Spaniards, a rich bishopric, while Culhua was a poor appointment; whereas, the former is now a wilderness, while the latter is the richest see in New Spain. The reader, however, will be glad of a conjecture or two brought forward by Mr. Stephens:—

"It is a notion, or, rather, a principle, pervading all the old Spanish writers, that at some early day Christianity had been preached to the Indians, and connected with this is the belief that the cross was found by the first conquerors in the province of Yucatan as a symbol of Christian worship. Prophecies are recorded supposed to show a traditionary knowledge of its former existence, and foretelling that from the rising of the sun should come a bearded people and white, who should carry aloft the sign of the cross, which their gods could not reach, and from which they should fly away. The same vague idea exists to this day, and, in general, when the padres pay any attention to the antiquities of the country, they are always quick in discovering some real or imaginary resemblance to the cross. A strong support of this belief is advanced in the 'Cozumel Cross' at Merida, found on the Island of Cozumel, and in the time of Cogolludo, as at this day, supposed to have been an object of reverence among the Indians before their conversion to Christianity. Until the destruction of that edifice it stood on a pedestal in the patio of the Franciscan convent, and, as we were told, from the time when it was placed there, no lightning had ever struck the building, as had often happened before. It is now in the Church of the Majorada, and in looking for it at that place, Mr. Catherwood and myself were invited into the cell of an octogenarian monk then lying in his hammock, for many years unable to cross the threshold of his door, but in the full exercise of his mental powers, who told us, in a tone which seemed to indicate that he had done what would procure him a remission from many sins, that he had himself dug it up from among the ruins, and had it set up where it is now seen. It is fixed in the wall of the first altar on the left, and is almost the first object that arrests the eye of one entering the church. It is of stone, has a venerable appearance of antiquity, and has extended on it in half relief an image of the Saviour, made of plaster, with the hands and feet nailed. At the first glance we were satisfied that, whatever might be the truth in regard to its early history, it was, at least, wrought into its present shape under the direction of the monks. And though, at that time, we did not expect ever to know anything more about it, the ruins of this church cleared up in our minds all possible mystery connected with its existence. In front of the building is a cemented platform, broken and uprooted by trees, but still preserving its form; and on this stand two square pillars, which, as we supposed on the spot, had once supported crosses, and we were immediately impressed with the belief that one of these missing symbols was that now known as the 'Cozumel Cross,' and that it had probably been carried away by some pious monk at or about the time when the church became a ruin and the island depopulated. For myself, I have no doubt of the fact; and I regard it as important, for, even though crosses may have been found in Yucatan, the connecting of the 'Cozumel Cross' with the ruined church on the island completely invalidates the strongest proof offered at this day that the cross was ever recognised by the Indians as a symbol of worship. At noon we had finished all our work, but there was a charm about our absolute proprietorship of this desolate island which made us regret that there was not more to give us occupation. Doctor Cabot found in it a rich field for his ornithological pursuits, but he was rather unfortunate. Two specimens of rare birds, which he had dissected and put away to dry, were destroyed by ants. In the clearing was a dead tree, holding on its topmost branches the nest of a hawk of a rare species, the eggs of which were unknown to naturalists. The nest seemed to have been built in apprehension of our visit. The dead branches were barely able to support it, and would evidently bear no additional weight. The patron and sailors cut down the tree, and the eggs were broken, but preserved in fragments."

After further adventure with the canoa, the party left the desolate island, and ran down again in the direction of Cape Catoche. Early in the second day they came in sight of the ruins of the Castillo of Tuloom, a building on a high cliff, two leagues from shore, discernible at a distance as much from its own importance and unimpaired condition as from the airy position it occupies. It was, of course, to be fully explored, though, from the rugged nature of the surrounding country, it appeared to be nearly as inaccessible as the Great Carbuncle of Mr. Hawthorne's American faëry legend. At last, however, Mr. Stephens reached the grand staircase of the Castillo:—

"The steps, the platform of the building, and the whole area in front were over-grown with trees, large and principally ramon, which, with their deep green foliage and the mysterious buildings around, presented an image of a grove sacred to Druidical worship. Our boatmen and Molas cut a path up the steps, and, carrying up their loads, in an hour we were domesticated in the Castillo. We had undertaken our long journey to this place in utter uncertainty as to what we should meet with; impediments and difficulties had accumulated upon us, but already we felt indemnified for all our labour. We were amid the wildest scenery we had yet found in Yucatan; and, besides the deep and exciting interest of the ruins themselves, we had around us what we wanted at all the other places, the magnificence of nature. Clearing away the platform in front, we looked over an immense forest; walking around the moulding of the wall, we looked out upon the boundless ocean, and deep in the clear water at the foot of the cliff we saw gliding quietly by a great fish eight or ten feet long. * * The building, including the wings, measures at its base one hundred feet in length. The grand staircase is thirty feet wide, with twenty-four steps, and a substantial balustrade on each side, still in good preservation, gives it an unusually imposing character. In the doorway are two columns, making three entrances, with square recesses above them, all of which once contained ornaments, and in the centre one fragments of a statue still remain. The interior is divided into two corridors, each twenty-six feet long; the one in front is six feet six inches wide, and had at each end a stone bench, or divan; and again on the walls we found the mysterious prints of the red hand."

Mr. Catherwood's illustrations are required to give a full idea of the impressiveness of these picturesquely situated ruins. Here Mr. Stephens first found vestiges of walls, watch-towers, and gateways, enclosing these mysterious cities; more than one adoratorio, or altar, was also discovered, with stucco ornaments. In short, the object of which our intelligent and enterprising author was in quest, was here fully attained; and we will give the summing up in his own words:—

"Under the circumstances attending our visit to it, we found this one of the most interesting places we had seen in our whole exploration of ruins; but I am compelled to omit many details deserving of description and comment, and shall close with one remark. The reader knows the difficulty we had in reaching this place from the interior. The whole triangular region from Valladolid to the Bay of Ascension on one side, and the port of Yalahao on the other, is not traversed by a single road, and the rancho of Molas is the only settlement along the coast. It is a region entirely unknown; no white man ever enters it. Ruined cities no doubt exist, and young Molas told us of a large building many leagues in the interior, known to an old Indian, covered with paintings in bright and vivid colours, and the subjects of which were still perfect. With difficulty we contrived to see this Indian, but he was extremely uncommunicative; said it was many years since he saw the building; that he had come upon it in the dry season while hunting, and should not be able to find it again. It is my belief that within this region cities like those we have seen in ruins were kept up and occupied for a long time, perhaps one or two centuries, after the conquest, and that, down to a comparatively late period, Indians were living in them, the same as before the discovery of America. In fact I conceive it to be not impossible that within this secluded region may exist at this day, unknown to white men, a living aboriginal city, occupied by relics of the ancient race, who still worship in the temples of their fathers. The reader will, perhaps,

Digitized by Google

think that I have gone far enough. We had now finished our voyage along the coast, and the end which we had in view was fully accomplished. We had seen, abandoned and in ruins, the same buildings which the Spaniards saw entire and inhabited by Indians, and we had identified them beyond question as the works of the same people who created the great ruined cities over which, when we began our journey, hung a veil of seemingly impenetrable mystery. At that time, we believed the discovery and comparisons of these remains to be the surest, if not the only means, of removing this veil; and though other proofs had accumulated upon us, these were not on that account the less interesting. Our journey in this direction is now ended, and our course is homeward. We were detained one day at Tancar by a storm, and on Tuesday morning the patron came to us in a hurry with a summons on board; the wind had veered so that he could get out of the harbour; and, bidding good-by to the carpenter and Molas, we were soon under way. The wind was still high, and the sea so rough, and kept the little canoa in such commotion, that in half an hour nearly all our party were sea-sick. The servants were completely disabled, and there was no chance for a dinner. We had a strong wind and fair, passed several small square stone buildings, like those of which representations have been given, but, on account of the rough sea and rocky shore we could not land, and late in the afternoon put in at Nesuc, where we had stopped before, distinguished by its solitary palm tree."

We might very possibly have found livelier passages in Mr. Stephens's book, but assuredly nothing more picturesque than his glimpse at these forsaken places. Here, however, we must take leave, but we hope to meet Mr. Stephens again and again.

The American Book Circular. Wiley & Putnam.

THIS is a classified list of the more important and recent American publications. Our readers, however, will be principally interested in a preliminary paper, in which the publishers (Messrs. Wiley & Putnam) defend their countrymen from charges, often preferred, of indifference to the claims of literature and literary men—of systematic literary piracy—and of patronizing an infamous and demoralizing newspaper press. On the first point, the writers observe,—

"The fact that *nine editions* of Prescott's 'Ferdinand and Isabella,' (an expensive work in three volumes octavo, equal to the London edition in style, &c.); that 12,000 copies of Stephens' 'Central America,' (also expensive—two octavos), and at least as many of his other works, have been sold in the United States in about four years, is perhaps sufficient proof, that those two writers also are not entirely neglected by their own countrymen. We may also mention in this connexion, the sale of more than 4,000 sets of Washington's writings, in twelve octavo volumes; of about the same number of Franklin's works, in ten volumes; the publication of such books of travel as 'Robinson's Researches in Palestine;' Stephens, and others; in Science, as the translation of the 'Mécanique Céleste,' with a commentary of nearly the same bulk, forming four large quartos; 'The Natural History of the State of New York,' in ten quarto volumes, produced at an expense of 40,000*l.* (200,000 dol.); the sale of *nine* editions of Bancroft's History of the United States; and other elaborate works; and the publication, chiefly within ten years, of no less than 120 different novels, original and copyright; and of 110 different poetical works."

To these may be added school books and children's books out of number; as a class excellent, and almost all of home manufacture.

Another charge preferred against the Americans, by Mr. Alison, is of indifference to their historical records and monuments. We confess, that this appears to us singularly unjust. Our own library shelves would almost enable us to refute it. But assuming that there had been indifference on the part of the government, the Historical Commemorations alone, a custom peculiar to America, must, from their nature, tend to collect and preserve such a mass of historical information, as no other country has ever possessed, or can ever hope to possess. Every town, indeed, has its history and its historical records; and the labour of selection will be the great difficulty in the way of the future historian. However, let the Americans adduce their proofs of its injustice.

"The publication of more than fifty octavo volumes of the historical memoirs and correspondence of Washington, Franklin, Jay, Jefferson, Hamilton, Madison, Morris, Adams, and many other statesmen; of twenty volumes of Diplomatic Correspondence; of three or four biographical collections, and as many historical, statistical, and commercial Journals, continued for several years; the three folio volumes, commencing a series of 'American Archives,' arranged by Mr. Force, under Congressional authority; the collection of American State Papers, in about forty folio volumes; the existence of at least two thousand volumes of documents, published in successive years, by the two houses of Congress, and the various state legislatures; the systematic collection and arrangement of the *original* public archives, commenced in Massachusetts, under the direction of the government, and continued by other States; the collections of the Historical Societies of Massachusetts, twenty-six volumes, of New York, of Pennsylvania, of Connecticut, of Rhode Island, of New Hampshire, of Georgia, of Ohio! and many more."

The question of an international law of copyright is not touched on; but in proof that all the piracy is not on one side, it is observed that Englishmen read more American books than is generally supposed:—

"The case of 'the oldest' *London Review* appreciating the articles of the *North American* well enough to appropriate some of them entire, *as original, accidentally* omitting to mention their origin, is not a solitary one. American periodicals have contributed 'considerably' to some of those in England, in mutually innocent unconsciousness. Some few American writers would scarcely recognise their own offspring under their new names and foreign dress; and authors are apt to take some pride in their bantlings, whether clever or otherwise. Who, in looking over a list of titles, would suppose that 'Quebec and New York, or the Three Beauties,' was the same as 'Burton, or the Sieges;' and 'Cortes, or the Fall of Mexico,' a reprint of 'The Infidel;' that 'The Last Days of Aurelian' is no other than Mr. Ware's 'Probus, or Rome in the Third Century;' and 'Montacute' only a new title for 'A New Home;' that Mr. Muzzey's 'Young Maiden' and 'Young Wife' are *translated* into 'The *English* Maiden,' and the '*English* Wife,' and Mr. Sparks's 'Life of Ledyard, the *American* Traveller,' is only made more attractive as 'The Memoirs of Ledyard the *African* Traveller' (anon.); and two volumes of his 'Writings of Washington,' in twelve volumes, are reprinted with the original title, and apparently as if complete? Dr. Harris's 'Natural History of the Bible;' Bancroft's Translation of Heeren's Politics of Greece; Mr. Everett's Translation of Buttman's Greek Grammar, were all reprinted and sold as English books. Judge Story's 'Law of Bailments,' was 'chopped into fragments,' and appended here and there, by Mr. Theobald, in his Notes on Sir William Jones. These are a few specimens;—in most of them, the *preface*, &c., is sufficiently altered to conceal their origin, and in several the author's name is *suppressed*. One more may be mentioned:—Mr. Neal, of Philadelphia, published, about 1839, a volume, called 'Charcoal Sketches,' with illustrations; his name appended in full. This volume appears *entire*, plates and all, in the *middle* of 'Pic-Nic Papers,' &c., 'edited by C. Dickens, Esq.,' 3 volumes, London, 1841. Mr. Neal, no doubt, would have been proud of his company, if his patron had not introduced him as a *nameless* person! 'A volume has been appended,' (to make the orthodox *three*,) 'from an American source,' says the editor; 'but not a syllable about the name, either of author or book!'"

Now of the general truth of this disgraceful statement we have no doubt; and therefore, on behalf of American, as of British authors, we shall continue to urge, and all the more emphatically, the necessity, the policy, and the justice of an international law of copyright. But, as Mr. Dickens has a name of weight and authority, especially with reference to this subject, we will observe that the 'Pic-Nic Papers' was, if we mistake not, an avowed gathering of *gratuitous contributions, gratuitously edited* by Mr. Dickens, and published for the benefit of the widow and children of Mr. Macrone, the bookseller. It is more than probable, therefore, that all the favour asked of Mr. Dickens was permission to print his popular name in the title-page, with a few words of introduction. Against this double-dealing system we have, as our readers know, again and again protested—but, if any circumstances can excuse it, they are included in this statement of facts.

Another mischievous consequence arising out of these piracies, of even a more serious nature than the original "appropriation," is, the liberty which the pirates take of "adapting" the work to their special market, to the manifest injury of the reputation of the author. The extent to which this has been carried may be judged of by one fact:—The *Westminster Review* favourably noticed the well-known Peter Parley's works, quoting, however, a series of "*Americanisms*," which "disfigured" them. Now every one of these quotations proved to be from the interpolations of the London publishers! Not *one* was written by Peter himself, or is to be found in the American editions!

With reference to the article in the *Foreign Quarterly*, on the state of the press, the writers observe:—

"The *Foreign Quarterly* article on the Newspaper Press of the United States (endorsed by Mr. Dickens), has at its head as text, the names of *eleven* newspapers (out of about 1,600 in the country), while at least nine-tenths of the censurable extracts, to prove the writer's views, are from *one* paper, the *New York Herald:* and from *eight* out of the eleven, not a *single line* is quoted, either for praise or censure! The *candid* writer of the article forgets to mention that this same *Herald*, the disgrace and curse of the country, is entirely owned and conducted by *foreigners*. He refers to the *circulation*, as boasted for obvious purposes, by its editor, and doubtless much exaggerated. Do not the English stamp returns show a greater circulation of the ——— than of almost any other paper? And are we then to infer that that paper is the best index of the tastes, opinions, and literature of the English people? Mr. Dickens refers all doubtful readers to the papers themselves for proof of this 'perfectly truthful' article. If any one took the trouble, did he find that either of those eight papers, with all their imperfections, deserved the atrocious character which is disingenuously fastened upon them by extracts—not from themselves, but from the *New York Herald?* We would second the suggestion—'let the malefactors be *examined.*' 1,640 American newspapers are certainly not immaculate; deficiencies in ability, in courtesy, and in integrity, may, without question, be fairly charged upon many in this vast number, and in particular upon such as are blindly enlisted in political partizanship; but the ——— is scarcely a fair specimen of the English press, nor is the *New York Herald* a representative either of the American newspapers or American people."

There are facts in this statement which we thought our readers might like to peruse.

OUR LIBRARY TABLE.

Melanthe: or, the Days of the Medici, a Tale of the Fifteenth Century, by Mrs. Maberly, 3 vols.—Some reading, some passion, and some power, have gone to the confection of this romance: yet, we fear, that not many will have courage to thread its mazes from first to last; for the reading is so anxiously displayed, as to suggest a mistrust of the general stores of the authoress; and the passion wanes too often into sentiment; while, on the other hand, (as must be the case in a woman's book, treating of one of the Borgias as principal actor) it as often stops short of the reality. Lastly, power is more than once abused: *vide* the horrible inquisition scenes in the third volume, which are painted in the colours of the shambles, not the artist's *studio.* In the first volume, we are at Constantinople, called in to witness the tragedy of Mahomet and Irene; in the second and third, we get involved in the Florentine conspiracy of the Pazzi. The heroine's parentage, and the unfortunate circumstances of her infancy, are detailed in the earlier: her love-trials, and the persecutions to which she is subjected, in the later portion of the story. Many of the passages are well written, but the want is life beneath the colouring, and character to give reality to the action. It is all hearsay work. Why will so few of our female authoresses tell us of the world with which they are familiar? Truth will al-

Digitized by Google

ways be popular at the moment when it is told, and may become classical when the novelty has passed; witness Miss Edgeworth, Miss Austen, Mrs. Marsh; witness homely Frederika Bremer, with her details of Swedish bakings and brewings,—of a heroine past her prime; and a hero, who smokes, chews, and is not ashamed of his habits. We should have conceived few things less likely to interest the reading public, at the present juncture, than a story made up of such materials; yet this 'The Neighbours' has done: and this is what, we fear, 'Melanthe' may never hope to do.

Raymond: a Tale of Truth.—The worn-out adage that "Truth is stranger than Fiction," will hardly help us here: since, paradoxical though it may seem, unusual adventures are made in 'Raymond' to assume an air of common-place, by a bald manner of narration; and strong passions produce no more forcible effects than the forms of drawing-room parlance, so tamely are they expressed in dialogue. In short, when we have stated that the tale embraces scenes in India as well as in England, and that it is well-meant, we have said as much as its merits demand.

Observations on Medical Institutions in France, Italy, and Germany, by Edwin Lee, M.R.C.S.—This is a new and an enlarged edition of a work that has been some time before the reading professional public. Mr. Lee is known to our readers as a keen enemy to homœopathy and animal magnetism (*Athen.* Nos. 555, 556). We add the additional testimony he brings forward respecting the first, as the result of his second visit to Leipsic, the quondam residence of Hahnemann, and head quarters of homœopathy:—"At my last visit, I heard that matters were going on but indifferently with homœopathy, the hospital, for want of funds having been turned into a dispensary: an *exposé* was likewise made about two years ago by a house physician, who having become convinced, during a residence of some time in the establishment, of the nullity and danger of homœopathy, resigned his appointment, and published an exposition of the system pursued, with an account of the cases, which clearly shows—what had been long evident to the profession—that the so-called cures were recoveries from ordinary ailments by the efforts of nature, the cases, as in the above instances, being mostly a long time under treatment; whereas, by proper medication, and attention at the outset, they might, in all probability, have been cured in a few days; and, on the other hand, that many of the more serious cases got worse, instead of better, for the want of efficient treatment."

Elements of Chemical Analysis, by E. A. Parnell.—Another and a valuable addition to the library of the student, which admits not of analysis. Chemistry is especially a science in which the student must work for himself; and every one who has approached the subject must have felt the want of such a help as that which is here offered.

List of New Books.—Black's General Atlas, new edit. in Monthly Parts, comprehending 61 folio Maps, and Index of upwards of 50,000 Names, 6*s.* swd.—The Early History of Rhode Island, an Historical Discourse, by J. Callender, M.A., with Memoir of the Author, by R. Elton, 8vo. 6*s.* 6*d.* cl.—Eyre's Affghanistan, 4th edit. complete, post 8vo. 12*s.* 12*s.* cl.—The Man-o'-War's Man, by Bill Truck, 12mo. 6*s.* cl.—Ragland Castle, a Tale of the Great Rebellion, by Mrs. Thomson, 3 vols. post 8vo. 31*s.* 6*d.* bds.—The Man of the People, by C. G. Rosenberg, 3 vols. post 8vo. 31*s.* 6*d.* bds.—Bunyan's Pilgrim's Progress, with Life of the Author, by the Rev. Robert Philip, pictorial edition, super-royal 8vo. 18*s.* cl.—The Christian's Daily Companion, a series of Meditations, by Clergymen of the Church of Scotland, royal 8vo. 21*s.* cl.—Marryatt's Believer's Manual, 16mo. 3*s.* 6*d.* cl.—Taylor's Hymns for Infant Minds, 34th edit. 18mo. 1*s.* 6*d.* cl.—The Psalter, with Gregorian Chants, 32mo. 2*s.* cl. swd.—M'Neile's Lectures on the Passion Week, 12mo. 4*s.* 6*d.* cl.—The Baroness, a Tale, post 8vo. 10*s.* 6*d.* cl.—Legends, Lyrics, and other Poems, by B. Simmons, 12mo. 7*s.* 6*d.* cl.—A Grandmother's Advice to Young Mothers, by Lady Mountcashell, 12mo. 6*s.* cl.—Thomson's Universal Gazetteer, with 32 Maps and Plans, 8vo. 18*s.* cl.—A Voyage of Discovery to the North Pole, by Capt. F. W. Beechey, R.N., 8vo. 14*s.* cl.—Borrow's Gypsies in Spain, 2nd edit. 2 vols. post 8vo. 18*s.* cl.—Life in the West, 2nd edit. post 8vo. 10*s.* 6*d.* cl.—Gilbert's Map of the Heavens and Guide to the Comet, 6*d.* on card.—European Geography, by J. J. Gaskin, 12mo. 1*s.* 6*d.* cl.—The Waverley Novels, Vol. V. royal 8vo. 20*s.* cl.—Broun's Baronetage for 1843, 12mo. 7*s.* 6*d.* cl.—The Medical Jurisprudence of Insanity, by J. M. Pagan, M.D., 8vo. 6*s.* cl.—Lectures on the Eruptive Fevers, by George Gregory, M.D., 8vo. 7*s.* 6*d.* cl.—Simms on the Principles and Practice of Levelling, 2nd edit. 8vo. 5*s.* cl.—The Handbook of Painting in Water Colours, 32mo. 1*s.* swd.—The Overseer's Guide, 18mo. 1*s.* swd.—The Constable's Guide, 18mo. 1*s.* swd.—Everard's Preparatory Latin Grammar, 12mo. 2*s.* cl.

AN APRIL HYMN.

Fountain of good—dear God!—thou that dost make
The sap to flow,
And, safe from floods, the snowdrop's trance dost wake,
Far 'neath the snow,
Why o'er the heart still leavest thou to break
Rivers of woe?

It must be that the heart offendeth thee—
That there is wrong
Somewhere in secret, which no eye can see,
Some sin too strong—
Thou that hast friend and father been to me,
My poor life long!

A soul of sorrow liveth in the flowers
That seem so glad;
It floats and breathes along the lustrous hours,
As if it had
A privilege immortal, which empowers
To make me sad.

I must have wandered from the one bright way
So early taught,—
The sense of transport could not else decay,
Which thou hadst wrought
Into the eternal spirit of this clay
With each Spring thought!

Well I remember how I thrilled, to mark
The soft hours roll,
That brought the violet to my lonely ark!—
I near life's goal;
But that Old Spring is past,—and ye are dark,
My Days of Soul!

'Tis well to be a mourner,—well to feel
My glad hope die;
And sicken at the tears that daily steal
O'er the dimmed eye,
If this strong Desolation should reveal
Where my sins lie.

Oh! tenderest chastener! whom in love, not fear,
I dare adore,
Offending whom, I have no comfort here
On this green floor!
Forgive! or when the flowers are on their bier,
Wake me no more!

E. L. MONTAGU.

ROYAL ACADEMY.

Sir R. Westmacott's Lectures on Sculpture.

LECTURE IV.

THE observations of the Professor were confined chiefly to the examination of the principles on which the ancient sculptors constructed their compositions. He said it would not be possible, in his reflections upon this subject, to separate the consideration of the mechanical from the mental or philosophical qualities or relations that are found to pervade their works. The first—the mechanical—is exhibited in the skilful disposition of the lines and balance of the masses, and in an agreeable variety in the combinations; the second, in the adoption of such forms as are consonant with the spirit in which the artist has conceived his subject; and by making the parts not only in union with each other, but subservient to a whole, conducing to that general harmony, by which an impression is to be produced, or any desired effect increased.

Composition in all the arts is subject to the same general rules, though it is much more limited in Sculpture than in Painting. In this art, Composition in what is technically termed the *round*, may be classed under three distinct heads: Simple—as it applies to construction in a single object, as, for instance, in the Apollo Belvedere; Columnar—when there are two or more objects whose base is confined, or nearly parallel with its bulk, as in the group of Venus and Cupid in the Vatican, Bacchus and Ampelus in the British Museum, Hercules and Antæus, and the group of Cupid and Psyche; Pyramidal—as in the group of the Laocoon, Hæmon and Antigone, and the Toro Farnese. The simple may be applied in Alto and Basso Relievo; but in this branch of sculpture, composition generally is extended to more complex disposition and arrangement, taking the oval, circular, square, or other geometrical forms, which, by well balanced combinations, may be carried to any extent; as may be seen in the Phigalian frieze, and other compositions of the kind.

A composition, whether it is simple or complex, must be true to Nature, on which all imitative art is founded. It must necessarily be governed in the balance of parts by her laws, and there is no example in the best ages of Greek sculpture in which these laws are violated. In the Belvedere Apollo, for instance, the action of the statue is carried to the greatest extent of which Nature is capable. Had the sculptor gone further, the just balance of the figure would have been destroyed, and the whole sentiment of the statue lost. Among the best examples of justly balanced, and therefore agreeably composed, Grecian statues, which do not depend upon accessories, are the Meleager, the Antinoüs—or, more properly, Mercury—of the Vatican, and the Jason. Among modern works, the bronze Mercury of Giovanni di Bologna, in the gallery of Florence, is pre-eminent. Independently, however, of the application of balance as a means of producing harmony in composition, there is an additional and powerful necessity for the observance of equal or just quantities in sculpture, in which a false calculation may prove fatal to a work.

The Professor remarked, that Composition, when it applies to the distribution and arrangement of matter, must be considered quite distinct from the invention which suggests that arrangement. The former is the part or work of Art: the latter has its rise in the genius of the artist; but a faculty of no mean character is required to combine or unite this matter skilfully and agreeably. The effect of the whole depending on the harmonious agreement of the forms, or a due regard to the places these should occupy, and on the absence of all restraint, they should be in unison with the action or passion intended to be represented, so that the sentiment may be conveyed in that significant and intelligible manner which will at once produce the effect required. The Greek sculptors appear to have felt strongly the great advantage to be derived from simplicity of construction, as well as from the avoidance of unnecessary and extraneous matter, in composition. It will be observed in the works of the best ages of Grecian art, that only such matter and incidents are introduced as are immediately applicable and appropriate to the subject, and all accessories which do not necessarily and essentially add to the grace, dignity, or effect of the whole are omitted. It is the multiplicity of small and unimportant parts, and the disregard of this valuable principle of simplicity, which so frequently adds to the difficulty of deciphering the subjects in many of the relievi which are found in sarcophagi of the later periods of Roman sculpture. The Roman artist followed, with respect to forms, the example of the Greeks in the filling in of the divisions of their compositions, but they appear to have overlooked, or perhaps they never understood, their principles. They outstepped the modesty of nature, and, in consequence, the complication of matter produced confusion and disorder, and instead of assisting the illustration of the subject, the attention is disturbed and fatigued, and the eye has no point on which it can repose with satisfaction. It is at the same time very important to bear in mind that composition is not confined only to the arrangement of the great mass, but must be extended to the study of the subdivisions of that mass, and the forms those subdivisions would assume. This consideration is necessary in all extensive compositions in which much action or excitement is to be expressed. The subordinate forms in the composition which a crowd, for instance, would assume, should be in accordance with the prevailing sentiment in the mass, whether of attention or repose, or of their opposites, as of turbulence, fear, exultation, or whatever motive happens to influence it. The former—the more tranquil—would be found to act in squares, parallelograms, or other composed or simple forms. The latter, in figures of a more irregular character, as acute-angled triangles, rhomboidal or trapezoid forms. Gaiety, or the dance, would take forms of corresponding harmony.

The Professor observed, there are many works in the Academy (alluding to the collection of plaster casts) which, though they are not of a character sufficiently complete to be recommended to the students as models in the class of form, still possess qualities

Digitized by Google

which, as their judgment becomes matured, might be profitably consulted on other grounds. There is, he remarked, scarcely any work of the Greeks in which there is not some peculiar and distinguishing quality to render it worthy of study and attention. The group of Niobe and her Children is of this number, and, as an example of beauty and expression, is of the highest order. The same observation would apply to the extensive composition of figures known as Apollo and the Muses.

Apollo, in this group, is characterized as *Musagetes*, or the leader of the Muses, and the graceful action in the statue, and the elegant disposition of the drapery, justify the high consideration in which we may presume its prototype was held by the ancients from the numerous copies of it which are left us in marble, as also from the same figure so often recurring on coins and medals. The original statues are generally believed to have been the work of Timarchides, the Athenian. The circumstance of their being selected for the decoration of so distinguished a place as the Palace Portico of Octavia confirms the conclusion that the statues we have are copies, by Grecian sculptors who had sought an asylum at Rome on the dismemberment of their own country.

The Olympic Games assisted in giving to the Greeks their martial spirit; but in that ardour of emulation, and love of glory, which those institutions encouraged, they were not unmindful of the milder virtues: thence the most beautiful allegory which perhaps was ever conceived, was embodied in the Muses.

Fabled as the daughters of Jupiter and Mnemosyne, or, in other words, the offspring of Intelligence and Memory, they were presumed to preside over every art which adorned existence, or contributed to the civilization and happiness of man. They recalled the remembrance of benefits conferred; they promoted benevolence, and presented to the mind pleasing and agreeable images. The brilliant imagination of the poets gave the attributes by which they might be distinguished, themselves becoming the invokers of the divinities they had created. That beneficent luminary who received the homage of the world was, under the name and image of Phœbus or Apollo, their protector, and he was supposed to be ever present with them. Diana, or Chastity, was their constant companion, and the Graces were given them as their attendants. Apollo, in this group, is habited in the palla, his peculiar dress, as described by Tibullus and other authors when he was represented as the god of Poetry and Music. The chlamys is thrown negligently over his shoulder. This statue is, perhaps, the most elegant in the whole series. The *motive*, or intention, expressed by the action, is that of heavenly inspiration. The drapery is broad, and on a beautiful principle, and all the minor divisions are nicely adapted to display the form. It will be observed, that the Greeks, in all clothed statues, were attentive to the general divisions of the figure; even the chest was indicated, the hip decidedly defined, and one or both knees, whenever possible, were marked; and so carefully was this principle observed, that there is not a Grecian statue in existence in which, however fully it may be dressed, the forms and action, or, in other words, the intention of the figure, may not be discovered.

Of the statues of the Muses in this group, the most distinguished in the class of composition to which they more immediately belong, are Euterpe, Thalia, Melpomene, Erato, and Polyhymnia.

There is no statue in this collection which we contemplate with greater regret for the loss of the original, or which excites a stronger desire that its prototype may yet be restored to us, than that of Melpomene. The action is imposing and characteristic of the Muse; and, notwithstanding its great faults, the air of majesty and grace, of noble and profound melancholy, which pervades it, moves us sensibly on beholding it. There is a mixture of sternness, and yet of fascinating beauty, in the head of this statue, and a grace throughout the whole *busto*, which are peculiarly striking; and the rich and full masses of the hair, picturesquely combined with the Bacchic wreath of vine-leaves and fruit, render it altogether one of the most enchanting productions transmitted to us of ancient Art.

There is a coarseness of execution throughout the whole of these statues by no means in accordance with their composition or the sentiment which pervades them. This is one of many reasons for believing them to be copies by inferior artists. It is not improbable that with accessories at the termination, they may originally have occupied the pediment of a building. These statues are also excellent examples of simple composition, as it applies to action or construction in a single object. The Professor closed some remarks he had made on the judgment shown by the Greeks in their choice of momentary action, and harmonious combination of invention and composition, by some observations on the Belvedere Apollo.

This statue, he said, may justly be considered an intellectual work; it is the finest model in existence of the sublime in what is termed Ideal Art. The mind of its great artist appears to have been raised to that conception of character which was not only appropriate to a god, but to the god of eternal youth and beauty. It is the union of all that is beautiful in thought, rendered visible through matter, without the grossness of materiality. The head supplies a fine example of judgment in the preservation of character without the slightest violation of beauty. The scorn expressed in the inflation of the nostrils, the contempt in the lower lip, and pride in the brows, are so regulated by the grand and open simplicity of the forehead, that we find nothing derogating from the dignity of the god. Self-possession and tranquillity reign throughout the whole. The head of the Apollo conveys more instruction than any other in existence, and he who is fully acquainted with, and capable of producing an exact imitation of that head, (and the same may be said of the feet, as regards those extremities,) may say he is thoroughly grounded in the grammar of his Art.

In Columnar composition, or that class of arrangement which includes two or more objects, whose base is confined, or nearly parallel with its bulk, a very pleasing example may be seen in the group of Cupid and Psyche. There are few compositions which, for the interlacing of lines and harmony of the parts, are more agreeable to the eye. Pyramidal composition assumes, in a great degree, a different character from the preceding classes, in not requiring so strict an adherence to the balances of the angles, such compositions being often intended for particular situations, and, consequently, limited points of view. The best exemplification of this class of composition, is the marble group of Laocoon and his sons.

This group supports the observations already made, that the general form of a composition should be agreeable to, or consonant with, the prevailing sentiment in the subject. It is so with the group of the Laocoon; a mere blot of the composition would be indicative of excitement, and of a perturbed subject.

Alto and Basso Relievo differ much in the principle and character of their composition from the classes hitherto considered, in which, the object being to produce an immediate effect, there was a necessity for compression.

In Alto and Basso Relievo, which, both from surface and extent, approaches more nearly than any other branch of Sculpture to the sister Art, there is always less necessity for this compression. Assuming the character of a narrative, it admits of all such simultaneous incidents as belong to the subject; and this enables the sculptor to diversify his work, for where the incidents are judiciously contrasted, the variety not only heightens the effect of each, but renders the whole agreeable to the eye.

In considering the compositions of the Greeks as they apply to Alto or Basso Relievo, and especially in compound or complex arrangements, their combinations will be found so constructed and balanced, that even by transposition the connexion or mutual harmony is not affected. A valuable illustration of this is afforded in a well-known alto relievo of Niobe and her Children, which forms the subject of the front of a sarcophagus in the collection of sculpture in the Vatican. This work is of a late age, and is rude in its execution, but the invention, expression, and other high qualities that are found in it, prove it to be the production of a very superior mind.

This composition is a perfect whole, and yet the parts, of which that whole is composed, are also perfect in themselves, and they maintain their places without affecting other parts, but are capable again of admitting their combinations.

Speaking of the merely mechanical qualities of Composition, the Professor took occasion to observe that an artist may be a tolerable composer, without possessing, in any great degree, the faculty of invention. But he begged the students to bear in mind, that it is in proportion only to the degree of power with which the inventive faculty is exercised, that a composition affects the spectator.

Very good examples of merely mechanical arrangements may be seen in many of the sarcophagi of the later periods of Roman Art, more especially in those of the age of Commodus.

CHARACTERS IN 'CYMBELINE.'—III.

Imogen and Pisanio.

The more we find it to be generally admitted, that Shakespeare designed his Imogen as a type of feminine excellence—a model of rich, genuine, delicate, and cultivated womanhood,—the more important it seems that we should truly estimate the qualities with which he has really endowed her;—since it is plain that any appreciation of them that falls short of the standard to which the dramatist has raised them, becomes a derogation either from the power of Shakespeare's own genius, or, which is a more injurious error still, from the dignity of that sex whose charms and whose merits he has here undertaken to personify and to celebrate.

First of all, then, let us observe, how studiously the poet has insulated the moral and intellectual beauty of the attachment between the heroine and her lover, amid the weakness, wickedness, and meanness of the court which surrounds them. It sparkles in lustre, like the diamond which Imogen places on the finger of her husband; it trembles in loveliness, like the parting kiss which she "had set between two charming words." Her mother dead, her brothers stolen in their infancy, how must the heart and mind of Imogen have grown up in sympathy with her orphan playmate, so brave and gentle, so graceful, intelligent, and accomplished. How pure and perfect their reciprocal affection, is beautifully shown in the two passages, where Imogen says of Posthumus to her father—

> He is
> A man worth any woman—*overbuys me*
> *Almost the sum he pays,*—

and where Posthumus himself says to Imogen,

> As I my poor self did exchange for you,
> *To your so infinite loss, &c.*

This is the very religion of true and happy love—it thinks not of *giving*—imagines not that it gives at all—it is all boundless gratitude for what it *receives*.

This lady "fair and royal," in uniting herself to this "poor but worthy gentleman," has but been true to her early affections and her matured judgment: the folly, inconsistency, and falsehood, lie all in her weak father, ruled by her wicked step-mother, who would fain marry the heiress of the kingdom to her worthless and booby son. Thus the dramatist has taken care to show his heroine, from the very beginning, notwithstanding her clandestine marriage, free from the taint of disobedient self-will. By drawing the character of Cloten, too, at full length, showing it in thorough contrast with that of Posthumus and in utter repugnance to that of Imogen, we are made yet more forcibly to feel how fully and how justly her intellect has sanctioned her own disposal of her heart.

That intellect, indeed, not only beams serenely above the agitation of her own feelings, tenderly thrilling as that agitation is; but the light of it, radiant in her words, discovers to us the true aspect of every character about her. She is not only the most exquisitely feeling, but the most keenly penetrating person of the drama,—not only the finest poet of the piece, but the noblest moralist also. How admirably do her very first words hit off the whole character of her step-mother—

> Oh
> Dissembling courtesy! How fine this tyrant
> Can tickle where she wounds!

How convincingly does she state her father's cruel folly! And how truly expressed are the respective characters of her husband and her suitor in the metaphor, "I chose an eagle, and did avoid a puttock." And then, what a charming developement of this parallel of hers do we find in the following passage of her subsequent altercation with Cloten, wherein, still to borrow her

Digitized by Google

own expression, she is "sprighted with a fool, frighted, and angered worse:"—

Cloten. You sin against
Obedience, which you owe your father. For
The contract you pretend with that base wretch
(One bred of alms, and fostered with cold dishes,
With scraps o' the court), it is no contract, none—
And though it be allowed in meaner parties
(Yet who than he more mean?) to knit their souls
(On whom there is no more dependency
But brats and beggary) in self-figured knot;
Yet you are curbed from that enlargement by
The consequence o'the crown; and must not soil
The precious note of it with a base slave—
A hilding for a livery—a squire's cloth—
A pantler—not so eminent.
Imogen. Profane fellow!
Wert thou the son of Jupiter, and no more
But what thou art besides, thou wert too base
To be his groom: thou wert dignified enough,
Even to the point of envy, if 'twere made
Comparative for your virtues, to be styled
The under-hangman of his kingdom, and hated
For being preferred so well.

How delicious, again, the dignified familiarity of her communing with her master's faithful servant Pisanio, and his affectionate veneration for her, making him proof against all the temptations held out by the ambitious and crafty step-mother, to induce him to avail himself of the place he holds in his lady's confidence, to incline her to forget his banished lord,

Who cannot be new-built, nor has no friends
So much as but to prop him.

The dramatist, we see, was sensible that the refinement, no less than the constancy, of affectionate feeling was a quality indispensable to the personage whom, in the character of a confidential servant, both to his hero and his heroine, he designed to be the guardian genius of their mutual faith and love, amid those formidable trials of both which were to make the leading interest of the drama. To no vulgar follower, however steadily attached—to none but a delicate as well as intelligent spirit—could Imogen have been represented as unbosoming all her sweetest and tenderest emotions of affection and solicitude for her absent lord. How beautifully is this interesting position of Pisanio, as the one sure medium of communication between two such hearts, first brought before us in that early scene where, after being anxiously sent back by his departing master to attend upon his otherwise unprotected mistress, she, in turn, despatches him to the haven, to bring her the very, very latest intelligence of his master's safety. And how her clear, bright imagination keeps pace with her ardent feeling, in the scene where Pisanio so expressively describes her lord's embarkation:—

I would have broke mine eye-strings; cracked them,
But to look on him; till the diminution
Of space had pointed him sharp as my needle;
Nay, followed him, till he had melted from
The smallness of a gnat to air; and then
Have turned mine eye, and wept!—But, good Pisanio,
When shall we hear from him?

Again, how clearly does she render to us all the bearings of her position, as well as the whole cast of the feelings resulting from it, in the brief soliloquy:—

A father cruel, and a step-dame false;
A foolish suitor to a wedded lady,
That hath her husband banished;—O, that husband,
My *supreme crown of grief*—and those repeated
Vexations of it! Had I been thief-stolen
As my two brothers, happy!—but most miserable
Is the desire that's glorious! Bless'd be those,
How mean soe'er, that have their honest wills,
Which seasons comfort!

How effectively, too, this precedes the appearance of Iachimo, introduced to her by Pisanio—

Madam, a noble gentleman of Rome
Comes from my lord with letters,—

and her delighted agitation in opening and perusing them—

So far I read aloud—
But even the very middle of my heart
Is warmed by the rest, and takes it thankfully.

Let us mark the beautiful clearness of intellect as well as purity of heart which she manifests throughout this trying scene. Already, in treating the character of Iachimo, we have shown how her interest and her confidence are bespoken, absolutely commanded, for that visitor by the terms of her husband's letter which he bears—how the door is closed in her mind against all suspicion of the Italian's character and intentions, by her beloved Leonatus's own hand. She feels the kindest solicitude for one whom her husband owns as his benefactor. His abstracted and disordered behaviour first of all makes her fear that he is unwell,—next, that something ill has befallen her husband. It is from no weak simplicity, but through the most logical deductions, that she accepts all his exclamations and disclosures as sincere, until, oppressed by the sense of calamity rather than of wrong, she so simply and beautifully says, "My lord, I fear, has forgot Britain;" and adds, in answer to her informant, who goes on, adding to her load of already intolerable anguish, "Let me hear no more!" Iachimo, we see, here overacts his part. The disgusting detail into which he immediately enters, as to the way in which, he says, her husband spends the money drawn from her own coffers, instead of strengthening her conviction and rousing her resentment, as he had anticipated, has precisely the contrary effects. It both affords her time to recover from the first stunning shock given to her mind by such a communication acting upon the unguarded confidence into which she had been betrayed, and by the very overcharging of the picture which he draws, begins to awaken her incredulity as to the truth of the representation. And so soon as he has ventured on his insulting proposal, how finely does the clear activity of her intellect appear in her instant call for the faithful Pisanio, whom her treacherous visitor had designedly sent away on a feigned errand, to look after his own servant. Such a demonstration as this, from any woman in the like circumstances, whatever consciousness of physical weakness it may show, is an eminent proof of moral energy and ready self-possession. It is one of the many instances, in the course of Shakespeare's development of this character, which show her so remarkably endowed with practical as well as speculative wisdom. A weak woman, intellectually speaking, would first of all have given vent to her indignation against the seducer: but the first thing which occurs to the firm, clear mind of Imogen is, not what she is called upon to *say* in this extraordinary emergency, but what it behoves her to *do*. She is instantly conscious, in herself, less of the insulted princess than of the woman who needs personal protection: for the highest heroism in woman, according to Shakespeare, is, at the same time, the most essentially feminine: he admitted not the virago into his ideal of female excellence: to borrow the words of Pisanio himself in relation to his mistress, our poet makes "fear and niceness" to be

The handmaids of all women, or, more truly,
Woman its pretty self.

The ensuing explanation on the part of Iachimo, and her consequent reconciliation, demand our particular attention; the more, because, amongst other important misconceptions as to the qualities and the conduct of this personage, Hazlitt, in his examination of this play, has the following remark upon this passage:—"Her readiness to pardon Iachimo's false imputations and his designs against herself, is a good lesson to prudes; and may show, that where there is a real attachment to virtue, it has no need to bolster itself up with an outrageous or affected antipathy to vice;" an observation which Mrs. Jameson, in her account of the character of Imogen, cites at full length, and sanctions, by telling us, "This is true."

But this version of the matter is nothing less than degrading both to the intellect and the delicacy of the heroine as portrayed by Shakespeare. It is talking as if, when, according to Hazlitt, she "pardons" Iachimo, or, as Mrs. Jameson expresses it, is "pacified," she still believed that her Italian visitor had really intended to leave her husband slandered in her opinion, and her own purity stained. Had she continued so to believe, it would have been contamination to her to exchange another sentence with one whom she held to be so foul a villain. But he, "singular in his art," had with subtle dexterity converted, in her estimation, his very defamation of her husband and his insult to herself, into a precious testimony of his extreme solicitude for her dear lord's welfare—that most irresistible of all claims upon her kindly regard. He had spoken thus, only "to know if her affiance were deeply rooted," and to enable himself to carry back to her husband the more gratifying report of her incorruptible constancy. His eloquent eulogy of Leonatus—

He sits amongst men like a descended god, &c.—

has a double charm for her by contrast with the foulness of his previous imputations. She betrays no weakness of judgment in accepting this explanation from a man introduced to her, under her husband's own hand, as "one of the noblest note," to whose kindnesses he was most infinitely obliged. Overlooking, though not quite forgetting, the liberty taken with herself, the revulsion of feeling in her generous breast makes her welcome the insinuating stranger with hardly less cordiality than before, though with the added reserve of a dignity and a delicacy too lately wounded.

How finely, too, does the reflection, shortly after, of one of the lords attending upon Cloten, prepare us for the added peril to her fame exhibited before us in the bedchamber scene:—

Alas, poor princess,
Thou divine Imogen, what thou endur'st!
Betwixt a father by thy stepdame governed;
A mother hourly coining plots; a wooer,
More hateful than the foul expulsion is
Of thy dear husband, than that horrid act
Of the divorce he'd make! The heavens hold firm
The walls of thy dear honour! keep unshak'd
That temple, thy fair mind! that thou may'st stand
To enjoy thy banished lord, and this great land.

How beautifully is the sentiment of these lines continued in her own brief orison, which immediately follows:—

To your protection I commend me, gods!
From fairies, and the tempters of the night,
Guard me, beseech ye.

As this, again, gives added effect to the stealing of Iachimo from his hiding-place:—

Our Tarquin thus
Did softly press the rushes, ere he wakened
The chastity he wounded.

With what wonderful art, indeed, has Shakespeare lavished every sort of homage upon this his favourite model of a glorious woman—making even self-sufficient fatuity own her influence no less than selfish villany. After the Italian thief has breathed out his hymn to that lovely purity, so awful in its defencelessness, in those low accents suited to his midnight proceeding, how delightful is the change to that daybreak salutation from the booby prince's musicians, which seems to soar on the very wings of the lark—that "wonderful sweet air, with admirable rich words to it"—combining, in its cheerful cadence and its luscious rhyme, its dews and its blossoms, the voluptuousness of midsummer with the buoyancy of spring. What a delicious comment upon Iachimo's proud celebration of her sleeping charms, do we find in the closing strain of the serenade—

With every thing that pretty bin
My lady sweet, arise!
Arise, arise!

But the troubles of poor Imogen thicken around her: it is just when she is most tormentingly "sprighted by a fool," that she misses the precious bracelet:—

Go, bid my woman
Search for a jewel, that too casually
Hath left mine arm; it was thy master's: 'shrew me,
If I would lose it for a revenue
Of any king's in Europe. I do think
I saw't this morning: confident I am,
Last night 'twas on mine arm; I kissed it.
I hope it be not gone to tell my lord
That I kiss aught but he.

Why, let us ask, is this last most exquisitely significant sentence omitted in acting? Surely, surely the suppression cannot have been owing to any suspicion that something approaching to indelicacy here drops from the lips of Imogen! Yet, as no other motive seems conceivable for striking out a sentence of such peculiar dramatic force, and as mere wantonness can hardly have produced what would in that case be so senseless a mutilation, we are compelled to attribute it to misapprehension as to the decorousness of the words themselves coming from the mouth of the heroine—a misapprehension which, in vindication of the poet's consistency, and the peculiar delicacy of mind so constantly preserved in this character, we feel it necessary distinctly to expose.

The palpable error, then, must here have been committed by the theatrical censor, whoever he be, of transferring to the mind of the heroine herself some suspicions of the fact whereof the auditor, at this point of the drama, is fully conscious—that the bracelet is really gone to testify against her. But there is not another word in the play which indicates that any such suspicion has once entered her mind. It is the pure innocence of her heart, and the ready playfulness of her fancy, that produce the touchingly sportive wish, that the jewel may not be gone to tell her lord she kisses "*aught* but he;"—"*aught*," be it observed—not "*any one*." The ideas suggested by this latter expression would have been as contaminating to her spotless soul, as the very imagination that

Digitized by Google

such a charge could have been forged against her would have been foreign to her unsuspicious nature. Her words are clearly to be taken in their strictly *literal* sense, as a mere sally from the tender sportiveness of anxious affection. So far, then, from their being, as any deliberate suppresser of the sentence must have supposed them to be, of the nature of a conscious *double entendre*, their delicate simplicity derives a higher charm by contrast with that compound sense which they necesarily assume in the mind of the auditor. Here, in short, we find one of the subtlest master-strokes of dramatic skill of which even a Shakespeare was capable; for, besides that exquisite significance which we have already pointed out, how much is this proscribed sentence needed, to give full effect to the exclamations of Pisanio, on perusing the next letter from his master:

How! of adultery? Wherefore write you not
What monster's her accuser? Leonatus!
O, master! what a strange infection
Is fallen into thy ear! What false Italian
(As poisonous tongued as handed) hath prevailed
On thy too ready hearing? Disloyal! no,
She's punished for her truth; and undergoes,
More goddess-like than wife-like, such assaults
As would take in some virtue. O, my master!
Thy mind to her is now as low as were
Thy fortunes.—How! that I should murder her!
Upon the love, and truth, and vows, which I
Have made to thy command!.....
..... *The letter*
That I have sent her, by her own command,
Shall give thee opportunity.

It is this letter, sent for this purpose, his presenting of which—

Madam, here is a letter from my lord—

draws from her another of those exquisitely characteristic effusions:—

Who? thy lord? that is, my lord? Leonatus?
Oh, learned indeed were that astronomer
That knew the stars as I his characters;
He'd lay the future open! You good gods,
Let what is here contained relish of love,
Of my lord's health, of his content—yet not
That we two are asunder—let that grieve him
(Some griefs are med'cinable; that is one of them,
For it doth physic love)—of his content,
All but in that!——Good wax, thy leave. Bless'd be
You bees that make these locks of counsel. Lovers,
And men in dangerous bonds, pray not alike;
Though forfeiters you cast in prison, yet
You clasp young Cupid's tables.——Good news, gods!

We know nothing that has been said upon the charms of epistolary correspondence between absent lovers that approaches this delicious passage, except the words of Heloïse on the same subject, in the opening of the first of her celebrated letters.

Then, when her eye catches her husband's intimation of his landing in Cambria, and his wish that she should *renew him with her eyes*, how glorious the instant leaping forward of her heart—

Oh, for a horse with wings!

that she may fly—

To this same blessed Milford.

And how delicious her fond parentheses:—

Then, true Pisanio,
(Who long'st, like me, to see thy lord—who long'st—
Oh, let me 'bate—but not like me—yet long'st.
But in a fainter kind—oh, not like me!
For mine's *beyond beyond*)—say, and speak thick—
(*Love's counsellor should fill the bores of hearing*
To the smothering of the sense)—how far it is, &c.

This is quite equal, in passionate eagerness, to Juliet's exclamation,—

Love's heralds should be thoughts,
That ten times faster fly than the sun's beams, &c.

Yet how quickly does her practical understanding recover its ascendancy:—

But this is foolery:
Go, bid my woman feign a sickness; say
She'll home to her father; and provide me, presently,
A riding-suit, no costlier than would fit
A franklin's housewife.

The next scene between these two interesting personages brings us to the very "heart's core" of the drama, its "heart of heart"—scarcely rivalled for pathos even on the page of Shakespeare. What can surpass the painting which the dialogue here gives us of that agonizing moment, the disclosure of his master's murderous purpose, by the faithful servant, to his beloved and venerated mistress?—

Imo. Thou told'st me, when we came from horse, the place
Was near at hand. Ne'er long'd my mother so
To see me first, as I have now. Pisanio! Man!
Where is Posthumus? What is in thy mind
That makes thee stare thus? Wherefore breaks that sigh
From the inward of thee? One but painted thus,
Would be interpreted a thing perplexed
Beyond self-explication. Put thyself
Into a haviour of less fear, ere wildness
Vanquish my staider senses.——What's the matter?
Why tender'st thou that paper to me with
A look untender? If it be summer news,
Smile to't before; if winterly, thou needs
But keep that countenance still. My husband's hand!
That drug-damn'd Italy hath out-craftied him,
And he's at some hard point. Speak, man,—thy tongue
May take off some calamity, which to read
Would be even mortal to me.
Pisa. Please you, read;
And you shall find me, wretched man, a thing
The most disdained of fortune.——
What shall I need to draw my sword?—The paper
Hath cut her throat already!

How beautifully does her recovering exclamation contrast with her husband's rumination, to which we have before adverted, upon the supposed easiness of Iachimo's success. It gives us, too, another of those enchanting pictures of virtuous loveliness, wherein we find the dramatist's imagination revelling throughout his treatment of this character:—

False to his bed! What is it to be false?
To lie in watch there, and to think on him:
To weep 'twixt clock and clock: if sleep charge nature,
To break it with a fearful dream of him,
And cry myself awake? That's false to his bed,
Is it?

To account for this extravagant imputation upon her, but one alternative presents itself to her mind—that Leonatus himself is false. Taking it to be at least as improbable, that he should believe in her infidelity, as that he should himself be unfaithful, the very detailed account of his misconduct, which Iachimo had given her, and so suddenly retracted, revives in her memory, and very naturally and logically hastens her to the conclusion, that, after all, it had been well-grounded, and only withdrawn to appease her indignation:—

I false! Thy conscience witness!——Iachimo,
Thou didst accuse him of incontinency;
Thou then look'dst like a villain; now, methinks,
Thy favour's good enough. Some jay of Italy,
Whose mother was her painting, hath betrayed him.
Poor I am stale, a garment out of fashion;
And, for I am richer than to hang by the walls,
I must be ripped; to pieces with me!

And now, the following passages demand especial attention; for in them the poet unfolds to us the inmost recesses of his heroine's heart and mind; showing us the liveliness of her fancy ever keeping pace with the warmth of her feeling, and the brightness of her intellect with the glow of her imagination. It behoves us, also, by comparing her behaviour and language on this occasion, with those of Posthumus under the like violently painful excitement, to mark narrowly the superiority over her husband, in understanding as well as in heart, which the dramatist has studiously maintained in her under these most trying circumstances of all.

Posthumus, then, for his wife's alleged inconstancy alone, seeks deliberately to take her life; but she, by the far greater enormity of guilt and wrong which she believes him to have committed against herself, in adding to his conjugal infidelity the command to murder her, is moved not to the selfish passion of revenge, but to that noblest kind of pity that even the most exalted Christian morality can teach—the pity of the injured for the injurer:—

Though those that are betrayed
Do feel the treason sharply, yet the traitor
Stands in worse case of woe.
And thou, Posthumus, thou that didst set up
My disobedience 'gainst the king my father,
And make me put into contempt the suits
Of princely fellows, shalt hereafter find
It is no act of common passage, but
A strain of rareness; and I grieve myself,
To think, when thou shalt be disedged by her
That now thou tir'st on, how thy memory
Will then be panged by me!

"A strain of rareness," indeed, is this; the most signal exhibition of all which the developement of this noble character presents to us, of moral elevation towering above the dignity of rank. Yet on this occasion, if on any conceivable one, might the offended princess have asserted herself against the injuries offered her by the man whose mind, according to Pisanio's expression, was now "as low to her" as once his fortunes were.

Posthumus, again, we have seen, is hurried on by the astounding conviction of his own wife's frailty, to a sweeping condemnation of all womankind. But the high, calm intellect of Imogen, under her vastly greater provocation, is not so blinded into passionate injustice. She does not infer, that all mankind *are* false, but only that such unexpected falsehood will *cast suspicion on the true*:—

Oh,
Men's vows are women's traitors! All good seeming,
By thy revolt, O husband, shall be thought
Put on for villany; not born where't grows,
But worn a bait for ladies.
True honest men, being heard like false Æneas,
Were, in his time, thought false: and Sinon's weeping
Did scandal many a holy tear; took pity
From most true wretchedness. So thou, Posthumus,
Wilt lay the leaven on all proper men;
Goodly and gallant shall be false and perjured,
From thy great fall!

She desires to die; but here, again, her moral and intellectual superiority displays itself. She does not seek death wantonly and gratuitously, as Posthumus does when he repents him of his rash revenge:—

Against self-slaughter
There is a prohibition so divine,
That cravens my weak hand.

But she feels herself at liberty to insist upon Pisanio's executing his master's command:—

Come, fellow, be thou honest;
Do thou thy master's bidding: when thou see'st him,
A little witness my obedience; look!
I draw the sword myself: take it, and hit
The innocent mansion of my love, my heart:
Fear not—'tis empty of all things but grief;
Thy master is not there, who was, indeed,
The riches of it.
——Come, here's my heart.
Something's afore't. Soft, soft, we'll no defence—
Obedient as the scabbard! What is here?
The scriptures of the loyal Leonatus,
All turned to heresy! Away, away,
Corrupters of my faith! you shall no more
Be stomachers to my heart! Thus may poor fools
Believe false teachers.
——Pr'ythee, despatch—
The lamb intreats the butcher! Where's thy knife?
Thou art too slow to do thy master's bidding,
When I desire it too!

Pisanio, we find, entertains not for a moment the belief of his master's incontinency; for, on the one hand, he has not heard Iachimo's story of his conduct; and, on the other, his very sex, and that kind of experience of the world which it has naturally brought him, render him far more aware than his mistress of the depth of artful deceit which a male villain may practise; while her own womanly apprehensions as naturally suggest to her, that she is wronged through the arts of "some Roman courtezan." However, she is too much interested in finding herself mistaken, not to be easily persuaded by her trusty counsellor to suspend her conviction until, by placing herself near her husband's foreign residence, she can have more certain information as to his conduct. And how beautifully do we trace all the woman, so fond yet so delicate, in her brief assent to Pisanio's proposal:—

Oh, for such means!
Though peril to my modesty, not death on't,
I would adventure.

How exquisitely conceived, again, is the whole of Pisanio's instruction to her how to assume and to enact her masculine part, with his gracefully and respectfully affectionate farewell:—

To some shade,
And fit you to your manhood. May the gods
Direct you to the best!

We need scarcely enlarge upon the surpassing grace and sweetness of her scenes with Belarius and her unknown brothers, familiar as they are to the heart of every lover of beauty and of Shakespeare. The peculiar and inexpressible charm of Imogen's male personation, results from her unvarying feminine consciousness, accompanied by that equally constant self-possession which lets her not for one moment forget, in the presence of others, the assumed character of manhood which she is enacting. Hence it is, that the indefinable captivation which, in her page's garb, she exercises over every beholder, never once occasions her sex to be suspected. Herein, therefore, the strength and subtlety of her intellect are especially conspicuous; the more so for the presence in her of that exquisitely feminine nature, which enhances the difficulty of her assuming the masculine character, by rendering it quite impossible for her to follow Pisanio's instruction that she should change "fear and niceness"

to a waggish courage,
Ready in gibes, quick-answer'd, saucy, and
As quarrellous as the weasel.

We must select two short passages which peculiarly illustrate this observation. The first is that where she comes out of the cave, when surprised by

Digitized by Google

the return of Belarius and his youths from the chase. The "fear and niceness" of "woman its pretty self," exhibited in this charming scene, have been much remarked; yet these, we contend, form not the predominating qualities of her deportment on this occasion,—which we take to be, her clear conception of her own position at the moment, and her ready fertility of thought and language suited to the emergency,—in one word, as we have said before, her practical sagacity. Having always, as a princess, been taught that "all's savage but at court," the language of propitiation which here she so eloquently utters, proceeds rather from an undisturbed intelligence than from the agitation of fear,—appealing to the reason as irresistibly as to the feelings:—

Good masters, harm me not.
Before I entered here, I called; and thought
To have begged, or bought, what I have took. Good troth,
I have stolen nought; nor would not, though I had found
Gold strew'd o' the floor. Here's money for my meat:
I would have left it on the board, so soon
As I had made my meal; and parted
With prayers for the provider.
Guiderius. Money, youth!
Arviragus. All gold and silver rather turn to dirt!
As 'tis no better reckon'd, but of those
Who worship dirty gods.
Imogen. I see, you are angry.
Know, if you kill me for my fault, I should
Have died had I not made it.
Belarius. Whither bound?
Imo. To Milford-Haven, sir.
Bel. What is your name?
Imo. Fidele, sir: I have a kinsman, who
Is bound for Italy; he embark'd at Milford;
To whom being going, almost spent with hunger,
I am fallen in this offence.

Again, how her strong understanding, no less than her noble heart, appears in the comment which she afterwards makes upon her undeception regarding the character of these mountaineers:—

These are kind creatures. Gods, what lies I have heard!
Our courtiers say, all's savage but at court:
Experience, O, thou disprov'st report!
The imperious seas breed monsters; for the dish,
Poor tributary rivers as sweet fish.

The other passage to which we have alluded, is that where she prevails on her outlaw entertainers to leave her, though unwell, alone at the cave, and attend to their daily occupation:—

Bel. You are not well: remain here in the cave;
We'll come to you after hunting.
Arv. Brother, stay here:
Are we not brothers?
Imo. So man and man should be;
But clay and clay differs in dignity,
Whose dust is both alike. I am very sick.
Guid. Go you to hunting—I'll abide with him.
Imo. So sick I am not. Yet I am not well;
But not so citizen a wanton, as
To seem to die ere sick. So please you, leave me.
Stick to your journal course: the breach of custom
Is breach of all. I am ill; but your being by me
Cannot amend me: society is no comfort
To one not sociable. I'm not very sick,
Since I can reason of it. Pray you, trust me here:
I'll rob none but myself; and let me die,
Stealing so poorly.

The exquisite pathos of the scenes where Belarius and the brothers lament over the seeming death of "the bird that they had made so much on," has been universally felt and acknowledged: yet an injury is done to it by the present mode of performing them at Drury Lane, which, in justice to the dramatist, we feel bound to point out. The dirge by Collins, indeed, has been very properly dismissed as a piece of meretricious obtrusion; but the sort of duet into which the simply recited verses of Shakespeare have been converted, does hardly less violence to the spirit of the original passage. Shakespeare, in his every piece, like a true and great artist, keeps the musical in strict subordination to the dramatic,—a principle which, in dealing with his plays, no manager is at liberty to compromise. The poet, in the instance before us, is not seeking to regale the ears of his audience, but has the nobler purpose of striking deeply into their hearts. The affectionate grief of these artless youths for the loss of their lovely companion, whom we, the auditors, know to be their sister,—with this it is that he cares to impress us, not with an admiration of their cultivated vocal powers, the incongruity of gifting them with which, under their homely training, was also, doubtless, present to his mind. We have already pointed out the beautiful contrast which he sets before us, between Iachimo's refined description of the sleeping Imogen, and Arviragus's simple effusion over the lifeless Fidele; and to us it is equally plain that Shakespeare designed the like opposition, in every way, between the "wonderful sweet air" of Cloten's serenade which follows upon Iachimo's oration, and the verses which the mourning brothers had, when children, sung over their mother, but were now too much choked by manly grief to sing over the corpse of their adopted brother:—

Guid. Cadwal,
I cannot sing: I'll weep, and word it with thee;
For notes of sorrow, out of tune, are worse
Than priests and fanes that lie.
Arv. We'll speak it then.

Here, we do think, the poet should have been felt to have given a sufficient admonition to forbear converting into a sort of operatic chant the artless lines that follow, like the rough sighing of autumnal winds among the fallen and the falling leaves!

The awaking of Imogen from the trance into which Pisanio's potion had thrown her, and the recognition of what she supposes to be the headless corpse of her husband, is a scene of agony much akin to that of the waking of Juliet in the sepulchral vault. The revulsion of feeling is even more violent. The horror of recognizing Posthumus's person with such certainty, as she thinks, by the figure and the clothes, but missing those adored features on which she had been wont to hang so fondly,—with the conviction flashing at the same moment across her mind that her husband, after all, was true to her, and her servant false, in league with their common enemy,—may well draw from her the exclamation—

Pisanio,
All curses madded Hecuba gave the Greeks,
And mine to boot, be darted on thee!

Here, again, the dramatist makes his heroine conduct herself in strict accordance with his general conception of her character. Left, as she supposes, friendless in the world, by the death of her husband, and the treachery of the man whom they had believed to be their one faithful adherent, she yields to the sole offer of kindliness that presents itself to her upon earth, and attaches herself, in her page's character, to the service of the Roman commander. And with what exquisite art is the greatest probability given to this passage—with what beautiful and pathetic truth of nature is it managed. How charmingly is her undeviating presence of mind, as to her masculine part and her page's attire, made to produce from her, in answer to the Roman's inquiry, "What art thou?" that touching expression of fond fidelity, which only the soul of an Imogen, and under that peculiar combination of circumstances, could have breathed out:—

I am nothing: or if not,
Nothing to be were better. This was my master,
A very valiant Briton, and a good,
That here by mountaineers lies slain. Alas!
There are no more such masters: I may wander
From east to occident, cry out for service,
Try many, all good, serve truly, never
Find such another master!

Already she had been informed, of "noble Lucius," that "he's honourable, and, doubling that, most holy." We are, therefore, prepared for his kind response to this tender lamentation, and for Imogen's consent to follow him:—

'Lack, good youth!
Thou mov'st no less with thy complaining, than
Thy master in bleeding.....
Wilt take thy chance with me? I will not say,
Thou shalt be so well mastered; but, be sure,
No less beloved. The Roman emperor's letters,
Sent by a consul to me, should not sooner
Than thine own worth prefer thee. Go with me.
Imogen. I'll follow, sir. But first, an't please the gods,
I'll hide my master from the flies, as deep
As these poor pickaxes can dig; and when
With wild wood-leaves and weeds I have strewed his grave,
And on it said a century of prayers,
Such as I can, twice o'er, I'll weep, and sigh;
And leaving so his service, follow you,
So please you entertain me.
Lucius. Ay, good youth;
And rather father thee, than master thee.
My friends,
The boy hath taught us manly duties. Let us
Find out the prettiest daisied plot we can,
And make him with our pikes and partisans
A grave.

And here we see the honourable interment of her dear lord's remains, establishing already a bond of deepest gratitude in the noble heart of Imogen towards her new protector. How she discharged it, appears in the terms in which Lucius afterwards entreats of Cymbeline to spare her life alone among the Roman prisoners:—

Never master had
A page so kind, so duteous, diligent,
So tender over his occasions, true,
So feat, so nurse-like.

How beautifully does this enhance our feeling of the superior intensity of interest which makes her leave this kind master's life to "shuffle for itself," and attracts her to the ring which she espies on the finger of the captive Iachimo. And then, again, how gloriously pathetic is that forgetfulness of her male disguise, which comes over her, for the *first* time, when she hears her name reiterated in the accents of agonizing remorse from the breast of the still faithful husband, who stands before her as one risen from the dead! The blow which, by springing forward with the exclamation—"Peace, peace, my lord! hear, hear!" she brings upon herself, from Posthumus, mistaking her for an impertinent page, is the most pathetic incident of the whole piece, and gives the crowning effect to his recognition of her whom he had thought to be murdered by his own revengeful act:—

Imogen. Why did you throw your wedded lady from you?
Think that you are upon a rock; and now
Throw me again!
Posthumus. Hang there like fruit, my soul,
Till the tree die!

And now we see, that if all the sympathetic feelings of her heart were not capable of being extinguished in grief for the loss of her husband, neither can they be absorbed in her over-joy for his recovery. It is not, in fact, those individual attachments which are the most exclusively engrossing to the feelings, that are either the warmest or the firmest. Such all-absorbing devotions are much rather indicative of a narrow heart and a petty mind. Generous love, when it takes possession of a noble heart, guided by an enlightened understanding, much rather opens it to a keener sense and a wider capacity for every other benevolent sympathy,—makes it overflow with more genial good-will to all with whom it stands in any kindly relation. So soon as Imogen has solicited her father's blessing, she turns first to her brothers, in reply to her father's remark upon their restoration—"Oh, Imogen, thou hast lost by this a kingdom":—

No, my lord;
I have got two worlds by't. O, my gentle brothers,
Have we thus met? O, never say hereafter,
But I am truest speaker: you called me brother,
When I was but your sister; I you brothers,
When you were so indeed!

Then to Belarius—

You are my father too; and did relieve me,
To see this gracious season.

And her last words are to Lucius—

My good master,
I will yet do you service.

Indeed, one sentence in the mouth of Cymbeline tells us emphatically the proud station of Imogen at the close of the drama, as the uniting centre of all the benevolent sympathies which are there brought together:—

See,
Posthumus anchors upon Imogen;
And she, like harmless lightning, throws her eye
On him, her brothers, me, her master; hitting
Each object with a joy: the counterchange
Is severally in all.

Even Posthumus's forgiveness of Iachimo, and Cymbeline's pacification with the Romans, serve but to grace the triumph of the nobly and intelligently sympathetic heart of the heroine. The very oracle has made the peace and prosperity of Britain to depend upon the recognizing and rewarding of her generous affection and unshaken constancy. The Roman soothsayer may declare with propriety,—

The fingers of the powers above do tune
The harmony of this peace:

but the instrument through which they tune it is, the harmonious soul of Imogen!

We leave this full examination into Shakespeare's own conception and developement of what would seem to have been the most fondly laboured of all his ideally feminine personations, to make its due impression upon the reader's mind. An attentive perusal of it, we are persuaded, will enable him to dispose for himself of any estimate of this great character so inadequate as that, for instance, wherewith Mrs. Jameson closes her account of it;—"On the whole, Imogen is a lovely compound of goodness, truth, and affection, with *just so much* of passion and intellect and poetry, as serve to lend to the picture that power and glowing richness of effect which it would otherwise have wanted."

Digitized by Google

Neither can any more signal instance be adduced to confute the position which Hazlitt, singularly enough, bases upon his consideration of this very character:—"It is the peculiar excellence of Shakespeare's heroines, that they seem to exist *only in their attachment to others*. They are *pure abstractions of the affections*. No one ever hit *the true perfection of the female character, the sense of weakness leaning on the strength of its affections for support*, so well as Shakespeare." Poor Imogen!—strong as her affections are, had she no strength *but* theirs to rely on, she must have sunk again and again!

The more we reflect upon these criticisms, the more we feel it a great moral object, to rescue so exalted an ideal character of Shakespeare from such injurious depreciation—an object only second in importance to that of vindicating the dignity of a great historical character. The question—what was the conception entertained by Shakespeare, as to the highest standard of female grace, virtue, and intellect?—is, we repeat, hardly less momentous than it is interesting.

One word more. The nobler and richer the ideal portrait sketched by the dramatist, the greater ever is the task, not only of expression, but of completion, in a kindred spirit of art, imposed upon its histrionic representative. With the characters of Shakespeare this is transcendently the case. In a following paper, therefore, while speaking in general of that late reproduction of 'Cymbeline' at Drury Lane, which merits far greater attention and encouragement than the public have yet afforded it, we shall be more especially called upon to draw whatever supplementary illustration we find to be derivable from the present personation of Imogen.

DR. FRANCK'S PICTURES.

Besides the Exhibitions, pre-eminently so called, opening and closing regularly with the season, there are certain other ones, occasional and fugitive, each perhaps visible but for two or three days, and then, like frost-work scenes, melting away for ever. We allude to those "Dissolving Views" of Private Collections exhibited before sale at various Auction-rooms throughout London. They appear to us not altogether unimportant, though unrecognized, adjuncts of the great annual shows at the Royal Academy and British Institution: wherefore it is, that, as lovers of art, we often accord them particular notice. Such collections, chosen in most cases by a Committee of *One*, display all the advantages and evils attendant upon singleness, and, by contrast, upon multitude of counsel; if they reveal injudicious purchases, they seldom present evidence of palpable *jobs*. We grant, indeed, that auction-room exhibitions are oftentimes mere exposures of the collector's *gusto* for trash and *amour* for ugliness, and wide mental range in trivialities and profound acquaintanceship with false principles of connoissance; but sometimes they at least comprise valuable works, many or few, from the meritorious even up to the excellent; and form collectively, as it were, a shifting panorama of almost all the circulative artistic objects in the kingdom, which come round and round again before the eyes of a time-honoured visitor, who may, and too frequently does, entitle himself a *virtuoso*, on the strength of the knowledge such sources afford him.

Dr. Franck's cabinet of pictures, which was sold last Saturday by Messrs. Christie & Manson, was no "Orleans Collection," it is true, yet was sight-worthy enough on the whole, and contained several pieces that deserve mention. Among these were two described as having been once in the said Orleans collection, a 'Repose near classical ruins,' by *Polemburg*, and 'The Spinner' by *Feti*; that, an excellent little work, of the smooth, monotonously dulcet character peculiar to its author, who seems as if he always painted on whetstone, 63 guineas; this, an ordinary production of a painter, from whose hands we have seldom seen anything extra-ordinary, 12½ guineas. A 'Holy Family' by *Garofalo*, once in another celebrated collection belonging to Charles I., has the "royal brand" on its panel; we should be inclined to mark it with a brand of a different stamp, as an imposture, though a clever one. When the king's pictures were put up for sale, it could not find a purchaser; doubtless the royal *dilettante* made his mistakes like the humblest amateur; it would have been well had he never committed any more fatal! price 34 guineas. Two pictures from the Marquess of Ely's collection were, 1mo. a 'Peter denying Christ,' by *Honthorst* (we cannot guarantee all these great names), which is painted with much power, but the apostle sacrificed to the secondary personages—dicers in a corner and an armed ruffian in front—for sake of effect, the usual error with second-rate artists: 2do. 'Mary washing the feet of Christ,' catalogued as by *Rubens* instead of *Van Veen*, his master, who afterwards became his imitator; it is a repetition of the work exhibited some years since at the British Institution—see *Athenæum*, No. 715, page 525, where we conjectured the possible existence of a fac-simile. Respective prices, 22 and 100 guineas. From Mr. Solly's collection, two pictures, a *Teniers* and a *Fra Bartolommeo*. Apropos, let us put simple visitors on their guard with respect to an auction-room figure of speech, but half understood in general: *from* such or such a collection may mean either *selected* by the purchaser or *ejected* by the proprietor. It makes no slight difference whether a work took its departure by that mode or this, yet the ambiguous term always passes as a grand recommendation! Teniers' pencil, so spirited and sure, could scarcely have produced such a timorous work as the 'Milk-maiden' above-said, which seems a good deception at best, 46 guineas. With regard to the other piece, we have long watched the picture-market in hopes of discovering what our National collection much desiderates, a genuine and suitable *Fra Bartolommeo*—but this is not it, nor indeed a *Frate* at all. It is a *pasticcio*, i. e. an olio of several styles, having the general air and composition of Il Frate, the tone and landscape of Del Sarto, &c. We do not recollect any of the few specimens extant by Suor Plautilla Nelli well enough to venture a comparison, yet she was fond of just such medleys, intermixing most of Fra Bartolommeo's manner, and some little of her own. It represents an 'Epiphany,' with the symbolical star and angel triune above; the Child lying beneath, in its child-like yet significant attitude (finger on lip and a steadfast grave smile on its countenance), expressive of the Word, though as yet not articulate; kneeling at each side are the parents, and a little St. John is seen approaching between them. We consider the work both curious and valuable, if neither authentic nor excellent; the landscape very good, and the virgin's look noble and sweet, her figure graceful: it deserved more than 25½ guineas. Another Epiphany (mis-called a 'Nativity,' from which it differs as much as an 'Assumption' from an 'Ascension,' though it seems a point of true-blue Protestant criticism to confound these Romish distinctions), painted by *Jan Steen*, brought 46 guineas. This picture, feeble in execution and absurd in conception, belonged to the tasteful connoisseur, Lord de Tabley. His talent for humour often made Jan farcify the most serious theme, and profane the most sacred with ill-timed, though, perhaps, unconscious burlesque: nothing could be more inappropriate than his mob of droll-faced, half-fuddled boors and booresses present on such a solemn occasion, except his Virgin—a vulgar fine lady, who realizes the meek and humble-minded Carpenter's Wife about as well as the lady of Loretto in her full court-dress and diamonds. Are we to believe it done by him whose characteristics Sir Joshua declares, are "a strong manly style of painting, which might become even *the design* of Raffaelle, the greatest skill in composition and management of light and shadow, as well as *great truth in the expression and character* of his figures"? A large, gray-green, hard landscape, by *Moucheron* and *Vandervelde*, once Lord Gwydir's, 72 guineas. Three landscapes by *Wynants*, having his usual sameness of merit and manner, 50, 65, and 37 guineas. 'Lake Averno,' by *Wilson*, a most Elysian prospect, where the atmosphere seems one golden haze, misty with radiant motes "that people the sunbeams," thick brightness, even brightness that could be felt. We rave: but enthusiasm apart, let us ask is there any Ancient Master,—Claude or Cuyp himself,—who can, like Wilson, paint a whole picture in so cool a general colour as green, yet give it so much warmth? He sometimes repeats in this colour a parallel miracle to the 'Blue Boy' of Gainsborough. Price 100 guineas. A credible *Metzu*, the 'Music Lesson,' brilliant and elaborate, but of rather a piecemeal composition; 77 guineas. Nearly the same might be said of a *Mieris*, the 'Lady and Parrot,' which brought not more than 12 guineas, and will, perhaps, bring twelve times as much again, on a less lucky occasion for the purchaser. A very poetical 'Market-Cart,' however incongruous the terms, by *Sebricht*, 17½ guineas; and an admirable 'Frost-piece,' by *Vanderneer* (painter of brown Moonlights in common), 80 guineas. One of the richest, mellowest, and finest works by *Brauwer* we have ever seen, 'Children in a Landscape,' quite a Venetian picture, almost a Titian, only 75 guineas. An *Ostade*, thus marked, but more in the style of his fellow-pupil and friend, Brauwer, than his own adopted afterwards. It represents a 'Boor lighting his pipe,' one of those happy low-lie-downs who render the state of semi-embrutification almost enviable; he is not, we confess, just the friend we should like to take to our bosom, and let drink of our cup (he would drink it all!)—looking, indeed, as if his skin had never felt water since his baptism, and as if his neighbourhood were redolent of perspiration rather than *huile antique à la rose*—but we admire him at a distance beyond measure. Surely these Dutch sooterkins are the nearest approach on earth to souls in bliss, and terrestrial bliss must be best attained by ignorance, beer, and tobacco! The object of our interest and regard sold below its value, 4*l.* 10*s.* There were other articles which might deserve a word, but we have expatiated too long already.

OUR WEEKLY GOSSIP.

His Royal Highness Prince Albert has expressed his intention of presiding at the meeting of British Architects, which is to be held on Monday; on which occasion His Royal Highness will present the Medals awarded by the Institute during the Session, to Edward Chamberlain and J. W. Papworth, for Essays on Synchronism, &c.;—to Arthur Johnson, Student, the Soane Medallion, for a Design for a Princely Palace, as described by Lord Bacon.

We have been much pleased with the Hon. Miss Eden's Sketches of Eastern men and manners, now on view at Messrs. Dickinsons', prior to their being lithographed. Of course, the sister of the Governor-General of India had opportunities of observing character and costume, which fall to the lot of few: and we must add, that she has shown qualifications for perpetuating what she saw, which are rare among amateur artists; a taste in arrangement, a feeling for character, and an eye for colour.

The Marquis of Lansdowne is the nobleman associated with Sir Robert Peel, Mr. Rogers, and the artists named last week, as the committee to award the premiums for the Cartoons.

We mentioned last week, from the German papers, a report that Prof. Böttiger had discovered a mode of daguerreotyping in colours. How this may be we know not: but certainly our own clever and enterprising artist, Mr. Beard, has discovered a mode of colouring daguerreotypes, which has a very pleasing effect. Two whole-lengths, one of a Highlander and the other of a lady in rich old-fashioned costume, struck us as admirable, and, for clearness and natural effect, hitherto unequalled.

In consequence of our remarks, last week, on what appeared to be a prevailing tone of manners and morals in our metropolitan medical schools, we have received several communications directing our attention to the great and laudable efforts now making to reform the medical institutions of the country, with a view (amongst other things) of raising the character of the profession. We have also been informed of a design entertained by certain literary men, for some combination directed towards the redemption of literature from the low estimate in which it is held by the general public. We of course, wish well to all zealous labours in a good cause; but notwithstanding the false money-value which Englishmen affix to what they call respectability, we are firmly persuaded, that the consideration enjoyed by any large body of men, will be closely determined by their average morality; and it is more to high principle, gentlemanly conduct, and a scrupulous and honest industry in the discharge of duties, that literary and professional men must look, for taking and maintaining their proper station in the ranks of society, than to acts of parliament or corporate manœuvres.

Our readers will be pleased to hear, that Lady Sale's 'Journal of Events in Affghanistan' has been received by Mr. Murray, and is already in the hands of the printer. Mr. Murray also announces 'Letters from the Pyrenees during three months' Pedestrian Wanderings amidst the wildest scenes of the French and Spanish Mountains, in the Summer of 1842,' by T. Clifton Paris, B.A.

In another part of this day's paper (p. 307), the subject of literary piracy has come, incidentally, under notice. Our attention has since been called by Messrs. Longman to a very flagrant case of injustice to individuals, and of injury to literature and *to the public*, arising from the absence of an international law of protection. The valuable series of Encyclopædias publishing by that firm is well known; and, among the most popular and useful volumes is Brande's 'Dictionary of Science, Literature, and Art.' This work is now re-publishing in America, at a price which precludes the future sale of a single copy of the original edition—for those who pay nothing to authors can, of course, afford to sell cheap. On this volume alone the Messrs. Longman expended more than 6,000*l.*, whereof *above a half was paid to authors*. It is well observed, that the Americans gain much less by this piratical system than might be at first supposed; for if they agreed to an International Copyright—if they secured to the original publishers an exclusive sale in the American market—the price of the original edition of a work like Brande's Dictionary would be reduced fully one-third.

The following extract from a letter from Bonn appears in the *Foreign Quarterly*:—"A few days ago, Professor Goldfuss received a present for our university museum, sent from London by His Royal Highness Prince Albert. The present is in itself an object of considerable scientific interest, and is the more welcome inasmuch as it is accompanied by an assurance, that Prince Albert cherishes a pleasing recollection of his studies at Bonn. The letter with which the gift is accompanied says, among other things, 'the Prince wishes hereby to give you a small proof that he still entertains a friendly remembrance of you and the University of Bonn.' The present consists of a well-preserved specimen of the *Hepialus virescens*, a curious caterpillar, from the tail of which sprouts a vegetable twig about six or seven inches long. It was recently brought from New Zealand by Capt. Siardet. In a description sent along with the caterpillar, it is stated to be the larva of a species of Hepialus (called *Hepialus virescens* in Dr. Dieffenbach's journey to New Zealand), on which a parasitical Sphæria frequently grows. The plant developes itself in the living body of the animal, and when the latter creeps into the earth prior to its chrysalic transformation, it fructifies. Whilst the vegetable shoot sprouts from the caterpillar, the living animal is gradually converted into a substance resembling fungus, which substance retains the form of the caterpillar. Another species of Sphæria grows in the larva of a moth in China, where it is gathered and used as a medicine. Some specimens have been brought from South Australia of a species in which several sprouts, forming a bunch, shoot from an individual animal. A fourth variety, described by Edwards, is found in the West Indies: this invariably grows on the larva of *Cingale*. The silk-worm is subject to a disease which transforms the interior of the body into a sort of fungus. Prince Albert's present was likewise accompanied by some very interesting correspondence relating to curious migratory birds whose bones have lately been found in New Zealand." From the same source we learn, that the Dutch poet and philologist, Hoeufft, died lately at Breda: and that Petronilla Moens, a lady to whom the literature of Holland is indebted for many esteemed productions, in verse and prose, died at Utrecht on the 4th of January, at the age of 80: that the Dutch government has recently purchased some curiously painted windows, taken from the old house at Gorcum, to which Grotius was conveyed after his escape from the Castle of Louvestein—on the windows are portraits of Grotius, Romboot, Hoogerbeets, and Thomas Esperius.

An oration of the historian, Frederick von Raumer, pronounced at the Academy, concerning the religious character of Frederick the Great, has created a great sensation in Berlin. The King has ordered it to be printed.

Leopold Schefer, a well-known German poet, has just published a volume of poetry, entitled 'Vigils,' or hymns of the new church, the apotheosis of the whole human race. From the extracts given in the German papers, it would seem to have more than an ordinary share of the mysticism, as well as the beauty which pervade this author's writings. Those who have read his 'Laien-brevier,' or layman's breviary, will not readily forget the impression it must have made upon them, of the earnestness and power of the writer.

The various fragments and relics of marble monuments, &c. excavated during the past year in different parts of Italy, have been carefully bought up by several Jesuits, for the purpose of decorating churches about to be built or restored. Many of them have been used in the restoration of the church of the Colleggio Germanico. The new high altar consists of a collection of valuable stones, which, it is said, is not equalled by any other in Italy, except, perhaps, that in the Borghese chapel of Sta. Maria Maggiore. The value of one of the slabs of marble is estimated at 24,000 florins, that of the whole altar at 200,000.

In consequence of the continued disturbances in Palermo, resulting from the performance of the opera of 'Maria Tudor,' mentioned last week, the theatre has been shut for the season by order of the police.

The King of Greece does not seem to have forgotten the country of his birth. A letter from Athens mentions that he has conferred a cross of the Order of the Redeemer on Schwanthaler, the well known Bavarian sculptor.

From Alexandria, we hear of the death, on the 30th of January last, at Assouan, in Upper Egypt, of a Norwegian, Mensen-Ernst, who had gone in search of the sources of the White Nile. He was buried near the first Cataract, by some European travellers, who happened to be in the neighbourhood.

The exhibition, which has just opened at the Louvre, appears, on the whole, to have given satisfaction to the Parisian journalists. Although neither Scheffer, Delaroche, Ingres, Decamps, Roqueplan, Delacroix, Gallait, Gudin, Marilhat, Jules Dupré, or Alfred Dedreux have sent pictures, and the sculpture is very poor indeed, still the critics tell us that abundant proof is offered that the French school is in a state of progressive advance. There has been, however, a good deal of excitement respecting the number and the class of works rejected, among which were many, the productions of old and acknowledged favourites. It is not clear to us, whether this has been a consequence of inferior production, or of a higher tone and standard taken by the committee. If, as we suspect, of the latter, we rejoice at it. But an indignant writer, in *Galignani*, hints at other causes. "Ought this state of things," he says, "to last? Ought painters, whose works have placed them in an advantageously conspicuous situation, to be made amenable to any other tribunal than that of public taste? Ought they to be at the mercy of a tribunal where architects and sculptors form a most imposing majority? Many such men, as Horace Vernet and Paul Delaroche, have withdrawn themselves in despair from the council, being unwilling that their presence should even give an appearance of sanction to acts which it was out of their power to control. It is asserted, however, that measures are about to be taken to modify the present mode of reception."

In consequence of the death of the Dowager Marchioness of Northampton, the *soirée* of the President of the Royal Society, intended to have been held on Saturday next, the 8th of April, will not take place.

BRITISH INSTITUTION, PALL-MALL.
The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS IS OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1s.: Catalogue, 1s.
WILLIAM BARNARD, Keeper.

ROYAL POLYTECHNIC INSTITUTION.
During Lent the DISSOLVING ORRERY will be exhibited on the Morning and Evening of WEDNESDAYS and FRIDAYS, when the THEORY of COMETS and other CELESTIAL PHENOMENA will be explained and illustrated by Diagrams. At work daily, a complete arrangement of COTTON SPINNING MACHINERY, consisting of a CARDING, ROVING, and SPINNING FRAME. Cary's NEW MICROSCOPE, magnifying SEVENTY-FOUR MILLION TIMES. DISSOLVING VIEWS. The Science of Electricity demonstrated by the COLOSSAL ELECTRICAL MACHINE at a quarter to Three Daily, and at Eight in the Evening, except Wednesdays and Friday Evenings. Lectures Daily on CHEMISTRY and NATURAL PHILOSOPHY, by Dr. Ryan and Prof. Bachhoffner. The CLASS LECTURES are continued as usual. Admission, One Shilling. Schools, half-price.

SCIENTIFIC AND LITERARY

INSTITUTION OF CIVIL ENGINEERS.—*Mar.* 21.—The first paper read, was a description, by Mr. S. C. Kreeft, of the furnaces at the Butterley Iron Works, and the barrow used for filling them. The application of the pointed Egyptian arch, to avoid the effects of expansion and contraction by the heat, and the use of the self-weighing barrow, with its moveable bottom, to distribute the materials equally in the furnace, were generally approved.

The next paper read, was the description, by Mr. Oldham, of the machine invented by Mr. Cotton, the Governor of the Bank of England, for weighing sovereigns, and separating the light ones from those of standard weight. The machine exhibited, was made by Mr. Napier, and was so delicate, that it detected with precision, a variation of a twelve thousand two hundred and fiftieth part of the weight of a sovereign. The coins are placed in a tube or hopper, from whence they are carried on to a small platform, which is suspended over a delicately poised beam; to the other end of which is appended the standard Mint weight. On setting the machine at work, a sovereign is placed upon the platform, and if it is full weight, a small tongue advances, and strikes it off into a till appointed to receive it; but if it is light, the platform sinks, and brings it within the reach of another tongue, at a lower level, which advances at right angles to the former tongue, and pushes the coin into another till. Other coins succeed in rapid rotation, so that the machine can weigh and sort 10,000 sovereigns in six hours, while an expert teller can, at the utmost, only weigh between 3 and 4,000 coins, by hand scales, in the same time, and even then, the optic nerve, by incessant straining, becomes fatigued, and errors occur.

Mr. Fairbairn exhibited and described a model of a large woollen-mill, which he is now constructing entirely of cast-iron, on the fire-proof principle, for the Sublime Porte, under the superintendence of Mr. Onanes Dadian, of Constantinople, who was present, with several gentlemen from the Turkish Embassy. The building forms three sides of a square, and covers an extent of 3 acres, the two main rooms, are 272 feet long by 40 feet wide, and 280 feet long by 20 wide. The other parts are in proportion. The power employed is water. One wheel of 80 horses, and another 50 horses power, giving motion to all the shafts and machines necessary. Many details of the manufacture, as of the construction of the building itself, were given.

March 28.—The President in the chair.

The paper read was a Report, by Mr. D. Mushet, on some experiments made at the Milton Iron Works, to ascertain the relative strength of the cast and malleable iron produced at those works, both by the hot and the cold blast processes. The results, which were arranged in tabular forms, showed, that although in some districts the introduction of heated air for smelting might have deteriorated the strength of the iron, yet with minerals like those of Yorkshire and Derbyshire, it could be used with advantage, and that the quality was improved. The table of breaking weights, from Mr. Fairbairn's experiments on cast iron, was given, and it appeared that the strongest quality quoted by him broke under a pressure of 581 lbs; whereas, the Milton hot blast iron only yielded at 610 lbs. The experiments upon malleable iron were not considered so conclusive, as the force of the blows for breaking the bars being manual labour, could not be accurately increased; the impact of a weight falling from a given height would have been more satisfactory.

Some specimens of wrought iron, of a fine quality, made from hot blast pig iron, at the Butterley Works, were exhibited; and in the discussion which ensued, it appeared to be the opinion, that the use of hot air in smelting might, with due precaution, be adopted with advantage, but that unfortunately, from the facility it afforded for working up refuse ores and sulphureous coal, it had been abused.

MEETINGS FOR THE ENSUING WEEK.

MON.	Institute of British Architects, 1.—General Meeting.—'The Essay on Synchronism,' &c., by E. Chamberlain.
—	Entomological Society, 3.
TUES.	Horticultural Society, 3.
—	Institution of Civil Engineers, 8.—'On the Supply of Water to Glasgow,' by D. Mackain.—'On the Supply of Water to Malta,' by W. L. Arrowsmith.

FINE ARTS

SOCIETY OF BRITISH ARTISTS.

It is useless to waste space in preluding when nothing new is to be said; which simple words will acquaint our readers that we are again disappointed in this the twentieth exhibition of the Society.

Mr. Prentis stands foremost on our list of those to be noticed, in right of his four illustrations of *Sponging* (10). These begin with exhibiting the dinnerless man soaked by a bitter shower, at that gloaming time when cheerful fires from kitchen windows are so peculiarly appetizing, and a roast pig, snugly covered up, entering a house on the head of a baker's boy, is an incitement to impudent ingenuity little less potent than "Umbrana's head" to the parasite in the old comedy. We are sure that the case will not be allowed to rest at Hunger standing without in the rain, while good cheer is spread within by the fire; and accordingly No. 2 gives us the assault of the Sponge, at the very moment when the neatest of maid servants has deposited the savoury dainty aforesaid between a dull old gentleman, who is nevertheless a gastronome, as his bulk assures us, and a dull middle-aged gentlewoman, who is shrewd, however, at tasting sauces, as we see by the curl of her lip. There is something approaching to abject supplication in the bent body of the Sponge; that his necessity is written on his face, may almost be gathered from the cool indifference of the maid in waiting, who despises the intruder, because he has no flatteries to bestow upon her; and in whose eyes he is little more respectable than the poor relation, the Mr. Billet, "who did not get pudding every day," and whom Charles Lamb hath immortalized. In Nos. 3 and 4, the touch of pity which the extremity of the case awakened is destroyed. The Sponge is now warm—full and fulsome: giving out the stale nothings he professes to have gathered on his morning ramble (miserable man! he had been all that day haunted by visions of Duke Humphrey) as freshest news to his cajoled hostess, whom dinner has made credulous, and stultifying the already phlegmatic host—who is additionally tranquillized by *his* share of crackling and prune sauce—with truisms in praise of the wine which the said Sponge is so eagerly imbibbing. Of their coarse kind nothing can be more humorously conceived than these four pictures; but they are not well painted. Mr. Prentis always tended towards an ashy blackness in his shade tints; here he has reached the sooty acme: hence the pictures may possibly look better in mezzotint than in oil. But there is something of the moralist in our painter, which entitles him to respect. We thank him for another pair of pictures (265), entitled *Morbid Sympathy*. In the first, a brutal murderer is slinking away from the scene where the crime has been committed: a more thorough-paced villain never rode to Tyburn Tree. In the second, he is the object of a prison visit from three sentimental souls; a lady (and a gay lady, too, by her bonnet) who tenders soothing tracts with an insinuating and sisterly kindness, and, worse, a delicate girl, with more than compassion in every meek line of her face, by whom it is, we cannot but think, that the flower has been given, which the ruffian wears in the button-hole of his prison jacket. It is saddening to reflect how many are the English houses in which this forcibly delineated contrast might be medicinally displayed. Surely the spread of education will do something for the sympathizers, as well as for the criminals! We must not, however, forget the technicalities in our admiration of the intention of these pictures. They are still worse coloured than the humorous series, while the repulsive and japan-like finish which distinguished Mr. Prentis from the outset of his career, has not been in the slightest degree mitigated.

The sky effect in Mr. Holland's *River Thames below Woolwich* (17), earned for it a note of admiration with us. It is singularly, bold, bleak, and true. Hitherto the painter has too exclusively confined himself to Venice; and indeed this very exhibition room contains many pictures by him, the scene of which is laid in St. Mark's city. But in these he is rivalled by Mr. Tomkins, who has left the Rhine, this year, for the lagoons, and exhibits more than one subject in which he will remind the lounger of Canaletti. The *View on the Grand Canal* (41) is truth itself: but it is painted with that tricky and smearing touch which lessens its attractiveness as a work for to-day, and its chances of surviving as a work for to-morrow.

Mr. Stephens gives us another of his pretty wax figures in *Little Red Riding Hood* (21). It is a pity that he is wedded to a manner so unfortunate, since the child's face is sweet and innocent, and indicative of better things than its painter has ever chosen to accomplish. But some of the leading men of this exhibition seem resolute against amendment; which assertion we beg to offer, in place of detailed criticism, on all that Mr. Hurlstone has this year exhibited. In another season or two, to judge from the rapidity with which he has reached his present position, his mannerism will have become intolerable.

The next artist we shall mention—Mr. Hamerton—is one whose name is less familiar. In a little picture (22) of two children before a window, he displays a pleasant power over bright colour and natural expression. He will be found further on in works more ambitious, but hardly more praiseworthy. For instance, his *Emigrants receiving News from England* (150), though a clever and pleasing picture, wants variety. The listeners are either gay or indifferent: either delighted with tidings of the old country, or so habituated to their new allotment as to care little for any other quarter of the globe. Was there no opportunity for displaying the conflict of home-sickness with present comfort, which we imagine to be a characteristic of the emigrant's real feelings, be his valley ever so pleasant—be his flocks and herds ever so many? Mr. Hamerton must also be called to account for carelessness of finish, especially observable in the foliage of the spreading tree. How is it that so many of our young artists are mistaking this for the audacity of genius? There is Mr. Woolmer, whom a lamentable possession of this sort is fast ruining, in spite of an eye for colour, and a graceful and poetical turn of invention, which might almost, with better schooling, have made him the Watteau of England. Were his slovenliness of touch, both as to drawing and painting, only corrected, his picture (185), a Mother bending over a sleeping child at her bosom, would be, of its domestic kind, first-rate; so charming is the management of light, so delicate the tones and tints employed; and, best of all, so placidly graceful the feeling of the composition. Mr. Woolmer has many other pictures, displaying a more exuberant fancy, but none so unexceptionable in point of taste.

There is an odd, but impressive picture by Mr. Danby—*The Rescue of Madame Dunoyer* (31), which those familiar with French exhibition rooms, will find interest in comparing with the shipwrecks and disasters at sea painted by M. Gudin. Both painters are fond of golden colours: in this differing from the Vanderveldes and Van Goyens of the Flemish school, who loved the soberer hues of ocean and heaven—the fleecy whiteness of the cloud, or the subdued but intense green of the water. Yet who will maintain that the moderns, with all their varieties of orange, and violet, and emerald, are less monotonous than those less extravagant colourists? Here, as in all pictures of the class, we are treated to a stage effect in the broad and garish sunset, which flames over the desolate waters, and shows in strong contrast the upright figure of the negro, to whose care the desolate woman and her children are committed, in a skiff as frail "as the boat of birchen bark" of Moore's North American legend;—on the other hand, there is more sublimity in the mountainous, but not angry swell of waters, than could have been given by the most frantic storm: and with all its faults (which are all its figures) the picture will detain many an eye and interest many a heart.

Continuing our circuit of the Great Room, and having bound ourselves over, on the present occasion, not to criticize Mr. Hurlstone's productions in detail, we shall mention Mr. Heaphy's *Story of Cosmo de Medici and Don Garzia* (149), and Mr. J. Stevens's scene from *Marino Faliero* (180), as two of the most ambitious pictures in the Exhibition; the latter displaying an attempt at Venetian colour as well as Venetian history. Defective as this picture unquestionably is, and mannered as it could hardly fail to be, from the peculiar style essayed, it nevertheless deserves consideration, on account of the breadth of effect produced, and for a dignity of attitude in the main figure not unworthy of the subject. Nor in Mr. Heaphy's historical picture must we overlook a certain originality in composition which is hardly English. The figure of the recumbent prince, so courageously foreshortened, reminds us of certain works which are to be seen at the Luxembourg and the Louvre; the costume, again, has something of the affected ultra-precision of the modern French school, which tells so disagreeably in a picture precisely because it tells so well on the stage. Let the treatment be carried but a little farther, and the drapery and decorations become the principal points of the picture.

One more paragraph must conclude our notice of this Exhibition. This shall commence with praise of Mr. Allen's *Devonshire Scene* (165), which is a delicious landscape. Rapid success and royal patronage have not, as yet, done their perverse work upon the painter. He seems every year to put more and more of mind and—what is better—of hand into his pictures; and the one vividly before us while writing, is as fair a representation of as fair an English scene as we could offer for the introduction of foreigners to the charms of our country. Here are no rocks, nor ruins, nor lakes, to challenge comparison; the road winds downward among a few old wood and mortar farm-houses underneath a sloping bank, behind which extends a distance of pastoral and well-wooded country. This enumeration of objects may not sound tempting: but there is much in treatment and tone of colour. Perfect repose, apart from lifelessness, can hardly be expressed without a certain poetry of atmosphere being diffused; nor can the glorious colours of early Autumn, caught at the moment when Summer lingers still on the bough, be rendered as faithfully as Mr. Allen has rendered them, without the picture possessing somewhat of the joyous serenity which belongs to the fairest of seasons. Another clever landscape, *Going to Water* (201), by another of our clever landscape painters, Mr. Tennant, hangs in near neighbourhood to Mr. Allen's picture. This, too, is a sunshiny picture, but it is as lifeless as its neighbour is alive; owing, perhaps, to peculiarity of texture, but more largely, we think, to the artist's determination to copy Cuyp rather than Nature. Mr. Pyne's *London from Greenwich Park* (227) deserves a third place in the list of landscapes, in spite of a certain chalky and livid mannerism, which recalled to us the worst portions of the most feebly executed panoramas ever seen in Leicester Square. We shall now conclude, when we have said that Mr. Josi's *Campagna of Rome* (191) is a close, yet not successful imitation of Leopold Robert; but mimickry is too much the order of the day—*vide* Mr. Huskinson's Landseer*ish Gipsies* (285), see also more than one rustic scene by Mr. Montague, in which Wilkie has been the elected model. A last word, to protest that Mr. Zeitter's *Departure of the Countess of Croye from Peronne* (317) is Mr. Zeitter's—not Scott's version of the story, but cleverly hit off, nevertheless, and containing a good effect of artificial light. Neither is Countess Hameline, the inimitable, so utterly wide of the mark as the rest of the procession.

MUSIC AND THE DRAMA

ANCIENT CONCERTS.—Our judgment with respect to the organization of these Concerts being on record, we need but point out such peculiarities as justify it, without again and again adverting to the general question. Some very odd illustrations of taste in selection distinguished the second, or Archbishop of York's Concert. It commenced with the Occasional Overture, after which, without pause or prelude, came the superb chorus, '*For* unto us a child is born': a movement as inevitably belonging to the song it follows, as the latter does to the former clause of every well constructed sentence. Nor did the wonder end here: we had *then* the Pastoral Symphony from 'The Messiah,' stopping short at the recitative. The repetition of such mistakes, year after year, is disheartening: since, where are we to look for progress in Art, if its highest patrons and professors treat a grand

Digitized by Google

musical work like the show-box of a kaleidoscope, from which it matters not which scrap of blue, yellow, or green glass is withdrawn, so that something pretty is left? Once more, the selections from Handel were all in one colour—nearly all in one key: but to expect attention at the Ancient Concerts to an arrangement so delicate as this, would be to demand a degree of enlightenment nothing short of Utopian! A movement from Haydn's 'Passione' seemed to give great satisfaction: to ourselves, this work is finer in its first and purely instrumental form, than with the vocal parts superadded, which were an after-thought, and (at least as performed on Wednesday) interfere with the exquisite accompaniments. We have little more to note with regard to this concert than the first appearance of Miss Towers, a young lady of more than usual promise. She has a thoroughly fresh, sweet *English* voice, of that quality which recalls to us the rich, but delicate tones of Miss Stephens—a fair articulation, and a degree of composure and refinement from which industry and intelligence may be augured. Her song was, 'But thou didst not leave,' from 'The Messiah.' The other ladies were, Miss Birch, who attempted the Seraph's song from 'The Mount of Olives,' which is too high for her voice, and was more successful in the *solo*, 'But bright Cecilia,'—Miss Rainforth, who was victimized in 'Gratias agimus,' by the utterly stagnant *tempo* in which Sir H. Bishop chose to take the movement,—and Miss Dolby, who would do well to polish her articulation. Do our songstresses ever think of such a thing as a reading-master? and where is the professor of declamation at our Royal Academy? We believe that it is the disregard of this branch of the art, rather than of musical science, which keeps back so many of our richly endowed vocalists from excellence. The gentlemen who took part in the concert were Mr. Harrison, Mr. Phillips, and Mr. Hawkins. The subscription this year seems to be in a reviving state; an additional reason, if "the powers that be" were only wise, for energy and intelligence in the conduct of the Society.

HER MAJESTY'S THEATRE.—The revival of Donizetti's 'Belisario' has been thoroughly successful. The first two acts of this opera are in the composer's better manner, affording fair scope to the singer as well as the actor. In the third, both *libretto* and music dwindle to an anti-climax. After the 'Adelia,' however, almost any work would be sure of welcome. 'Belisario,' too, had a better chance on Saturday last than is here permitted to most operas which, like it, have been already tried, and failed to please. The character of *Irene* was given to Persiani, and made worthy of her adoption by an interpolated *bravura*, the *adagio* of which was a model of singing in the grand and florid style. *Antonina's* entrance brought back to the public its great favourite, Signora Moltini; and in truth, her pleasant looks, agreeable voice, and sensible method of singing make up a whole so engaging, that it is only on recollection we can find in our hearts to wish she had been sterner, more forcible, and more impassioned, and to express our judgment that her real sphere is *opera buffa*, or, at most, among such gentle sorrows as the trials of *Amina* and *Ninetta* give occasion for. The part of the hero was enacted by Signor Fornasari, whose *début* excited a greater sensation than any that we recollect at the Opera since that of Madame Persiani. Nature has bountifully given to him magnificent stature, and, as far as an ultra-luxuriant beard permits us to judge, a handsome and radiant countenance. His voice, too, is in harmony with the frame which encases it, being a rich, sonorous bass, extensive in compass—of the most mellow quality, and in power almost rivalling Lablache. Of his method we are not quite so sure: his enthusiasm and feeling carried the house by storm, and we have not to complain of any trick *ad captandum* to which one so liberally gifted might easily be tempted; but here and there came a tone (we fancied) which told of imperfect vocalization. The peculiarity, however, if it should prove constant, is so slight as to be within reach of cure. His action in the first act is something redundant; but the newly imported Italians *must* gesticulate more than we Northerns can admire; and it is something to have an artist in the prime of powers so great, who is as thoroughly in earnest as Signor Fornasari. More artistic was his quieter action in the assumption of blindness. His success, as we have said, was almost unprecedented, and we wait but his appearance in another character to join the chorus of satisfaction and delight raised by the subscribers and the public. We cannot leave 'Belisario' without expressing our warmest admiration of the manner in which the orchestra performed its duties. The prelude (it is really unworthy the name of an overture) was executed with a dashing precision and brilliancy we have never before heard in England. The chorus of Bulgarians, too, in the last part, showed signs of a disposition to act and to break through the formal semicircle traditional at the Opera, which cannot be passed over without commendation. The *ballet* 'Giselle' was revived on Thursday evening; and so brilliantly as to demand a more extended notice on a future occasion.

ST. JAMES'S THEATRE.—*French Plays.*—In our last notice of the popular Mdlle. Plessy, the line which she could not pass as an *artiste*, was pointed out: and we were confirmed in the justice of our opinion by the different impressions she produced on Monday evening in 'Clemence' and in 'Le Legs.' The former drama is by Madame Ancelot: the latter by Marivaux. *Clemence* is the daughter of an advocate, brought up from home, and privately married to the son of a nobleman, who employs her unconscious father's legal talent to break off the marriage. In spite of the agony of this discovery when *Clemence* reveals her secret, the sense of duty does not forsake the father: he *must* defend the interests committed to his care; goes into court, and wins the nobleman's cause for him. The latter, on discovering the facts, is so thoroughly touched by the integrity of his advocate, and the dignified submission of the daughter, that he voluntarily ties again the knot he had taken such pains to cut. With this overstrained story to work out, Mdlle. Plessy, nevertheless, contrived to draw not a few tears, by the pathos and the quietness of her emotion. We have never seen her to greater advantage, more thoroughly possessed with her part, and less anxious about the boxes and *parterre*:—on the other hand, we never liked her less than in the one-act drollery by Marivaux which followed. Consummate must be the talent, which, out of his flimsy dialogue, can evoke a character; exquisite must be the bearing which will enable the actress to keep the stage without wearying the audience, in scenes so conversational, where repartee fences with repartee, while wit is wholly absent. Yet Mdlle. Mars did both feats by the force of demeanour. To see her manage her fan in one of these sketches was a study. When the words conveyed little meaning, how *it* executed some witticism!—threatened — cross-examined—screened the little sentimental "*asides*," in which the actress let out, that under all the feathers and lace and coquetry, a woman's heart was there—perhaps only a small one, but still keeping touch and time. Then her step, her curtsey, her entrances and exits were all so high-bred—all so full of meaning! not a turn of her head, but told upon the audience as thoroughly as Lady Teazle's air upon her uxorious husband—not a "*oui da*" or an "*effectivement*" which her exquisite diction failed to invest with some significance, generally feminine and specially characteristic. It was a fine thing to see how consummately Art could clothe and colour an outline so shadowy and meagre. But we fear the secret has gone with the actress. As the willing but sprightly countess, waiting to be wooed as a noble-woman should wait—that is, with due respect to her own dignity—Mdlle. Plessy was angular, sullen, and unyielding, as compared with her predecessor. That sly man the Marquis would have never really got to the temerity of his final

Et encore une fois qu'en pensez-vous?

had the lady, with all her vivacity, been so *aigre*, as the actress was by moments. Nor do we see any signs of *mellowing* in Mdlle. Plessy. To play Marivaux, may not possibly be worth the trouble; but we think that she will never play it. We have the less scruple in venturing the above reminiscence and parallel, seeing that our fair visitor has already left us;—to be replaced by M. Vernet, the drollest of the droll, and Madame Doche, the handsomest of the handsome. Every one must see the former in 'Le Père d'une Débutante.' It beats.... but we have made one comparison, and that shall suffice for the present.

MISCELLANEA

Paris Academy of Sciences.—March 13.—A discussion took place relative to the experiments of M. Liebig on the food of animals, but without adding anything to the facts which have already been stated.—A communication was made by M. Daguerre respecting a new improvement in the process which bears his name. M. Daguerre, being struck with the variations in his photographic plates, although all prepared in the same way, endeavoured to ascertain the cause, and found it was owing to the presence of greasy emanations, which prevented the uniform action of the vapour of the iodine. To obviate this inconvenience, he heats the plate, and covers it with a small quantity of water; the greasy matter rises to the surface, and is poured off. M. Arago announced that M. Daguerre is following up his experiments, to accelerate the photogenic action, by the intervention of electricity.—A great portion of the sitting was occupied with discussions on medical subjects, possessing little general interest.—*March* 20, 27.—The communications were from M. Arago, and related to the comet. Unfortunately, the atmosphere at Paris, he stated, had been so clouded, that what was known relating to the comet came from other places. The intelligence from England was unimportant. It had been seen at Nice, on March 12, 13, and 14; at Toulouse, on the 18th; at Marseilles at the same time as at Paris, and the united observations of the two places would be sufficient to determine its orbit. At Geneva, the weather had enabled very excellent observations to be made, the comet having been examined on three successive occasions. It appeared certain, from the information derived from this quarter, that not only had the present comet approached the nearest the sun of all others known, but that it had even penetrated into the luminous matter of that body. The tail was presented in an oblique direction, and could not be less than 63 millions of leagues. He had taken some observations, with a view of deciding the disputed point as to whether comets shine by their own light, or by a light reflected by the sun, and he was decidedly of opinion that they shine by a light of their own. The appearance of the comet, at this particular moment, would, he said, have the effect of strengthening the old belief, that such phenomena are always productive of dreadful calamities to man. Thus, that which was seen at Rome, in the year 373 before Christ, coincided with an earthquake and inundations, which overturned two cities in the Peloponnesus. The terrible disaster at Guadaloupe would be quoted by many as the dire effects of the present heavenly visitant. It was also generally believed that comets produced an extraordinary elevation in the temperature, and, this year, the weather had certainly been particularly mild; but, remarked M. Arago, this could only be a coincidence, for it was impossible that the immense heat of comets—and Cassini calculated the heat of that seen in 1702 as 2,000 times greater than red-hot iron—could have any effect on our temperature; and calculations made at the Board of Longitude had even proved that the heat in the years when comets appeared have not been, on an average, greater than others, and sometimes was even less.

Portable Gas.—The *Censeur* of Lyons states that, at one of the late sittings of the Municipal Council, a trial was made of a new portable gas, to which its inventor has given the name of *hydroluminous*. The apparatus, says this journal, is very simple, and applicable to the smallest candlesticks as well as to the largest and most splendid candelabra. The light it gives is very fine, and it is so portable that it may be carried about with the commonest hand-candlestick.

A Volcano of a novel kind has broken out in the neighbourhood of Kœnigshutte, a town in Silesia. For twenty years past a slow fire, which occasioned no alarm, has burnt in the coal-mines of that district; but recently it has assumed an alarming character, shooting out immense volumes of flame, which threaten destruction to the surrounding buildings, and to the vast forests of the country. A steam-engine has been established for the purpose of discharging water into the mines; but, at the latest accounts, this machine had been in action for seventy-two hours without producing the slightest effect.

SCOTTISH (WIDOWS' FUND) LIFE ASSURANCE SOCIETY.

Report of the Procedure at the Twenty-ninth Annual General Court of the Society, held on the 7th March, 1843;

The Rev. Dr. GRANT in the Chair.

The Minutes of last General Court having been read and approved of, the Manager read States of the Business done during the past year,—of the Existing Business,—and of the present amount of the Capital and Revenue of the Society. From these it appeared—

1. That the Assurances Effected during the year 1842, consisting of 504 Policies, amount to 371,291*l.* 7*s.* 4*d.*
2. That the total Amount of Assurances Effected since the commencement of the Society is very nearly Six Millions, and that there have been no fewer than 6817 Policies issued.
3. That the total Subsisting Assurances amount to upwards of Four Millions and a Half.
4. That the Amount of Sums paid to the Representatives of Deceased Members is upwards of Half a Million; and that the Sum paid during the last year alone was 52,490*l.* 4*s.* 4*d.*
5. That the Capital Accumulated and Invested is now upwards of One Million Two Hundred and Seventy Thousand Pounds.
6. And that the Annual Revenue of the Society is upwards of Two Hundred Thousand Pounds.

Mr. LINDSAY, Accountant, auditor of the Society, then rose and said, "The statements which have just been made by the Manager have been examined by me, and compared with the books of the Society, and it gives me much pleasure to confirm their accuracy.

"The total amount of the Insurances which have been effected with the Society from the period of the last investigation on 1st January, 1839, to the close of the year which is just past, is about 2,006,500*l.*, being an annual average of more than half a million. It will be observed, however, that the amount insured in last year (371,000*l.*) is considerably under the average. But it cannot, I think, be matter of surprise to any one who considers the depression which has prevailed in the commercial and manufacturing interests of the country during this period, that such should be the case. Insurances with this Society are usually effected with a view to family provisions, and not, as is very generally the case with companies differently constituted, as a security for debt. It is therefore evident that, in periods of depression, such as we have lately seen, parties engaged in business must necessarily be prevented by other demands on their resources from making the provisions for their families which they would otherwise be disposed to do. In confirmation of this view I may refer to the number of policies which have been *surrendered* in the past year, and which amount to no less than 51,000*l.* This is a sum greatly beyond the amount surrendered in 1841, and more than double the amount of those surrendered in any previous year. Now, as all our experience shows that parties who have obtained the privilege of becoming Members of this Society do not lightly or readily part with the benefits which it confers, I think it may be fairly assumed that so marked an increase in the amount of surrenders could have been occasioned by no ordinary pressure; and that the same pressure must necessarily have operated, in an equal degree at least, on the amount of the new Insurances.—(Hear.) The same diminution has not, however, occurred in the number as in the total amount of the Policies. The average amount of the individual Policies passed in the last year is about 740*l.*, while the average used formerly to be about 1000*l.* There has, in fact, been a gradual diminution for some years past in this average, indicating, in the most satisfactory way, as it appears to me, a progressive extension in the community generally of a due appreciation of the benefits of Life Insurance. So far as can be judged from the short period which has elapsed since the close of the last year, the business of the Society is again upon the increase; the amount insured up to the present time being greatly more than in the last or preceding years at the same period.—(Hear, hear).

"With regard to the mortality during the past year, I have much pleasure in stating that the losses by death are not only less in actual amount than those of the preceding year, by upwards of 13,000*l.*, but that, looking to the amount only, and not to the number of deaths, they are, when compared with the tabular expectation, the smallest that have yet occurred in the experience of the Society; being in point of fact not quite thirty-nine per cent. of this expectation. This very favourable contrast, while it is no doubt in the meantime satisfactory, yet being considerably below our own general experience, cannot be anticipated as often likely to recur, in the same degree at least. And as I have already referred to the increase in the amount of the business since the close of the year, it is but right that I should also mention the fact, that during this period, the amount of the casualties by death is rather above our usual experience in the same time; although still much below the tabular calculations. It is not, however, to short periods, such as that to which I have now referred, nor even to single years, but, as is wisely provided for by the laws of the Society, to a period of several years' duration, that we must look for a fair average upon which to found a safe estimate of the true position and prospects of the Society's affairs.—(Applause.)

"I have only to add that the Manager and myself have much pleasure in bearing our united testimony to the continued attention and assiduity with which the official details of the Society's business are performed by the various members of the Establishment."—(Applause.)

The Rev. CHAIRMAN then addressed the Meeting in nearly the following words:—"It now, Gentlemen, according to the established form of procedure, falls to me, as having the honour to occupy the chair of the Meeting, to address this General Court, on the subject of the statements that have been submitted by the Manager and Auditor. And you will allow me to preface the little I have to say, by the expression of deep regret that the discharge of this duty should have fallen to one so little qualified, from the nature of his profession, and other causes, to discharge it aright—a regret which is increased when I consider in what way it would have been discharged by the learned Lord (Moncrieff) who was expected to take the Chair, and recollect the ability and impressiveness with which, in other years, it was performed by our noble President, whose absence all of us deplore (hear), and none with as good cause as myself. I rejoice, however, to think that the reports which have been read are at once so clear and so satisfactory as to make my task comparatively easy as well as pleasant.

"I can have no difficulty or hesitation in offering you my congratulations on the statements that have been submitted to us, and on the continued prosperity of the Society which these evince. You have heard, indeed, that there has been a decrease in the amount of business done, as compared even with the last, and still more, with one or two other preceding years. But there is not, in this fact, any the least ground either for surprise or apprehension. Such an extraordinary increase in the business done by the Society, as had taken place in some former years, was hardly to be expected to continue. An increase to the same extent is not at all essential to the success of the Society, and to its realizing, to those who may have joined it, the benefits it holds out. And the state of things during the past year is more than accounted for by the depression that, for some years, has unfortunately affected the mercantile and manufacturing interests of the country. That it is directly traceable to this cause is shown by the admitted fact that, whatever may be the case with a few Societies still in their infancy, the amount of Insurance business done throughout the country generally has decreased even in a greater proportional degree. It is farther shown by the facts, noticed in the Report of the Auditor, that, during the past year an unusual number of policies has been surrendered, and on those that still subsist an unusual amount of money has been borrowed. These last facts themselves, proved as they are from our own books, I repeat, leave us in no doubt as to the cause of the decrease in the amount of business done; and though they are very painful in their character, as showing an adverse change in the circumstances of many of our members, they are not at the same time without their advantage, as reminding us, and the public generally, of the facility with which in this Society the value of a policy is converted into a cash credit, and the liberal terms on which those parties are dealt with who find it necessary to surrender their policies, and abandon their connexion with us.—(Hear, hear.)

"But, Gentlemen, while the decrease that has occurred in the amount of our business during the past year may be, as I have said, very easily and satisfactorily accounted for, you are by no means to conclude that that amount has been small. Policies have been issued covering no less a sum than 370,000*l.* The whole sums insured amount to between four and five millions. Our Annual Revenue is above 200,000*l.*, and the Accumulated Fund greatly upwards of a million. Add to this, that we have the promise of an increase of business during the current year, so far as we may judge from that portion of it that has elapsed. In short, it clearly appears that as ours is the first Scottish Assurance Society in point of age, so it is the first in point of extent and importance; that it has passed safely through the anxious period of its childhood and youth, and has reached the maturity of its strength and manhood.—(Hear, hear.)

"But, Gentlemen, while I take on me to assure you that the Society is in a state of great prosperity, you are aware that that fact is not necessarily proved by the mere amount of business done and of cash accumulated. The amount of business done is indeed enormous. The sum accumulated in our coffers, and payable in the form of annual rates, is very great; to a poor unsophisticated man like me it is astounding, and produces some degree of the stupid amazement with which a common rustic reads an account of the national debt!—(Laugh.) But then we must also look steadily in the face the obligations we have contracted, and the conclusion that we are in a state of prosperity can be legitimately drawn only *from a strict comparison of our funds and our liabilities.* Now, such a comparison has been made, from year to year, and the result has been most satisfactory.—(Hear, hear.) And here I beg to recall your attention to one statement in the able Report of the Auditor, as bearing directly on this point—I mean that in regard to the small number of casualties that has occurred. These have, on the whole experience of the Society, little exceeded fifty per cent. of the estimated number. This year they have only reached thirty-nine per cent., less than *two-fifths* of the amount according to the tabular expectation. This is, in every view, a most gratifying circumstance. It is directly profitable to the great body of the Society, that its older Members should have survived so long. It may, in one view, be a loss to the individuals themselves, inasmuch as they may have come to pay more for their policies than in any circumstances they can receive; but this is a loss they are not very likely to grudge or complain of.—(Hear, and a laugh.) It may set at nought the estimate of human life formed in the Northampton and Carlisle Tables, and confound even the more experienced calculations of our own Auditor, but he will not be angry if we should fail to offer him our condolences on his disappointment.—(A laugh.) But, above all, the fact shows that the standard of what is called a good life, which is arbitrary, and varies in different offices, has with us been kept unprecedently high; that our Directors and Office-bearers, attentive and severely economical as regards every branch of their administration, are especially careful and scrupulous on this all-important point;—and that the whole proceedings of our Society are based on principles and calculations that are even far more than safe.

"There is just one feature more of the Report of the Auditor to which I would refer. I allude to the statement that, though the total sum insured last year amounts to less than that in the preceding one, the average amount covered by each Policy is less also, and, in consequence, the number of Policies is greater. I submit that this fact should afford great satisfaction to every philanthrophic mind, as showing that classes lower in the scale of society than formerly have become alive to the benefits of Life Assurance, and to the peculiar advantages which this Society holds out. And it also affords the best guarantee for the future extension of our operations, because the lower we descend in society the wider the field for our operations necessarily becomes.—(Hear, hear.)

"In conclusion, I deem it altogether superfluous to allude to the general benefits of the system of Life Assurance. These are now generally known and admitted, and your presence here, and the position you hold as Members of the Society, show that you properly appreciate them. I have already alluded to my particular profession as unfitting me to discuss, with the same effect as other men, the principles and practice of such a Society as this. That very profession, however, is one which peculiarly leads me to appreciate the business of Life Assurance. The incomes of the clergy are fixed: they are generally scanty, at least we are ourselves in the habit of thinking and saying so;—(laughter)—and then our families—often it would appear just in proportion to the scantiness of our incomes—are generally immoderately large—(Continued laughter.) Life Assurance, then, beneficial in almost all circumstances, is inestimable to *us*, as affording, in truth, the only means we in general enjoy of securing something for those dependent on us, in the event of premature decease. And I can, from experience, testify the amount of solid satisfaction, which, apart from all future benefit to others, it presently affords to ourselves.

"I have only now to apologise for having trespassed so long on your patience, and again to congratulate you on the state and prospects of our Institution."—(Great applause.)

On the motion of Lord IVORY, seconded by Mr. PENNEY, advocate, a vote of thanks was given to the Directors. On the motion of the SOLICITOR-GENERAL, seconded by Mr. ALEXANDER DOUGLAS, W.S., the Directors for the next year were appointed, viz.—

PRESIDENT.

The Right Hon. the Earl of Rosebery.

VICE-PRESIDENTS.

The Most Noble the Marquis of Tweeddale, K.T.
Sir Thomas Dick Lauder, Bart.
The Hon. Lord Moncreiff.
*His Grace the Duke of Buccleuch, K.G.

EXTRAORDINARY DIRECTORS.

Professor H. Scott, Aberdeen.
W. Smith, Esq. of Carbeth Guthrie.
Sir Charles D. Ferguson, Bart.
Rev. Dr. James Grant, South Leith.

William Wilson, Esq., W.S.
John Cockburn, Esq., wine merchant.
Alex. Campbell, Esq., brewer.
George Bell, Esq., merchant, Leith.
Anthony Murray, Esq., W.S.
*The Hon. Bouverie F. Primrose.
*Alex. Thomson, Esq., W.S.
*James Howden, Esq., jeweller.

Those marked thus * are new appointments.

On the motion of the Rev. T. G. SUTHER, seconded by Mr. CADELL, bookseller, a vote of thanks was given to the Trustees, Manager, Auditor, and Medical Officer, of the Society.

Mr. MACDUFF RHIND then gave notice that he should make the following motion at next General Meeting:—"That a special investigation be made, in order to ascertain to what extent the Guarantee Fund, as fixed by the Original Articles of Constitution, now exceeds the amount necessary to meet every contingency contemplated by these articles, and how far the same should not be altered or modified: That the opinion of the most eminent Actuaries be taken upon the subject, and a Report made thereon by the Directors to the next General Meeting."

On the motion of Mr. DALRYMPLE of Fordel, the Meeting cordially voted their thanks to DR. GRANT for his conduct in the Chair, which was received with much applause. The Rev. Chairman acknowledged the compliment; after which the Court adjourned.

N.B. *Full Reports of the Speeches will be published in the Annual Report, which may be obtained on application at the Head Office, or to any of the Society's Agents, within a fortnight from this date.*

23d March, 1843. Hugh M'Kean, Agent.

In 1 vol. 8vo. 12*s.*

THE ENGLISH LANGUAGE.
By R. G. LATHAM, A.M.
Fellow of King's College, Cambridge,
Professor of the English Language and Literature, University College, London.

"It is, in truth, a most learned and laborious inquiry into some of the more abstruse points in general Grammar, and in that of the English language in particular, commencing with its historical descent and connexions, and including the causes of many of its peculiarities of structure and condition. By the word Grammar, in ordinary parlance, is understood a number of rules; whereas the work before us, so far as it has attained to the character of a well-ordered design, is a repertory of the reasons which are at the bottom of rules."—*Athenæum.*

Now ready, in small 8vo. with Illustrations, price 10*s.* 6*d.* bound, the First Volume of

LIVES OF THE

PRINCES OF WALES,
HEIRS TO THE BRITISH THRONE,
From the most Authentic Private and Public Sources.
By FOLKESTONE WILLIAMS, Esq.
Author of 'Shakspeare and his Friends,' &c.
Henry Colburn, Publisher, 13, Great Marlborough-street.

WILLIAMS'S CHRISTIAN TEACHER.

JOSHUA MILNE, *Actuary.*

LOW RATES.—PARTICIPATION IN PROFITS.

THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to a participation in the Profits of this Society.—Persons, having Life Interests, such as Clergymen, Medical Men, and others deriving incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.

Tables of Rates may be had at the Sun Life Office, in Cornhill, at the Sun Fire Office in Craig's-court, and at No. 65, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.

R. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£126 13 4
1000	4 Years	80 0 0
1000	2 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and R. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

ARGUS LIFE ASSURANCE COMPANY, 89, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff
James Clift, Esq.	of London and Middlesex
Rt. Hon. J. Humphery, M.P.	Lewis Pocock, Esq.
Lord Mayor of London	

Physician—Dr. Jeaffreson, 3, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.

Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advance of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

TO CLERGYMEN AND CHURCHWARDENS.

GILBERT J. FRENCH, BOLTON-LE-MOORS, LANCASHIRE,

Respectfully intimates, that in anticipation of Easter, he has prepared an adequate supply of the following much approved accessories to the Church:—

1.

DAMASK LINENS, with appropriate symbolical devices, for the Communion service.

2.

ALTAR CLOTHS in various materials, at prices varying from 1*l.* 10*s.* to 50*l.*

3.

APPROPRIATE COVERINGS for the FLOOR of the COMMUNION or CHANCEL, in Pede Cloths, and Cloths printed with fac-similes of ancient Encaustic Tiles.

4.

SURPLICES of much improved form and durable material, from 30*s.* to 60*s.*

These articles have received the sanction and warm approbation of a large body of influential Clergy and Gentlemen interested in promoting a consistent adornment of the Church. They have been prepared with great care, and at so moderate a price, as to be within the reach of almost any Village Church. It is to be hoped that they may supersede the use of the vulgar and unmeaning patterns and materials so frequently misapplied for the purpose.

A list of prices, with patterns, and every information can be forwarded on application through the post.

Specimens may be seen at No. 13, Henrietta-ttreet, Covent Garden, London, or at Bolton, to which place all correspondence is requested to be addressed.

Parcels delivered in London free of expense.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

DR. GREEN'S SULPHUR, FUME, MEDICATED, and VAPOUR BATHS, 40, Great Marlborough-street.—For more than twenty years Dr. Green's attention has been directed to the remedial agency of baths of different kinds upon the human body; and for the same length of time he has superintended an Establishment for their due and proper administration.

Judiciously employed, Fume and Vapour Baths are beyond all question, invaluable as principal or auxiliary means in the treatment of many kinds of chronic disease, particularly Rheumatism and Rheumatic Gout, Affections of the Skin, and Impaired functions of the great Abdominal Viscera.

These Baths are accessible at all hours of the day to the public at large, and to members of the medical profession, with their patients, in cases where it is desirable that the medical attendant should witness and direct the administration of the bath.

CARD-PLATE ENGRAVED TO ANY PATTERN 2*s.*, and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and Name, 5*s.* Note paper 4*s.*, 6*s.*, 8*s.*, and 10*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 1*s.* 4*d.* per quire: no charge for the die. Wafers from the dial, 1*s.* per 100, or 4*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY.—Terms: 2*l.* 2*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

LOOKING GLASS and PICTURE FRAME MANUFACTORY, 13 and 14, LONG-ACRE.—JAMES RYAN begs to call the attention of those who may favour him with their orders to his splendid Stock of Looking Glass, Picture and Print Frames, Girandoles, Console Tables, Cornices, Candelabras, Screens, Brackets, and every article connected in the above line, made to any pattern or design, at such prices as will defy competition. Fancy Wood Frames in every variety of pattern, at his Wholesale and Retail Manufactory, 13 and 14, Long-acre.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

FRAMES FOR ART-UNION PRINTS.

C. F. BIELEFELD begs to call the attention of Artists, Printsellers, &c. to his numerous assortment of PICTURE-FRAMES, appropriate for the Art-Union and other Prints, &c., manufactured in his improved Papier Mâché. "The specimens of these frames which we have seen are certainly very beautiful." *Globe*, 17th Jan. 1843.—"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness we have seldom or never seen obtained in composition." *Art-Union.*

C. F. B. has just published a New Tariff of the Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on receipt of six post-office stamps.—Works, 15, Wellington-street North, Strand.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, Crests, &c. for book plates, in their proper HERALDIC COLOURS, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 2*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 7*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their Warehouses,
EGYPTIAN HALL, PICCADILLY, and 122, BISHOPSGATE-STREET WITHIN,
or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.* 12*s.*, and 8*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large, and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting books, Bibles and Prayers, gold and silver pencil-cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietor's stamp over the cork of every bottle.

INFLUENZA, COUGHS, AND COLDS.

SIMCO'S ESSENCE of LINSEED is the most efficacious remedy ever discovered for the relief of persons suffering from Influenza; the two first doses generally arrest the progress of this distressing complaint, and a little perseverance completely removes it. Children's Coughs, as well as recent ones in adults, will be removed by a few doses frequently by the first; and in asthmatic persons, who previously had not been able to lie down in bed, have received the utmost benefit from the use of it. Sold by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate-street Without, London, and all Medicine Venders, in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each.

ROWLAND'S ODONTO, or PEARL DENTIFRICE.—This is an efficient White Powder for the Teeth, solely prepared from *Oriental Herbs* of the most *delightful odour*, and of sovereign virtue for *strengthening, preserving, and thoroughly cleansing the Teeth.* It eradicates *Tartar* from the Teeth, removes *spots of incipient decay, pollishes* and *preserves* the enamel—to which it gives a *pearl-like whiteness*; and, above all, from its *disinfecting* properties, gives SWEETNESS TO THE BREATH. As an *anti-scorbutic*, the *gums* also share in its transcendant powers. *Scurvy* is eradicated from them, a healthy action and redness are induced, that offer to the notice of the medical practitioner the most indubitable signs of their *healthful state.* Price 2*s.* 9*d.* per box, duty included.

☞ NOTICE—The Name and Address of the Proprietors, *A. ROWLAND & SON*, 20, *HATTON GARDEN, LONDON*, are engraved on the Government Stamp, which is pasted on each. Be sure to ask for "ROWLAND'S ODONTO." Sold by Chemists and Perfumers.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whithy, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years: he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.

Yours, &c. JOHN KILVINGTON.

To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.

OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off, a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.* and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

NEW WORKS IN PREPARATION.

PAST AND PRESENT.

By THOMAS CARLYLE.

Post Octavo.

THE IRISH SKETCH BOOK.

By Mr. M. A. TITMARSH.

With Etchings and numerous Engravings on Wood, from the Author's Designs.

Two Volumes, Post Octavo.

THE BARONIAL HALLS,

Picturesque Edifices,

AND

ANCIENT CHURCHES OF ENGLAND.

FROM DRAWINGS

By J. D. HARDING, W. MÜLLER, W. PYNE, &c. &c.

Executed in Tinted Lithography and Litho-tint;

WITH DESCRIPTIVE LETTER-PRESS, AND NUMEROUS ENGRAVINGS ON WOOD.

Edited by S. C. HALL, F.S.A.

The size of this Work will be Royal Quarto; and the mode of its production will be in all respects commensurate with the importance of the subject and the advanced state of the graphic and typographic arts. Each Part—of which one will be issued on the first of every alternate month—will contain Three Subjects of a large size, executed in Litho-tint—the patent invention of Mr. Hullmandel, or in tinted lithography—a method peculiarly suited to such a publication, as combining accuracy of detail with brilliant artistic effects, and having also the advantage of novelty.

The Drawings will be taken on the spot by accomplished and popular artists, among whom it is sufficient to name Messrs. Harding, Müller, Pyne, &c. Woodcuts, when desirable to elucidate the text or to convey accurate ideas of striking details, will be scattered through the letter-press, which will consist of Twelve pages,—sufficient, it is believed, to furnish all necessary information to the general reader.

☞ *A full Prospectus and Specimens of the Work will be issued in the course of April.*

TO BE PUBLISHED IN THE FOREIGN LIBRARY.

In Four Parts,

SCHLOSSER'S HISTORY OF THE EIGHTEENTH CENTURY.

Translated by DAVID DAVISON, M.A.

Under the immediate superintendence of the Author.

The Literary Portion of the History will appear first, and form Two Volumes, octavo, with an entirely new Introduction by the Author, not yet published in Germany, and with a Preface and Notes by the Translator.

A New Edition of the Political History is now in course of preparation by the Author, which will be immediately translated from the proof sheets, and appear contemporaneously with the German Edition.

In Two Parts,

AUSTRIA.

By J. G. KOHL.

COMPRISING

VIENNA, PRAGUE, HUNGARY, BOHEMIA, STYRIA, TRANSYLVANIA, &c.

CHAPMAN & HALL, 186, Strand.

THE

ANNUAL BIOGRAPHY:

Being LIVES of

Eminent or Remarkable Persons

Who have died within the Year 1842.

By CHARLES R. DODD, Esq.

Author of 'The Peerage,' 'The Parliamentary Companion,' 'The Manual of Dignities,' &c.

"This is announced as the first volume of a series, and it contains a number of biographical sketches of individuals who have died during the year 1842. It is divided into two portions, in one of which the memoirs of the most remarkable persons are arranged in the order of their deaths, and in the other, shorter notices of those less remarkable are placed in alphabetical order. The publication will be a very useful one; and the general execution of the present volume is neat and judicious."—*Morning Chronicle.*

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

Complete, in cloth, price 10*s*.; or in Nine Numbers, price 1*s*. each,

THE HORSE:

Its History, Races, Structure, Diseases, and Treatment.

Baudry, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition. [JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

ROYAL ASTRONOMICAL SOCIETY.—The NEXT MEETING of this Society will be held on WEDNESDAY, the 12th instant, at Eight o'clock.

EDUCATION AT LUBEC, IN GERMANY.

THE very superior nature of the Education imparted to Youth at the higher Schools and Colleges of Germany, and more particularly, the great proficiency in Modern Languages, History, Geography, Mathematics, and other practical branches of instruction, to be attained by Pupils destined for the Army or Navy, or for Commercial pursuits, has long convinced reflecting parents and guardians of the advantages to be conferred on the Youth under their charge, by sending them over to Germany, to complete their Education at one of these Institutions.

The College or High School at Lubec, denominated "The Catharineum," has for centuries enjoyed high repute as one of the first of these Collegiate Schools; a Commercial Institution in the same city, for the communication of practical commercial and counting-house knowledge to Pupils of a more advanced age, has attained to almost equal celebrity, and an English Gentleman resident there, who has been a Master at the Catharineum nearly Twenty Years, has an Establishment for the reception of a limited number of Pupils, destined to attend either of those Institutions, under whose care parents and guardians may rest assured, that the Youth they may intrust to his charge will meet with not only all the superintendence requisite to their obtaining a perfect knowledge of the German and French Languages, and to insure due progress in their other studies, but also all those comforts of home and social intercourse, and that attention to the religious and moral opinions of English parents, the want of which so often deters persons from sending youth abroad.

For a Prospectus and further Particulars, Terms, &c., apply to W. L. NEWMAN, Esq., Insurance Office, York.

ART-UNION OF LONDON.—The Committee beg leave to inform the Artists who have kindly favoured them with DESIGNS, that the PREMIUM is awarded to a Series by Mr. H. C. Selous, of Camden-street North, Camden Town, illustrative of Bunyan's 'Pilgrim's Progress.' To the Authors of 'Prometheus,'—marked with a triangle; 'Griselda'; and 'Comus,'—marked S. within a C.;—the Committee have resolved to present an honorary premium of Twenty Pounds each, and therefore request permission to open the letters containing their names.—Candidates may obtain their Designs on application at the Office, 4, Trafalgar-square.

GEORGE GODWIN, } Honorary
5th April, 1843. LEWIS POCOCK, } Secretaries.

GEOLOGICAL TRANSACTIONS.—A Second-hand COPY, including the Parts that are out of print, TO BE SOLD at 20 per cent. below the published price. To be seen at J. TENNANT'S, 149, Strand, London.—J. T. has an extensive assortment of SHELLS, MINERALS, and GEOLOGICAL SPECIMENS, and arranges Elementary Collections for Students in Geology, Mineralogy, and Conchology, from 2 to 50 guineas each.

CONCHOLOGY. Lovell Reeve begs to announce, that his Cabinets of Shells are now arranged for the season, and exhibit many specimens of great rarity and interest from all parts of the globe.

This day is published, No. III. of the
CONCHOLOGIA ICONICA: a complete Pictorial and Descriptive Repertory of Species of Shells, with occasional representations, general and anatomical, of their animal inhabitants; a number of eight plates, each plate with separate leaf or leaves of letter-press, on the first day of every month, price 10s. coloured; 7s. 6d. plain.

A well illustrated 'Encyclopædia of Shells' is so manifest a desideratum, that the author of the 'Conchologia Iconica' was induced to trust his costly venture without adopting the usual security of petitioning subscribers. The result has been most satisfactory; for the stimulus given to this favoured science by the prolific discoveries of modern travellers, has induced a remunerative issue at a much earlier period of its publication than could have been expected. The author is thus enabled to make *permanent* arrangements for the due performance of his task, and no expense will be spared to render this elaborate work of Conchological Illustration worthy in all respects of the encouraging patronage under which it has commenced.

Lovell Reeve, Conchologist, 8, King William-street, Strand.

INTERESTING and CLASSICAL EXCURSION.—STEAM to CONSTANTINOPLE, calling at GIBRALTAR, MALTA, ATHENS, SYRIA, SMYRNA, MYTILENE, and the DARDANELLES. For Passengers, Goods, Specie, and Parcels. The Peninsular and Oriental Steam Navigation Company will despatch the TAGUS (900 tons and 300 horse power), on her next trip to the above places, from Southampton, on FRIDAY, the 28th April, at 9 o'clock, A.M. Goods and Parcels must be at Southampton by the 26th April. Programme of the route, rates of freight and passage, and other particulars, may be obtained at 44, Regent-street, Piccadilly; also of Earle, Langston, Manchester; F. M'Gowan, 3, Burgh-quay, Dublin; and to secure Passages, apply at the Company's offices, 57, High-street, Southampton, and No. 51, St. Mary-Axe, London.

VALUABLE BOOKS SELLING AT EXTRAORDINARY REDUCED PRICES, BY G. WILLIS, PIAZZA, COVENT-GARDEN. THE FOLLOWING IS A SELECTION FROM HIS EXTENSIVE STOCK:—

BRITTON'S ARCHITECTURAL ANTIQUITIES of GREAT BRITAIN, represented in nearly 400 fine Engravings of Views, Elevations, Plans, &c., with Historical and Descriptive Accounts of each, 4 vols. royal 4to. neat, uncut, and original sets. 10l. 10s., published at 30l. 1801.

BATTY'S (Capt.) SELECT VIEWS of some of the Principal Cities of Europe, with Illustrative Notices, royal 4to. 2l. 2s., published at 10l. 10s. 1832.
This is a beautiful proof copy on India paper, with etchings.

BRITISH GALLERY of CONTEMPORARY PORTRAITS, being a Series of Engravings of the most Eminent Persons of Great Britain, from the best Pictures, with Biographical Notices, 2 vols. folio, printed on drawing paper, 150 portraits, contains many fine portraits of celebrated persons in no other publication. original copy, half morocco. 3l. 10s. published at 31l. 5s. 1822.

COSTUMES of RUSSIA, AUSTRIA, CHINA (with the Chinese Punishments), TURKEY, and the Military Costume of Turkey, in all 6 vols. imp. 4to. All the plates finely coloured in red morocco gilt, with gilt leaves, 7l. 7s., published at about 40l. 1801-10.

CLARKE'S (Dr. E. D.) TRAVELS in various Countries of EUROPE, ASIA, and AFRICA, plates, best edition, 6 vols. 4to. calf, very neat, 5l. 15s. 6d., published at 39l. 1810-24.

DIBDIN'S (Dr. T. F.) BIBLIOGRAPHICAL, ANTIQUARIAN, and PICTURESQUE TOUR in the NORTHERN COUNTIES of ENGLAND and SCOTLAND. 2 vols. royal 8vo., 100 beautiful plates, 2l. 2s., pub. at 9l. 9s. 1833.

EDGEWORTH'S (Miss) TALES, NOVELS, and ROMANCES, complete in 18 vols. foolscap 8vo., new edition, and only one complete, with beautiful frontispieces, new in cloth gilt, 2l. 10s., published at 4l. 14s. An excellent set of books for a present. 1833.

ENCYCLOPÆDIA LONDINENSIS, or Universal Dictionary of Arts, Science, and Literature, illustrated with very numerous plates, complete in 24 vols. 4to. half-calf gilt, 10l. 10s. 1829.

FISHER'S COLLECTIONS, HISTORICAL, GENEALOGICAL, and TOPOGRAPHICAL, for BEDFORDSHIRE, 117 plates, (several coloured), folio half-bound morocco, 1l. 11s. 6d., published at 8l. 8s. 1837.

GELL'S (Sir W.) POMPEIANA: the Topography, Edifices, and Ornaments discovered since 1819. 2 vols. 4to., half morocco gilt, large paper, numerous fine Plates, plain and coloured, 2l. 4s., published at 7l. 10s. 1832.

LYSONS' ENVIRONS of LONDON, being an Account of the Towns, Villages, &c. within 12 miles of that Capital, with the Supplementary Parishes. 5 vols. 4to. numerous Plates. Very cheap, 3l. published at 18l. 18s. 1810, &c.

LINNEAN TRANSACTIONS.—The Society's Transactions from the Commencement in 1791, to the last Part published 1842, forming 19 vols. 4to. numerous Engravings, cloth neat, 14l. 14s. 1791-1842.
Very cheap set, usually priced 18l. or 20l; the set is published at about 50l.

LOUDON'S MAGAZINE of GARDENING. 10 thick vols. 8vo. bds.; the series complete, with about 500 Wood-engravings, 2l. 10s., published at 9l. 10s. 1821-26.

LOUDON'S MAGAZINE of NATURAL HISTORY, with upwards of 900 Wood-engravings on subjects of Natural History. 9 vols. 8vo. bds., 2l. 10s., published at 9l. The series complete. 1827-37.

MEYRICK'S (Sir R. S.) CRITICAL INQUIRY into ANCIENT ARMOUR, nearly 100 beautifully coloured Plates, heightened with gold and silver. 3 vols. folio, half-bound, red morocco, uncut, gilt at top, 7l. 7s. published at 21l. 1824.
The above is a most beautiful set of books, far superior to copies that are usually to be met with.

NAPOLEON.—The History of NAPOLEON, by G. Moir Bussey, illustrated by Horace Vernet, with 500 fine spirited Engravings. 2 vols. royal 8vo. cloth gilt. A charming work, only 18s., published at 2l. 8s. 1840.

RAPIN'S HISTORY of ENGLAND, translated and continued to George the Second, by Tindal, the Medallic History, &c. with the Heads and Monuments, &c., by Vertue and Houbraken, very fine impressions. 5 vols. folio, calf, gilt, best edition, 4l. 15s. Knapton, 1741.

SKELTON'S ENGRAVED ILLUSTRATIONS of ANCIENT ARMS and ARMOUR, with Descriptions by Dr. Meyrick, 2 vols. folio, 180 very fine Plates, new and elegant, in half morocco, extra gilt tops. 3l. 10s. published at 6l. unbound. 1830.

LOCKER'S GALLERY of GREENWICH HOSPITAL, comprising Portraits of celebrated Commanders, and their Memorable Actions. 4to., cloth, large paper, fine impressions of the Plates on India paper. 1l. 4s. 1831.

SWIFT'S WORKS, complete, the last edition, edited by Sir Walter Scott. 19 vols. 8vo., calf, elegant, 7l. 7s. sells for 14l. 1821.

TAYLOR'S (Dr. JEREMY) whole WORKS, with a Life of the Author, and a Critical Examination of his Writings by Bishop Heber. Fine Portrait. 15 vols. 8vo., calf elegant, 8l. 10s. 1839.

COTMAN'S ENGRAVINGS of SEPULCHRAL BRASSES of Norfolk and Suffolk, intended to illustrate the Ecclesiastical and Civil Costume, &c. of Ancient Families, 172 Engravings, some illuminated. 2 vols folio, half morocco gilt, 4l. 10s., published at 12l. 12s. 1820.

WELLINGTON'S (Duke of) DISPATCHES during his various Campaigns in India, Denmark, Portugal, Spain, the Low Countries, and France; compiled from authentic Documents, by Lieut.-Colonel Gurwood. With the Index, 13 vols. 8vo., whole bound cloth, 7l. 7s., published at 13l. 13s.
The above is a very cheap set of books.

A Catalogue of Ancient and Modern Books published monthly, Gratis, and sent post free to Gentlemen forwarding their address to G. WILLIS, PIAZZA, COVENT-GARDEN.

JUST ISSUED, Messrs. HAMILTON & BIRD'S CATALOGUE of OLD BOOKS, consisting of many excellent Theological and curious Works, all in good condition, at lower prices than any house in London. It will be sent on application, free of expense, to any part of the Kingdom.—No. 21, High-street, Islington, near the Liverpool-road.

CHEAP BOOKS.—G. HEARL'S CATALOGUE of CHEAP SECOND-HAND BOOKS, Part XVIII. is just published, and may be had Gratis and Postage-free at any part of the Kingdom, upon application to No. 28, Russell-court, Brydges-street, Covent-garden, London.—A large Collection of Second-hand Reviews and Magazines, to complete sets, at low prices.

London; and of all Booksellers.—Books sent, carriage free, to London.

Just published, 1 vol. royal 8vo. cloth boards, price 7s.

BOSSANGE, BARTHES and LOWELL'S GENERAL CATALOGUE of FOREIGN BOOKS for 1843.

This Catalogue contains all the best productions of French, Italian, and Spanish literature of the last century, and is the only one of any importance that has appeared in England for many years.

The prices have been marked generally at the rate of shillings for francs, for modern French works.

For the convenience of teachers and heads of families, the elementary part may be had separate, price 2s.

*** It is presumed that this Catalogue will be found useful to public libraries, and literary institutions, as it contains a copious index, and a detailed notice of the Transactions of many celebrated Learned Societies of Europe, and all the most important Works now publishing under the sanction of the French Government.

14, Great Marlborough-street.

LOOKING GLASSES, &c.—To all parties furnishing.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4s. 6d. per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, Moorgate-street, City.—A few Second-hand Chimney Glasses for sale.

LOOKING GLASS and PICTURE FRAME MANUFACTORY, 12 and 14, Long-acre.—JAMES RYAN begs to call the attention of those who may favour him with their orders to his splendid Stock of Looking Glass, Picture and Print Frames, Girandoles, Console Tables, Cornices, Candelabras, Screens, Brackets, and every article connected in the above line, made to any pattern or design, at such prices as will defy competition. Fancy Wood Frames in every variety of pattern, at his Wholesale and Retail Manufactory, 13 and 14, Long-acre.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ARGATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, Barbican, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s.	d.		s.	d.
Table Spoons and Forks, per doz.	16	6	Mustard Spoon	0	6
Dessert ditto, ditto	12	6	Tea Spoons, per dozen	5	6
Fish Knives	5	6	Gravy Spoons	3	6
Soup Ladles	6	6	Salt ditto	0	6
Sauce Ladles	1	6	Sugar Tongs	1	0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.

C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.

TEA TRAYS, and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 35s.; a best Gothic border 30-inch Japan tray, 12s.; a dozen ivory table knives, 11s.; dessert ditto, 9s.; a pair of carvers, 4s. 6d. A Palmer's Candle Lamp, bronze or lacquered, 9s.; a solar ditto, to burn common oil without smoke or smell, 25s.; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1s. each; best ivory-handle razors, 8s. 6d. per pair.

41 and 42, Barbican, and at 16, Norton Folgate.

Digitized by Google

On the 16th of April will be published,

CATALOGUE of OLD BOOKS, on Sale by JAMES TAYLOR & Co. 38, North-street, Brighton.

*** In consequence of intended alterations, the books will be marked at about half the usual price. Catalogues sent *free* to Gentlemen forwarding their address, and had *gratis* as above; and of James Gilbert, 49, Paternoster-row, London.

Sales by Auction.

MESSRS. HENRY SOUTHGATE & CO. having completed the alterations of their extensive premises, beg respectfully to call the attention of Executors, Trustees, and others, having Literary Property to dispose of, to the importance of their being enabled to display an entire library, even should it extend to twenty thousand volumes, in one large room, at the same moment; thus affording their connexion and casual visitors an opportunity to make personal selections with the greatest facility, instead of depending on the description of the Catalogue. Most centrally situate, near the two principal Inns of Court, within a few doors of the Middle Temple gate, the facilities for the disposal of Law Libraries are undeniable, whilst the immediate vicinity of the largest West-end Bankers, Messrs. Hoare's, Gosling's, Child's, and Strahan's, and being in the main thoroughfare from the City to the Court-end of Town, enable them to obtain the attendance of more private buyers and collectors *than could be induced to visit less public premises*. Books, Prints, Pictures, and, in fact, all sorts of property connected with Literature and the Fine Arts, in large or small parcels, may be transmitted to Messrs. Southgate's rooms; and, if intended for immediate sale, *an advance of two-thirds of the value will be made, to meet the convenience of Executors or Trustees*.

Should testamentary valuations be required, and the books afterwards be intrusted to Messrs. Southgate & Co. for sale, no charge will be made for the valuation.

Messrs. Henry Southgate & Co. continue to make advances on consignments from the Continent, and undertake to defray all charges of Customs, &c. on property sent to this Country for immediate Sale by Auction.

Auction Rooms, 22, Fleet-street, London.

HENRY SOUTHGATE & CO. beg to announce that they are preparing for immediate SALE by AUCTION, at their Rooms, 22, Fleet-street,

A VALUABLE COLLECTION of BOOKS, including a Selection from the Library of W. Walton, Esq. (Author of 'The Revolutions of Spain,' 2 vols., and other Works on Peninsular and South American Affairs); comprising a choice selection of Works in general literature; a great variety of Books in the Spanish and Portuguese Languages; a valuable collection of Manuscript Italian Operas by eminent Authors, set to music in full score by some of the most celebrated composers, 39 vols. vellum; and a number of Ancient and Modern Maps.

Catalogues will be forwarded to Gentlemen favouring Messrs. S. & Co. with their address.

SHELLS FROM MOZAMBIQUE, AND MISCELLANIES.

Messrs. J. C. & S. STEVENS will SELL BY AUCTION, at their Great Room, 38, King-street, Covent-garden, on THURSDAY, 13th April, at 12 o'clock,

A CONSIGNMENT of SHELLS from MOZAMBIQUE, in the finest state, and some of them scarce; Crustacea and Dried Fishes. Also a 30-inch plate Electrical Machine, and a Cylinder ditto. China, Lacquered Ware, Matting; a few lots of Archery Implements, and Miscellanies.

On view the day prior, and Catalogues had at the Rooms.

CAPITAL MODERN DRAWINGS, ENGRAVINGS, AND BOOKS OF PRINTS.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on MONDAY, April 10, and following day. (By order of the Executors.)

A COLLECTION of CAPITAL DRAWINGS, the works of the most celebrated Modern English Artists, the property of a Gentleman deceased: comprising two grand Drawings by Robson; one by Nessfield; two beautiful Works of Stanfield; and examples of

Alexander	Cox	Hunt	Stephanoff
Bright	C. Fielding	Lewis	Stevens
Cattermole	T. Fielding	Nash	Stothard
Cristall	Girtin	Prout	Varley
Cotman	Harding	Rowlandson	Wright.

May be viewed two days preceding, and Catalogues had.

PICTURES, OF THE FIRST CLASS, OF JOHN CAVE, ESQ. DECEASED, OF BRINTRY HOUSE, NEAR BRISTOL.

Messrs. CHRISTIE & MANSON have the honour to acquaint the Nobility and Public, that on SATURDAY, May 6, they will SELL BY AUCTION, at their Great Room, King-street, St. James's-square, precisely at 1 o'clock,

(By order of the Executors.)

THE BEAUTIFUL COLLECTION of ITALIAN, SPANISH, FLEMISH, DUTCH and ENGLISH PICTURES, of JOHN CAVE, Esq. of Brintry House, near Bristol, deceased.

This Collection, which has justly obtained high celebrity, comprises a noble Work of Murillo; a Carità, by Herera; a beautiful Cuyp; the chef-d'œuvre of Lingelback; a Miracle of Art by Breughel and V. Balen; and others of high quality by

May be publicly viewed two days preceding, and Catalogues had.

THE CAPITAL COLLECTION OF PICTURES OF SIR C. BETHEL CODRINGTON, BART. DECEASED.

Messrs. CHRISTIE & MANSON respectfully inform the Nobility and Public, that on FRIDAY, May 12, and following day, they will SELL BY AUCTION, at their Great Room, King-street, St. James's-square,

(By order of the Executors.)

THE HIGHLY-IMPORTANT COLLECTION of nearly TWO HUNDRED PICTURES, formed many years since at Dodington, in Gloucestershire, the property of Sir C. BETHEL CODRINGTON, Bart. deceased. This fine Collection of Italian, French, Flemish, and Dutch Pictures, comprises a Sea Piece, by W. V. der Velde, of the very highest order; the Holy Family, a noble work of A. del Sarto; Paree Somnum Rumpere, a capital picture by Sasso Ferrato; and a Head of Christ, a picture of considerable interest, by Rembrandt; a Landscape by Lynacher; and many very important examples of

L. da Vinci	Borgognone	P. de Champagne	Wouvermans
Baroccio	G. Poussin	Jouvenet	Asselyn
L. Carracci	Swaneveldt	V. Dyck	S. Koninghe
Guido	Canaletti	Snyders	De Gelder
Albano	Zuccarelli	Teniers	Old Cuyp
C. Dolce	Pannini	Ostade	Weenix.

Also Portraits of Charles I., by De Reyn; George II., Vander Bank, and others of interesting character, by Kneller, Richardson, &c. &c.

May be publicly viewed two days preceding, and Catalogues had.

This day is published,

Further particulars will be announced.

NOTICE TO ADVERTISERS.

THE GARDENERS' CHRONICLE; A WEEKLY NEWSPAPER of RURAL ECONOMY and GENERAL NEWS. The Horticultural Part edited by Professor LINDLEY. Price Sixpence stamped, to go free by post. Published every Saturday.

The very extensive sale of The GARDENERS' CHRONICLE amongst the Clergy and wealthy residents in the country, makes it an especially valuable channel for Advertisements. Another advantage is, that the work from its nature is one not only of daily reference but permanent value, so that Advertisements are constantly under the eye of the Subscribers.

To enable all to avail themselves of the columns of The GARDENERS' CHRONICLE, the scale of Charges has been fixed as low as possible.

	£	s.	d.
Space of Four lines and under	0	4	0
Each additional line up to twenty	0	0	6
Every Five lines beyond	0	2	0

Office for Advertisements, 3, Charles-street, Covent-garden, London.

From the last Official Stamp Returns just published (April 3, 1843) it appears that during the three months of October, November, and December, in the past year, the Stamps supplied to each of the undermentioned Journals gave them an average Publication of—

GARDENERS' CHRONICLE	4,308
Mark Lane Express	4,193
Watchman	4,116
St. James's Chronicle	4,000

GUY'S HOSPITAL REPORTS, New Series, No. I.

It is proposed in this series to devote a large portion of each number to Reports of the most interesting Cases occurring within the Hospital, illustrated by plates. These cases will be classified, so as to present the history of any particular Disease, as it has occurred in the Hospital.

The present number contains an Account of Observations made during last summer by Drs. Bright and Barlow, on about forty cases of Renal Disease; for which purpose two wards were exclusively appropriated; with an account of Chemical Examination of the fluids, by Dr. Rees. Also, a Report of about Sixty Cases of Hernia, or of Cases simulating Hernia; as well as Reports of nearly all the Cases of Fever occurring in the last twelve months. It also contains Original Communications by the different Officers and Lecturers of the Hospital.

S. Highley, 32, Fleet-street, London.

A CATALOGUE of BOOKS, PUBLISHED BY C. KNIGHT & CO. For 1843.

May be obtained at 22, Ludgate-street, and of respectable Booksellers.

Several of the more important of the Serial Publications in the Catalogue are rapidly approaching to their completion. The limits of these Works, namely, the PENNY CYCLOPÆDIA, the PICTORIAL EDITION OF SHAKSPERE, the PICTORIAL HISTORY OF THE REIGN OF GEORGE THE THIRD, and the LONDON, have now been strictly defined, and will be rigidly adhered to by the Editors and the Publishers. The number of volumes, therefore, and the price of each completed Work, are given in their Catalogue, and the exact period is stated at which each will terminate.

It is requested by the Publishers that the order for any selection from their Catalogue may be given through a bookseller.

NEW WORKS, 1843.

PORTER'S PROGRESS OF THE NATION, Complete in 3 vols., price 1*l*. 4*s*.

In 2 vols. post 8vo. price One Pound, elegant, in cloth,

CHAPMAN'S HOMER;

The Iliads of Homer, Prince of Poets, never before in any language truly translated, with a Comment upon some of his chief places. Done according to the Greek by GEORGE CHAPMAN. A New Edition, with Introduction and Notes, by W. COOKE TAYLOR, Esq. LL.D. M.R.A.S., of Trinity College, Dublin. With Forty Engravings on Wood, from the Compositions of John Flaxman, R.A.

This great translation, so dear to every lover of our old poetry who has been able to read it in the very rare original, is now reprinted for the first time during more than two centuries. The wonderful Homeric Designs of Flaxman, carefully reduced, and engraved by Jackson, add to the interest of this republication.

"Much have I travell'd in the realms of gold,
And many goodly states and kingdoms seen;
Round many western islands have I been
Which bards in fealty to Apollo hold.
Oft of one wide expanse had I been told,
That deep-brow'd Homer ruled as his demesne;
Yet did I never breathe his pure serene,
Till I heard Chapman speak out loud and bold:
Then felt I like some watcher of the skies,
When a new planet swims into his ken;
Or like stout Cortez, when with eagle eyes
He stared at the Pacific—and all his men
Look'd at each other with a wild surmise—
Silent, upon a peak in Darien."—*Keats*.

London: Charles Knight & Co. Ludgate-street.

Now ready, demy 8vo. (oblong), 2s. 6d.

FIRESIDE HARMONY; or, Domestic Recreation in Part Singing. A Selection of favourite old Glees, Rounds, and Canons; arranged to words suitable for Families and Schools. By HELEN S. HERSCHELL. 2nd edition.

Printed for Taylor & Walton, 28, Upper Gower-street; and sold by W. Whyte & Co. Edinburgh.

COMPLETION OF MÜLLER'S PHYSIOLOGY.

Now ready, in 2 vols. 8vo., each volume 20s.

ELEMENTS of PHYSIOLOGY. By J. MULLER, M.D., Professor of Anatomy and Physiology in the University of Berlin. Translated from the German, with Notes, by WILLIAM BALY, M.D., Graduate in Medicine of the University of Berlin. Illustrated with Steel Plates and very numerous Wood Engravings.

"We do, however, recommend it very strongly, and we have no hesitation in saying that it will supersede all other works as a text-book for lectures, and one of reference for students. It steers a middle course between the superficial brevity of many of our modern works, and the pleonastic and metaphysical jargon of Burdach."—*Med.-Chir. Review*, April, 1838.

*** Subscribers are requested immediately to complete their Copies.

Printed for Taylor & Walton, 28, Upper Gower-street.

CHEMICAL ANALYSIS.

In 1 vol. 8vo. with Diagrams on Wood, price 10s. 6d. cloth,

ELEMENTS of CHEMICAL ANALYSIS, INORGANIC and ORGANIC. By EDWARD ANDREW PARNELL, Assistant Lecturer on Chemistry in the Medical School of St. Thomas's Hospital; late Chemical Assistant in University College, London.

"We have perused this interesting volume with great satisfaction, and have no hesitation in recommending it strongly as a safe and valuable guide in conducting the intricate and perplexing operations of analytical chemistry."—*Medico-Chir. Review*, Jan. 1843.

Printed for Taylor & Walton, 28, Upper Gower-street.

FOR LECTURERS, SCHOOLS, ETC.

NEW BARONETAGE.

Now ready, price 7s. 6d. cloth gilt, with Illustrations drawn by Herman, and engraved by Armstrong,

THE BARONETAGE OF THE BRITISH EMPIRE

FOR 1843.

Differing in arrangement, information, and several other important features, from any existing Publication on the subject; and containing a succinct genealogical account of the *whole* MEMBERS of the Order, chronologically classified, under their respective Creations. The Families who are Lords of Manors in England and Ireland, and Free Barons in Scotland, are particularized; and the eminent Services for, or remarkable occasions on, which the Members received their Baronetcies, during the last and present centuries, are specified.

This Work also comprises an Historical Account of the original Institution of the Baronetage, and of the Rights, Privileges, Immunities, and Precedency vested in it by the Charters of its Royal Founder.

It is elegantly illustrated with Engravings of the different Insignia, and with Examples of Arms charged with the exterior Heraldic Ornaments incidental to the Order.

CUNNINGHAM & MORTIMER, Publishers, Adelaide-street, Trafalgar-square.

NEW NUMBER OF 'THE STORY-TELLER.'

This day is published, price 6d., No. II. of

THE STORY-TELLER;

OR,

Table-Book of Popular Literature:

A COLLECTION OF TALES, TRADITIONS, AND LEGENDS OF ALL NATIONS.

Embracing the choicest Productions, and forming a comprehensive

LIBRARY OF MINOR FICTION.

EDITED BY ROBERT BELL,

Author of 'Lives of the Poets,' 'Mothers and Daughters,' &c.

With INCIDENTAL NOTES, Critical and Illustrative.

THE object of this publication is to collect and preserve the best specimens of the fugitive literature of Europe—those exquisite gems which so rarely find their way into the large collections of National Fiction, and so often perish in the evanescent periodicals. Such productions have a peculiar value as illustrations of the customs, manners, social characteristics, and poetical spirit of the age; and the sources from whence they will be derived, including the range of all the living languages, are extensive, so as to ensure continuous excellence in the choice of materials.

Every nook of literature, ancient and modern, at home and abroad, will be explored for the means of conferring a permanent grace on the pages of this Anthology—the haunted places of Moorish romance—the allegories of oriental fable, full of passionate beauty and moral truth—the traditions of chivalry—the lays of the Minnesingers and Troubadours—the picturesque reliques of our old English literature—the fresh springs of poetry that have of late years gushed forth in the North of Europe—the fictions of Italy and Spain—the ballads and weird tales of Germany, teeming with intellectual superstitions—and the fanciful metaphysics of the Romantic School in France, now scattered through a multitude of ephemeral journals.

The plan of the 'Story-Teller' will admit short Sketches of Society and Scenery—Real Narratives of remarkable Actions and Events—and occasional Episodes from large and costly works. Original Tales will also form a distinct feature.

The selected papers will be accompanied by notes, or introductions, sometimes taking the shape of criticism, and sometimes that of biographical or historical annotation; but always with a view to heighten and refine, rather than to interrupt, the pleasure of the reader.

The 'Story-Teller' will be published every Saturday, and will consist of 36 pages, imperial extra, price 6d. Monthly parts will be issued in a wrapper with the Magazines, and an Index will be supplied half-yearly for binding into Volumes. Each Number will be equal in solid contents to an ordinary Octavo Volume.

"We have much pleasure in welcoming back to our weekly literature this graceful critic and always agreeable writer. His plan is full of promise, being every way much above the ordinary compilations of that kind which have hitherto been attempted. Its purpose is to collect and preserve the best specimens of the fugitive literature of Europe, to which, as to a worthy feast, the Editor invites his friend, the reader, giving him the advantage of a rare experience and judgment in selection, and of a most kindly and enjoying spirit in criticism. We shall be heartily glad of the success of 'The Story Teller.'"—*Examiner.*

☞ *ADVERTISEMENTS will be received till THURSDAY of every week.*

London: CUNNINGHAM & MORTIMER, Publishers, Adelaide-street, Trafalgar-square.

LONDON, SATURDAY, APRIL 8, 1843.

REVIEWS

Examples of Railway Making; being chiefly an Account of the Utica and Syracuse Railroad, constructed by O. H. Lee and C. B. Stuart, Engineers, of the United States. London, Weale.

EIGHTEEN months ago we directed attention to some questions regarding the General Economy of the Railroad System, which at that time appeared to us of considerable importance to our national and commercial welfare. The evils to which our attention was directed were then just beginning to be felt as casual annoyances, without having assumed a definite shape or general features. It was occasionally found out that a town which wanted a railway was *not large enough* to have one. It was ascertained that a particular district was *not sufficiently populous* to participate in the railway privileges of its neighbours, and, therefore, must be content to remain isolated, cut off from the great railway world, in which alone commerce breathes the atmosphere of health, and grows in the sinews and thews of the mercantile contest. Even a whole fertile and populous country of the British Union, a land teeming with population, and rich in all mercantile, agricultural, and commercial capabilities, is declared to be *too poor* to share the blessings of the railway system. These evils were then regarded as the inevitable judgments of fate, to be quietly endured with Mohammedan resignation. To us, however, they appeared only as manifestations of the giant evil of the British railway system,—an evil of which we endeavoured to ascertain some of the causes, and to point out what appeared to be the possible remedy (see *Athen.* No. 739).

This giant evil in railway economics has recently manifested itself in a variety of ways too palpable to be mistaken; and our observations, which to some at that time appeared too strongly expressed, because, we admit, strongly felt, and were reckoned somewhat premature and overstated, have been forced home on the convictions even of the sceptical and incredulous men of 1841. This evil is the enormous cost of railways. Here, at last, is the bill, as made up by Mr. Wishaw:—

Cost of British Railways.

Designation.	Length.	Cost.
Arbroath and Forfar	15	£160,000
Ardrossan and Johnston	5½	19,250
Aylesbury	7	59,000
Ballochney	6	38,431
Birmingham and Derby	38¾	1,030,000
Birmingham and Gloucester	55	1,329,300

This is truly an appalling array of figures—FORTY MILLIONS sterling and more, expended on 1,500 miles of railway! And worse still, more than half that sum *unprofitably* invested! Is it not well we should avail ourselves of the present pause of speculation, to ponder on the effect and tendency of so large an investment? Surely this giant feature in modern national economy demands an attention which it can hardly be said to have received.

We shall not, for the present, stop to inquire where this money came from, though this is a most interesting question; nor to find out where this money has gone to, or what has become of it now. Who have gained by the change? who have lost by it? What might have happened if railways had not been created? What a volume might be written on the Railway System as an Element of Social Economy—a source of the wealth of nations! an engine of national industry! commerce! prosperity! luxury! Why has this book not already been written? Who will take up the gage we have thrown before them?

Our question at this moment is, however, a much plainer, homelier, simpler one. Have we been spending all this money in the best way? Have we got the greatest practicable amount of value for our money? Could not the same amount of money have extended the benefits of the system through a wider range? In that case, would not a larger population, enjoying these benefits, have increased the profitableness of investment in all? and would not the number of unprofitable investments have been greatly diminished? Have they already cost so much, that we cannot afford to go any further? Forty millions of pounds—could it have been expended better? Fifteen hundred miles of railway—could we not have had more? Twenty-six thousand pounds a mile—would not less have done equally well? Such are the questions we now put. They should have been put by our legislators long ago, but the ins and outs of office are too important in their eyes to leave leisure for the mere interests of the nation. We may now reply to them more at large, than we did formerly, when we mooted the questions.

Question 1.—1,500 miles of railway for forty millions, at 26,000*l.* per mile! Could this have been less?

Answer first:—Belgium has provided her subjects with a well organized system of railways, at a low tariff of charges, as follows:—

350 miles of railway for five millions, at 14,000*l.* per mile.

This is a pretty good reduction to begin with—nearly a half; so that we might, with our much cheaper iron and machinery, have had a double profit on our railway stock, provided always it had been possible to make our railways at the rate of the Belgian—*nous verrons.*

Answer second:—We have lent a great deal of money to Brother Jonathan: he has made railroads with a portion of it. How has he expended our money comparatively with our own investment? By a careful examination, we have found that Brother Jonathan has made with our capital lent to him,—

6,000 miles of railway for twenty-seven millions, at 4,500*l.* per mile.

In regard to many of these American lines, it is further to be observed, that they are arranged systematically under the direction and superintendence of the government, each State having a main line, supported and enriched by lateral and tributary branches, while the systems themselves are again united on a more extensive scale in larger systems and lines of general communication; thus economizing the resources and extending the advantages of the system, and preventing that redundancy of lines, which in this country deprives some districts altogether of communication, and allows excessive competition on others, injurious to both and to the public well-being. Now, America is a very thinly peopled country; a comparatively poor country; and its distances enormous. Yet, in 1839, all the railways—good, bad, and indifferent—had paid on the average 5¼ per cent.!

Let us examine into the causes that have led to the enormous cost of our lines compared with those of other countries; this will go farther to answer our question.

Answer third:—Want of faith in the powers of the locomotive engine and the resources of mechanical improvers, has been one material source of expense.

The slowness to believe in the capabilities of the locomotive engine, exhibited by the engineers of Great Britain, is truly surprising. This is the more surprising, as means for making the experiment have never been wanting, since the earliest coal railways, with the rudest locomotives, were at work at Newcastle, in Scotland, and in Wales. What is most remarkable in the locomotive engine, is its astonishing power of adapting itself to circumstances! of varying its exertions according to the work to be done! of straining every nerve (bolt?) to encounter and conquer a difficulty! of its power of extraordinary exertion in an emergency! It is difficult at first thought for any one to conceive this versatility of energy, especially one who has never handled the wonderful creature. It is well known to the intelligent driver; and, indeed, much of the success of the engine in an effort and in general work depends on the handling and the management,—the "feeding," the "watering,"—now keeping her by the head, now letting her out, now spurring, and occasionally running to her utmost, taking care above all, as with a good steed, never to run her out of breath, to keep her well in check at the starting, never to let her take too much water at a time, and a sufficient interval between her feeds, and especially never to over-feed before hard work. In short, the waggoner must thoroughly understand the character of his individual engine, and the nature of the line and the work, to do his engine any justice; and an unskilful driver will cost his employers more in one day, than his wages will cover in a year; hence he should be well kept, well paid, and moderately worked. But with such a driver, it is wonderful what an engine will accomplish. First, as regards speed, the locomotive engine has a power of adaptation. Let us conceive an engine starting, with a train behind her, and going along steadily at fifteen miles an hour,—a slow pace; it will require all the steam she then produces to maintain that pace, and she will manifest no capability of going faster; in short, she will consume all the steam she has the power of producing at that pace, and, therefore, to all appearance and to all reason, she has attained her maximum speed, and can go no faster; nor would an ignorant engineer ever imagine it possible she could do more. But now comes the art, and its effect. The driver prepares his steed for

Digitized by Google

the race: he gets the fire into a general glow, except just round the margin, where he lays the fresh coke; he regulates the water until just the proper quantity, but rather a full charge, is in the gauge, and waits till the steam is just strong enough to raise the valve. Now for the race: he slacks the rein (valve) a little, and off bounds the steed with increasing strength and speed, and, of course, with a much more rapid expenditure of steam, so that the supply of the boiler would manifestly be soon completely exhausted, and the store being expended, the speed would soon relax; but this does not happen; on the contrary, the steam increases in supply more rapidly, or at least as rapidly, as it is carried off, so that instead of the boiler being emptied by the rapid process of exhaustion, it is just the reverse,—that is, the more rapidly it is emptied, the fuller does it become; the more it has to do, the more it is able to do; the greater its speed, the greater its ability to sustain that speed. The paradox is explained thus: and this is one of the wonderful qualities and contrivances of the structure of the locomotive engine, from which it derives its great value as a worker of railway labour, that its powers of exertion and production are developed in precise proportion to the demand for exertion. The contrivance for this purpose is like most valuable inventions, simple in proportion to its value. There is a contrivance for blowing the fire. This contrivance is automatic,—that is, the engine blows the fire of itself. Let us call this apparatus the blast. This blast operates by puffs; and these puffs are so regulated, that when the machine is in motion, the air shall be blown into the fire by one puff for every four feet of distance over which the engine travels. When the engine, therefore, travels over one mile, the fire receives 1,320 puffs. Now each puff carries into the fire a certain quantity of oxygen to sustain the combustion, and this supply of oxygen is a proximate cause of the production of heat by the fire, and, indeed, an approximate measure of the quantity of heat produced; double the quantity of air, therefore, properly applied, will give double the quantity of oxygen, and, of course, double the quantity of heat. Therefore, if each puff force into the fire a given quantity of air with its oxygen, a double number of puffs per minute will give a double supply of heat, and will generate double the quantity of steam, and give out in a minute double the quantity of work. Suppose, now, that an engine starts with a speed of one mile an hour, it will make only about one puff of air into the furnace in three seconds of time; at three miles an hour it will make a puff every second of time, or rather 66 puffs per minute, and will advance about 4½ feet per second; at twelve miles an hour it will advance 18 feet per second, and make 264 puffs per minute; and at twenty-four miles an hour, it will make a bound forward of 12 yards in every second of time, but in each second of time it will also make 9 puffs, or 528 puffs per minute. By this contrivance of making the puffs of the blast apparatus regulated not by an independent cause, but directly by the speed of the engine, or the quantity of steam it requires, which is as the speed, there is given to the locomotive that faculty, by which its means of generating strength increases along with the demand for that strength. It was otherwise in the early locomotive engines; they were, in this respect, like the common engines of a steam-boat, or like the common steam-engines fixed on land; these engines have a chimney, the height of which measures the draught, and it has no connexion whatever with the number of strokes of work that may be required of the engine. They will only burn a given amount of fuel, and raise a given quantity of steam, and do a given quantity of work per day, whatever be the accidental necessities of the case. But for this beautiful contrivance, the locomotive engine would have been an inert, plodding machine, like any commonplace engine. It is this wonderful ability to increase and multiply its powers of performance with the emergency that demands them, which has made the giant engine the noblest creation of human wit, the very lion among machines. With this wonderful capacity, it may be truly said, that danger and expense are the only known limits of railway speed.

We have said that want of faith in the capabilities of the locomotive engine has formed one important item in the expense of the English railway system. Engineers set out in their railway career with the impression that the locomotive was ill-calculated to climb up hill with its load, and that, therefore, to work with advantage, it must work on lines either altogether level or nearly so; hence mountains required to be levelled, valleys filled up, tunnels pierced through rocks, and viaducts reared in the air—gigantic works at a gigantic cost, all for the purpose of enabling the engine to travel along a dead level, or nearly so. But here, again, was want of faith in the powers of the locomotive engine. The locomotive engine can climb the mountain side, as well as career along the plain; for here, also, its wonderful quality of increasing its efforts with the emergency comes into play. We have already seen how, in running along the level, the engine's powers of production increase with the demand for them, and supply of steam increases in proportion to the speed of the engine; but so also does the power of propulsion increase with the load to be dragged, or with the steepness of the incline to be ascended. In proportion as the load is increased does the elasticity of the steam, as it issues from the engine, increase, and thereby is the strength of the blast which blows the fire so increased, as to generate more steam, and stronger in proportion to the severity of the work to be done. Thus the locomotive engine has been found capable of ascending hills of rapid inclination. A slope rising 1 yard in 220, or 8 yards in a mile, has been found hardly of sensible disadvantage in a railway; double that, or 48 or 50 feet in a mile, is quite practicable; and the parliamentary slope of a common road, or 1 foot in 36, by no means impossible to the wonderful powers of our present improved locomotive engines. It should, therefore, cease to be deemed impossible to adapt railroads to the face of the country. Those enormous works may be dispensed with, or greatly diminished, which were made for the purpose of making the way practicable to the locomotive engine; and the enormous expense which this erroneous view, this want of faith, has cost us in the past, may be saved us in the future. Engineers must resign their crotchets about optimum gradients,—must cut their roads, as their tailors their coats, according to their cloth, and give to such places as will not pay for an optimum railway, such a railway as their means can afford or their traffic warrant. Instead of going through the mountain, they must go over it, or round its base, as they best can. We can no longer afford to erect costly monuments of the talent or ambition of engineers; we want plain, useful, profitable railroads for the carriers of our goods and the drivers of our coaches; we want a fair speed and a moderate price: and that is all we wanted, or should have had, from the beginning; by which means we might now have had double the length of line, and a much larger revenue for the present amount of national expenditure.

So much for gradients: but there is another crotchet of engineers about curves, which, equally absurdly and uselessly, has cost immense sums of money. Neither satisfied to go over a hill or round it, our engineers insist on going through it: like the land-crab in its migrations, the engineer in his railways, seems to forget that he has the power of turning to the right or left, and insists, at all hazard, of going right on, and eating his way through when necessary; he flatters himself that a straight line is the shortest distance between two points, and has an instinct, like the ass, which directs him to adopt it. (We forget which ancient philosopher asserts, that the donkey has an intuitive knowledge of geometry, as far as the XVII. Prob. of Euclid, for, says he, place a donkey at one end of a straight line and a bundle of hay at the other, and he will manifest his proficiency by adopting the straight line, rather than any other line, to reach the fodder). When a hill is in his way, the engineer says, remove that hill, and take this rock and fill with it that chasm,—forgetting how much easier (commercially speaking) it may be to remove that locomotive engine out of the way of the mountain, than the mountain out of the way of the locomotive engine. A very learned and profoundly scientific engineer will tell you, that the straight line is the only true path of momentum for moving bodies, or rather the circle of curvature of the earth, and will, to prove his learning, refer you to the Phil. Nat. Principia Math., auct. Isaaco Newtono, Eq. Aurato, p. 15, edit. P.P. Thomæ le Seur et Francisci Jaquier, vol. primum; and there to the Leges Motûs, ubi lex primum: Corpus omne perseverare in statu suo quiescendi vel movendi uniformiter in directum, nisi quâtenus viribus impressis cogitur statum illum mutare: which he interprets thus, that a locomotive engine naturally prefers (like the philosopher's ass aforesaid) the straight line, and is, indeed, so fond of it, that you have only to give it a push at one end of it, and it will arrive, without further impulse, at the other, under the guidance of Newton's first law of motion. Now all this is very profound and very wise, only it happens not to be true so far as the locomotive engine is concerned. The locomotive engine does not like the straight line, and never will go in it. When placed on a straight and level piece of railway, it will, of its own accord, begin pirouetting from one side to the other, describing a continual serpentine line, as far as the rails and the guiding flanges of its own wheels will let it. This oscillating motion may often be felt even in the carriages, when going fast. The opposite axiom is, therefore, true, and is this, that locomotive engines prefer curves to straight lines, and always will adopt them when not prevented; so that, in short, it is always proper and right to use curves when wanted, provided their curvature do not exceed the curvature which the engine would naturally take when moving with a given velocity. Experience has shown, that such curves are perfectly consistent with speed, regularity, and safety. Had engineers been sufficiently acquainted with their profession, they would have understood all this, and spared us many millions of expenditure, besides leaving us a great deal of money to have been making railroads with *now*, instead of having *none*. Much that has been said, and unhappily done, in the English railway system, has gone on these two grand errors, arising from ignorance of the nature of the locomotive engine, and want of faith in its capabilities, and the gradual improvement that would take place in its manufacture. It can both climb a hill and go round one with ease and safety, and fair speed. To select a level and straight line is very proper and right, if it is to be had, and the wish for one is very well, if, by so doing, the engineer can make the mountain (and why not the valley as well?)

Digitized by Google

come to him. Let the engineer select the shortest and straightest and levellest line he can get, by all means; but if Nature has been very perverse, let him work with her, rather than without her. If, by making a line two miles in fifty longer, he can make it two thousand in ten thousand cheaper, which he frequently could, it is not difficult to see which way the gain lies.

Now, be it observed, that we are talking all this while, not of what engineers might have done by possibility, if they had been of our mind, but of what they actually have done, against their will, when they have been compelled by circumstances to give proofs opposed to their own practices. Mr. ——— finds that his tunnel through a hill will not stand (on account of the nature of the soil), and, in order to open his railway at all, is compelled to go round the hill instead of through it, which might have been done with easier curves, and better, if he had voluntarily done so at first, to avoid not so much the mountain of earth as the mountain of money in his way. No, but the reputation of the engineer rises with a handsome tunnel, and falls with a sharp curve. There's the rub. The engineer loves a bit of good masonry, a well formed arch and a good tunnel; *therefore* it must be made, and of course the company will pay: but this may be thought personal, so we will stop. We have merely shown, that where impossibilities have rendered curves imperative, they are adopted without hesitation: now economical views—the interests of the country at large—should have rendered them imperative, and we should have had more railways and better returns for them. And as with curves, so with inclinations. Where it has proved impossible, from the features of the country, to get level lines, lines with inclinations formerly considered impracticable are sucessfully employed. When it is known that the cost of cutting down hills and of filling up hollows increases in the *two-fold* proportion of the height and depth, it will be seen how enormously the expense increases with the theoretical perfection of the line; thus, a cutting of four miles in length, and of an average seventy feet deep, will cost, say 60,000*l.* per mile; now, by a gentle increase of inclination towards the summit level, before entering and after emerging from it, one-half of the depth may be saved; but while one-*half* of the depth is saved, *three-fourths* of the expense are saved, or the cutting is reduced to 15,000*l.* per mile, being a clear saving of 45,000*l.* per mile, or of 180,000*l.*: a *bagatelle*, it may be said, in three or four millions; true, but many such bagatelles would sensibly affect these same millions, and would, moreover, suffice to open many a good paying branch line for the public use, so extending the benefits of the system, besides providing many a good feeder to the line itself. The same law holds in regard to embankments as well as cuttings, whose expense diminishes in a double proportion to the diminution of height, besides manifold subsequent advantages in sustentation and repairs, and condition of way.

If engineers must have monuments of their talent, we suggest that St. James's Park, at the end of George Street, Westminster, would be a much more appropriate site for them than the lines of railway over which passengers pass so often without seeing the engineering wonders of the line, often in the darkness of night, and still oftener in the dark about the merits of the railways and those who made them. But on this site in the Park, at the end of Engineer-street, might all these monuments be accumulated in one vast pile, erected at the public expense:—or rather say, that all the money which might be, or might have been saved by intelligent engineering, were devoted to the erection there of a tower or pyramid of granite, we are sure the tower would be higher than that of Belos, and the pyramid than that of Cheops. On it might be exhibited to advantage the names of talented engineers, whose united labours would, we are confident, far outstrip, if thus accumulated, even on railways alone, all the labour, material, and cost of all the pyramids of all the Pharaohs. In this building might be held all the meetings of the great Institution of Engineering: here might be exhibited all the works of those great men whose title in future to admission should be as follows: that they should exhibit the plans, not as heretofore, of the monuments of Genius they have actually built, at public expense, but of all which they would have built, had not an enlightened regard to the general welfare led them to prefer the public good to their personal gratification. And thus at last might these exhibitions display, in happy and harmonious union, Genius, Principle, and disinterested Patriotism. But we are speaking of Utopia: engineers will have monuments as long as the public will submit to pay.

Examples are not wanting, in our own country, of the successful adoption of the economical principles of construction we have ventured to recommend and to advocate. The great line between Liverpool, Manchester, and London illustrates our principle well: the northern half, below Birmingham, called the Grand Junction, cost 23,000*l.* per mile; the upper half, between Birmingham and London, cost 50,000*l.* per mile. Now in this great disparity, one very important element is this, that the former adapts itself to the face of the country, rising and falling as much as 20, 30, and 60 feet per mile, while the latter rigidly limits itself to the theoretical gradient, excluding in every case a steeper inclination than 16 feet per mile: witness the result; the one of 82 miles length is made under two millions of expense; the other, of 112 miles, has cost more than five and a half millions. The consequences are as follows: the one pays a considerably larger per-centage of profit, though with much less traffic than the other, and we do not find in the comparative expenses of working the lines anything from which we can infer that any practical advantage is gained on the more expensive line, either in more economical, more expeditious, more safe, or more regular transport. *Cui bono?* is the question which the disparity of expense brings home upon us continually—echo answers *Cui bono?*

Again, take the Newcastle and Carlisle Railway, 62 miles long. It passes through a most difficult country, and might have been an expensive railway in the hands of a talented and ambitious engineer; but being in prudent and conscientious management, it has cost less than a million, or about 15,000*l.* per mile. Curves and inclinations suitable to the country are adopted: Mr. Wishaw, in his 'Railways,' says very justly—"Whoever is in the habit of travelling on this railway, between Newcastle and Carlisle, will be forcibly struck with the sinuosities of its course throughout; yet notwithstanding this apparent impediment to speedy locomotion, no railway in the kingdom is better regulated in point of punctuality of the arrivals, especially of the quick trains, nor is there any upon which fewer accidents have occurred."

But the most extraordinary line is the Birmingham and Gloucester, where we find two planes, rising 52 feet in a mile, one of 65 feet, and one which rises the unparalleled amount of nearly 140 feet per mile, or one foot high in every 37 feet forward, being about the inclination of a slope in a good mail-coach road. We do not, however, quote this as a desirable rate of railway inclination: we merely adduce it as a practicable inclination, which it would be better to put up with than want a line, or want profit on the line when made.

In other points our most striking lessons in railway economics may be taken from the railways constructed with our money in America. But these we reserve for another notice, having given our hobby a sufficient airing for this week.

A Voyage of Discovery towards the North Pole, performed in His Majesty's Ships Dorothea and Trent, under the Command of Captain David Buchan, R.N.; 1818. By Captain F. W. Beechey. Bentley.

When we remember how long and anxiously public attention was directed to the proceedings of our arctic voyagers—how eagerly the narratives of Ross, and Franklin, and Parry, and Back, and others, were, not read but devoured—it does seem strange that no account should have been published of the first of those perilous voyages until a quarter of a century after the close of the expedition, and when the interest must, in a great degree, have subsided. If the past will not throw a light on this question, will the future? Is Captain Beechey's volume, "published by authority," a trumpet to rouse public attention once again? Is another expedition in contemplation? We think it not improbable, and before we conclude we may say a few more words on the subject. Meanwhile our concern is with the narrative before us—the incidents of the voyage especially, for the results have long been known.

The question of a north-west passage to the Pacific had for ages engaged the attention of all the northern nations; but after the unsuccessful expedition under Captain Phipps, in 1793, the attempt to solve it seemed to be altogether abandoned. The peace, however, in 1814, left us a little leisure for speculation: attention was again directed to the subject by the pleasantest of faery tales in the *Quarterly;* interest was awakened; it was soon found out that time and circumstances were especially favourable; Polar changes were announced, that led the enthusiastic to look in that direction for the garden of the Hesperides; and forthwith expeditions were fitted out—two ships, commanded by Captain Ross and Lieutenant Parry, to proceed by Baffin's Bay; two other ships, the *Dorothea* and *Trent*, commanded by Captain Buchan and Lieutenant Franklin, by a northern course across the Polar Sea.

On the 25th of April, 1818, the expedition, under Capt. Buchan, sailed from the Thames, and arrived at Lerwick on the 1st of May. The ships had been made as strong as wood and iron could make them, and yet they were hardly clear of the river before a leak was discovered in the *Trent*. Fortunately it was not of such magnitude as to endanger the vessel, but quite enough to cause serious uneasiness, and to deter the Shetland fishermen from joining the expedition. On the 10th they sailed from Lerwick, and pursued their course towards Spitzbergen. Captain Beechey remarks:—

"In a voyage over a portion of the globe so entirely new to us, and so totally different in its natural phenomena from those to which we had been accustomed, either in our own country or in parts of the earth nearer the equator, we experienced much to interest us at almost every step of our proceedings; but nothing made so deep an impression upon our senses as the change from alternate day and night, to which we had been habituated from our infancy, to the continual daylight to which we were subjected as soon as we crossed the arctic circle. Where the ground is but little trodden, even trifles are interesting; and I do not, therefore, hesitate to describe the feelings with which we regarded this change. The novelty, it must be admitted, was very agreeable, and the ad-

Digitized by Google

vantage of constant daylight, in an unexplored and naturally boisterous sea, was too great to allow us even to wish for a return of the alternations above alluded to; but the reluctance we felt to quit the deck, when the sun was shining bright upon our sails, and to retire to our cabins to sleep, often deprived us of many hours of necessary rest; and when we returned to the deck to keep our night-watch, if it may be so called, and still found the sun gilding the sky, it seemed as if the day would never finish. What, therefore, at first promised to be so gratifying, soon threatened to become extremely irksome, and would, indeed, have been a serious inconvenience, had we not followed the example of the feathery tribe, which we daily observed winging their way to roost, with a clock-work regularity, and retired to our cabin at the proper hour, where, shutting out the rays of the sun, we obtained that repose which the exercise of our duties required."

On the 26th they got sight of Spitzbergen, and soon after fell in with several "streams of ice," and then came upon that old barrier which has hitherto set limits to Northern discovery. They coasted along its margin to within a short distance of the land, and then steered for Magdalena Bay, where they arrived the 3rd of June.

"We had been in possession of the anchorage a few days only, when we were agreeably surprised at the appearance of a strange boat pulling towards the ship. On a nearer approach we found that she belonged to some Russian adventurers who were engaged in the collection of peltry and morses' teeth. They appeared equally astonished at the sight of our vessels, but after scrutinizing us awhile, they took courage and went on board the *Dorothea*, where, by the well-known mode of signs, they had no difficulty in communicating their desire for some spirits; Captain Buchan gave them a kind reception, and supplied them with whatever they wanted; in return for which, they sent on board the following day a side of venison in excellent condition. Being desirous of gaining further information of these people, an officer of the *Dorothea* accompanied them to their abode at the head of a small cove, about four miles to the southward of Magdalena Bay. They had here a comfortable wooden hut, well lined with moss, divided into three compartments, in one of which there were three carcasses of fine venison, and many wild ducks. It was with extreme pleasure we noticed, in this retired spot, probably the most northern and most desolate habitation of our globe, a spirit of devotion rarely exercised in civilized countries. On landing from the boat, and approaching their residence, these people knelt upon its threshhold, and offered up a prayer with fervour and evident sincerity. The exact nature of the prayer we did not learn, but it was, no doubt, one of thanksgiving, and we concluded it was a custom which these recluses were in the habit of observing on their safe return to their habitation. It may, at all events, be regarded as an instance of the beneficial effect which seclusion from the busy world, and a contemplation of the works of Nature, almost invariably produce upon the hearts of even the most uneducated part of mankind. This is one of the few remaining establishments at Spitzbergen still upheld by the merchants of Archangel, who, during the last century, and under the auspices of the Russian government, formed a settlement in Bell Sound, upon this coast, and who still send annually a small vessel to bring home the peltry and sea-horse teeth that have been collected by their servants during the year."

The expedition started again on the 7th, and again sailed along the margin of the solid ice. After some days, a channel was perceived, which appeared to lead to an open sea; the ships entered, but were soon stopped by the old enemy, and their retreat cut off by the closing of the channel. When the tide changed, the ice began to separate, and the vessels were immediately hauled into two small bays in the floes, and secured by ice-anchors. Here we first meet with one of those fearful adventures with which the narratives of subsequent explorers have made us familiar.

"On the 13th, an officer of the Dorothea obtained permission to proceed with a few seamen over the ice to the shore, which was distant about three or four miles from the ships—a journey which, whilst the day was fine and the breeze light, seemed to be of very easy accomplishment. Early in the afternoon he set out with his party, and commenced his excursion pleasantly enough, travelling at a good rate and surmounting every obstacle. Scarcely, however, had he reached half way to the shore when the appearance of a fog in the horizon induced the prudent part of his companions to return to the ships, and, shortly afterwards, obliged the remainder to desist from proceeding further. The fog approached quicker than was expected, and soon obscured every distant object; so that the party, having failed in every other mode of preserving the direction of the ships, attempted, as a last resource, to retrace their footmarks in the snow; but this was found to be equally impracticable, in consequence of the pieces of ice over which they had passed having changed their position, and of the occurrence of other tracks, such as those of bears and seals, which at distances were mistaken for their own. Thus circumstanced, they felt the full extent of the danger to which they had thoughtlessly exposed themselves—a danger of no trifling magnitude, as it threatened to involve the lives of the whole remaining party. Still, endeavouring to preserve the direction in which the ships had last been seen, they wandered about, making a very circuitous course, which was rendered still more indirect than it might otherwise have been by the difficulty of getting from one piece of ice to the other, and the necessity of searching for the most convenient places for that purpose. To travel over ragged pieces of ice, upon which there were two feet of snow, and often more, springing from one slippery piece to the other, or, when the channels between them were too wide for this purpose, ferrying themselves across upon detached fragments, was a work which it required no ordinary exertion to execute. Indeed, the getting from one piece to the other was, throughout, by no means the least hazardous part of their journey; the difficulties too were much increased, and many accidents occurred, through that hurry, and anxiety to overcome them speedily, which occasioned the neglect of many precautions, that leisure had before enabled them to observe, in order to ensure their safety. Some fell into the water, and were with difficulty preserved from drowning by their companions; while others, afraid to make any hazardous attempt whatever, were left upon pieces of ice, and drifted about at the mercy of the winds and tides. Foreseeing the probability of a separation, they took the first opportunity of dividing, in equal shares, the small quantity of provision which they had remaining, as also their stock of powder and ammunition. They also took it in turns to fire muskets, in the hope of being heard from the ships, which they knew would return the fire, and that they would thus at least learn in what direction to proceed, even though it might be impracticable to derive assistance from them. These discharges were distinctly heard on board; but it is a remarkable fact that, although they were answered by volleys of musketry, and even by cannon, not one report was heard by the party, who, consequently, concluded themselves at a much greater distance from the ships than they really were. Our adventurers continued to travel in the supposed direction of the ships, keeping within view of each other, and rendering one another all the assistance possible, until a breeze sprung up, and set the pieces of ice in rapid motion. Unable to contend with this new difficulty, and overcome with wet, cold, and sixteen hours of fatigue, they sat down in a state of despondency, upon a piece of ice, determined to submit their fate to Providence. It is difficult to imagine a more distressing situation than that of the party at this moment; almost perishing with cold and fatigue, with the bare snow for their only resting-place, their supply of provision exhausted, and themselves drifting about in a thick fog, they knew not whither, perhaps far away from their ships, and with the prospect of being carried out to sea, where death would have been inevitable. The muskets we had heard on board the ship had, of course, made us extremely anxious to afford relief to our suffering companions; but, for many hours, no person dared venture over the ice, on account of the fog, and the difficulty of getting back to the ship; but when, by the report of the muskets becoming more audible, we found that the party were drifting towards us, the anxiety to rescue them was so great that the Greenland master and mate of the Trent ventured out, with poles and lines, and had the good fortune to fall in with the party, who, by this time, were drifted nearly within sight of the vessels. They found them seated upon a piece of ice, as already described, cold, wet, and so overcome that in a few hours more, the greater part of them must have perished. Their joy at unexpectedly beholding their companions come to their relief, and still more at finding themselves so near their ship, may readily be imagined, and inspired them with fresh vigour, which enabled them, with the assistance of their shipmates, to effect the remainder of their journey. After eighteen hours' absence, they all got safely on board, fully determined, in future, to rest satisfied with the view of the shore which was afforded them from the ship, and without the slightest desire to attempt to approach it again by means of the ice."

After thirteen days' detention, they again reached the open sea. A calm followed, herds of walrusses appeared, and permission was given to go in pursuit of them.

"The boats, properly equipped, and manned with some of the officers and seamen, pushed off. The first herd which was selected disappointed the sportsmen, but another was so intent upon its gambols, that, notwithstanding the extreme vigilance I have noticed, several of the crew managed to effect a landing upon the ice without any alarm being given to the animals; but immediately on the first musket being fired the affrighted group made such a desperate rush towards the edge of the ice, that they nearly overturned the whole of our party, purposely stationed there to intercept them. The seamen finding this charge more formidable than they expected, were obliged to separate, to allow their opponents to pass through their ranks, and being thus, in their turn, taken by surprise, they suffered them, almost unmolested, to perform their summersets towards the sea. What with their uncertain movements, the extreme toughness of their skin, and the respectful distance at which the men were obliged to keep, to avoid the lashing of the head and tusks of the animals, it was, indeed, no easy task to inflict any serious injury upon them. One, however, was desperately wounded in the head with a ball, and the mate of the brig, being determined, if possible, to secure his prey, resolutely struck his tomahawk into his skull, but the enraged animal, with a twist of its head, sent the weapon whirling in the air, and then lashing his neck, as though he would destroy with his immense tusks everything that came in his way, effected his escape to the water. The seamen followed, and pushed off in their boats; but the walrusses finding themselves more at home now than on the ice, in their turn became the assailants, and the affair began to assume a serious aspect. They rose in great numbers about the boats, snorting with rage, and rushing at the boats, and it was with the utmost difficulty they were prevented upsetting or staving them by placing their tusks upon the gunwales, or by striking at them with their heads. It was the opinion of our people, that in this assault the walrusses were led on by one animal in particular, a much larger and more formidable beast than any of the others; and they directed their efforts more particularly towards him, but he withstood all the blows of their tomahawks without flinching, and his tough hide resisted the entry of the whale lances, which were unfortunately not very sharp, and soon bent double. The herd was so numerous, and their attacks so incessant, that there was not time to load a musket, which, indeed, was the only effectual mode of seriously injuring them. The purser, fortunately, had his gun loaded, and the whole now being nearly exhausted with chopping and sticking at their assailants, he snatched it up, and thrusting the muzzle down the throat of the leader, fired into his bowels. The wound proved mortal, and the animal fell back amongst his companions, who immediately desisted from the attack, assembled round him, and in a moment quitted the boat, swimming away as hard as they could with their leader, whom they actually bore up with their tusks, and assiduously preserved from sinking. Whether this singular and compassionate conduct, which in all probability was done to prevent suffocation, arose from the sagacity of the animals, it is difficult to say, but there is every probability of it, and the fact must form an interesting trait in the history of the

Digitized by Google

habits of the species. After the discharge of the purser's gun, there remained of all the herd only one little assailant, which the seamen, out of compassion, were unwilling to molest. This young animal had been observed fighting by the side of the leader, and from the protection which was afforded it by its courageous patron, was imagined to be one of its young. The little animal had no tusks, but it swam violently against the boat, and struck her with its head, and indeed would have stove her, had it not been kept off by whale-lances, some of which made deep incisions in its young sides; these, however had not any immediate effect: the attack was continued, and the enraged little animal, though disfigured with wounds, even crawled upon the ice in pursuit of the seamen, who had relanded there, until one of them out of compassion, put an end to its sufferings."

On the 6th of July another attempt was made to penetrate the icy barrier, and again the ships were locked in. Captain Beechey has before adverted to the enormous pressure of the ice:—

"The following morning it blew a hard gale from the south-west, and such a heavy sea rolled in upon the pack, that, although the ships were nine miles distant from the margin of the surf, it was distinctly heard like distant thunder. The pressure of the ice around the ships now became very great; every pool of water was closed, and the enormous force acting upon the floes was occasionally apparent by large pieces of ice being forced upon those with which they were in contact. In anticipation of an occurrence of this nature, we had taken the precaution of placing the vessels in small bays, formed in the field to which they were secured, and were thus, in a great measure, protected by the points of ice on either side of us. But, notwithstanding this advantage, it was evident, by the grinding noise against their sides, that they sustained considerable pressure throughout the gale. At one time, when the *Trent* appeared to be so closely wedged up that it did not seem possible for her to be moved, she was suddenly lifted four feet by an enormous mass of ice getting under her keel; at another, the fragments of the crumbling floe were piled up under the bows, to the great danger of the bowsprit. The *Dorothea* was in no less imminent danger, especially from the point of a floe, which came in contact with her side, where it remained a short time, and then glanced off, and became checked by the field to which she was moored. The enormous pressure to which the ship had been subjected was now apparent, by the field being rent, and its point broken into fragments, which were speedily heaped up in a pyramid, thirty-five feet in height, upon the very summit of which there appeared a huge mass, bearing the impression of the planks and bolts of the vessel's bottom! It is remarkable that, although we had indisputable evidence that it was blowing a gale of wind at sea,—by the enormous pressure upon the ice, the roaring of the sea upon the edge of the pack, and the aspect of the sky—the ships were so perfectly becalmed that the vane at the mast-head was scarcely agitated. There was also a most marked difference in the state of the atmosphere over the packed ice and that over the open sea. Over the ice the sky was perfectly cloudless, whilst the sea was overcast with stormy-looking clouds, which passed heavily along with the gale, until they reached a line nearly perpendicular to the edge of the packed ice. At this point, or line of demarcation of the two atmospheres, it was curious to mark the rapid motion of the clouds to the right or left, and how immediately they became condensed, or were dispersed on arriving at it; and although masses of clouds were continually borne towards the spot, by the impetuosity of the tempest, the line of termination did not encroach upon that of the serene atmosphere overhanging the pack. This contrast between the two atmospheres, so remarkable in cloudy weather especially, is termed the 'ice blink,' and enables the experienced mariner to judge of the nature and position of the ice, even at a distance. The effect of a south-west gale upon the ice, especially when it is of long continuance, is first to pack it so closely as to exclude every pool of water, and then to propel the whole body to the northward. But, as soon as the wind ceases, the floes separate with an apparent elasticity; the prevailing current, which has been pressed up by the gale, resumes its course, the ice opens in every direction, and may be seen travelling at a rate scarcely credible. Thus, on the 23rd, we found the field to which we were fast, setting to the southward at the rate of three miles an hour, and the pack beginning to open in every direction."

On this occasion he observes:—

"During the period of our detention in the ice we found that with westerly or southerly winds, and occasionally upon the change of the tide, the fields of ice would sustain such a pressure that their points would yield and be crumbled to atoms; the bay ice would slide upon, and form a layer over the field that was in contact with it; immense hummocks would be overset, and sometimes forced under water; and in other parts, again, fragments would be piled up thirty or forty feet in height. As nothing made of wood can withstand these pressures, a vessel, if caught, must either be crushed, or rise and allow the ice to advance until it meets an opponent as unyielding as itself. Fortunately, the wedge-like form of a vessel is favourable to her rising, and the outline of the fields is generally so irregular that some points of it are nearly certain to receive the strain before it presses much upon the vessel; the squeezes are, however, occasionally very dangerous. On the evening of the 10th the Trent sustained one which made her rise four feet, and heel over five streaks; and on the 15th and 16th both vessels suffered damage, especially the Dorothea, from her being longer and more wall-sided than the Trent. On that occasion we observed a field fifteen feet in thickness break up, and the pieces pile upon each other to a great height, until they upset, when they rolled over with a tremendous crash. The ice near the ships was piled up above their bulwarks, to the great danger of the bowsprit and upper works. Fortunately the vessels rose to the pressure, or they must have had their sides forced in; the Trent received her greatest damage upon the quarters, and was so twisted that the doors of all the cabins flew open, and the panels of some started in the frames, while her false stern-post was moved three inches, and her timbers cracked to a most serious extent. The Dorothea suffered still more: some of her beams were sprung, and two planks on the lower deck were split fore and aft, and doubled up, and she otherwise sustained serious injury in her hull. It was in vain that we attempted any relief, our puny efforts were not even felt, though continued for eight hours with unabated zeal; and it was not until the tide changed that the smallest effect was produced."

While thus embayed, the ships were driven westward, and soundings increased from 80 to 300 fathoms:—

"From these depths we brought up several species of living zoophytes, a star-fish, a lobster, a piece of sponge, and a *branch of dead coral* attached to a stone. That a coral of this species, the growth of which is generally limited to a mild climate, should be brought up from a great depth in the latitude of 80° north, may form a subject of curious speculation to the naturalist. We certainly know of no current in the Atlantic save that of the strongest part of the gulf-stream, which could transport such a stone, with its appendage, so many miles from the supposed place of its growth; and if we did, the tender ramification of its perfect branches would not permit the conclusion that it had suffered such a violent mode of transportation. The inference, therefore, seems to be, that the specimen was reared near where it was found, and that either the zoophyte is capable of enduring a greater degree of cold, and has a wider range of habitation, than has hitherto been generally supposed, or else the temperature of the Polar region has undergone a very considerable change."

This time the ships remained embayed in the pack for three weeks. On effecting his escape, Captain Buchan seemed to think that he had given a fair trial to the ice in the vicinity of Spitzbergen, and determined, therefore, to try his fortune to the westward; and thither we shall accompany him next week.

Proverbial Philosophy. By M. F. Tupper, M.A. 2nd Series.—*Polylogy.—Aphorisms and Reflections.* By W. B. Clulow.—*The Prism of Thought.* By the Baroness de Calabrella.

If this be not a wise age, it is not for lack of Solomons, nor for dearth of Queens of Sheba. The tragic poets of the day are not more numerous than the proverb-writers. Authors are grown so pregnant, that in nine cases of literary parturition out of ten, they bring forth a book of proverbs. Literature exhibits the "facies Hippocratica," she has grown so aphoristic. If a writer is not a Solomon, it is twenty to one he is a Rochefoucault; if not, he is nearly certain to be a Sancho Panza. Nothing is more astonishing than the prodigious scale upon which every intellectual demand of the present generation is supplied. The subject of China is no sooner started, than 'Ten Thousand Things about China' makes its appearance. Are facts called for, 'A Million of Facts' is issued forthwith. There is the same profusion in the instance now before us,—proverbs, sayings, maxims, and reflections, are as the sands of the sea in number. There cannot be less than a million of these scraps of wisdom in the actual library of proverbs now splitting our table. We are well nigh blinded by the diamond-dust of so many sparkling maxim-mongers, who have submitted every branch of human knowledge to a process of pulverization, and brayed Philosophy, as it were, in a mortar, perhaps to punish her for denying the existence of atoms. If you are an homœopathist in intellectual matters, you may now have an infinitesimal dose of instruction upon any subject whatsoever. In fact, these aphoristic writers hold wisdom in solution; and this accounts for the fact that, when one of their drops is analyzed, wisdom is ascertained to be present in such wonderfully minute quantities.

But we are not going to be severe upon either the Solomons or the Shebas. One of the first maxims of the 'Prism of Thought' plucks out our critical sting, and leaves us not a waspish feeling. Pathetic is the appeal, that "many a budding genius has been crushed by stern criticism, whom judicious praise might have led to future excellence." Anxious, therefore, for the future excellence of the Baroness of Calabrella, what can we do but praise her pretty little square illuminated volume? Truth is not the less truth because it has been a thousand times reiterated; and if but one of her ladyship's many sound and amiable rules of life and principles of morals gain a readier admission into any youthful understanding, because recommended by the borrowed charms of colouring and gilding, we shall not deplore the cost at which her work has been given to the small world. And who is ignorant of the magic powers of colours in the fresh morning of life? The first joy of infancy is the perception of the solar light, which is the glorious combination of all hues; but the familiarity of the pleasure quickly deadens the sense of it, and none remember the rapture with which the organ of sight made its first acquaintance with the day; but everybody recollects how his young eye was captivated by the blazonry of the rainbow, or the glancing splendours of a drop of dew upon a rose-leaf, or by the reflections from a many-sided piece of glass or crystal. Light decomposed is more attractive than the radiant composite itself. Light may be said to be the natural food of the eye, but colours are its luxuries: it subsists upon the one; it revels in the other. Far from objecting, therefore, to the modern method of embellishing and adorning books of elementary education, we consider it most judicious to profit by so powerful a source of interest, and a help to the memory natural and elegant. The remembrance of the old race of school-books, not yet entirely extinct, almost makes the blood run cold. Our grandfathers seemed to think that first principles were only to be instilled through the medium of everything revolting in paper, typography, and binding. A grammar of those days was as horrible to look

Digitized by Google

at, as to study. We vividly recollect an elementary work of our own thumbing, which the teachers of the present day would not place in the hands of a little pickpocket in Bridewell. The bristles of the animal that supplied the binding stood erect upon the cover, so that we could have brushed our coat with our Alvary's Prosody, for that was the book to which we allude. Because the idea of a royal road to learning was justly scouted, our ancestors sprang to the conclusion that the path lay through the narrowest and most offensive lanes. They would have sent the Baroness de Calabrella to St. Luke's, for her attempt to make the pleasures of the eye subsidiary to the enlightenment of the understanding. In short, in point of *illumination*, they were decidedly our inferiors.

But this has nothing to do with our books of proverbs; we have been led astray by the gay hues of the 'Prism of Thought,' like an enthusiast in tulips, or the huntsman of a butterfly. In Mr. Tupper's 'Proverbial Philosophy' (written in irregular blank verse of more than Alexandrine dimensions) there is not much profound thinking, but there are many excellent reflections couched in language of some poetical merit. Take for example the following verses on the subject of 'To-day,'—

Now is the constant syllable ticking from the clock of time,
Now is the watchword of the wise, Now, is on the banner of the prudent.
Cherish thy to-day and prize it well, or ever it be gulphed into the past,
Husband it, for who can promise, if it shall have a morrow?
Behold thou art,—it is enough: that present care be thine;
Leave thou the past to thy Redeemer, entrust the future to thy Friend;
But for to-day, child of man, tend thou charily the minutes,
The harvest of thy yesterday, the seed-corn of thy morrow.

The moral feeling, too, of another couplet, is expressed by a noble image:—

O bright presence of To-day, let me wrestle with thee, gracious angel,
I will not let thee go, except thou bless me; bless me, then, To-day.

We extract four lines from the chapter 'Of To-morrow,' chiefly for the beauty of the second:

Each morn the bees fly forth, to fill the growing comb,
And levy golden tribute of the uncomplaining flowers:
To-morrow is their care; they toil for rest To-morrow;
But man deferreth duty's task, and loveth ease to-day.

'Of Neglect' is another section from which we shall quote a passage or two, having been struck by the truth of the sentiment and the delicacy of the expression:—

It is an evil thing and bitter, when the cheerful face of Charity,
Going forth gaily in the morning to woo the world with smiles,
Is met by those wayfaring men with coldness, suspicion, and repulse,
And turneth into hard dead stone at the Gorgon visage of Neglect.
O brother, warm and young, covetous of others' favour,
I see thee checked and chilled, sorrowing for censure or forgetfulness:
Let coarse and common minds despise—that wounding of thy vanity,
Alas, I note a sorer cause, the blighting of thy love.

Again:—

Moreover, praise is good; honour is a treasure to be hoarded;
A good man's praise foreshadoweth God's, and in His smile is heaven.

He proceeds to the anodynes of "neglect," and amongst others recommends reflection upon the necessary selfishness of mankind. There is truth in the verses suggestive of this mournful consolation:—

But consider, child of sensibility; the lot of men is labour,
Labour for the mouth, or labour in the spirit, labour stern and individual.
Worldly cares and worldly hopes exact the thoughts of all,
And there is a necessary selfishness, rooted in each mortal breast.
The plans of prudence or the whisperings of pride, or all-absorbing reveries of love,
Ambition, grief, or fear, or joy, set each man for himself:
Therefore the centre of a cycle, whereunto all the universe convergeth,
Is seen in fallen solitude, the naked selfish heart:
Stripped of conventional deceptions, untrammelled from the harness of society,
We all may read one little word engraved on all we do;
Other men, what are they unto us? the age, the mass, the million,—
We segregate distinct from generalities, that isolated particle, a self:
It is the very law of our life, a law for soul and body,
An earthly law for earthly men, toiling in responsible probation.
For each is the all unto himself, disguise it as we may,
Each infinite, each most precious; yet even as nothing to his neighbour.
O consider, we be crowding up an avenue, trapped in the decoy of time,
Behind us the irrevocable past, before us the illimitable future,
What wonder is there if the traveller, wayworn, hopeful, fearful,
Burdened himself, so lightly heed the burden of his brother?
How should'st thou marvel and be sad, that the pilgrims trouble not to learn thee,
When each hath to master for himself the lessons of life and immortality?

The author is not equally felicitous in dealing with subjects of lower interest. The style and versification that suit reflections of an elevated moral nature, are quaint and almost ludicrous, when applied to topics of criticism and philology. Here is an instance from the chapter entitled 'Of Names':—

Many a fair flower is burdened with preposterous appellatives,
Which the wiser simplicity of rustics entitled by its beauties.
The herbalist had a simple cause for every word upon his catalogue,
But now the mouth of Botany is filled with empty sound;
And many a peasant hath an answer on his tongue, concerning some vexed flower,
Shrewder than the centipede phrase, wherewithal philosophers invest it.

And a little further on:—

The fossilist hath found a bone, the rib of some huge lizard,
And forthwith standeth to it sponsor, to tack himself on reptile immortalities.

It is hardly necessary to say, that it is not to Mr. Tupper's volume we would apply the remarks with which this notice commenced. They must fall, however, upon 'Polylogy's Sayings' without reserve. How it could have entered the mind of writer or publisher to conceive, that two volumes of such matter, although there is here and there a dash of frantic cleverness, could find as many readers, is to us an enigma. But as "Polylogy" says himself, "Folly is infinite; the greatest fool can always find a greater fool than himself for an admirer." The preface is a curiosity, and leads one to suspect that the work is a production of the Hanwell asylum. We quote one short passage which is decidedly lunatic:—

"The attention of the lovers of rare books is called to the linear metre of these thoughts, a conceit and peculiarity of publication, which has caused the editor and printer much embarrassment, and may make this book of value in their libraries. Many of these thoughts are the essential extracts of huge volumes, but they retain their expansive nature, and as texts in the hands of diffusive writers may be made again to assume their pristine size and pomp of furniture. Couplets of thought may be cut out of the pages, each thought having a reverse, and be embodied in polylogy plums; confectioners by such incarning will give these twin kernels of meditation and memory the qualities physically, which psychally they may need."

Why Mr. Clulow should call his book a book of "aphorisms" it is not easy to determine. Brevity is one of the qualities of aphorism, and the name is absurdly applied to a tissue of observations frequently extending to a couple of pages, and occasionally still further protracted by the addition of notes.

Poems on Slavery. By H. W. Longfellow. Cambridge (U.S.), Owen.

Mr. Longfellow has a name and fame not unknown to our readers; but all the laurels he has heretofore won as a scholar and a poet, were they twenty times as luxuriant, would fade and wither before this little volume. "It is the cause—the cause," that here ennobles; and when we remember the state of public feeling in America with reference to slavery, we forget the poet in our admiration of the man. But the poems themselves are worthy of the cause; and we shall extract some half dozen without comment, leaving them to make their own way to the heart of the reader. The first is worthily dedicated to a worthy fellow labourer:—

To William E. Channing.

The pages of thy book I read,
And as I closed each one,
My heart responding, ever said,
"Servant of God! well done!"

Well done! Thy words are great and bold;
At times they seem to me,
Like Luther's, in the days of old,
Half-battles for the free.

Go on, until this land revokes
The old and chartered Lie,
The feudal curse, whose whips and yokes
Insult humanity.

A voice is ever at thy side
Speaking in tones of might,
Like the prophetic voice, that cried
To John in Patmos, "Write!"

Write! and tell out this bloody tale;
Record this dire eclipse!
The Day of Wrath, this Endless Wail,
This dead Apocalypse!

The Slave's Dream.

Beside the ungathered rice he lay,
His sickle in his hand;
His breast was bare, his matted hair
Was buried in the sand.
Again, in the mist and shadow of sleep,
He saw his Native Land.

Wide through the landscape of his dreams
The lordly Niger flowed;
Beneath the palm-trees on the plain
Once more a king he strode;
And heard the tinkling caravans
Descend the mountain-road.

He saw once more his dark-eyed queen
Among her children stand;
They clasped his neck, they kissed his cheeks,
They held him by the hand!—
A tear burst from the sleeper's lids
And fell into the sand.

And then at furious speed he rode
Along the Niger's bank;
His bridle-reins were golden chains,
And, with a martial clank,
At each leap he could feel his scabbard of steel
Smiting his stallion's flank.

Before him, like a blood-red flag,
The bright flamingoes flew;
From morn till night he followed their flight,
O'er plains where the tamarind grew,
Till he saw the roof of Caffre huts,
And the ocean rose to view.

At night he heard the lion roar,
And the hyæna scream,
And the river-horse, as he crushed the reeds
Beside some hidden stream;
And it passed, like a glorious roll of drums,
Through the triumph of his dream.

The forests, with their myriad tongues,
Shouted of liberty;
And the Blast of the Desert cried aloud,
With a voice so wild and free,
That he started in his sleep and smiled
At their tempestuous glee.

He did not feel the driver's whip,
Nor the burning heat of day;
For Death had illumined the Land of Sleep,
And his lifeless body lay
A worn-out fetter, that the soul
Had broken and thrown away!

The Good Part,
That shall not be taken away.

She dwells by Great Kenhawa's side,
In valleys green and cool:
And all her hope and all her pride
Are in the village school.

Her soul, like the transparent air
That robes the hills above,
Though not of earth, encircles there
All things with arms of love.

And thus she walks among her girls
With praise and mild rebukes;
Subduing e'en rude village churls
By her angelic looks.

She reads to them at eventide
Of One who came to save;
To cast the captive's chains aside,
And liberate the slave.

And oft the blessed time foretells
When all men shall be free;
And musical, as silver bells,
Their falling chains shall be.

And following her beloved Lord,
In decent poverty,
She makes her life one sweet record
And deed of charity.

For she was rich and gave up all
To break the iron bands
Of those who waited in her hall,
And laboured in her lands.

Long since beyond the Southern Sea
Their outbound sails have sped,
While she, in meek humility,
Now earns her daily bread.

It is their prayers, which never cease,
That clothe her with such grace;
Their blessing is the light of peace
That shines upon her face.

The Slave Singing at Midnight.

Loud he sang the psalm of David!
He, a Negro and enslaved,
Sang of Israel's victory,
Sang of Zion, bright and free.

In that hour, when night is calmest,
Sang he from the Hebrew Psalmist,
In a voice so sweet and clear
That I could not choose but hear,

Songs of triumph, and ascriptions,
Such as reached the swarth Egyptians,
When upon the Red Sea coast
Perished Pharaoh and his host.

And the voice of his devotion
Filled my soul with strange emotion;
For its tones by turns were glad,
Sweetly solemn, wildly sad.

Paul and Silas, in their prison,
Sang of Christ, the Lord arisen,
And an earthquake's arm of might
Broke their dungeon-gates at night.

But, alas! what holy angel
Brings the Slave this glad evangel?
And what earthquake's arm of might
Breaks his dungeon-gates at night?

But the fate of the negro is not half so morally offensive as that of the Quadroon—many of whom are tenderly brought up, and carefully educated, while others are sold as slaves. Here is a touching picture, but too true:—

The Quadroon Girl.

The Slaver in the broad lagoon
Lay moored with idle sail:
He waited for the rising moon,
And for the evening gale.

Under the shore his boat was tied
And all her listless crew
Watched the grey alligator slide
Into the still bayou.

Odours of orange-flowers and spice,
Reached them from time to time,
Like airs that breathe from Paradise
Upon a world of crime.

The Planter, under his roof of thatch,
Smoked thoughtfully and slow;
The Slaver's thumb was on the latch,
He seemed in haste to go.

He said, "My ship at anchor rides
In yonder broad lagoon;
I only wait the evening tides,
And the rising of the moon."

Before them, with her face upraised,
In timid attitude,
Like one half curious, half amazed,
A Quadroon maiden stood.

Her eyes were, like a falcon's, grey,
Her arms and neck were bare;
No garment she wore save a kirtle gay,
And her own long, raven hair.

And on her lips there played a smile,
As holy, meek, and faint,
As lights in some cathedral aisle
The features of a saint.

"The soil is barren,—the farm is old;"
The thoughtful Planter said;
Then looked upon the Slaver's gold,
And then upon the maid.

His heart within him was at strife
With such accursed gains;
For he knew whose passions gave her life,
Whose blood ran in her veins.

But the voice of nature was too weak;
He took the glittering gold!
Then pale as death grew the maiden's cheek,
Her hands as icy cold.

The Slaver led her from the door,
He led her by the hand,
To be his slave and paramour
In a strange and distant land!

We will conclude with a poem that will find an echo in every honest heart:—

The Witnesses.

In Ocean's wide domains,
Half buried in the sands,
Lie skeletons in chains,
With shackled feet and hands.

Beyond the fall of dews,
Deeper than plummet lies,
Float ships with all their crews,
No more to sink or rise.

There the black Slave-ship swims,
Freighted with human forms,
Whose fettered, fleshless limbs
Are not the sport of storms.

These are the bones of Slaves;
They gleam from the abyss;
They cry, from yawning waves,
"We are the Witnesses!"

Within Earth's wide domains
Are markets for men's lives;
Their necks are galled with chains,
Their wrists are cramped with gyves.

Dead bodies, that the kite
In deserts makes its prey;
Murders, that with affright
Scare schoolboys from their play!

All evil thoughts and deeds;
Anger, and lust, and pride;
The foulest, rankest weeds,
That choke Life's groaning tide!

These are the woes of Slaves;
They glare from the abyss;
They cry, from unknown graves,
"We are the Witnesses!"

The Life of a Travelling Physician, &c. 3 vols. Longman & Co.

When the 'Diary of a late Physician' first appeared in *Blackwood's Magazine*, the public was somewhat startled at the possible betrayals which the title seemed to foreshadow; and only tranquillized when it became manifest that the diarist's cases, patients, and melo-dramatic scenes, were pure fabrications. Here, however, we have the veritable life of a Physician. The narrative, of course, is of a much paler hue, but it is true; in place of the terrible death-bed phenomena of conscience, sharpened by mortal agony, we have here a show-up of the friends, medical or lay, to whom the young Doctor had letters of introduction—a sketch of Lord A. and his family, with whom he travelled—a full-length portrait of his employer, Prince B., and his foibles—particulars of the personal and domestic habits of the Countess C., at whose house they visited—the ridiculous embroidering fancies of another host, Count D.—the private hospitalities of merchants E., F., and others. It will be fortunate for future Travelling Physicians if they do not find their positions in continental society somewhat less pleasant than heretofore, and if they be not forbidden the use of pen and ink, save when a pill or a composing draught is required.

The writer is undoubtedly a clever man,—but not so clever as he imagines; he is too complacently occupied with himself and his own *dicta*, to see any other person very clearly, or listen to them very attentively. He knows nothing of Art; cannot distinguish a Raphael from a Titian, and prefers Paul Potter's Bull to either; yet he oracularly denounces the polychromatic decorations of Cologne Cathedral:—he finds all the translations of 'Faust' bad and incorrect, and modestly publishes his own;—takes up his parable against Botany in one page (pathetically exclaiming, "How much we learn that is not worth remembering!") and lo! recommends Tournefort's system as a pretty plaything for the ladies, with a passing sneer at Mrs. Somerville and Miss Martineau. [See vol. iii. p. 127.] But much as we object to some of the "pencillings" in these volumes, we admit that the work is pleasantly written, and that our Physician is often happy in sketching a portrait, and has a very sprightly narrative style; and we shall do our best to satisfy the reader on these points. Let us then, without further preamble, introduce Prince —— and his *chef de cuisine*:—

"The Prince shone as a star in the gastronomic firmament; but what greater eulogium can be paid him, than the one pronounced upon him by his own cook, who, in speaking of him, and discussing his different merits, observed, that it was a pleasure to serve him, for, said he, '*Monsieur le Prince est essentiellement cuisinier.*' Now this same artist had been cook to two empresses, and to many princes, which adds weight to the compliment paid the Prince upon his culinary talents. He paid dear for the compliment, it is true, in more ways than one; nor was he blind to the system of depredation which these artists practised upon him. * * The Prince, once shut up with him in his carriage, and proceeding gloomily along the road which leads to Smolensko (soon after the termination of the campaign which reduced that city to ashes), wishing no doubt to change his train of ideas, burst like a torrent upon his unsuspecting artist with the emphatic demand, 'Why do you rob me so?' The poor astounded cook, who was at the very moment probably devising some plan of peculation, to make up for the time lost in a long, and for him unprofitable, journey of some weeks' duration, replied in an agitated tone, 'Sir, sir, I don't rob you, I only—only——only make the usual profits of my ——' 'Stop,' said the Prince, 'I am not angry with you: I know that you rob me; but I wish to make an arrangement with you. Why do you do it? I give you a handsome salary, you have many perquisites, and what need have you of more? Now be candid, and speak the truth boldly: you know that I cannot do without you.' * * 'Why, sir, I admit that your's is an excellent situation; but you know, sir, that it is not equal to my expenses. I like society—to treat my friends handsomely. I am addicted to play; *enfin j'ai une petite maîtresse*; and you must be aware, Prince, that all these things considered, your wages are not sufficient.' 'Good,' said the Prince, 'this is precisely the point to which I hoped to bring you. Tell me how much all this costs you over and above what I give you, and I will make up the difference; only do not rob me.' The cook laid his hand upon his heart for a minute, and looking with an affectionate, and even grateful expression towards his master, replied in a suppressed sigh, '*Non, Monseigneur, je préfère de vous voler.*' Having said this, he burst into tears, and hid his face in a cotton handkerchief."

But neither London nor Paris must detain us, and we shall therefore start for Poland, and thence proceed to Odessa. We need not, perhaps have travelled so far to find the original of the following:—

"He was a great politician, and one of the old school. He was averse to all kinds of innovations; he would not even listen to the voice of philanthropy, nor would he believe in the distresses of the poor, nor of the expediency of improving their condition, if the possibility even existed. He hated all public charities; never subscribed to any; nor had he any idea of such a science as political economy. He held in abhorrence all kinds of machinery which tended to throw the manual labourer out of work. He pointed to his peasants, and asked me of what use manufactures could be to people who wore a sheep's skin in winter, and whose wives wove them a linen dress for the summer? He would hear of no improvements in the breed of cattle. Little horses were better than large ones, because they were hardier, and were more economically fed. As to constitutions and charts, he believed them to be instituted for no other purpose than for impeding the progress of government. Notwithstanding all these illiberal ideas, he was a gentleman and a scholar, and a man of very considerable mental capacity. He had travelled all over Europe; had been in the United States, and was passionately fond of the English, of whose institutions he spoke with enthusiasm. If you spoke to him of the French, he got red all over, and was threatened with apoplexy."

Here is a whole-length portrait of an English musician, stumbled on in Austrian Poland. It is true to the life, and will be recognized in a moment by many persons:—

"So disgusted was he with the arbitrary system, and with the apparent poverty which seemed to surround him, that he could not contain himself, but launched out into execrations against the government, 'wishing that the Almighty might send an angel, with a flaming sword and a pair of fiery wings, to destroy them all.' This was uttered too in a coffee-house, and in public. It is singular how tolerant all foreigners are towards the English; how much they will bear from them, without being excited to anger; and how seldom even the most despotic governments

Digitized by Google

take notice of their outrageous conduct. Whence is it that so much deference is paid them? Why are they to escape whole, when for similar offences a Frenchman or an Italian would be put in prison? 'Pshaw, it is only an Englishman; when he has sworn himself easy, there is no more harm in him. He has no idea of intriguing or interfering with the government itself. He curses his own all day long. Allow him the privilege of doing as much for others.' Whether such be the reasoning I know not, but certain it is that an Englishman will get *into* a scrape, and *out* of a scrape, sooner than any man of any other nation; and he asserts his right to liberty of speech so strenuously, that he persuades others that it is useless to attempt to restrain him. So it was with my countryman. He had been disappointed in his expectations, so that the measure of his wrath was full. He had quitted Florence, where he had resided for some years, with the idea of making a fortune in Russia; and imagined that, by giving a concert in the different towns through which he passed, he should defray all his expenses, and fill his pockets into the bargain. Of all men in the world, however, he was the least likely to succeed in his undertakings; not but that he was a first-rate musician, but he seemed to think that, as such, everybody should show, by their submission to his eccentricities, how they appreciated his talents. As to his condescending to be civil to anybody, no such idea entered his head. He treated all alike, and he would tell a princess to open her mouth wider, and not squall like a peacock, where another music-master would have hardly ventured to have intruded a suggestion. As a teacher for children he was inimitable, for he never passed over the slightest fault, and he either made them learn, or he broke their hearts. It happened that his wife was taken ill during my stay in Lemberg, and he begged me to see her. She was a striking contrast to himself; a mild, placid woman, who, having in vain endeavoured to cure her husband of his impolitic conduct, gave it up as hopeless, and now, making a virtue of necessity, laughed at the very things which perhaps had formerly made her weep."

Subsequently, at Odessa, the writer observes:

"Here we again met with the English musician, and as he lodged in our immediate neighbourhood, I had frequent opportunities of seeing him. I had ill-judged him in my first interview, for I found his manners so repulsive that I had little inclination to cultivate his acquaintance. I now had time to correct my error, and to make a friend of a travelling companion. I never met with a man of such honour, honesty, and high principle, who did so much injury to himself by the abruptness of his manners at first interview. This was the opinion of all who knew him in Odessa, *quel brave homme mais quel original.* All the asperities of his manners wore away by degrees, and the ore shone bright beneath. He was persuaded to give a concert, and this time he succeeded to his heart's content. The Empress herself was present. It went off with great eclat. The emoluments amounted but to a modicum, and in this respect he was disappointed; for, like myself, he had been led to believe that professional men could not fail to make their fortunes rapidly in Russia; but if such things have happened, the times had passed before the musician and myself had tried the experiment. The pagoda tree had been plucked of its fruit—nay, the branches even well shaken. He, like myself, had been deceived by the profuseness and liberality of the Russian and Polish nobility abroad, expecting to find them maintain the same character in their own country. This was our fault, and not theirs. After all, perhaps, we have had our deserts, for what right have Englishmen to suppose that they shall be rewarded in foreign lands so much above what their merits entitle them to at home? as one of my colleagues has expressed himself, '*Soyons de bonne foi.*' Should I ever again meet with my musical friend, I shall be inclined to say with Cassius,

> The fault, dear Brutus, is not in our stars,
> But in ourselves."

We regret to add, that he never can meet with his musical friend again—he died in London about four or five years since.

At Brody we have another portrait worth adding to our gallery:—

"During our stay in Brody, we were lodged in an old and dilapidated castle, once capable of defence, the former residence of Count ——, to whom, indeed, the whole town itself belonged. He had lately paid the debt of nature, and died in the bed which he had not quitted for many years previous. He was an eccentric character, but a man of talent and information; and though rational upon all other points, he seemed to be hardly so upon one, which was an idea of living longer by always remaining in bed. He actually lived, not merely in his chamber, but in his bed, for many years of his life, and his greatest consolation was derived from reading accounts in the papers of people dying by falling off their horses, or by the upsetting of carriages, or by bathing in the river, or by congestions of blood to the head from over exertion in walking, in running, jumping, &c. &c. He hugged himself upon the perusal of such accounts, and congratulated himself that such accidents could not happen to him. He received his guests as regularly as at any former period of his life, for no infirmity of the body compelled him to adopt this resolution. He read, wrote, took his meals, and lived, in fact, more comfortably in his bed, than Diogenes in his tub. He was no cynic, no sectarian, no philosopher; he was only known by the name of the Count who always lived in his bed."

We shall now let our author give an account of a dinner at the Countess ——, a niece of the famous Potemkin:—

"The dining room was not better furnished than the parlour; the walls were bare. There was a long table covered with a clean coarse cloth, and nothing encumbered it but a bottle of champagne opposite the hostess's plate, and a bottle of Don wine at each end of the table. About fifteen guests sat down to dinner. If I was surprised at the dinner service, my astonishment was still greater when the dinner was served; and I committed my observations to paper after the repast. Behind each person stood a servant, not dressed in the most splendid livery. The dinner commenced by slices of cold ham handed round in a dish; then a cold *pâté* of the livers of geese; then a salad consisting of craw fish, garnished with slices of beet root, and, lastly, some thin slices of Parmesan cheese. Being myself fond of cold meats, I congratulated myself upon having made a good dinner, though I could have devoured more with pleasure; but as I saw the other guests help themselves but sparingly, I could but follow their example. I was about to ask for a third slice of bread, having consumed the two portions of white and brown which were placed before me, when I opened the eyes of astonishment upon the entry of the soup. Not knowing how to act, I watched the operations of the Countess, thinking that I could not do wrong if I followed her example. I despatched a plate full of craw fish soup, than which I never tasted anything more exquisite, and seeing the hostess qualify it with a glass of wine, I filled my glass from a bottle near me; the doctor's place being, as I have before observed, at the end of the table. Whether she perceived any wryness in my face, as I gulped down the sour wine, I know not, but she ordered the man behind her chair to put beer, and kvass upon the board, and immediately a bottle of each was placed before me. I partook of both during the repast, but they were not to my taste. I now found a large sirloin of beef at my left shoulder. The Countess had already helped herself very plentifully, but, after having tasted a mouthful or two, she sent her plate away, which she did with two-thirds of the dishes. I found that a favourite servant enjoyed the privilege of eating off her mistress's plate, who was now employed in groping with her fork in a black earthenware jug, from the top of which a bladder had been partially removed, to pick out some stewed kidneys, which she consumed with a peculiar gusto. This dish was not handed round. Some buckwheat, boiled, and served up with cold butter in a saucer, followed the beef. I took the liberty of allowing this dish to pass, having indeed dined before the arrival of the soup: as I saw in what way the hostess treated her platefuls, I was easy upon this score. The next temptation presented itself in the shape of stewed carp, of which I partook, but they had the real muddy taste of the species; they were well dressed, and seemed to be approved. Had the wine been better, it might have stimulated my stomach to a little longer warfare; as it was, I was quite *hors du combat*, and saw with pleasure what I supposed to be the the last dish, in some chickens stuffed with parsley. I had often heard that eating and drinking to excess were very hard labour, and I seemed to be proving the truth of the adage; the chickens being handed to me, I summoned up courage and took a wing to play with; and on my plate being removed, I found a plum pudding at my elbow. Not venturing to attack this dish (the *mehlspeise* of the Germans), another was presented, consisting of fine asparagus covered with a sweet sauce. I had no alternative but to die of an apoplexy, or cease to eat altogether. I preferred the latter. I had now only to gaze and wonder at the capacity of the guests' stomachs, most of whom partook of every dish which was presented to them, and many asked me why I did not eat. The asparagus was succeeded by an immense joint of roast veal, served with salad, and the repast was terminated by a pile of cold craw fish, which were picked and eaten as a kind of *passe temps.* Little conversation, or only monosyllabic dialogues, enlivened the meal."

We now proceed on our journey:—

"It was about three o'clock, or perhaps a little later; and in the distance was a hill, the only elevation we had seen since we left Lemberg. I was riding upon the outside of the calash, reading a book, and as we rolled slowly along I perceived a large black cloud lying upon the top of the hill. I first thought it betokened a thunder-storm, a daily occurrence during the whole of our journey. I was, however, struck with the motion of the cloud, which seemed to assume all shapes, lengthening and contracting, and throwing itself into various contortions. I knew not to what this could be attributable, but of course immediately referred it to the usual and unerring cause which accounts for all physical phenomena—*electricity.* As I was still gazing upon it, the calash suddenly stopped, and Count ——, who was in the van, beckoned me to him. 'Do you see that large black cloud in the distance, Doctor?' I have been watching it for some time, I answered. 'Well what do you think it is?' It is not difficult to say what it is, but I am puzzling my brains to find out what causes it to make such evolutions; and as I spoke, it suddenly tapered into a long string. 'Now look at them,' said the Count. 'These are the locusts upon wing. I hardly ever saw such an army in the air. We shall hear what devastation they have done before we get to Odessa. Woe to him on whose fields they alight—not a green thing will remain.'"

The party soon reached Severinowka, but the locusts were before them. They dined with the Count's uncle, who was to give them "forty different kinds of wine to drink, and thirty-nine of them detestable," according to the promise of the Doctor's patient. But Ceres was in such danger, that we hear little of Bacchus. The "thin, spare, and feeble old man," showed the Count and the Physician not into the cellar, but into the garden:—

"It is almost impossible to hope for credence from those who had not been eye-witnesses of the sight which the garden presented. The whole of the surface was covered, ankle deep, with these insects, clambering pellmell over each other, but all proceeding in the same direction. They did not allow us to tread upon them, but, on our approach, rose on wing with a whizzing noise, and flying forwards over the heads of the main body, settled down again in the vanguard over the body of their army. This is the manner in which they alight from the wing: the first rank pitches upon the ground, and the others do not follow the train, but precede it, alighting one before the other, so that the rearguard in flight is the vanguard when they are upon the field. The sight of them upon the trees was most curious. The branches were bent to the ground by the incumbent weight, and the Italian poplars resembled weeping willows, from their lighter branches being reversed by the weight of the locusts. Several trees were already completely bared, for the insect destroys much more than it consumes. It gnaws the stem of the leaf, and not the body, so that the leaf drops upon the ground almost entire, its stalk only having been eaten. When the insects are browsing upon the trees, they are not so easily scared away by the appearance of man as when merely settled upon the ground; they hold fast to their food, and the boughs must be shaken

Digitized by Google

before they will leave their hold. This was indeed a curious and amusing experiment, for it was something like magic to see a tree throw its branches up into the air, as soon as the locusts were shaken off. Their instruments of destruction must be very tough, for many is the stalk of a large sun-flower which I have seen gnawed through by these insects. They seem, indeed, to be particularly fond of the stalk of this flower, and, as several are employed upon it at the same time, it soon breaks where the part is weakened by their gnawing; and it is curious to see the insects rise suddenly in the air when put to flight by this unexpected accident."

To this we shall append a few general facts:

"Volney has given an accurate description of these insects in his Travels in Syria, and mentioned several facts which I myself witnessed. He observes that they are accompanied in their flight by birds of the size of a thrush, which devour them and make continual war against them. These birds are cherished by the peasants in Syria, and so they are by the people in this country. I have watched them for hours, but must confess I never saw them make much havoc in the ranks of the enemy. Some few would drop maimed upon the ground, but I never saw more than twenty of these birds at a time, and what could twenty do against millions? I think the destructive power of the birds has been overrated. As Volney observes, the locusts are sometimes carried by the wind towards the sea, and, being exhausted before they reach the opposite shore, fall dead into the deep, and are washed ashore by the tide, producing a foul infection. I have understood that this is also the case upon the borders of the Black Sea. When they arrive in full force in a country which is at all populous, the inhabitants drive them away by making noises with marrow bones and cleavers, &c. They also burn straw, or sedge, or whatever light fuel they may possess, to smoke them out. All these efforts go but a little way to accomplish their end, for the locusts, driven from one field, proceed to another; and wherever they appear, it may be truly, said in the language of Scripture that 'The land is *before them* as the Garden of Eden, and *behind them* a desolate wilderness.' It is more easy to destroy them in their yet imperfect state, or before they have wings. They walk along the ground in myriads before they can fly, and always proceed *en masse*, in one direction; their march is very slow, and they do not skip as grasshoppers do. The French word, *sauterelle*, is certainly a misnomer. In our route to Severinowka, we saw great quantities of them along the road-side, in a direct line of march. At this period it is possible to destroy great numbers by preceding them and cutting deep trenches across their path; they all walk into the trench, where they find lighted straw to receive and consume them. This is a common and most effectual way. Upon the same principle, a person in Odessa invented a kind of long iron roller, which was to be dragged with horses at full pace over their marching armies. All the means, however, resorted to at present, are more plausible than effectual, and have only destroyed the hundreds, to see the millions vanquish. * * It is asserted, that when they have devoured all that is green upon the earth, and are unable to procure more food, they are pushed by hunger to prey upon each other; the weak and the wounded thus feed the strong, as is the case with quadrupeds under similar pressure of want. The same cause which compels them to consume each other, has often compelled the inhabitants of Syria, in cases of famine, to consume them. They actually grind the dried bodies of the locusts, and knead them into a cake. Hunger will break through stone walls, and locusts and human bones have been found preferable to starvation; and this may be understood by those who have felt what hunger is. But to eat locusts by choice, when corn, wine, and oil are in abundance, appears almost incredible. We must at least say that it is very bad taste. Yet I knew a nobleman, of high rank and consideration, who repaired to Syria, and dressed and lived as the natives. But he wished to imitate St. John in the wilderness, and amused himself by eating these insects and wild honey; a more disgusting mouthful cannot be well imagined than one of these long, horny, scaly insects, from whose mouth oozes, upon the least pressure, a viscid fluid of the colour of treacle. We were conversing upon the history of locusts, and lamenting the ravages which they committed, when the steward was announced. He came to report upon the mischief they had done upon the estate. He informed us that the whole crop was destroyed, and that, for the distance of several versts, not a head of corn was to be found upon the stalk; every ear of it had been gnawed off by these destructive insects."

We may return to these volumes again.

The Zincali. By G. Borrow. 2 vols. 2nd edit. Murray.

We do not often trouble ourselves with second editions—but a pleasant preface to a pleasant book is worth extracting:—

"I cannot (says Mr. Borrow) permit the second edition of this work to go to press without premising it with a few words. When some two years ago I first gave 'The Zincali' to the world, it was, as I stated at the time, with considerable hesitation and diffidence: the composition of it and the collection of Gypsy words had served as a kind of relaxation to me whilst engaged in the circulation of the Gospel in Spain. After the completion of the work, I had not the slightest idea that it possessed any peculiar merit, or was calculated to make the slightest impression upon the reading world. Nevertheless, as every one who writes feels a kind of affection, greater or less, for the productions of his pen, I was averse, since the book was written, to suffer it to perish of damp in a lumber closet, or by friction in my travelling wallet. I committed it therefore to the press, with a friendly 'Farewell, little book, I have done for you all I can, and much more than you deserve?' My expectations at this time were widely different from those of my namesake George in the Vicar of Wakefield when he published his paradoxes. I took it as a matter of course that the world, whether learned or unlearned, would say to my book what they said to his paradoxes, as the event showed,—nothing at all. To my utter astonishment, however, I had no sooner returned to my humble retreat, where I hoped to find the repose of which I was very much in need, than I was followed by the voice not only of England but of the greater part of Europe, informing me that I had achieved a feat—a work in the nineteenth century with some pretensions to originality. The book was speedily reprinted in America, portions of it were translated into French and Russian, and a fresh edition demanded. In the midst of all this there sounded upon my ears a voice which I recognized as that of the Mæcenas of British literature: 'Borrome, don't believe all you hear, nor think that you have accomplished any thing so very extraordinary: a great portion of your book is very sorry trash indeed—Gypsy poetry, dry laws, and compilations from dull Spanish authors: it has good points, however, which show that you are capable of something much better: try your hand again—avoid your besetting sins; and when you have accomplished something which will really do credit to —— Street, it will be time enough to think of another delivery of these Gypsies.' Mistos amande: *I am content*, I replied, and sitting down I commenced 'The Bible in Spain.' At first I proceeded slowly,—sickness was in the land and the face of nature was overcast,—heavy rain-clouds swam in the heavens,—the blast howled amid the pines which nearly surround my lonely dwelling, and the waters of the lake which lies before it, so quiet in general and tranquil, were fearfully agitated. 'Bring lights hither, O Hayim Ben Attar, son of the miracle!' And the Jew of Fez brought in the lights, for though it was midday I could scarcely see in the little room where I was writing. A dreary summer and autumn passed by, and were succeeded by as gloomy a winter. I still proceeded with the Bible in Spain. The winter passed, and spring came with cold dry winds and occasional sunshine, whereupon I arose, shouted, and mounted my horse, even Sidi Habismilk, I scoured all the surrounding district, and thought but little of the Bible in Spain. So I rode about the country, over the heaths, and through the green lanes of my native land, occasionally visiting friends at a distance, and sometimes, for variety's sake, I stayed at home and amused myself by catching huge pike, which lie perdue in certain deep ponds skirted with lofty reeds, upon my land, and to which there is a communication from the lagoon by a deep and narrow watercourse.—I had almost forgotten the Bible in Spain. Then came the summer with much heat and sunshine, and then I would lie for hours in the sun and recall the sunny days I had spent in Andalusia, and my thoughts were continually reverting to Spain, and at last I remembered that the Bible in Spain was still unfinished: whereupon I arose and said: This loitering profiteth nothing,—and I hastened to my summer-house by the side of the lake, and there I thought and wrote, and every day I repaired to the same place, and thought and wrote until I had finished the Bible in Spain. And at the proper season the Bible in Spain was given to the world; and the world, both learned and unlearned, was delighted. * * Now the Bible in Spain is off my hands, I return to 'these Gypsies;' and here you have, most kind, lenient, and courteous public, a fresh delivery of them. In the present edition, I have attended as much as possible to the suggestions of certain individuals, for whose opinion I cannot but entertain the highest respect. I have omitted various passages from Spanish authors, which the world has objected to as being quite out of place, and serving for no other purpose than to swell out the work. In lieu thereof, I have introduced some original matter relative to the Gypsies, which is, perhaps, more calculated to fling light over their peculiar habits than any thing which has yet appeared. To remodel the work, however, I have neither time nor inclination, and must therefore again commend it, with all the imperfections which still cling to it, to the generosity of the public."

OUR LIBRARY TABLE.

Hargrave, or the Adventures of a Man of Fashion, by Mrs. Trollope. 3 vols.—An amusing list of definitions of the Man of Fashion might be drawn from the English Novelist's Library. Take, for instance, Richardson's Sir Charles and Lovelace, and *Sir* Hargrave, Fielding's Lord Fellamar, Miss Burney's Mr. Lovel and Sir Robert Floyer, Miss Edgeworth's Sir Philip Baddeley, Mr. Ward's Lord Cleveland, Mr. Lister's Trebeck, Sir E. L. Bulwer's Pelham: and the individual of whom every one of these is a professed portrait, will be found many-coloured as the cameleon; vibrating between the slang of the stage-coach box, and the ruffles and essences of a perfumer's back-shop. But the feminine conception of the character is expecially curious. To restrict ourselves to our own days, 'Cecil,' for instance, (whose confessions it is now "no scandal" to say were written by a woman) is made to assert his claims by slandering the fair sex; while we find the warlike Mrs. Trollope displaying her hero as not a scruple more orderly than Robert Macaire: a street robber, in short, who lies in wait for his winning friends as they return home from gaming-houses; a lover of diamonds as audacious as Cardillac in Hoffmann's 'Mademoiselle Scuderi,' who decoys a lady to a ball, and builds a labyrinth of temporary apartments with the deliberate purpose of there rifling her of her jewels! On such a monstrosity the only comment is the American exclamation "My!" imported by the fearless authoress who has perpetrated it. It is possible that Mrs. Trollope may choose to appeal against our judgment. What if Punch (to give vent to a passing crotchet) should give *her* 'Man of Fashion' a rehearing, and, for contradiction's sake, plead that he is not essentially more immoral than certain parties who have recently been found laying hands upon property in Grub Street garrets; that Mr. Hargrave's dinmond-hunger is not more remarkable than that appetite for club-house plate which the police journals have lately recorded? We are ready with our rejoinder, if thus rebuked. What would become of the Ross or Deveria as a beauty-painter, who chose to select some Madagascar Venus, or white and pink Albino, as the type of the fair sex? What should we say to the sculptor whose "*Homo*" was modelled from a Count Bonelaski, or from "Mr. Freeman, the American giant"? As a caricaturist, we are perfectly willing to recognize Mrs. Trollope; but she aspires to the reputation of a class-painter and teacher;—treats of morals, manners, and abuses as authoritatively as the sincerest and soberest of her contemporaries, and we, therefore, protest against her delinentions. If the Man of Fashion's deeds, too, are outrageous, the miracle by which he escapes punishment is little less startling. He has a daughter-in-law, who owns a love-secret, and who, while con-

Digitized by Google

ducting a delicate negotiation, through the agency of an old domestic (Mrs. Trollope never fails to step for help into the servants' hall), becomes acquainted with Hargrave's crime. She comes forward at the critical moment when detection is imminent, to assist his escape, and manages this with the address of a veteran police-officer. Roger Humphries, her familiar, gets falsely accused and imprisoned as the robber of Madame Bertrand's brilliants. What becomes of him in prison—how the fugitives take shelter in a mysterious castle on the banks of the Mummelsee—how Mr. Hargrave, the Man of Fashion, follows in the path of sanctity so whimsically chosen by Baron Whiskerandos Geramb—and how Adèle (the heroine), and Sabina, her softer half-sister, become possessed of the very properest husbands extant in the novelist's catalogue of faëry gifts, let all inquire for themselves, who are interested. In defiance of our testimony against the probabilities of the book, they will find it difficult to lay it aside, when once they have taken it in hand.

Days in the East, a Poem, by J. H. Burke, Esq.—We really feel some difficulty in treating books like this. Here we have the versified reminiscences of an officer in the East India Company's army, embracing the voyage out to Bombay and a journey through some of the western provinces of India; the poem having been composed on ship-board, to amuse the *ennui* of a soldier's return home, compelled by ill-health, contracted in the jungles of the country. Works so originating, if put forward simply as the mental diversions which, in their first intention, they were, would be entitled to very great indulgence: and might, indeed, well be left out of the pale of criticism altogether. But the public are, unluckily, supposed to have an interest in each man's lucubrations; the critic is directly appealed to, and the measures which he is then compelled to apply are not of his own making, nor is it in his discretion to vary them at his pleasure. What often makes the matter far worse against such authors is, that many of them rashly select for themselves the standards against which it is their pleasure to be measured, and the critic has but the duty of applying them rigorously. In this manner the author before us has brought himself into direct comparison with Lord Byron, whom he has imitated, as to form and manner, and a portion of whose spirit he is evidently under the impression that he has caught. His ideal personage expatiates in the stanza, and after the fashion, of Childe Harold, over scenes and objects about which he has nothing of novelty to relate, and which he has not the faculty of investing with a spiritual beauty of his own, like the poet Childe. In a word, the penning of these versified recollections and impressions was an excellent and praiseworthy resource against the monotony of a sea-voyage to an invalid; but the public are not in the same predicament.

Night and Day Thoughts.—There are some books of which we cannot hope to give anything like an adequate notion but by extract; and this before us is one to which the proposition applies—as does its converse,—a single extract will give the entire measure of the volume. Here are about two hundred and fifty sonnets, like nothing else of the kind we have ever met with, in the course of a tolerably extended and miscellaneous reading, but marvellously like one another in all their essential qualities of thought, argument, and construction. But, besides that we have no other means of characterizing this production, we are tempted to let our readers have, now and then, a specimen of the curious things upon which our critical functions occasionally bring us. For both these purposes we need not select on the present occasion, but may take the first sonnet in the volume merely because it is the first. Any one brick is an adequate specimen of this literary edifice, excepting only for the marvel, that any man should be able to make such a number of bricks without straw. Here, then, is a foot of the Hercules, it being premised, however, that this poetical Hercules is lame on all his feet:—

If I have advantage o'er my fellows
In anything, and Heaven knows I covet
None, for, tho' fond of home, I would gladly rove it
O'er the world to share it, as it mellows
E'en unripe fruit to my taste, to hear those
Fond of sweetness, boast of their vine and fig-
Trees bearing, it is that I seldom dig
Deeply into consequences, but lose
My interest in action, which, being
My own, I take care of, and let the fates
Make of it what they choose, since from old dates
I'm satisfied there is no foreseeing
What they intend to do.—I have tried such
Now and then, but it ne'er profited much.

List of New Books.—Counting-house Manual and Introduction to Business, by Calculator, 8vo. 4*s.* cl.—Gurney's Short-Hand Simplified and Improved, 12mo. 1*s.* 6*d.* cl.—The Preparatory Latin Grammar, by E. THE CROWNED MOURNER.

[Michael Wisniowecki, a private citizen, who was elected King of Poland, is said to have wept when the crown was placed upon his head.]

The northern sun, in his noonday splendour,
Is shining on Vola's sacred field,
But sees not Jagellon's early grandeur,
Nor beams upon Sobieski's shield;
Yet still there are knightly lances gleaming,
And banners floating on Summer's air,
And the clang of the trumpets, loud proclaiming
That Poland hath chosen her monarch there.

Hark! to the voice of a nation, rending
The cloudless calm of the noontide now;
Hark! to the hymn, with the cannon blending,
As they place the crown on their chosen's brow.
The best and the bravest bow before him,
With dauntless hearts and with matchless brands,
And the skies of his land bend brightly o'er him,
But sad and silent the Monarch stands.

Why is it thus? tho' his birth was lowly,
Nor Fame nor Fortune had smiled on him,
Yet the crown was won by no deeds that sully
Its splendour, nor make its radiance dim.
Whence spring the tears? for the great and glorious
Have sought that sceptre with prayer and vow,
And he without strife hath been victorious,
But what doth the crown'd one weep for now?

Ah! did some dream of the past awaken,
Even as that sunrise of Fortune shone,
Of one true heart that the grave had taken,
Who might have sweetened and shared his throne?
Or found he the thorns beneath the glory,
When others saw but the circling gold;
Or did the Muse of his country's story
Some page of her future woes unfold?

There have been tears when the bride was leaving
Her mother's breast for a stranger's arms;
There have been tears when the nun was giving
To Heaven the flower of her maiden charms:
There hath been weeping, aye blent with laughter,
O'er sceptres shivered and thrones cast down;
But never before, nor ever after,
We saw it beneath a new-worn crown!

March 18. FRANCES BROWN.

ROYAL ACADEMY.

Professor Howard's Lectures on Painting.

LECTURE IV.—ON COLOUR.

Design and Chiaroscuro, it has been shown, are in themselves sufficient to enable the painter to tell a story or convey a sentiment with considerable effect, and may, therefore, be regarded as the true basis of our art; but to develope all its capabilities, to complete its illusive power, and present it in its utmost beauty, there is still wanting the important element of COLOUR, to which I next invite your attention.

Colour seems to be an exclusively *ornamental* quality; we find it scattered through all the classes of nature, animate and inanimate, decking with tints of equal brilliance the shell, the flower, the gem, birds, beasts, and reptiles, as well as the clouds which attend upon the rising and setting sun, and with no apparent use but that of cheering and delighting mankind with a perpetual display of splendour and magnificence. This bountiful provision of nature has the power of imparting a charm to things the most trivial and otherwise unattractive, and thus furnishes the painter with ready and inexhaustible resources for the embellishment of his subject, of what kind soever it may be.

Colour, like Chiaroscuro, may be treated of either as a property to be found in the local hues of illuminated objects in general, that is, as merely *imitative*, or as it forms a part of that *ideal* whole, which he has conceived in his own mind, and seeks to call into existence on his canvas, and is altogether *inventive* or theoretical.

The *inventive* part of colouring (to which I shall at present confine myself) includes a consideration of the quantities, arrangement and harmony of the colours employed in the composition of a picture.

Whether colour is an inherent quality in bodies, or how their surfaces dissect the light, and reflect or refract the innumerable hues of which it appears to be composed, is perhaps not yet satisfactorily determined. It is, however, admitted, that light consists of but *three* original colours, red, yellow, and blue, from which all others proceed,—the orange, green, indigo, and violet, being formed from an admixture of the primary colours, between which they are to be found in the rainbow, or may be shown by the prism. Of these the red is the most intense, and seems to be pre-eminently *colour*, which becomes yellow in the light and blue in the dark part of the ray, (exhibiting the natural union of colour with chiaroscuro). Painters have agreed to call red and yellow, and their mixtures, *warm* colours; and blue, and those tints of which the larger portion is blue, *cold* colours; the presence of all three, either in a pure or compounded state, is indispensable to harmony; and the allotting to each its due quantity and relative position, are points of the first importance in the *colouring* of a picture.

The simplest mode of harmony is where one of the three primary colours is pure, and the other two are combined; as when red in due quantity and tone, is opposed to green, yellow to purple, or blue to orange. The fullest and richest harmony is when the prismatic hues are all displayed together. In either of these cases there is the just proportion of cold colour necessary to balance the warm.

It would seem to follow, that to produce an agreeable effect of light in painting, the same proportion of warm and cold colour should be adopted, as we perceive in a dissected solar ray; but besides that these proportions do not appear to have been very accurately ascertained, we shall not, I think, find this principle constantly observed in the works of the best colourists. Reynolds inculcated a general diffusion of warm colours, with only so much cold intermingled as may serve to give it variety; and this seems to have been the more usual practice of Titian, Rubens, and other great authorities. Various opinions have been entertained as to the relative situations which the different colours should occupy in a picture. Some have thought that the most perfect, or even the only model, for the purpose, is to be found in the rainbow; and this was strongly insisted on by the President West, who, in the latter part of his life, had given much attention to colouring, and whose judgment at all times well deserved consideration. According to him, the red should be placed on the side on which the light enters, then the orange, yellow, green, and so on; but this order, however agreeable, would, if always followed, inevitably give to all pictures the same general aspect; and as we find this arrangement, in nature, only in the rainbow itself, and in a few accidental effects, we are at least entitled to doubt the necessity of adhering to it on all occasions; and also to question if some of the fine pictures of the best colourists would have gained by being more in conformity with Mr. West's system.

But let us refer at once to the practice of the most approved masters in this branch of the art, from whose works alone a safe conclusion may be deduced.

As my wish in these Lectures is to convey to the students useful suggestions and information, rather than to indulge in discursive speculations, I shall not dilate on what has been affirmed or conjectured of the colouring of the ancients.

The specimens left us of these paintings are so few and inconsiderable, as to supply us only with vague and uncertain notions of the extent of their skill in this particular. All that can be collected from their writers, seems to prove that they either knew not, or disregarded that complicated harmony of colours, which characterizes Modern Art. In the imitative part it cannot reasonably be doubted that they excelled as much in *colour*, as we are sure they did in *design;* and many of the specimens remaining possess the qualities of breadth, purity, and truth of tone in an eminent degree. But I shall begin my examination of the rise and progress of colouring, as a technical *element* of painting, with the great painter and philosopher who may be called the Founder of Modern Art, Leonardo da Vinci. This extraordinary man was not only the first who unfolded the principles of chiaroscuro, but he also anticipated Newton in discovering the threefold colour of light; and although, from the effects of time, or from the use of some pigment which has unfortunately changed, the shadows of his pictures have generally become too dark, many of his works show that he had made great progress in the path which he had so happily opened.

The *copy* above me, from the 'Last Supper,' exhibits *portions* of very refined and beautiful colour, which may be fairly supposed to have belonged to the original, in at least an equal degree,—possibly some passages in it may have been executed by Leonardo himself. In the St. John, and the neck of Judas, there is a great feeling of tone, and the arrangement of colours, though not prismatic, is very agreeable and harmonious; the distribution of the warm and cold tints, throughout highly skilful, finely varied and proportioned, with sufficient breadth and point.

So intimately is colouring connected with chiaroscuro, that in adverting to those who have led the way to excellence in this bright track, I may repeat, in the same order as I did in my last Lecture, the names of Fra Bartolomeo, Giorgione, and Correggio, as equally excelling in both. Raffaelle, though he rarely courted them, was by no means deficient in either. His 'Miracle of Bolsena' is a convincing proof of his fine perception of rich and harmonious tones.

But the great artist who stands at the head of the Venetian school, Titian, seems to have been the first to comprehend the true nature of this element of painting, and to establish a theory of colouring on sound philosophical principles. In the *imitative* part, he applied to colour the same system on which the Greeks had founded style in the treatment of form. Excluding whatever was accidental or peculiar, and preserving only its essential and permanent qualities, he purified it from all that was vulgar and unharmonious in tone, gave predominance to the local hues, and raised it from a mere servile copy of individual models to an ideal perfection, impressing on it the stamp of *general nature* in her several classes, with a truth and simplicity unknown before.

He fully perceived also its extensive capability as an inventive element of Painting. His usual treatment was that of spreading a succession of rich warm tints through the picture (both lights and darks), and giving value to these by intermingling portions of decided blue between the two. These blues appear the more brilliant and effective from the warm tints that surround them and are artfully infused into their shadows. He seems invariably to subordinate everything to his carnations; to keep which as pure and broad as possible, he adopted (as I observed in my last) fainter shadows than Tintoretto or Giorgione, and made out his chiaroscuro, by light and dark local colours; reducing his whites to a pearly tint to increase the brightness of his flesh; enveloping and uniting all the lights in a flood of golden radiance, supported by warm draperies, which gives his pictures the glow and harmony of objects seen by a setting sun—*Colour* soon became his predominant aim, and this fascinating part of the art seduced him from the cultivation of powers, which (as he has occasionally shown) might have enabled him to cope with the great designers of the Roman school. In proof, I need but refer to the St. Peter Martyr, and those fine compositions on the ceiling of the Salute at Venice. How far he may have erred in the preference he thus gave to colour, or whether his fame would have been as great as it is had he chosen differently, it were vain to inquire. The art, at least, has probably been a gainer by the course he adopted, and is, perhaps, indebted to him for sound principles of colouring, in which it might otherwise still be deficient.

This country fortunately possesses many fine specimens of his talents to which I may refer you.

The 'Ganymede,' in our National Gallery, exhibits a taste in colour quite in accordance with the grand character of the composition; sufficiently picturesque in tone, but extremely simple. His 'Venus and Adonis,' in the same collection, is also a fine work in all other respects, as well as in colour, and evidently the production of his ripened knowledge. His 'Bacchus and Ariadne,' also in the National Gallery, well deserves the student's close examination; he will observe in it a larger portion of strong blue than is usual in Titian's later works (perhaps occasioned by the ultramarine having retained its purity in a greater degree than the other pigments he employed. The carnations are in consequence, particularly rich and glowing. This picture is also a model for careful and elaborate execution. In the Bridgewater collection is a picture of an earlier period, by this great artist, called the 'Three Ages,' which, by the favour of its noble and liberal

Digitized by Google

owner, was lately before the students in the Painting School—a work as pure in sentiment as in colour, and equally admirable for its exquisite feeling as for the suavity and truth of its hues;—and in the same collection, the half figure of 'Venus in the sea,' is not inferior in taste, both of colour and drawing to anything he ever produced.

His 'Actæon,' also in the same collection, shows the maturer treatment, but less finished workmanship of a consummate colourist. I shall advert but to one more specimen of this great master's pencil, which, though not in this country, has probably been seen by many of my audience; I mean his 'Christ crowned with thorns,' now in the Louvre; one of the most brilliant examples of his pictorial skill, and painted in the zenith of his powers. The prevailing tone of the picture arises from an extended mass of iron-grey colour in the background, which is brought into the front by a figure in mail armour of a similar tone; this gives a stern and gloomy air to the whole, very suitable to the pathetic character of the subject; to balance this quantity of cold and sombre tint, a sufficient portion of very rich warm colour is introduced in the foreground parts;—the focus of light and colour is on the right thigh of the principal figure, where are assembled golden flesh, bright crimson, and blue—the yellow shirt of the figure on the left, and the crimson robe, support and spread the group of rich tints about the centre, and by this management the picture is entirely rescued from monotony and heaviness. Nothing can be more admirable in colour and appropriate effect. This work was so highly admired at its first appearance, as to attract many of Titian's scholars, and other artists from different parts of Italy, to settle at Milan for the purpose of studying it.

I pass by Tintoretto from the want of examples near enough to refer to, of his vigorous colour combined with the fiercest chiaroscuro.

Two productions of this master may be seen at Hampton Court, which are below his usual standard. Of Giorgione, we have a few smaller specimens in this country, which are very conclusive evidence of his possessing chiaroscuro and colour, in the happiest union, together with a beautiful sentiment that characterizes his works in general. A figure of Temperance, in the possession of the Academy, is a graceful specimen of the talents of this rare artist, whose early death has probably deprived the world of many admirable productions.

Paolo Veronese seems to have made Titian his model in colour and effect, which he employed, however, with an unbridled luxuriance of imagination, and rendered decidedly paramount over all the other qualities of his art. And it must be admitted that in the brilliance and beauty of his hues, as well as in the adaptation of his colouring to large decorative compositions, he has never been surpassed. A fine specimen of the great purity, and freshness of his colour may be seen in his 'Mercury and Herse' in the Fitzwilliam Collection, at Cambridge.

Of his larger works 'The Marriage of Cana,' now in the Louvre, has always been the theme of admiration, in its particular class. Having had an opportunity of devoting an attentive consideration to this picture in its present situation (where it has, no doubt, been seen by many of my audience), I shall lay before you the result of my remarks upon it. The story of this immense work is lost in the splendour and *bizarrerie* of the banquet. Its real subject is properly colour, and magnificence, to which all other meaning is made subservient. It may be considered as a large nosegay, in which the light and dark—the warm and cold tints—are arranged and intermingled with admirable skill, effect, and harmony, without offering any predominate mass, unless it be the large portion of light in the sky. The composition is connected by a symmetrical arrangement of architecture, reaching on each side from the bottom to the top. The light is brought down on the left by the marble columns and piles of plate to the table-cloth, and carried out below by means of some white in a dog, placed there for that purpose, just above which the painter has concentrated his richest colours, opposing the warm white of the table-cloth to bright, deep-toned fruits, and one of those light, figured dresses which he was so fond of introducing into the focus of his pictures. These contrivances are echoed rather more faintly in another figured drapery, and another cluster of rich colours: the lights are chiefly composed of positive white, flesh colour, and light yellows, immediately opposed by deep reds and blues, the reds varying from scarlet to violet. Every artifice is resorted to for the purpose of making out the chiaroscuro without much shadow: the dark heads and draperies of the line of figures at table (crossing the composition horizontally) tell very decidedly against the bright light of the sky, the strong and extended blue of which makes the figures below appear rich and warm, though they are interspersed with so much of the blue of the sky, a little deepened, as was necessary to prevent heat and heaviness. The middle tints throughout are produced by orange and red colours, gradually deepening into a cluster of darks on the right, which counterpoise the brilliancy of the left corner. These dark colours are carried through in a dingonal line to the top of the right side, where with the columns in shade they make up the oscuro of the picture. The deep red of a figure in front (the chief mass of dark) is relieved against green, and rendered still more effective by the figure close to him in a yellow white dress, who is Paolo himself. It seems to have been a principle with him always to introduce white near yellow: to give the latter positive colour (and this is the case with Correggio also) green is interspersed in small quantities, (and generally as secondary to the yellows) to give brilliance to the carnations. The largest mass of blue (out of the sky) is in a back figure sitting at the end of the table on the right, which contrasts vigorously with a stooping figure in yellow; and to complete the richness and harmony of colour at this point, a scarlet vest and staff are given to the figure above (perhaps the ruler of the feast); and a sparkle is here introduced by means of the glass held up by a boy sitting, in which you at length find you have stumbled on the miracle of the water changed into wine.

The figure in blue has also the further contrast of a bright orpiment sleeve. The upright figure in ornamented white vies in brilliance with the left corner of the table, the glitter and richness of which it seems intended to echo, while it serves to negative and keep back the figures behind. All the tints of the picture tell distinctly, and almost as spots, which contributes much to its brilliance. There is no attempt at blending light with light, and dark with dark, as in the systems of Correggio or Rubens, but breadth and continuity are effected by detached portions of harmonizing colour. I have dwelt on this justly celebrated work, the rather as I know of none which displays more of chromatic ingenuity, or that better elucidates the principles of the ornamental *Venetian* school; and if the merits of any work are to be judged of by the skill with which the obvious aim of its author has been carried out, few pictures can be said to have been more completely successful than the 'Marriage of Cana.' It has fully accomplished its end, which was to fill an immense canvas with a rich combination of colour and effect, and to delight the eye rather than afford occupation for the mind.

Correggio does not appear to have considered colour with that almost exclusive partiality which actuated Titian and Paolo, but he justly and feelingly appreciated its value as one of the great powers of the art, and has invariably made it contribute its due assistance in all his fascinating works. Among the variety of attractions presented in his 'St. Jerome,' it would be difficult to say which is the most engaging. They charm us individually, and in their union; in colouring not least. The 'Notte' I have already spoken of, as displaying the poetry of colour and chiaroscuro in a degree amounting to the sublime. The specimens from the pencil of this rare artist which have lately been added to our National Gallery, enable those who have not had an opportunity of seeing his great works at Parma and Dresden, to form some estimate of his taste and skill as a colourist. From these, and all his other pictures, Correggio appears to have uniformly avoided a florid style of colour. They may both be considered as modulations in a minor key; even in the picture of 'Venus, Mercury, and Cupid,' which admitted of the more vivid colouring of the two, there is scarcely a larger portion of bright red than is to be found in the cheeks of the 'Cupid.' Flesh colour of different hues, finely opposed by a good deal of warm pale green, a cold deep red, light broken yellow, and a small quantity of blue, make up the harmony, and a little cluster of gay tints, light blue, yellow and red, on the wing of the Cupid, gives sufficient vivacity and point to the delightful breadth of the work. In the 'Ecce Homo,' the carnations, also, are the leading tones; and though the crimson or purple robe in the centre of the picture is perhaps more vivid in colour than is well adapted to pathos, yet it was necessary as an historical part of the subject. It may be observed, too, that he has reduced the quantity of this tint as much as he could, and by a pentimento, which may easily be traced, has even taken away a part of what he at first thought desirable; in so doing, he has extended his mass of light, while, by means of the deep blue cloak of the inimitable fainting mother, he has given a solemnity to the general aspect of the picture which is strikingly impressive. The piece of white drapery is happily introduced to set off the colours, and is made use of, also, to detach, with particular spirit, the fingers of the Christ, where he seems to have thought it most convenient to produce the strongest effect of relief, the *punctum saliens* of the picture, and to give roundness and unity to the whole.

The genius of Rubens was not less conspicuous in colour than in all the other parts of the Art; and he thoroughly incorporated into his system the principles of Venetian colour, with the chiaroscuro he had derived from Leonardo and Correggio. Happily we are possessed of many examples of his great power in this element of painting. His 'Ixion,' in the Marquis of Westminster's collection, has twice graced the Painting School for several months, and as it must still be in the recollection of many of the students, I am induced to offer a few observations upon this fine work. The invention is ingenious and poetical, the composition graceful and expressive, and it only wants some refinement in the drawing to make it in these respects complete; but refinement is not a characteristic of Rubens in any one branch of his art; and this remark will apply, though perhaps with minor force, to his colouring. Like Titian (on whose system his own is principally founded), he generally gave the chief attraction to his carnations, and they form a very considerable portion of this picture, varied in tone, and partly thrown into shadow; but they exhibit a peculiarity of treatment which we do not find in any other artist, excepting in some of his imitators: I allude to that decided separation of the flesh tints into distinct stripes, lying side by side (a dissection of the local colour, which is so remarkable in many of his works); his high lights are always yellow; next to those a bright rosy, or deep red, as the complexion required; then a strong grey tint, almost blue, running into a warm brown shadow, with still warmer reflections. These, when viewed from a sufficient distance, whence they come in a blended state to the eye, acquire the tone and effect of nature, and gain in brilliance from their crudeness; but when seen near, they are sometimes offensively coarse, and would be intolerable but for the powerful chiaroscuro by which they are controlled or absorbed. The work I am speaking of exhibits some variation from his ordinary practice in the arrangement of his colours. The shadows are cool; the single mass of red is in the centre, and is recalled only on the back of the Cupid; the brightest blue is brought very near it, and makes this part the focus of *colour*, which is well placed above the heads of the principal figures, and gives air to the celestial personages in the sky. The darks are arranged on one side of the picture, the lights on the other; nothing approaching to white is to be seen, and very little yellow, which renders it more fresh and elegant in tone than his pictures in general.

The works of Rubens, at Antwerp, to which I adverted in my last, are not less remarkable for their colour than their chiaroscuro; an examination of which will fully repay any artist who may be induced to visit them. Most of these have been commented on by the best critics, and I shall therefore pass them by. But of one picture there, which is placed above his tomb, in the Church of St. Jacques, I could wish to give the students some idea. The subject is a 'Holy Family, with Saints,' and consists, in fact, of the different branches of his own family, whom he has thus perpetuated. It is not one of those extensive compositions into which he was able to bring forward all the resources of painting, but it is a remarkable

Digitized by Google

example of his skill in colour and effect. In the centre of the picture is a beautiful profile figure of the Magdalen, standing in front of the Virgin and Child; her hair, of a very rich brown, is relieved against a grey sky; the shoulder and arm bare, and fair as a white rose, with a piece of linen attached to it, varying but little in tint from the flesh itself; the lower part of her dress is a mass of deep transparent black. Close behind her stands St. George (Rubens himself) in a polished steel cuirass, which extends the strong light and dark of the Magdalen; and immediately beside her is Joseph, leaning forward, whose arm is covered by a large mass of crimson drapery, the richest portion of colour in the work. Thus the great force of light, dark, and colour are brought together in the centre. In the right corner is St. Jerome sitting, partly naked, and of a very hot red tone, the garment about him still redder; but this tendency to rustiness is checked by a little cherub between his knees (supporting the Bible), whose flesh is of the freshest and fairest hue, and by the deep blue mantle of the Virgin above him; the reds are recalled on the left side of the picture by a banner in the hand of St. George. In the sky are three or four hovering cherubs, gracefully composed; one of whom holds a wreath over the Infant, in which is a small portion of green, seemingly contrived as a foil to the quantity of flesh colour. A low horizon has given the painter an opportunity of showing, between the legs of St. George, a peep of landscape, in which there is a little more green and cool colour, and the green arbour behind the Virgin, combining with her blue mantle, make up the cold portion of the picture. These vivid oppositions are all brought into the most complete harmony. Excepting only the sprawling attitude of St. Jerome, the disposition of the whole is not less beautiful than are the parts; and it appeared to me altogether the most sparkling and even elegant specimen of his pencil I ever saw. Sir Joshua Reynolds, in his journey to Flanders, has noticed the remarkable brightness of this picture.

Rubens seemed to have aimed, like the Venetians, at adding vivacity and intensity to the colouring of Nature, though he rendered it, like every other part of the art, rather too systematic, unless for those extensive decorative compositions which he was so often called upon to execute. Amid the gorgeous gold and velvet ornaments of a church or palace, his splendour was in its place: but he adopted the same general principles in all his pictures, small or large, whatever their theme, not excepting even his landscapes; and though richness, where the subjects admit of it, is desirable, an excess of florid colour always offends, but most of all when combined with such sublime subjects as those in which he has aimed at rivalling M. Angelo, now removed to Munich.

Of white he introduced in general a very small quantity, and that almost reduced to a dove or lilac tint, giving a preference to the carnations of his females: like Titian's, his second tones are generally a light grey, and seem intermingled with the flesh tints to check their too great warmth: the reds are placed triangularly near the light, in masses of different shapes and hues: the greens, in small quantities, are generally introduced to set off the carnations: the third and fourth tints are yellow browns, which form a large part of his pictures, chequered with small quantities of grey, and his strongest masses of dark are generally blue or black. The 'Rape of the Sabines' in the National Gallery, is an instance of this treatment. In this picture a larger portion of green is brought forward to cool the profuse quantity of red which is everywhere displayed. Here, too, is introduced the black dress, to increase the compass of his chiaroscuro.

On quitting this great man I may here remark, that the systematic character of his works, which renders them less interesting to persons of refined taste, is, however, that which makes them invaluable as subjects of study for the artist. His principles are more apparent and intelligible than those of any other painter: you more easily trace the motives which guided him, and his technical skill, if rather too obvious and intrusive, is at the same time unrivalled.

In the enumeration of able *colourists*, Vandyke is entitled to a high station, and some of the best of his works are happily to be found in this country. His 'Charles the First on horseback,' in the royal collection, may be considered one of the finest equestrian portraits extant. The colour in general is exquisitely pure, and conducted a good deal on the principle of Titian, the red and yellow are supported by a great breadth of warm brown colours, and though there is a considerable quantity of grey, which is beautifully managed, the blue mass in the sky and in the scarf tell distinctly as the counterbalancing cold hues of the picture. He has infused a great portion of brown into the shadows of the green curtains, which unites it with the architecture, and makes out the harmony. The focus of chiaroscuro is happily thrown into the cuirass, carrying the eye up towards the head, which, by its fine colour and admirable expression, at once fixes the attention.

Vandyke's 'Theodosius excommunicated' (now in the National Gallery) presents a very effective system of colour and chiaroscuro. The sky and architecture spread a large portion of grey behind the figures, against which are placed the Emperor in a bright red mantle, and St. Ambrose in his episcopal robe of light yellow, figured with a deep blue: to this still greater richness is given by the opposition of the boy in a white surplice, which forms the principal mass of light; the white sleeve of a priest behind carries it on, and is ingeniously contrived to relieve, and give point to the sun-burnt head of Theodosius, the yellow and brown tints on the other figures, and the dog, and faintly spread on the steps, serve further to check the quantity of grey, and the deep shadows of the figures on the left finely balance the chiaroscuro; this distinct arrangement of the warm and cold tints produces great brilliance, though it may be doubted if there is not, after all, rather too great a prevalence of the leaden hue, into which this great artist occasionally fell. Perhaps this may be fairly ascribed to the use of some pigment, which has become more opaque and cold from time. Some of his historical pictures at Antwerp strongly suggest this opinion; in these the greys appear to have been formed of white, mixed with the brown earth which goes by his name, and are become so heavy in their tones as materially to injure the beauty of the colouring.

In the truth and purity with which he imitated the hues of his model, no one has exceeded Rembrandt. Of his skill in combining and arranging a variety of colours in extensive composition he has not often given us an opportunity of judging. The 'Guard-house at Amsterdam' is less satisfactory in this respect than many of his smaller works.

The colour of Rembrandt is always rich, and blended in a peculiar manner with his chiaroscuro. The 'Joseph and Potiphar's Wife,' lately in the Painting School (to which I alluded in my last), is a very beautiful specimen of both, the lights are glowing and finely modulated; and as they contain a considerable portion of red, he has counterbalanced them by a background chiefly of green; lively but not crude, his brightest colour is sparingly employed to give zest to particular points. The extended light of the bed is of a low, warm tone, which is made to appear white and brilliant by the quantity of rich dark about it, and from there being nothing else so like white in the picture. The red dress of the female is of a beautiful tint, and finely harmonized. Many of Rembrandt's portraits in this country, particularly those in the Grosvenor Gallery, are admirable for their tone, effect, and truth.

The science and practice of colouring may be fairly said to have maintained itself with undiminished power in these latter days. Our own school, with whatever deficiencies it may be charged, may boast of having produced very distinguished talent in this department of painting. Holbein, Rubens, and Vandyke perhaps led the way to the knowledge of colour among us, but it is to the first President of this Academy, Sir Joshua Reynolds, that we are immediately indebted for an insight into its true principles (as, indeed, into those of the art in general). Naturally possessed of an exquisite relish for colour, as well as an eye of peculiar delicacy, he had diligently studied in the continental schools those works which were most remarkable for harmony and effect.

Correggio, the Venetians, the Dutch, and Flemish, all contributed to form him as a colourist: he seems to have thoroughly appreciated and discriminated their various styles, and to have early learned to rival their best examples. He imitated, successfully, the veiled splendour of Titian, and by lowering the scale of his colour, added to its richness and brightness, supporting it with a depth of chiaroscuro equal to Rembrandt: a more varied management and less apparent artifice. In rendering the true effects of light, in the beauty and suavity of his hues, in breadth, unity, and force, no less than in his refined taste and feeling, he may rank with the greatest colourists that the art has produced. Though constantly recurring to Nature, he never allowed too close an adherence to the individualities of his model to interfere with the true idea of Nature developed in the works of the most admired masters. Many examples of his powerful skill will readily occur to my hearers. The glowing colour of his 'Iphigenia' in the Royal Collection (lately, by her Majesty's gracious permission, in the Painting School), happily remains in such a state of preservation, that it has scarcely lost anything of its original perfection. We may regret that the same cannot be said of that once exquisite example of colour and effect, his 'Holy Family' in the National Gallery.

His portraits are too numerous and well known to need any comment. 'The Marlborough Family,' one of his more extensive works, gives us an opportunity of judging of his arrangements on a larger scale. In this he seems to have adopted the general principles of Titian and Rubens, but with a greater breadth and force of chiaroscuro than the first, and far more purity of tone than the second,—the blue robe of the garter, furnishes him with his strongest dark, the bright red curtains spread his warm middle tints through the picture, and give great delicacy to the carnations. His discrimination of the principal classes or styles of colour, as well as the many other valuable observations which he has made on the technical parts of the art, (in his notes on Du Fresnoy,) will, no doubt, be carefully considered by the student, and treasured up in his memory. It has sometimes been inculcated, that the warm colours should always be placed in the front, or foreground objects, as having a tendency to impress the eye more strongly, or to come more forward than the cold; but union and harmony require that some intermixture of warm colour should be thrown into the background, and of cold into the front; and, in confirmation of this opinion, we may observe that many of the pictures in which the contrary principle has been adopted, (such as the 'Notte,' the 'Magdalen,' and the 'Christ in the Garden,' of Correggio, Titian's 'Christ crowned with Thorns,' and others,) have afforded as general delight as any that could be named.

Rubens, in the Cathedral at Antwerp, has, for the sake of contrast and variety, painted in one of the side pictures of the great altar-piece, a female saint, in a grey drapery, against a mass of brown rock, and on the other, St. Paul in brown, against a blue sky. Some of the most admired portraits of Vandyke are treated in the same way; and, I may add, Gainsborough's 'Blue Boy,' in the Grosvenor collection.

In nature we often see these cold colours, as they are called, near, and warmer colours at a distance, without being offended, and it would seem from the above instances, among hundreds which might be cited, that they require only judicious management to make them agreeable in art. The effect of the whole would seem to depend on the *quantity* and opposition of warm tones necessary to counterbalance the cold and make out the harmony.

In portraiture, the dress generally gives the leading and predominant tone of the picture, and perhaps *any* tint whatever, warm or cold, may be adopted for that purpose, and made agreeable if duly balanced and distributed. The black dress of Rubens, in the midst of bright tints, while it gives depth to the chiaroscuro, adds richness to all the colours it opposes, and sobriety to the whole. Titian sometimes made use of a low white or grey dress, set off by warm tones, the converse of the same principle. Reynolds occasionally placed a white dress against a light grey sky, with very little positive colour, and produced a pleasing effect by breadth and hue. Vandyke's half-length portrait of Queen Henrietta, in the royal collection, is a fine specimen of the same kind of treatment. The general aspect is grey and silvery; the only positive colour in it consists of a little red, which is sprinkled, as it were, on the stomacher, and a small red flower in the hair (acting like the *red cap* in some of Teniers' pictures),

Digitized by Google

which preserves the whole from coldness. A beautiful picture by Rubens, at Antwerp, of 'St. Anne teaching the Virgin to read,' is on the same principle.

But, in fact, the different modes in which the colours may be arranged with effect, and the variety of keys in which they may be modulated, seem to admit of no limitations. They may be raised to the most vivid and gorgeous, or subdued to the most delicate tones, according to the nature of the subject; may be reduced almost to chiaroscuro, or glow with all the hues of the prism. The picture may be made effective either by the simplicity, or by the richness of its harmony, accompanied as it were by a single instrument, or a whole band. The skill of the master is to be seen as advantageously in the one as in the other, and his most bewitching effects will often be produced, like those of the musician, in a *minor* key, which in both arts is particularly suited to the *pathetic*. In the earlier works of Titian, Garofalo, and others of the Venetian and Ferrarese schools, a great intensity of colour seems to have been aimed at, emulating the "storied windows richly dight" of our Gothic cathedrals, and a similar practice is to be found in the oil pictures of Van Eyck, and the old German schools, from which it was probably derived.

Titian, as his taste improved, quitted this gaudy manner, making his blues a distinct counterbalance to a general diffusion of warm but not florid colour; and, from the practice of all the great colourists, it appears that a considerable portion of negative hues is necessary to set off the more positive; for brilliance, if attempted everywhere, becomes ineffective from the want of opposition; alternations of excitement and repose are indispensable in every part of the art, (and where sentiment is aimed at, a very small portion of vivid colour can be safely introduced). Hence, *broken* and subdued colours form the larger part of all fine pictures; they are serviceable either to *oppose* or *reconcile* the leading colours of the picture, to vary the tones of the lights, and add to the harmony and even brightness of the whole. For this purpose, great use may be made of reflections; warm tints may thus be introduced to check and keep in tune those which are in themselves rather too cold, and *vice versâ*.

By this principle the extremes of both may be brought together, and a kind of transparency obtained in the colouring, which is always desirable: care, however, must be taken that these reflections are not overdone, or the picture will lose solidity and substance, and become diaphanous. An artifice of the same kind is the adoption of draperies shot with threads of opposite colours, very frequent in the Herculaneum pictures, and occasionally used by Raffaelle, Poussin, and Rubens, which, when well managed, is capable of very brilliant and pleasing results.

Contrast is the source of all character and effect in colour, as in every other division of the art. No tint will appear very bright unless set off by an opponent, and by this treatment effect may be given to any, but the shadows must all partake of the same negative tone, and that should be the natural antagonist of the general hue of the light, which again must be gently diffused over the local colours, in order to tinge them with the same atmosphere, and give truth and union to the whole.

In the works of the finest colourists, particularly those of Correggio, there is a gradual variation from warm to cold tones, as well as from light to dark, while the extremes of both are economized, and have their more decided points of antithesis, and this modulation or rhythm is one great cause of the suavity and breadth for which he is remarkable.

The general tone of colour to be adopted for a picture, together with its chiaroscuro, is the music to which the composition is set, and should always accord with, and arise out of, the character of the subject. This has naturally some fixed and inherent circumstance, some indispensable demand, which must first be attended to,—as whether it be simple or rich, playful or grave, whether it derive its light from the freshness of the morning or the glow of evening, the quality or costume of the principal characters, &c.—something of this kind will generally suggest the key in which the harmony is to be evolved, and lead to all the rest. Thus, if there be a necessity for clothing the principal figure in red, that must be supported by congenial tints, carried on in some part by a smaller repetition of nearly the same tint, and set off and harmonized by a portion of the antagonist or complementary colour, more or less positive, as Reynolds has shown in speaking of Vandyke's 'Cardinal Bentivoglio'; and this general principle is applicable to all the various classes of painting, from a portrait, or single figure, to the most complicated history.

Having now referred to the practice of the most eminent masters in colour, and endeavoured to illustrate their general principles with regard to inventive or ideal colouring, it would be useless to draw your attention to any examples of less acknowledged excellence. I shall therefore conclude with remarking, that though Reynolds, with true judgment and great impartiality—towards an element of Painting in which he so much excelled—has pointed out the ambitious nature of colour, and its tendency to absorb every other quality of the art, yet it is equally certain, that when regulated by taste and feeling, colour will be often found capable, in a powerful degree, of expanding the poetical sentiment of the work, and of interesting the imagination and affections no less than of delighting the sense.

THE TEMPLE CHURCH.

THERE are one or two points connected with the renovation of the Temple Church, which, though perhaps of only minute importance, in that particular case, yet tend to mar the satisfaction produced by contemplating that costly work, when viewed with reference to the principles they involve. For some time past a disposition has begun to develope itself in one portion of the antiquarian public, to which it is to be hoped that the growing inclination to indulge in the seductions of gorgeous colouring applied to architecture, may not take a contrary, but rather, which is very possible, a parallel direction;—namely, the disposition to encourage the use of genuine, in opposition to false, and supposititious materials in architecture, and to strip off those incongruous additions which, applied parasitically to the original and constructive features, seem as if they aimed to "paint the lily" and "gild refined gold." And this disposition has been more especially directed against the choking and blocking up the comparatively artistic productions of the carver, whether in stone or wood, with the handicraft daubings of the house-painter and whitewasher.

Notwithstanding this, however, it may be noticed by any passer-by, that the venerable portal of the Temple Church, after having endured so long the defilements of plentiful coats of paint or whitewash, has at last been cleansed and purified, and has had its elaborate sculptures carefully re-worked, only to be again subjected to the hands of the painter; as if it were a modern drawing-room, the material of whose imitation ornaments requires disguise and concealment. This daubing of the western porch is a very different matter from that revival of the ancient system of coloured decoration which has been carried to so great an extent within the choir of the church; in which case the powers of the artist may be exercised to discriminate, to distinguish, and to heighten, the architectural distinctions of lines and forms, by a parallel system of shades and colours; or else, as the case may require, to soften, to blend, and to temper the boldness of the designer and the carver, also to enrich such portions of plane surface as might otherwise not accord with the richness of the carved work in other parts. But the spreading a uniform coat of opaque colour over a piece of rich carved work wrought in solid materials, is like taking a fine painting out of the hands of its artist, and intrusting the finishing touches to the undistinguishing hands of a house-painter. It may be added, too, that this mode of treatment unfits the object for undergoing that operation performed by Nature's own hand; in the course of which the granular structure of the stone becoming developed by the action of the atmosphere, alternates with the marks of the workman's tool still remaining, and produces both variety and tone, softness and depth of effect, and constitutes that gentle impression which, left, as a memorial, by the finger of Time, makes the object venerable instead of repulsive.

There arises now another subject for comment. "When we have sucked the orange we throw the peel away," said a great monarch to a great wit, whose racy conversation he had enjoyed to the utmost. In like manner, when in a building under repair the decayed portions have been replaced by new, it is a common case for the builders to be required to "remove all surplus materials," a still more effectual mode of clearance than throwing them away—for why should they be left to cumber the ground? Yet, when we find in the catalogue of an auction of building materials, certain time-worn marble shafts and carved capitals, described as "antique relics of the Temple Church," ("part of the original structure, and seven hundred years old,") it may be allowable to indulge some regret, that though the "juice" be very much dried up and "sucked" away, yet that the association of seven hundred years with one locality should not have preserved the "peel" from being ignominously thrust out when worn with long service. The ancient remains in question include the circle of clustered pillars formerly sustaining the whole upper part of the original nave of the church. Could not an honourable asylum be found for these venerable relics, by setting them up in their accustomed relative position to each other, in some shady nook of the Temple Gardens, forming a unique and peculiar ornament to that agreeable locality? The common objections to ARTIFICIAL RUINS would not in this case have their usual force. The ancient fragments in question already possess all those charms of association which are usually wanting in an artificial ruin. They have for centuries stood within a few yards of the same spot; they have been originally moulded to the best forms for grace and beauty, according to the skill and understanding of a remote age; and to the present time they have retained those forms in a sufficient degree to serve as models for us, whereby to fashion those fresh materials, which, having borrowed their shapes, have assumed their places also.

Had this paper been written previously to the day fixed for the sale by auction alluded to (the 16th of December last), it would have been amusing to speculate on the probable results. It would have been reasonable to imagine, that as Purbeck Marble columns are not, like cast iron ones, applicable to useful purposes—such as supporting the floors of warehouses or the roofs of railway stations—and as full-sized Norman capitals and bases are too bulky to be put as chimney ornaments on the mantel-pieces of the curious, the resource of the purchaser would not improbably be, to lay them in some corner of a depôt for building materials, until an unusual demand for hard rubbish called them forth to utter destruction. Or else they might have seen the light once more as decorations for some suburban tea-garden or bowling-green; there to exchange their associations with the tones of the organ, and the subdued step of the awe-struck worshipper, for the sounds of coarse music, and the noise of boisterous revelry. Neither of these suppositions, however, has yet been verified; for, when the day of sale came, not one bidding could be got for the fragments in question; and so they still lie in close contiguity to their old accustomed abiding-place, strewed about, or piled up, on the ground, in Hare Court, a few yards from the Temple Church.

By the bye, the word "Restoration" seems to be used architecturally in a very peculiar sense, when by it is only meant a "substitution" of new objects for those old ones by which the sympathies are excited, and the associations interested. It is true, that the difficulties in the way of the architect are very great. He cannot call upon the four winds of heaven, to surrender back suddenly those particles of matter, which, with invisible hand, they have been unceasingly employed for ages in stealing away, and dispersing abroad throughout the earth. But the faithful portrait is a treasure to those, from before whose eyes the original has passed away; and the public must be thankful, when they receive all that the architect can produce—that which in form, and colour, and substance, most resembles what has been lost. In realizing this, much diligent examination must be required, much patient attention given; numerous obstructions will occur, and many practical difficulties must be overcome. But practical difficulties are things of the present hour, obvious to the sense, which sees only realities, and sorely disturb thoughts of the past and the future, the remote, the visionary, and the spiritual. And methinks it requires

Digitized by Google

a constant watch to be kept while overcoming them, lest the beauty of workmanship grow to be regarded as all in all, and the beauty of Association as nothing.

While hazarding these strictures on certain matters of detail, in the recent extensive reparations of the Temple Church, the writer does not intend to insinuate anything against their general character; far from this, he would prefer such general application to be made by the rule of contraries, if the reader must insist upon making it at all. Furthermore, with regard to the principles in art here dwelt upon, the question of beauty in composition, architectural or pictorial, is but little involved: the two sides of the question here placed at issue are, association or historical interest, on the one hand, and workmanship on the other. Beauty of composition may happen to take part with one side or the other, or to unite with both. G. M.

THE AERONAUT STEAM-ENGINE.

"*How to make a man to fly*" is one of the Century of Inventions of that arch-anticipator of all modern inventions, the Marquis of Worcester,—"*which I have tried*," says he, with characteristic *naïveté*, "*with a little boy of ten years old, in a barn*;" an excellent caution and laudable foresight; and then he adds this important element in the experiment—"*on an hay mow*." So completely does this philosophical mode of proceeding square with our own notions of experimental aëronautics, that we confess we experienced no slight disappointment when the many illustrated newspapers of the day brought forth the plans of this much-talked-of Aërial Locomotive Engine, to find that among the various precautions for the safety of passengers, there was no vestige of, nor substitute for, the hay mow of the Marquis of Worcester. We hope this appendage will not be forgotten in the specification.

We entreat our readers not to assume from this rather suspicious commencement of our notice, that we have any intention of treating this subject with either levity or ridicule. The air is a highway that interferes with no vested rights, injures no man's park or pleasure ground, and costs nothing for maintenance. We have neither milestones nor turnpikes there; and, free as air, we may roam where we please, unassailed by taxes or tolls. Railways have realized the fable of Jack the Giant-Killer's "seven-leagued boots;" may the "Ariel" soon realize to the public the fable of the "wishing-cap," and with the purse of Fortunatus reward the inventor; and "may we be there to see,"—for we wish all success to the invention and the inventor; and far be it from us to follow the example of those who ridicule what they cannot understand, and condemn what they are unable to appreciate. So much for feelings and intentions,—now for the facts.

Mr. William Samuel Henson is the inventor of the Aërial Locomotive Steam-Engine, for which patents have been taken out, and a bill has been brought into parliament, to authorize the transfer of the patents to more than twelve persons, who are to be incorporated as the Aërial Transit Company.

Now, the first question one asks about this machine is, how is it to be supported in the air? We know how a balloon ascends, because it is filled with gas, vapour, or smoke lighter than air, and, of course, like smoke, it ascends, and floats in virtue of its small specific gravity. That a balloon should rise in the air, and that it should be rowed forward or propelled by oars or other devices as a boat is rowed by the watermen, or a steam-boat propelled by the paddles, it is easy enough to understand, provided we get a balloon large enough, a man strong enough, or a steam-engine and fuel light enough to be carried up. This balloon plan of aërial locomotion has often been proposed but never effected. It has an obvious disadvantage; the balloon must be of so monstrous a size to carry the necessary weight, that any degree of success in propelling so great a bulk at a tolerable speed through the air becomes hopeless.

The present plan rests on a totally different principle. It is not sustained in the air by buoyancy, *but must be kept up by the continued expenditure of power*: to render this as easy as possible, means are adopted to retard the descent by gravity. All our readers are acquainted with the construction of the parachute of a balloon—it is an enormous umbrella, by which a person may descend in tolerable safety from a balloon, in case of danger; the size of the umbrella pressing on the air retards the descent of the weight:—now, this is what Mr. Henson uses. He employs an enormous flat umbrella, or gigantic fan or pair of wings (only they do not move as wings do), to keep the weight from falling rapidly; and so, when his machine is once in the air, it will descend but slowly, and the more slowly as the umbrella is larger—the shape is not, however, round like an umbrella, but flat, and oblong, and horizontal.

We may observe at this point, that the size of this umbrella can only retard the descent of the machine, but cannot sustain it. This consideration appears to have altogether escaped our inventors. They say,—"Our umbrella is so large as to expose a foot and a half of surface for every pound of total weight, and therefore, as we have 4,500 square feet of surface, and 3,000 lb. of load to carry, we may safely trust that we can stay aloft." But they surely know that no size of umbrella can do more than retard their fall. By a very simple calculation, based on abundant experiment, we have found that this aërial machine, supposing all their sanguine plans to be realized, must infallibly fall perpendicularly downwards to the earth, somewhere about the rate of thirteen miles an hour, or eighteen feet per second. So much for the powers of the umbrella!

But may not the power of the steam-engine be applied to keep the machine up in the air, and so countervail this inconvenient gravitation? Let us see. A weight of 3000 lb. is descending 18 feet per second—required, the power of steam capable of sustaining it? The answer is 60 *horses' power*. Our aërial company propose only 20 *horses' power* for *both* propelling and resisting powers; and on this slender basis rests the Aërial Transit Company! *Sic transit gloria*, &c.

Thus have we have lost faith in our aërial friends. We wished to find their plan true and promising—but when we find they have not made such very simple calculations, which a slight knowledge of the element they deal in, and the powers they use, would have suggested, what can we think? what can we hope? We see a want of foresight in their calculation; and in their mechanical devices we do not find those judicious mechanical contrivances, which should favour the hope that the patented ideas of Mr. Henson are in hands likely to bring what merit may lie in them out into practical use.

But, do we mean to say, there is no merit in the invention? On the contrary—it has just merit enough to seduce and fascinate the race of schemers and speculators. It has a good idea in it, and indeed more than one, only it does not seem to be in hands capable of developing what good is in the idea, in such wise as to bring a practically good thing out of the idea of it.

Further—we have seen that there are no means of sustaining the weight of the engine, even were it once at the necessary elevation. Then how is it ever to get there? The plan is this. The machine is to run down an inclined plane, to acquire a certain velocity, and then spreading its wings, is, by the mere velocity acquired, to rise in the air to the necessary height. Now surely these inventors ought to know that all the velocity a body will ever acquire by running down an inclined plane, will never do more than carry it up as high (barring a little loss) as the top of the plane. We are, therefore, disposed to recommend a start from the top of the inclined plane, rather than the bottom.

But who will set bounds to human ingenuity? We may yet fly. Watt was ridiculed, Galileo persecuted, and Dr. Lardner and the *Edinburgh Review* cavilled about the transatlantic steam-boats. So doubtless Mr. W. S. Henson, and his friends, think that, as a matter of course, they are martyrs, and we persecutors of unappreciated merit. But we abide by our opinion, and are satisfied with its risks. We may fly by and bye—but this is not the machine. We hoped great things and we are disappointed—

Parturiunt montes; nascitur ridiculus mus.

Our head and tail piece, are the flying engines of Stuart some twenty years ago.

FOREIGN CORRESPONDENCE.

Auxerre, 28th March, 1843.

HAVING observed, some eighteen months since, in your paper, a short notice on the effect produced by Music at the lunatic asylum of this town, it may not be uninteresting to you and your readers to know the result of that experiment, and how far the attempt has answered the intentions of the philanthropic and zealous director.

First allow me a few preparatory remarks. England boasts itself, and justly, as the cradle of those enlightened ideas which now preside at the direction of the insane; and in France, where that speciality now attracts so much attention, few names are more honoured than that of Dr. Ellis. Yet, if I mistake not, the French are now in advance even of the English in their treatment.

The present director, Dr. Girard de Cailleux, was named here in 1839, in virtue of the law of 1838, for centralizing the lunatic asylums, and found the Hospital, as all those in France at that epoch, under the management of *religieuses*, and without any resident physician. The old system reigned in all its horrors,—that is, cells, seclusion, and straight waistcoats. The number of the former was to the inmates as 54 for 150 patients, and 22 more were actually contracted for when the change took place. The patients were fed like wild beasts, and left all day without employment. Need I say the cures were few? This treatment was immediately changed; social life was exchanged for seclusion, employment was gradually given to all, idiots excepted; every kind of *délassement* was furnished, music and reading introduced; and such has been the effect, that about a month since, when conducted over the asylum, we were perfectly astonished at the order and regularity everywhere remarkable, and at the cheerfulness and uniform politeness of all the patients. It appeared to us to be nothing more than a well regulated almshouse. The cells were everywhere empty, the *dortoirs* full. The patients are all present at meals. They work, they promenade together, their amusements all in common, and almost all the work of the house is performed by the patients. We found the tailors, shoemakers, carpenters, sempstresses, spinners, laundresses, all engaged with evident pleasure at their respective employments; and those who have no handicraft skill, work in the garden, cultivate the land, or are employed in digging a canal for bringing a supply of water to the establishment, straw-plaiting for hats, bonnets, &c., and the least able at mat-making.

Sunday, the 26th, was the anniversary of the establishment, and a grand mass in music was executed entirely by the insane. Yes, and well executed too. The singers, about 50, were in the gallery, and the choir was filled by about 120 patients. What a cheering sight to contemplate the decorum everywhere observed;—the pleasure the patients appeared to feel, all dressed in new clothes, entirely made by themselves, and proud of their power to unite together and give delight to all that is most distinguished in or near the town: the *préfet*, the *maire*,

Digitized by Google

judges, directors, engineers, with their wives and families, who came to witness and applaud the complete success of this philanthropic experiment!

I could give you many curious illustrations of the effects produced by the music in particular cases, but general results are, perhaps, best suited to your readers, and here they are:—In two years (1841–2) 44 patients have been discharged as cured out of an average of 190 patients,—paupers nearly all, and only sent to the establishment when it is impossible to leave them longer at liberty in their *communes*.

I am, &c. J. M.

PICTURE SALES.

The late Mr. F. W. Wilkin's collection of paintings and drawings came to hammer at Messrs. Christie & Manson's, last Saturday. Mr. Wilkin was the well-known copyist of Ancient Masters, and the almost unknown original painter of a large historic piece in the Hall of Battel Abbey, representing the fight that gave this mansion its ominous name. His 'Battle of Hastings' exhibits rather aspiration than inspiration, but water-colour, not oil, was his true element—imitation, not invention, his real faculty. His copies in water-colours, after celebrated pictures, are themselves celebrated. The smaller specimens appear to be the better ones; perhaps too richly tinted, yet, for that same reason, very attractive: the life-size copies we would designate less failures than mistakes—so thin and poor a medium as water spread over a wide surface cannot, even when made as "slab" as the witches' gruel with illicit ingredients, attain the powerful effects of oil, but becomes vacant when it attempts breadth, and substitutes for richness what is called "rottenness." Let us quote, however, some prices of the principal works in each category. 'Virgin and Child,' after *Vandyke*, 10 guineas; another, 7½ guineas; 'Holy Family,' after *Titian*, 6 guineas; his 'Daughter,' after *ditto*, 8½ guineas; 'Peace and War,' after *Rubens*, 8½ guineas; 'The Three Maries,' after *Annibale Carracci*, 10 guineas; 'Snake in the Grass,' after *Reynolds*, 12½ guineas; 'Lady Waldegrave and Child,' after *ditto*, 10 guineas; 'Sophonisba,' after *Titian*, 6*l.* 5*s.*; 'Queen Henrietta,' after *Vandyke*, 10½ guineas; 'Duke of Hamilton,' after *ditto*, 5*l.* 10*s.* These are specimens about miniature size; the next in size (about quarter life and less) are also next in merit:—'St. Catherine,' after *Raphael*, 40 guineas; 'The Salutation,' after *Del Piombo*, 36 guineas; 'Pan and Syrinx,' after *Rubens*, 38 guineas; 'The Brazen Serpent,' after *ditto*, 30 guineas. Among the full-size copies, a 'Portrait of Andrea del Sarto,' after *Del Sarto*, brought 50 guineas; one of 'Annibale Carracci,' after *Annibale*, 29 guineas; and one of 'Leo X.', after *Velasquez*, 30 guineas—the smaller repetitions of both these latter being preferable in execution and lower priced, viz. 4*l.* and 4*l.* 15*s.*; 'St. Bruno,' after *Andrea Sacchi*, 29 guineas—the much superior miniature, 4 guineas; 'Sophonisba,' after *Titian*, a staring mass of yellow flaccidity, 30 guineas; 'St. John baptizing Christ,' after *Murillo*, 28½ guineas—this also we thought a very indifferent work, as likewise 'Dr. Johnson,' after *Reynolds*, 19 guineas; 'Disputation with the Doctors,' after *Leonardo da Vinci* [Luini?], 124 guineas; the transcendant merits of the original blind us to those of the copy, but it may be considered a blazing star of beauty in the provinces.—(Apropos of water-colour imitations; at Messrs. Graves's printshop, Pall-Mall, may be seen some admirable specimens by a living artist, whose talents have not yet gained due recognition from the public, however they are prized within the select circle of connoisseurs. His name is *West*, and his nation is, we believe, West (America), both which appear congenial to water-colours, as Mr. President West exhibited a strong taste for them, even in oils. Many among the above-mentioned specimens equal, we think, anything yet produced of their kind in modern days. A 'Deposition,' after the Louvre *Titian*, struck us as superlative. Mr. West's copies are, judiciously, of miniature dimensions: his style is less soft and luscious than Mr. Wilkin's, but purer and more powerful. It should never be forgotten that one element of the pleasure which pictures afford us consists in surprise—surprise at effects produced by apparently inadequate means. Titian, with a single positive colour, *red*, aided by the mere non-colours black and white, has painted many a picture full of truth, nature, forcible expression, and glowing lustre. But when a whole *spectrum* of gorgeous hues are thrown upon the canvas, when an apparatus of pigments, palettes, and gallipots has contributed its adulterous mixtures, when the numberless tricks and knacks and artifices known to the profession are put in play, spectators feel much less surprise, and proportionally less pleasure at the result. We would not have this principle exert too rigorous or restrictive an influence over artists, whilst we contend that it should to a just degree regulate their practice: above all, our *water-colourists* might oftener observe it with advantage.)

On the same day, and at the same place, were sold two other collections, of small amount and no great importance. They contained, however, between them, some half-dozen pictures worth notice. 'View of a Dairy Farm,' by *Camphuysen*, a good Cuyp-like work, strongly or rather stiffly handled, 120 guineas. 'The Lying-in Visit,' by *Eglon Van der Neer*, from the Lockhurst collection, 155 guineas: *maugre* this picture's high repute, we question both its genuineness and goodness; it does not exhibit the strenuous workmanship of Eglon, who seems to have wrought with a steel pencil, nor his fine *luminous* impasto, but his laboured design only; it bears a signature, indeed, which nevertheless rather tends to overthrow its pretensions than confirm them, as Eglon's second name *Hendrick* is omitted. 'A Landscape,' by *Hobbema*, 355 guineas; from Baron Bekker's and Mr. Solly's collections; sunk, blackened, and blistered, but still a good picture—save that it is *too like* Hobbema, too much in his common style of manufacture. 'View at the Mouth of the Avon,' by *P. Nasmyth*, 71 guineas; an admirable landscape, which will some years hence soften down into a delicious one. The hand of Time is often the best hand employed on a picture; it co-operates with that of a good painter, mellowing his tints and harmonizing his touches, while it wars against that of a dauber, soon disfiguring his unhandy-work or blotting it out. Two productions—a *Guercino* and a *Sassoferrato*,—exhibited last season by the Duke of Bedford at the British Institution *pro bono publico*, and now ejected from his Grace's collection *pro bono proprio*,—were likewise disposed of, we hope for Doctor Francia's Gallery in Paraguay, that they may never escape from his iron grip, to appear among our "Ancient Masters" again.

OUR WEEKLY GOSSIP.

A fortnight since a sale of the Pell Records was openly advertised to take place by Mr. Fletcher, of Piccadilly, but it did not, in consequence of cautions sent from the Treasury; and the Records themselves, we are informed, have since been handed over by the possessor to the Public Record Office. The documents claimed, were Rolls of issues of the Exchequer, and very many Rolls of various tellers of the Exchequer. The issue Roll was of the reign of Edward III., and was described by the catalogue as "a document of the highest value and importance, sixty-three feet in length, clearly written on vellum, and the greater part in very good condition." It was certainly a very fine Roll, and indisputably a public record. This circumstance, as well as others which occurred last year, seem to point out the necessity of making some declaratory Act for public guidance on this subject. A custom has been allowed to creep in of late years, even during the existence of the Record Commission, of sanctioning, at least by non-interference, the sale of public records. Now that a more vigilant authority is placed over our records, whatever is necessary to guard the public for the future should undoubtedly be done. It may be true that the present *law* does not recognize the sale or possession of any public record, and it cannot be doubted, that the sale of the Pell Records some time back, though authorized, was strictly illegal; but it is a fact, that public documents have been sold by authority, and bought even by another public authority, the British Museum. It occurs to us, that the way to meet the difficulty would be to give a power to the Master of the Rolls to purchase any public records to which the possessor could substantiate an honest title on his own part: and to make known, that parties bringing in records would be so treated with; but that if any records were discovered after this notice, they should be summarily seized. Some years ago Sir Thomas Phillipps publicly and openly expended several hundred pounds in the purchase of Exchequer Records. As these documents were suffered to be sold, the government cannot morally claim them, without repaying Sir Thomas Phillipps; but if that gentleman should refuse to surrender them on these equitable terms, then we would not hesitate to assert the legal right of the crown to its own property.

In an introductory paper to a new work called 'The Story Teller,' edited by Mr. Robert Bell, an extract is given from a letter written by Mrs. Southey, which confirms the public judgment, and sets at rest all disputes about the authorship of 'The Doctor.' "Undoubtedly," she writes, "you have my full authority to affirm that my husband *is the author of the 'Doctor.'* Not until the last twelve months have I ever acknowledged this directly or indirectly; but I found that others had not been so (perhaps fastidiously) scrupulous, and therefore it would be absurd and unwise in me to affect further mystery about it. If you do not find my simple affirmation suffice to convince the doubters and *claimants*, I could give you more irrefragable proofs, in the shape of *proof-sheets, MS. copy*, &c. It has always been marvellous to me, that the authorship could ever have been doubtful to those who knew much of Mr. Southey—still more, to those who were acquainted with his family, and its *vie intérieure*, so graphically pourtrayed in the first volume. 'My wife, and my wife's sister' *are to the life.* The Bhow Begum was a Miss * * *, an intimate friend at that time. The beautiful idea of William Dove, was from an uncle of Mr. Southey's, an uncle William, &c. I have at hand many proof-sheets of a sixth volume, that was half through the press before we left Buckland. My dear husband used to enjoy that innocent mystery, and had laid out plans to make me a contributor to the future Olio. There are materials for several more volumes collected." Respecting the startling paragraph in Mrs. Southey's former letter, (*ante*, p. 139,) relating to the state of mind of her husband, which in our charity, we assumed that Mrs. Sigourney had inadvertently allowed to be published, we now learn, that so far from Mrs. Sigourney being a friend of Mrs. Southey's, Mrs. Southey never even saw that lady. The facts are—"Mrs. Sigourney, a perfect stranger, wrote to Mrs. Southey to request her correspondence. Mrs. Southey, having other objects to engross her thoughts, declined the honour, but simply and politely answered her inquiries as to Mr. Southey's health. All this, of course, was under the recognized seal of private correspondence, which ought to have been considered all the more sacred from the way in which Mrs. Sigourney had herself brought it about. You may judge, then of Mrs. Southey's astonishment, when she afterwards saw her letter not only printed in the public journals, *but interpolated with phrases implying intimacy, and ejaculations of pathos, not one of which she ever penned!*"—The remains of Southey were interred in the burial-ground attached to the parish church of Crosthwaite, where other members of the family are buried. Wordsworth attended the funeral. Dr. Southey's library has been, it is announced, already consigned to Mr. Leigh Sotheby, for public sale. It will be found particularly rich in Spanish literature. He has left personal property amounting to about 12,000*l.* By his will, dated the 26th of August, 1839, he has bequeathed to his wife all the personal property possessed by her previously to their marriage, together with the interest of the sum of 2,000*l.* during her life. The residue of his property, including the above 2,000*l.*, he has bequeathed to his four children. The Laureateship has been offered to and accepted by Wordsworth.

Sir George Hayter's great Reform picture is at last finished, and now exhibiting at the Egyptian Hall. To recognize the full merit in a work so elaborate, the public must recollect the difficulties of the subject, the inevitable formality of perspective, the ungracious monotony of modern costume, and the necessity of giving literal portraits of sundry personages, who, however good at legislation, are not good for picturesque effect. Further, we would add, it may not be amiss to recollect some of the contemporary foreign historical pictures on similar subjects—those, for instance, which stare from the walls of the new galleries at Versailles; nay, we might in-

Digitized by Google

clude, in our challenge, the painted chronicles of David and Gerard, without fear of the result. The management of the light seems, to us, excellent; and this, too, it will be recollected, is arbitrary: then the mathematical angularity of a composition in which four rows of heads necessarily form a prominent object, is happily varied. Sir E. Codrington's hand on the pillar, the eager attitude of O'Connell, like that of the war-horse who has heard the sound of a trumpet, Lord John Russell leaning forward—to say nothing of the groups of listening Whig and Tory peers in the foreground—are all accidents at once conducive to truthful and to pictorial effect. Even the solitary red uniform of the Member on his legs, and the Hon. Grantley Berkeley's gay green coat, have been felicitously turned to account. The likenesses are, for the most part, good. It is true that Sir George Hayter sees his sitters through some medium which sharpens their features, a certain pinched thinness of face being as characteristic of his portraits, as a squareness of contour is of those by Leslie; but it would be hard to name the artist who would have been, on the whole, more faithful, or so spirited:—while the industry with which the work has been wrought up and finished, is creditable to its painter. On the walls of the exhibition room are hung the separate studies, from whence the greater part of the figures were finished, with some of Sir George Hayter's former pictures,—among others, the Trial of Her Majesty Queen Caroline.

The miserable premium of sixty pounds offered by the London Art-Union, for a series of ten designs, illustrative of British history or a British author, has been awarded to Mr. H. C. Selous, for his illustrations of the 'Pilgrim's Progress.' Thirty sets were sent in, and to some of them, honorary premiums have been awarded.

The lovers and collectors of Art in Paris have had their attention occupied by sales of two important galleries, which have taken place during the last and previous weeks. The sale of the Aguado Collection was preceded by that of M. Perier, which realized about 240,000 fr. (9,600*l.*), an amount somewhat exceeding their cost to M. Perier. The proceeds of the Aguado sale, on the contrary, fell short of the expectations formed; having realized about 450,000fr. A 'Virgin and Child,' by Raphael, sold for 27,000fr.—a Murillo, 19,000fr., bought, it is believed, for the present Marquis de las Marismas (Aguado)—the 'Annunciation,' 17,900fr., purchased by the Marquis of Hertford, who also bought a Teniers for 15,300 fr. The Velasquez was knocked down to Mr. Moran, for 12,750fr.—the 'Magdalen' of Canova was carried off by the Duke of Galliera for 59,500 fr., being 7,000 less than M. Aguado paid for it.

The pictures, &c. purchased in Italy by Dr. Waagen for the Museum at Berlin, have just been made accessible to the public. Among them are several small pictures of Titian; an allegorical painting of 'Peace and War,' by Giorgione. There is also a series of paintings executed for the Hall of the Guild of German Merchants at Venice, by Paul Veronese. The series consists of four: 'Jupiter giving Germania the Insignia of Empire,' 'Time overcoming Heresy and exalting Religion,' 'Mars and Minerva representing the power of Germany,' 'Apollo and Juno representing German Art.' Tintoretto and Alessandro Buonvicino contribute some fine altar-pieces, and Bernardino Luini some splendid fresco paintings executed for the brotherhood of Santa Corona, at Milan, in the years 1521–22. Del Sarto, Peruzzi, Sebastian del Piombo and Velasquez are among the other painters, whose works are to be found in this valuable collection. There are also some beautiful specimens of sculpture.

Von Bulard, a physician well known by his indefatigable exertions in examining the nature of the plague at Cairo, Smyrna, and Constantinople, died lately at Dresden. He was one of that small class of men who devote their lives to the cause of humanity; and passed days and nights with the plague-stricken, shut up with the wretched sufferers, when all others fled. The result of his investigations appeared in a work published in Paris in the year 1839, and entitled 'De la Peste Orientale d'après les Matériaux recueillis à Alexandrie, au Caire.'

The German stage has sustained a heavy loss in the death of Herr Seydelmann, the actor. From remembrance we should be inclined to number him among those finished artists, for whom study had done more than natural genius—if the patience which ripens imperfect powers, and the courage which no obstacle can daunt or distance, be not permitted to bear that much-abused name. Herr Seydelmann's voice was not good, but his diction was exquisitely refined; his face not expressive, but his demeanour was perfect in its adaptation to the part he was personating; and his versatility enabled him to become equally a favourite in such slight pieces as the comedies translated from the French, in which the Berliners delight, and in the more national *Mephistopheles* and *Philip of Spain*, of Goethe's and Schiller's serious dramas.

Tasso's oak, on the Janiculum at Rome, has been blown down during the last month, and several painters are making drawings of it. This has recalled Tasso prominently to men's minds, just at the time when a remarkable law-suit has been commenced on the part of a bookseller at Ancona against the Count Mariano Alberti, the reputed possessor of several unedited MSS. of the great poet. The charge is, that, having sold all his MSS. to the aforesaid bookseller, for the sum of 4,000 scudi, he kept back several, and forged or interpolated others. Alberti, it seems, has been, from his youth, a collector of books, fac-similes, and autographs, on which he set a high value. He has been always an admirer of Tasso, and possessed three volumes of his poems in his own handwriting, which he sold, in the years 1824–25, to an antiquarian at Rome, when he declared that they were all the MSS. of Tasso he possessed. In 1827 he declared himself in possession of two till then unknown poems in Tasso's handwriting, which drew forth some letters in the *Giornale Arcadio*. Afterwards he produced four other autographs, and then a volume containing thirty-seven poems, bearing the title 'Rime del Sig. Torquato Tasso, scritte di sua propria Mano,' with the stamp of the Falconieri Library of 1770, and notes by G. B. Guarini and Carlo Strozzi. Alberti offered this volume for sale to the Duke of Tuscany, it having been pronounced genuine by several Florentine literati; but the transaction was broken off by the Duke's agents declaring them spurious and modern. Alberti was, however, prosecuted by Sig. Orazio Falconieri for theft, as having stolen the volume from his library, but he dropped the charge on Alberti's producing a receipt which Falconieri admitted as a defence, but declared to be a forgery of his former steward. He then produced a file of letters of Tasso, all of which were generally considered genuine, till, in 1841, his property was sequestered, and, soon afterwards, the whole affair proved to be a tissue of forgery almost unexampled.

At the sixth Concert of the *Conservatoire* the principal pieces performed were Beethoven's *Sinfonia Eroica*—a new overture, by M. Conradin Kreutzer, which the *feuilletonists* complain against as not new, and far too much in the frivolous style of the *Opéra Comique*—and the *finale* of Euryanthe, a *Benedictus* and *Agnus Dei*, from Haydn's fourth mass, and an *aria* by Pergolesi, in which Madame Viardot Garcia sustained the principal part. Discord and disunion seem to be making sad havoc with Parisian music just now. At least at the Italian Opera Lablache has formally announced his intention of retiring, and Fornasari has been engaged in his stead—Ronconi to fill the place of Tamburini. It remains to be seen whether there be not descent in point of finish, for novelty's sake, in both these substitutions. Meanwhile Duprez has been at law with the management of *l'Académie*, touching his part in Halévy's new opera, which he insisted on throwing up as unworthy of him. In spite of the eloquent pleading of M. Crémieux, the Tribunal of Commerce has pronounced sentence against the artist, who is compelled to play the part, and to pay the costs. In the gossip of the *coulisses*, which gives reasons for irritation on the one side, and a pertinacity somewhat tyrannous on the other, our readers would take no interest. Sure we are, however, that any quarrel which deprived the French opera of its main attraction would be most injudicious on the part of the direction of the theatre.

A requisition, we are told, is in circulation among the musical profession, with the purpose of getting up a gratuitous performance of Spohr's Fall of Babylon, by way of welcome to the composer on his approaching visit to London. This is well devised, save as regards the work selected, which universal consent apportions to the decline rather than the maturity of the master's creative powers. We are longing for some of his violin music. His duets, for instance, are unknown to the English public; and yet it is by them, and his earlier symphonies and operas, that the composer, we are inclined to believe, will take rank.

The Academy of Sciences has at length filled up the vacancy occasioned by the death of Baron Larrey, by the election of M. Velpeau.

The Committee of the "Society of Arts for the Rhine provinces and Westphalin," has offered the Town Council of Aix-la-Chapelle, a liberal contribution towards a work of art now in contemplation in that town. This is the decoration of the Town Hall with fresco-paintings from the life and exploits of Charlemagne, whose favourite residence was in that city, which already contains so many interesting memorials of him.

From the report read at the annual meeting of the Society of (French) Dramatic Authors and Composers it appears that the whole number amounts to 400, of whom about one-half have ceased to write. The amount of money received as authors' rights, both in Paris and the departments, was, for the year, 772,230fr., giving an average of scarcely 4000fr. each writer. Last year the sum was 842,394fr.

BRITISH INSTITUTION, PALL-MALL.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS is OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1*s.*: Catalogue, 1*s.*

WILLIAM BARNARD, Keeper.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virtù. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2*s.* 6*d.* Children under 12 years, 1*s.*

SCIENTIFIC AND LITERARY

INSTITUTE OF BRITISH ARCHITECTS.

March 20.—J. Shaw, Esq., in the chair.—A paper 'On the contemplated Restoration of the beautiful Chapter House at Salisbury Cathedral,' was read, by Mr. T. H. Wyatt, Architect to the Salisbury Diocesan Church Building Association. After alluding to the absence of all documents in the Chapter records, which could throw any light on the commencement or early history of this building (though supposed to have been erected soon after the completion of the cathedral, in 1258), Mr. Wyatt proceeded to describe its present condition. It is covered with a low roof, not rising above the parapet, the timbers of which, from being injudiciously framed together, without any lateral tie, resting on a central pillar of wood, carried up from the small shaft that supports the whole of the stone vaulting, have very considerably injured the walls, and have tended to force that centre pillar about five inches out of the perpendicular. The light and beautiful tracery of the windows has suffered considerably from this cause, combined with that arising from the corrosion of numerous iron bars, which are connected with them. The main walls and buttresses are, however, sound and uninjured. The pavement of encaustic tiles, with which it was originally decorated, has fallen into decay: it has sunk and lost much of its colour. The internal stone-work has suffered much from natural decay; and of the painted glass, which must originally have tended to soften and enrich this light and beautifully proportioned room, not a vestige exists. After some details as to the *comparative* age, beauty, and construction of the other polygonal chapter-houses in England, similar to that at Salisbury, such, for instance, as those at Wells, Westminster, Lincoln, York, and Southwell, Mr. Wyatt proceeded to describe the contemplated restorations. He dwelt with much earnestness on the propriety of restoring a roof of pyramidal form, instead of the low one now existing, the horizontal line of the parapet being opposed to the spirit of that architectural group which surrounds it, and at variance with the practice of the early Gothic architects. The intended roof would be similar in appearance to those at York and Lincoln, the latter having been restored early in this century. There are at present eight iron bars, which surround the top of the central Purbeck

Digitized by Google

marble shaft, and go through the buttresses; they are supposed to have been introduced by Sir Christopher Wren, when he was called in to strengthen the tower, but there is no proof of his having done so; and Mr. Wyatt considered that they must have been placed there long before his time. The great object is to remove these, which so prejudicially affect the appearance of the interior; and, by throwing the whole weight of the new high roof on the eight buttresses (instead of being spread over the walls generally, as at present), Mr. Wyatt believes, that such an additional resistance will be gained to the outward thrust of the groined roof as will enable them to be safely removed; indeed, they do not appear now to have any great strain upon them. The centre pillar it is proposed to take down (the superstructure being firmly shored up), and to rebuild it perpendicular to the centre of the present springer over the column, for which the whole foundation of concrete is well adapted. The external masonry would then be repaired, and the new roof put on; it would be covered with lead, and held together so as not to have any tendency to force out the walls, and the eight iron ties, or bars, which would be then carefully taken away from their present position, it is proposed to introduce above the vaulting and under the roof. The stone capitals and ornaments inside would be repaired, and an entirely new floor of encaustic tiles (strictly copied from the present examples) laid on concrete. The great extent of glass renders it improbable that it can at first be filled with stained glass; that some will be introduced there is, we hope, no doubt, if it is only to serve as an example.

Mr. Ferrey read a paper 'On an old staircase at Tamworth Church which has fallen into decay.' It is a sort of double corkscrew stair, winding in such a manner over each other, that two persons may go up and down without meeting, although both are circulating in the same well-hole. Mr. Ferrey offered some remarks as to its probable purpose. It is said to be a solitary instance of this exact kind of stair in England, but we remember to have seen one at Cologne.

April 3. — As announced last week, His Royal Highness Prince Albert, the Patron of the Institute, presided at a general meeting of the members, and presented the medals awarded during the session, for essays and drawings. His Royal Highness arrived punctually at the time appointed, attended by Colonel Bouverie: he was received by the Vice-Presidents, and the Honorary Secretaries, and conducted to the Library, where the other members of the Council being assembled, were severally presented. The Prince then presided at a Council, at which some ordinary routine business was transacted; and, subsequently, having inspected the various antiquities, casts and models in the collection, proceeded to the large room, where his Royal Highness took the chair, and the business of the day was commenced. The minutes having been read, and some donations announced, Mr. Donaldson, Foreign Secretary, read letters from Italian and French correspondents, at Milan, Coblentz, and Paris. Mr. Fowler, Honorary Secretary, then read Bacon's Description of a Princely Palace; and Mr. A. Johnson was presented to the Prince as the author of the best design founded on that description, and received the Soane Medal. In like manner his Royal Highness presented to Mr. E. Chamberlain, of Leicester, the medal of the Institute, for his essay on the subject proposed, 'On Synchronism and uniformity of style essential to beauty and propriety in Architecture;' and to Mr. J. W. Papworth, the medal of merit, for an essay on the same subject. Mr. Bailey announced the subjects for essays and drawings, for which the Council propose to offer the medals for the ensuing year, and then read a communication from Mr. C. Parker, 'On the modes usually adopted in forming Foundations in the city of Venice,' the soil of which city is of a nature to require the greatest care, and yet where failure is seldom if ever seen. Thanks were voted to the author. Mr. Barry then addressed the Prince in the name of the Institute, and expressed, in a few words, the grateful sense entertained by the members, of the honour conferred on the body by the gracious manner in which his Royal Highness had acceded to their wishes in presiding on the occasion: to which his Royal Highness very graciously replied, that he had felt much pleasure in taking part in the proceedings of the day.

ROYAL SOCIETY.

J. M. Rendel, Esq., J. Miers, Esq., and Dr. W. B. O'Shaughnessy, have been elected Fellows since our last report (p. 216); and the following papers read.

'Tide-Observations at Tahiti,' by Capt. Sir E. Belcher, R.N.—This paper consists of copies of the Tide Journal, registered at the Island of Motuatu, in the Harbour of Papeete, and of a short comparative series made at Point Venus. They were conducted by Mr. Richardson, Mate. The construction of the tide-gauge is described; and an account is given of the methods of observation, and of the precautions adopted to ensure accuracy. The results are specified in the following letter, which accompanies the paper:—

"Woolwich, August 2, 1842.

"Referring to the Tide Registries, forwarded on my arrival, I beg leave to offer the following general remarks upon the tides at Tahiti. In consequence of your very special instructions relative to the determination of the *actual periods* of high water at the Island of Tahiti, the most minute attention was paid to this subject; and as these periods could only be *approximated*, recourse was had to my old method (successfully practised in the Lancashire survey), of deriving them from the equal-altitude system. By a reference to the Tide Registry annexed, it will be found that there are *two distinct periods of high water*, during each interval of twenty-four hours; and that during the seven days preceding, and seven days following the full and change, they are confined between the limits of 10 a.m. and $2^h\ 30^m$ p.m., the whole range of interval, by day as well as by night, being about $4^h\ 27^m$. Commencing with the seventh day preceding the full moon, viz. the 9th of April, it will be perceived that high water occurs at 10 a.m., this being the greatest a.m. interval from noon; and that on the 16th, at the full moon, it occurs nearly at noon. Passing on to the 23rd, it reaches the greatest p.m. limit at $2^h\ 30^m$, and on the 2nd of May again reaches the noon period. Between the 23rd and 24th, however, a sudden anomaly presents itself. Throughout the day of the 23rd, the variation of the level does not exceed 2¼ inches, and the general motion is observed to be 'irregular.' The time of high water is also the extreme p.m. limit. On the 24th we discover that it has suddenly resumed *the most distant* a.m. *period*, viz. 10 a.m., but proceeds regularly to the noon period at the change. Although the differences of level do not at full and change exceed 1 foot 4½ inches, still I presume that we have sufficient data to establish the fact,—that it is *not invariably high water at noon* (as asserted by Kotzebue, Beechey and others); and, further, that we have corresponding *nightly periods* of high water. It is evident that the time of high water at full and change may be assumed as that of noon, because we have sufficiently decided changes of level to fix the approximate period of high water. It does not appear by these Registers, that any higher levels result from the rollers sent in by the strong sea breezes (as asserted by several writers), but rather the contrary, the highest levels being indicated during the night, when the land breezes prevailed. I have great satisfaction in presenting you with these facts, and trust that they may induce others to follow up the same experiments, so as, eventually, to obtain the variations which other seasons may produce.

"EDWARD BELCHER, *Captain*."

'On Fissiparous Generation,' by M. Barry, M.D.

'Researches on the Decomposition and Disintegration of Phosphatic Vesical Calculi; and on the introduction of Chemical Decomponents,' by S. E. Hoskins, M.D.—The object of these researches was the discovery of some chemical agent, more energetic in its action on certain varieties of human calculi, and less irritating than any of the fluids hitherto employed. These indications not being fulfilled by dilute acids, or other solvents which act by the exertion of single elective affinity, the author investigated the effects of complex affinity in producing decomposition, and consequent disintegration, of vesical calculi. For this purpose an agent is required, the base of which should unite with the acid of the calculus, whilst the acid of the former should combine and form soluble salts with the base of the latter. The combined acids would thereby be set free in definite proportions, to be neutralized in their nascent state, and removed out of the sphere of action, before any stimulating effect could be exerted on the animal tissue. These intentions the author considers as having been fulfilled by the employment of weak solutions of some of the vegetable super-salts of lead; such as the supermalate, saccharate, lactate, &c. The preparation, however, to which he gives the preference, is an acid saccharate, or, as he calls it, a *nitro-saccharate of lead*. The salt, whichsoever it may be, must be moistened with a few drops of acetic, or of its own proper acid, previous to solution in water, whereby alone perfect transparency and activity are secured. He furthermore states, that the decomposing liquid should not exceed in strength one grain of the salt to each fluid-ounce of water, as the decomposing effect is in an inverse ratio to its strength. Having by experiments which are fully detailed ascertained the chemical effects of the above class of decomponents on calculous concretions *out* of the body, the author briefly alludes to the cases of three patients, in each of whom from four to eight ounces of these solutions had been repeatedly, for weeks together, introduced and retained without inconvenience for the space of from ten to fifty minutes. It not being the intention of the author to enter into the medical history of these cases, he merely cites the above facts as sufficient to establish the principle originally laid down; namely, chemical decompositions of phosphatic calculi, by means of solutions so mild as to be capable of retention without irritation or inconvenience.

'A Method of proving the three leading properties of the Ellipse and the Hyperbola from a well-known property of the Circle,' by Sir F. Pollock.

'On the diurnal Temperature of the Earth's surface, with the discussion of a simple formula for ascertaining the same,' by S. M. Drach, Esq.

'On the Laws of Individual Tides at Southampton and at Ipswich,' by G. B. Airy, Esq. Astronomer Royal.—The author gives the results of his own observations of the tides at Southampton and at Ipswich, in both of which places they present some remarkable peculiarities. He explains in detail the nature of his observations, and the method he pursued in constructing tables of mean results; and deduces from them the conclusion, that the peculiarities in the tides which are the object of his investigation are not dependent on any variations in the state of the atmosphere, but are probably connected with the laws which regulate the course of waves proceeding along canals.

'On the Special Function of the Skin,' by R. Willis, M.D.—The purpose which is answered in the animal economy by the cutaneous exhalation has not hitherto been correctly assigned by physiologists: the author believes it to be simply the elimination from the system of a certain quantity of pure water, and he considers that the saline and other ingredients which pass off at the same time by the skin, are in too inconsiderable a quantity to deserve being taken into account. He combats by the following arguments the prevailing opinion, that this function is specially designed to reduce or to regulate the animal temperature. It has been clearly shown by the experiments of Delaroche and Berger, that the power which animals may possess, of resisting the effects of a surrounding medium of high temperature, is far inferior to that which has been commonly ascribed to them; for in chambers heated to 120° or 130° Fahr., the temperature of animals is soon raised to 11° or even 16° above what it had been previously, and death speedily ensues. The rapid diminution or even total suppression of the cutaneous exhalation, on the other hand, is by no means followed by a rise in the temperature of the body. In general dropsies, which are attended with a remakable diminution of this secretion, an icy coldness usually pervades both the body and the limbs. A great fall in the animal temperature was found by Fourcald, Becquerel and Breschet to be the effect of covering the body with a varnish impervious to perspiration; and so serious was the general disturbance of the functions in these circumstances, that death usually ensued in the course of three or four hours. The question will next arise, how does it happen that health and even life can be so immediately dependent as we find them to be on the elimination of so small a quantity of water as thirty-three ounces from the general surface of the

Digitized by Google

body in the course of twenty-four hours? To this the author answers, that such elimination is important as securing the conditions which are necessary for the endosmotic transference between arteries and veins of the fluids which minister to nutrition and vital endowment. It is admitted, by physiologists, that the blood, while still contained within its conducting channels, is inert with reference to the body, no particle of which it can either nourish or vivify until that portion of it which has been denominated the *plasma* has transuded from the vessels, and arrived in immediate contact with the particle that is to be nourished and vivified: but no physiologist has yet pointed out the efficient cause of these tendencies of the plasma, first to transude through the wall of its efferent vessels, and, secondly, to find its way back again into the efferent conduits. The explanation given by the author is, that in consequence of the out-going current of blood circulating over the entire superficies of the body, perpetually losing a quantity of water by the action of the sudoriparous glands, the blood in the returning channels has thereby become more dense and inspissated, and is brought into the condition for absorbing, by endosmosis, the fluid perpetually exuding from the arteries, which are constantly kept on the stretch by the injecting force of the heart. In an appendix the author points out a few of the practical applications of which the above-mentioned theory is susceptible. Interference with the function of the skin, and principally through the agency of cold, he observes, is the admitted cause of the greater number of acute diseases to which mankind, in the temperate regions of the globe, are subject. He who is said to have suffered a chill, has, in fact, suffered a derangement or suppression of the secreting action of his skin, a process which is altogether indispensable to the continuance of life; and a disturbance of the general health follows as a necessary consequence. Animals exposed to the continued action of a hot dry atmosphere die from exhaustion; but when subjected to the effects of a moist atmosphere, of a temperature not higher than their own, they perish much more speedily; being destroyed by the same cause as those which die from covering the body with an impervious glaze; for, in both cases, the conditions required for the access of oxidized, and the removal of deoxidized plasma, are wanting, and life necessarily ceases. The atmosphere of unhealthy tropical climates differs but little from a vapour-bath at a temperature of between 80° and 90° Fahr.; and the dew-point in those countries, as for example on the western coast of Africa, never ranges lower than three or four degrees, nay, is sometimes only a single degree, below the temperature of the air. Placed in an atmosphere so nearly saturated with water, and of such a temperature, man is on the verge of conditions that are incompatible with his existence; conditions which may easily be induced by exposure to fatigue in a humid atmosphere under a burning sun, or other causes which excite the skin while they prevent the exercise of its natural functions. The terms *Miasma* and *Malaria* may, according to the author, be regarded as almost synonymous with air at the temperature of from 75° to 85° Fahr., and nearly saturated with moisture.

'On the Cause of the reduction of Metals from solutions of their salts by the Voltaic Circuit,' by A. Smee, Esq.

'On the import and office of the Lymphatic Vessels,' by R. Willis, M.D.—That absorption is the special office of the lymphatic vessels was, until very lately, a universally received doctrine in physiology: but it is now admitted that if they exercise this faculty, it can be only to an inconsiderable extent; and physiologists of high authority have even denied that they possess any absorbing power at all. This last is the opinion of Magendie, in which the author concurs. So lately as 1841, Rudolph Wagner asserted that "neither anatomical nor physiological considerations render any satisfactory account of the import and office of the lymphatics," which hus, shorn of their ancient office, were repudiated as a superfluous apparatus in the animal mechanism. The grand organs of absorption the author believes to be the veins; and a principal object of his paper is to point out the mode in which they acquire this remarkable faculty.

'Further Observations on the descending fluids of Plants, and more especially the Cambium,' by G. Rainey, Esq.—The author relates an experiment in proof of the sap descending from the upper to the lower part of an exogenous tree, through vessels which are continuous from the leaves to the roots; the course of these vessels being shown by the addition of a solution of iodide of potassium after they had taken up by absorption a quantity of a solution of acetate of lead. The fluids in these vessels are, he conceives, separated from the sap, which is ascending from the roots, only by the membrane of which they are composed. When the leaf-buds of a tree are vegetating, large separations are observable between the cells of the bark, and also between the bark and the wood: while no such separations are apparent when the leaf-buds are entirely inactive. These separations are various in size, and irregular in form; their parietes consist of rows of cells, piled up one above another, like the bricks of a wall: and their cavities all communicate with one another. From these and other anatomical facts, which are given in detail by the author, he concludes that the propulsion of the sap along the vessels, resulting from the operation of endosmose, will explain the descent of the cambium, which, being the nutritious portion of the vegetable fluids, corresponds in its nature to the chyle in animals.

A letter was read from Sir J. Herschell, containing an account of an extraordinary luminous appearance seen in the heavens on the 17th March. The letter was dated the 17th, and contained the first announcement of what is now known to be a comet.

GEOGRAPHICAL SOCIETY.

March 27.—Sir C. Malcolm, V.P., in the chair.

Read, an account of the Cameroons River and Bay of Amboises, by Captain W. Allen, R.N.—In the months of May and June, 1842, Captain Allen had an opportunity of examining the Cameroons River. By carefully feeling his way with the lead, he took the *Wilberforce* safely up to the anchorage of the palm ships in the estuary. Here he found an important community under two chiefs, King Bell and King Aqua; the houses were well built, and the grounds well cultivated with maize, plantains, &c. From hence he attempted the ascent of the river by the Jibareh Creek, but want of water compelled him to return, but not till he had explored the Bomano Creek, coming in from the west. Captain Allen then resolved to ascend by a boat expedition; and accordingly he started in a forty-foot galley, manned with a crew of nine black men, under his head kruman, Jack Smoke, and accompanied by Lieut. Sidney, surveying officer, Mr. Terry, chief clerk to the commissioners, Mr. Sterling, assistant surgeon, and Mr. Lilley, a volunteer. King Bell and Prince Beppo, with canoes of about thirty paddles each, were induced to be of the party. They ascended with the flood tide and fine weather, and kept the lead going. They soon got into shoal water, among mud banks and mangroves, whose slimy roots, with the decayed vegetable matter, produced a most offensive odour. This spot passed, they got into an open expanse of water, a thousand yards wide. A narrow channel was next entered, and the mangroves were found to cease where the salt water terminates. In the undivided stream the breadth was found to be five hundred yards, the banks low but firm, and covered with high grass, behind which came ferns, plantains, and bushes of endless variety of form and foliage. The evening was fine, the temperature of the air 84°, that of the water 83°. As the party proceeded, the villages became more numerous; their neatness, and the cultivation around, denoted plenty and comfort. At three miles from the head of the Delta, the River Yabiang came in from the west, navigable, it is said, to a place called Abo, which could be reached at sun-set. Three miles beyond this, the river became exceedingly shallow, but Glasgow, the native pilot, said, that in the floods the river rose so that the canoes could paddle with ease over the grass on the banks, which was fifteen feet high. A little above this the river narrowed to 360 yards, with a depth of 18 or 20 feet. The stream was here divided into two branches, by the Wúri Island. The country was generally level, with only a few eminences of a friable sandstone, to which the natives resort, and where they live in temporary huts during the floods. Taking the western branch, the party arrived at Bona Pia, the landing place of the town of Andámaka. From hence, in opposition to the wish of King Bell and the chief of Andámaka, Captain Allen and his party proceeded to the village of Wana Makemby, a little above Wúri Island; but the chief was absent, and the place most uninviting, so that they returned to Bona Pia, where they landed and went up to the village of Andámaka, and passed the night there. The feast of their reception over, a long palaver ensued on the subject of their further ascent of the river, which ended in a resolution to consult the Fetich; his godship's answer was adverse, notwithstanding which Captain Allen determined to proceed at least to the highest point of Wúri Island. Every means were employed in the morning to prevent this, and the people said that if the party went further up they would meet with a very bad race of men, and that if they would not be advised by their best and warmest friends, they would be under the disagreeable necessity of shooting them themselves, to prevent the disgrace and mortification of their being killed by bushmen. What this meant was easily understood, and eventually the captain was allowed to depart; he therefore rounded the Wúri Island, after which he ascended the Yabiang River to Kokki, passing on the way a low wooded island, where the smell from decayed vegetation was most offensive. Having passed the night at Kokki, the captain wished the next morning to proceed to Abo, but the river became so narrow, and the vapours so noxious, that he hastened the return to the steamer. Abo was said to be four hours higher up, and situated near some rocks, over which the Yabiang falls fifty feet. On their way down they passed through the Jibareh Creek, which they had in vain attempted to go up in the *Wilberforce*. At ten in the morning they reached the vessel. They had, in this excursion, ascended the river to forty miles from the sea. The river, in the floods, has water enough for vessels of any draught, but at ninety miles from the sea, the navigation is said to be interrupted by rocks. Captain Allen was prevented from exploring the Qua Qua River, but he surveyed the Cameroons, or Dualla, from Bell's Town downwards, and connected it with Captain Vidall's survey. Slight symptoms of fever induced the captain to hasten to the Bay of Amboises, or Ambas. This bay is at the base of a lofty mountain, thirteen thousand feet high. It has three small but inhabited islands, one called Bobia, an impregnable position, whose inhabitants have a bad name, but were found very civil. The people are all fishermen, who exchange the abundant produce of the sea with the natives of the main land for plantains and yams. Captain Allen says, "From the peculiarity of its situation, and from local circumstances, I think that the Bay of Amboises will be found to be the most healthy position on this coast of Africa. Although my visits were during part of the rainy season, we seldom had more than a shower or a tornado about once a day, the rest of the day was very beautiful, and we were some days without rain. The anchorage is excellent in all parts of the bay as to holding ground and depth; and although it is a lee shore, it never blows hard here, and the pure breeze from the Atlantic, and the land winds being cooled by blowing over the mountain, are very refreshing; besides, there are here hardly any mangroves or marshes; water is excellent, and provisions abundant, and cheaper than at Fernando Po."

GEOLOGICAL SOCIETY.

March 22.—The President in the chair.

1. 'On some Pleistocene Deposits, near Copford, Essex,' by John Brown, Esq.—The order of the component beds of these deposits was taken from a cutting made for the Eastern Counties Railway. The lowest beds noticed consisted of blue clay, which the author refers to a great detritic accumulation called Till, and which occurs extensively over the northern portion of Essex. The till varies considerably in character and composition; at the northern extremity of the section which the author exhibited, it was described as consisting of a stiff tenacious clay, but that within a short space it changed to a sandy gravel, containing fishes' teeth and corals in great abundance. The rock fragments have been derived from basaltic and secondary beds, the latter affording the fossils, of which Mr. Brown communicated a list, determined by Mr.

Digitized by Google

J. de C. Sowerby. The pleistocene deposit at the Copford brickfield consists, in an ascending order, first, of a bed of peat, containing land and fresh-water shells; and, secondly, a bed of clay and detritus, with similar fossils, covered by a second layer of peat. At the southern extremity of the section the order of the beds was as follows—1st, diluvial clay, three feet;—2nd, white sand, with shells, three feet;—3rd, white calcareous marl, with shells and bones of elephant, ox, and deer;—4th, peat, with shells;—5th, blue clay, with fresh-water shells. The author suggests that this deposit is the bed of an ancient pond, which occupied a depression on the surface of the till. He presented lists of its fossils, named by Mr. S. P. Woodward.

2. 'On the Tin Mines of Tenasserim Province,' by Professor Forbes Royle.—The author prefaces his memoir by a view of the ancient history of the metal, especially as regards India, and gave an account of the tin mines of Banca, and of the peninsula of Malacca; describing the native processes for washing and smelting the ore. The British provinces on the coast of Tenasserim contain about thirty thousand square miles, having a north and south range of mountains for their eastern boundary. The mineral products of these provinces are tin, iron, and coal. The north and south range is stated by Dr. Helfer to be composed of granite and gneiss, and the northern and middle parts of the country to consist of transition slates and limestones. The country south of the Moulmain River, the province of Ye, towards Tavoy, is a sterile slate district, covered with bamboo. Amherst Province presents isolated ridges of limestone, with fertile land at their bases; to the south are sandstones and conglomerates. Tertiary formations, chiefly argillaceous, occupy the higher parts of Amherst and Ye provinces, the plains of Tavoy and Kalliconny, those between Tavoy and Poilon, the valley of Jaunbrauk, and of the Tenasserim River, and the elevated land of Meta-Mio. In 1837 Dr. Helfer discovered tin near Lake Saulret, about 110 miles N.N.E. of Moulmain, and in 1840 he reported the country to the north of the Pekehan River to be the richest staniferous district within the Tenasserim provinces; the ore is formed in the *débris* of primitive rocks, and the range is stated to be a continuation of the Siamese tin district of Rinowng. Domel Island, and the banks of the Boukpeer, are also cited as localities yielding tin. In fact, tin is of very common occurrence in the southern parts of Tenasserim, and probably its richest deposits are yet unknown. Captain Tremenheere's account of the tin of the Tenasserim provinces is, that it occurs chiefly in the beds and banks of those rivers which issue from the primitive mountains on the Shengdon River, in the immediate vicinity of the coal mines, on the great Tenasserim River. 11.889 grains of peroxide of tin were collected in an hour and a half. Along the course of the streams which flow into the little Tenasserim River, it occurs in thin beds, in gravel; and Captain Tremenheere calculated, from a short trial he made, that two men could obtain, by washing the gravel, about 5 lb. 2 oz. 464 gr. of tin per day, at the cost of twelve anas, including the expense of reduction, which is extremely simple, and requires only charcoal, easily obtained from the abundant forests. At Kohan, on the right bank of the great Tenasserim River, eleven miles from Mergui, Captain Tremenheere found a vein of tin about three and a half feet wide, nearly vertical, and inclosed in a white decomposing granite rock. The ore is described as equal to that from Banca. It is conjectured that tin may ultimately be found in the small isolated granite hills which rise out of the alluvial plain in the neighbourhood of Kohan.

ASIATIC SOCIETY.

March 25.—Professor Wilson in the chair.

The reading of Dr. Stephenson's paper on the Literature of India was concluded. The portion read comprised the Mohammedan literature, and that contained in the vernacular languages, more especially the Mahratta, with which the writer is most conversant. Some knowledge of the Mohammedan writers of India has long existed in Europe, among persons who have studied the history of that country. Their works differ little from those of other Mohammedans; and they are usually written in Persian, and consequently can have no influence on the habits and feelings of the people to whom that language is unknown. Much of it is valuable to the historian, who has no other source of information, from the almost utter deficiency of Hindú historians; but it is essentially foreign, and is studied only by a few of the higher classes. The light Mohammedan literature consists of romances, love songs, elegies, &c. &c., and is generally imitated from that of the modern vernacular writers, which form the subject of the last portion of the paper. In approaching this latter subject, the Doctor observes, that it is so utterly unknown in Europe, that a volume would be required to elucidate it; and that, according to general opinion, every thing valuable in Indian literature is to be found either in Sanscrit or Persian. The truth, however, is, that an extensive literature exists in the spoken languages of India, which influences all, from prince to peasant; and that even Brahmans have condescended to mingle in it, though most of the writers of this class have been humble Sudras. After some observations on the two great divisions of Indian languages—one derived almost wholly from Sanscrit, and the other from a tongue which must have been current in India before the coming of the conquering tribe who brought Brahmanism with them—the writer proceeds to an account of the rise and progress of this recent vernacular literature. From the period of the full establishment of Brahmanism, about the eighth or ninth century, every other form of faith was persecuted, and no writings were permitted to exist but those which formed the dominant religion. But the conquest of the Mohammedans, bearing with equal heaviness on all, introduced a greater degree of religious liberty: and the persecuted Jains, being less determined idolators than the worshippers of Vishnu and Siva, found some favour in the eyes of the conquerors. Accordingly we find religious reformers, both Vaishnavas and Saivas, committing their opinions to writing soon after this period, and establishing sects varying from ancient Hinduism, which remain to this day. In the fifteenth century Kabir established nearly a pure theism, and ridiculed equally the idolatry of the Brahmans and the rites of the Moslems; and many thousands of Hindús to this day reckon themselves amongst his disciples. The works of these reformers yet exist, and are largely read by their followers. The Tamil poetess, Aryar, has also left a collection of moral precepts of the same reforming tendency, though not belonging to any named sect. A race of authors sprung up in the Mahratta country about the beginning of the fourteenth century, whose works inculcated a purer system of religion than had hitherto prevailed. All these writers used the vernacular languages of the provinces in which they resided, and were read by the unlearned people. Poetry was also cultivated about the same period by Tulsidas, Jaya-deva, and others. History then began to occupy the attention of Hindús; and events were recorded in many cases by men who had been actors in the scenes they described. Specimens of these vernacular writings were read. The translation of the Bible into all the idioms of India opens a new era in its literature, which is full of interest, and cannot fail to be productive of great changes. Into this part of the subject the Doctor does not enter, but remarks upon the fallacy of the received opinion that the Hindús have always remained at a dead level in religion and literature; a fallacy propagated by interested bigots, and believed by the credulous confidence of Europeans. He is fully of opinion, that the learned Hindús of the next age will study the works of their ancestors, with the object of imitating their beauties and avoiding their defects; and that they will store their minds with the learning of the West, to present it to their countrymen in a form calculated to interest them, by blending the more sober verities of their European guides with the warmth and glow of their own native skies.

ASTRONOMICAL SOCIETY.—At the annual general meeting, the following officers were elected:—

President, F. Baily, Esq. *Vice-Presidents*, G. B. Airy, Esq., Astronomer Royal, A. De Morgan, Esq., Rev. G. Fisher, Lord Wrottesley. *Treasurer*, G. Bishop, Esq. *Secretaries*, T. Galloway, Esq., Rev. R. Main. *Foreign Secretary*, Capt. W. H. Smyth. *Council*, S. H. Christie, Esq., Rev. W. R. Dawes, T. Jones, Esq., J. Lee, Esq., Capt. W. Ramsay, R.N., E. Riddle, Esq., R. W. Rothman, Esq., Rev. R. Sheepshanks, Lieut. W. S. Stratford, C. B. Vignoles, Esq.

March 10.—The following communications were read:—'Occultations observed at Port Royal Dockyard, Jamaica,' by Capt. Milne, R.N.—'Observations of the beginning and end of the Solar Eclipse on the 8th of July 1842, in the fort on the left bank of the Shanghaie River, on the coast of China,' by Capt. Sir E. Home, Bart.—

Latitude of the place of observation, 31° 26′ 36″ North.

—'Translation of a letter from M. Hansen, accompanying a printed paper on the Perturbations of the Heavenly Bodies moving in very eccentric and very inclined orbits.'—'On the application of the Method of Least Squares to the determination of the most probable Errors of Observation in a portion of the Ordnance Survey of England,' by T. Galloway, Esq.—The object is to give the results of an application to a part of the Ordnance Survey, of a general method of correcting the observed horizontal angles, whereby the positions of the stations are determined in such a manner as to give the nearest, or most probably accurate, representation of the whole of the observations. The method in question, which is due to Gauss and Bessel, has only recently been introduced into geodesy.—The President announced a communication received from the Rev. Baden Powell, relative to an easy and convenient method of imitating the appearance of the *corona*, or glory that surrounds the body of the moon, during the time of total darkness, in total eclipses of the sun; and also the appearance of the *beads* that occur, not only in total eclipses, just prior to the time of total darkness, but likewise in annular solar eclipses. A sketch of the method was exhibited, which is merely this: a candle is placed in the focus of a lens, fixed in a screen, with an aperture of about three quarters of an inch in diameter, on the opposite side of which screen is placed an opaque circular disc, of equal (or even greater) diameter than the aperture, which may be placed at different distances, so as to produce an eclipse of any magnitude, as the spectator shifts his position. When it is central and total, there is a brilliant ring, or glory, even when it is so much nearer to the eye as to subtend a much greater angle than the aperture. Also, when there are any cusps, minute irregularities, on the edge of the disc, produce distinct *beads*. Prof. Powell has tried a similar experiment with the circular opaque disc and the rays of the *sun* reflected from a small piece of glass, which produced a most brilliant ring, the disc being nearly double the apparent diameter of the sun: and he proposes to pursue the inquiry still farther.

HORTICULTURAL SOCIETY.—*March* 21.—Sir O. Mosley, Bart., in the chair.—Messrs. W. H. Holmes, and W. Rendle, were elected Fellows.

A paper was read upon the Tussac Grass, by Lieut. Governor Moodie, of the Falkland Islands; from which it appears, that some seeds which had been sown in the government garden, at a short distance from the sea, in good soil, but different from that in which it grows naturally, had shot up, and seemed to show that it would thrive in any soil, provided it were supplied with moisture. In its native state, it succeeds best in spots most exposed to the sea, and in the rankest peat bogs. So fond are horses and wild cattle of its herbage, that their tracks may be seen extending towards it for several miles from the interior of the country. It is recommended, in cultivating the tussac, to sow the seed just below the surface of the ground, in patches two feet apart, to be afterwards thinned out as the plants grow six or seven feet high. The herbage should not be grazed, but reaped or cut in bundles: when grazed it is liable to be injured, particularly by pigs, who tear it up to get at the sweet, nut-like roots. The wild west coast of Ireland would, no doubt, be well adapted for its cultivation. Mrs. Lawrence exhibited a well-grown specimen of *Phaius Wallichii*; *Burchellia capensis*, in a vigorous state of health, bearing clusters of beautiful orange at the end of every branch; with the much-neglected, but nevertheless pretty, *Gnidia pinifolia*, covered with its numerous heads of delicate white flowers. A Knightian medal was awarded for the Phaius and Burchellia. From Mr. Gaines were

Digitized by Google

three hybrid Rhododendrons, Princess Royal, Prince of Wales, and Victoria Regina, the latter being of a delicate flesh colour, and having the throat marked with well-defined dark brown spots; several seedling Cinerarias, the best of which were Ne plus Ultra, resembling the King, but with larger flowers, and True Blue, of a deep purple colour, with a reddish tinge in the centre; with these were a well-cultivated specimen of *Camellia Donckelaeri*, exhibiting its peculiar mottled character in great perfection, and *C. Nicholsii*, a small, well formed, and light red flower, also spotted in a slight degree, and well worthy of cultivation. A Banksian medal was awarded for the two latter. W. Wells, Esq., of Redleaf, brought two seedling Azaleas, raised from seed presented by the late Lady Amherst: one bore a great resemblance to the yellow Chinese Azalea, and the other was a pretty variety, with large, finely formed, yellow flowers, tinged and spotted with reddish brown. Mr. Wells also exhibited some fine blooms of *Camellia reticulata*, and other good kinds, with cut specimens of *Rhododendron arboreum album*, and several beautiful hybrid varieties. A Banksian medal was awarded for the Azaleas and hybrid Rhododendrons. From the Dean of Manchester were a seedling Camellia, called foliolosa, of a very brilliant colour, and remarkable for the exceeding fulness of the flower, being composed of an exterior row of petals, densely filled up in the centre with others of irregular form; and a Muscari, raised from seed gathered in the Durrood Pass, near Meshed, in Persia, and apparently a small variety of *M. racemosum*. A certificate was awarded for the Camellia. Messrs. Davies & Co. also exhibited a handsome seedling Camellia, raised from the seed of *C. Colvillii*, fertilized with the pollen of *C. reticulata*: in the foliage it resembles the older sorts, but the flower, which is large and well filled up, partakes of the form and colour of its male parent. A certificate was awarded. Sir J. T. Tyrrell exhibited some fine White Versailles Lettuces. A certificate was awarded for them. From the garden of the Society were *Spiranthes orchioides*, a pretty terrestrial species, with pink flowers; *Acanthophippium bicolor*, with clusters of singular wax-like flowers, edged with deep crimson; *Phaius bicolor*, bearing lofty spikes of yellowish brown and white; *Boronia anemonefolia*, a handsome free-blooming species, with small rosy star-like flowers; *Acacia mucronata*, a showy sort, with sulphur-coloured flowers, which, with *A. hispidissima*, a small species, bearing a great resemblance to *A. pulchella*, is well adapted for a limited greenhouse. Cuttings were distributed.

Society of Arts.—*March* 22.—W. H. Hughes, Esq., V.P. in the chair. Mr. Taunton exhibited and described his elaborately constructed umbrella, intended as a present from the Turkish Ambassador resident in England to the Sultan, its value being 500 guineas. The stick and frame generally are made of gold, and the handle of ivory, having on its exterior carved representations of military trophies. The silk is of Spitalfields manufacture and worked—the pattern being a basket of flowers, which is repeated in each gore. Within the stick and handle are contained the following articles: a telescope, a watch, a pencil-case with watch-key, a case containing pencil points, a sun-dial, a thermometer, a botanical microscope, and a knife with two blades. The weight is 36 oz.

Sir F. Desanges described his Ramoneur Machine, which is designed to sweep flues of every shape and size; whether considered in reference to their transverse or longitudinal section. The model machine exhibited consists of four brushes, each attached to two brass arms, working with springs into as many sockets, ranged at right angles to each other in pairs, and secured to the stem, which being furnished with universal joints, is capable of following all the irregularities of the most tortuous chimneys.

March 29.—W. Tooke, Esq., V.P., in the chair. Thirteen Members were elected.—Mr. Whishaw read a communication from Mr. Kemp, 'On his process of Printing Warps to produce fabrics termed "Clouded," or "Chiné,"' the subject being illustrated by numerous specimens of fabrics manufactured by the new process.

April 5.—T. Hoblyn, V.P., in the chair.—Two Members were elected.

Mr. Pellatt described and illustrated the new art of Electro-Plating and Gilding, according to Messrs. Elkington's process. Several specimens were placed upon the table, and during the lecture two old candlesticks were plated, and a silver watch-case was gilt in a few minutes. It is immaterial what metal is used for articles to be plated by this process; a compound metal, composed principally of nickel, however, is preferred, which, when plated with silver, can scarcely be distinguished from the solid metal. Upon the wax model is first deposited a copper surface, by the electro process; the wax is then melted out, and thus a perfect mould of copper is obtained, into which is deposited silver of any substance that may be required. The copper is then removed by dissolving it with acid, and the article required is obtained. If the original model is in metal, an elastic mould, made of glue and treacle, is used, by pouring the composition in a liquid state upon the model. By a late improvement, the proprietors have the means of giving a metallic conducting medium to this composition, and to other substances, without the use of any external application, as blacklead, &c. The first thing, before plating or gilding, is thoroughly to cleanse the articles from all grease or oxide, and this is done by boiling them in caustic alkali, and scouring them with sand and dilute acid; they are then washed and dried, and a copper wire being attached to them, they are placed in a metallic solution of the metal required to be deposited. The entire article is then suspended by a copper wire in the solution of silver, or metal, the wire being connected with the negative pole, while a silver plate, suspended in the same solution, is connected with the positive pole of the battery. The process of gilding is similar to that of silvering, except that the gold solution requires to be heated while the process is proceeding. Great care is required in the arrangement of the batteries, the object being to decompose the solution easily, and, at the same time, to produce a firm, smooth, and regular deposit of the metal. The secret of the manipulation consists in the correct balance of power, between the battery on the one hand, and the strength of the solutions, and number of articles to be deposited on, on the other. The solution for gilding is prepared by dissolving the gold in a mixture of pure nitric and muriatic acids, the product being a chloride of gold; after evaporation, this is converted, by means of an alkali, into the oxide, which oxide is dissolved in pure cyanide of potassium. The solution of silver is prepared by dissolving pure silver in nitric acid diluted with distilled water, and similarly treated with the cyanide of potassium as in the gold solution.

MEETINGS FOR THE ENSUING WEEK.

Sat. Asiatic Society, 2, P.M.
— Botanical Society, 8.
Mon. Geographical Society, half-past 8.
Tues. Institution of Civil Engineers, 8.—'On the Supply of Water to the Island of Malta,' by W. L. Arrowsmith.—'Description of the Artesian Well at the Abbatoire de Grenelle, Paris,' by Sir John Robison, K.H.—'Description of the Water-Pressure Engine, constructed by Herrn Brendel, at Freyberg, for the Alte Mordgruba Mine,' by W. L. Baker.
— Zoological Society, 8.—Scientific Business.
Wed. Astronomical Society, 8.
— Literary Fund, 3.
— Society of Arts, 8.—Mr. Davis on his 'Stereoprism Combination as applicable to Wood Pavements.'
Thur. Royal Society of Literature, 4.

FINE ARTS

NEW PUBLICATIONS.

The volumes of lithographic sketches put forth by favourite artists—beginning with Prout, Harding, and Stanfield, and coming down to Nash, Haghe, and Roberts—are exclusively of a popular character; their attractiveness consisting either in the charm of style, the picturesque nature of the subjects, or the interest attached to the scenes delineated: with the exception of Mr. Gally Knight's architectural illustrations of 'The Normans in Sicily,' no single one of the numerous series makes pretensions to archæological research. In proportion as we regret this deficiency of exact information and scientific character, should we welcome the appearance of a work which combines pictorial beauty with learned investigation, and is at once valuable to the architectural student and acceptable to the lovers of art: we allude to another elaborate production by Mr. Gally Knight, illustrating the 'Ecclesiastical Architecture of Italy, from the Time of Constantine to the Fifteenth Century,' of which the first volume has just appeared. The attention which church building just now receives from the public—the emulation of religious sects in erecting new and restoring old fabrics, give present interest to the subject of ecclesiastical architecture; and the successful introduction of the Byzantine and Lombard styles, as varieties in modern structures, naturally creates a desire to become acquainted with those magnificent edifices which offer the best examples for suggestion or imitation. The perusal of Mr. Gally Knight's introductory account of the churches of Italy, ought to silence that fanatical opposition to the adoption of Romanesque architecture for new churches, which relies on the force of its objection that the style is not Christian. Not only were the basilicas converted into Christian churches, but the plan of those edifices—an oblong divided by columns into a nave and aisles, with a semi-circular recess at the upper end—was selected by Constantine as a model for new ones; the cruciform plan being a subsequent change, though when first introduced is not known. The Pantheon and the Temple of Minerva Medica, at Rome, also served as models for the round churches and baptisteries, the first being the Church of the Holy Sepulchre, erected by Constantine. The Byzantine cupola was next adopted, and the heavy proportions of the Lombard style—which was not original, but only a modification of the Roman, with some new features—prepared the way for the pointed style. This, Mr. Knight considers, came into Italy, from Germany, entire. It was first adopted by Arnolfo, at Assisi, and prevailed throughout Italy—Rome alone excepted, where it was looked upon with disdain—until the close of the fourteenth century, when the classical predilection of the Papal see extended to Florence, and other cities, through the agency of Brunelleschi and Alberti. It is curious to trace, in the various styles that successively prevailed in the Middle Ages, the several links which connect Pointed, or Christian, with Greek, or Pagan, architecture; and the arrangement of the forty plates of this volume in the chronological order of the various structures, greatly facilitates an appreciation of the amount and nature of each change. The examples in this volume commence prior to the fourth, and come down to the eleventh century; including, among other less known, but scarcely less remarkable edifices, the Baptistery of Constantine, and Basilica of St. Paul, at Rome; the Palace and Tomb of Theodoric, and the magnificent churches of San Apollinare and San Vitale, at Ravenna; the Lombard churches at Brescia and Pavia; the famous cathedrals and baptisteries of Florence and Pisa; San Ambrogio, at Milan; St. Mark's, Venice, &c. The drawings are strictly accurate in detail; being made from measurement by architectural draughtsmen, whom Mr. Gally Knight engaged expressly for this work; the artistic treatment of the subjects, however, and the introduction of figures, and agreeable effects of light and shade, give vivacity and pictorial character to the plates. Signor Quaglio has sketched the greater number, but Mr. G. B. Moore, who has lithographed the majority, and Mr. Knapp, furnished some originals. In point of execution, the lithographic drawings are generally satisfactory, though they do not challenge particular admiration; but the Mosaic paintings are brilliant specimens of lithochromatography, and exemplify the perfection to which this beautiful art has been brought by Mr. Owen Jones, who has, in some of these plates, improved upon his Alhambra, especially in the lustre of the blazonry.

Another remarkable addition to the series of artists' sketch books, is a volume of 'Sir David Wilkie's Oriental Sketches.' Mr. Joseph Nash has produced exact fac-similes of those made with crayon and pen, and free, yet faithful translations, of such as were done in oil and water-colours—a difficult, though humble task, and one that merits more praise for the ability with which it has been performed than the artist is likely to receive. Apart from Wilkie's fame—to which, by the way, they add nothing—these sketches possess little attraction; but taken in connexion with the great artist's career, they are valuable and interesting records of its close, and exhibit the painter of common life and homely character as an aspirant for distinction in the highest range of art—scriptural subjects. It was in pursuit of this ambitious aim that Wilkie visited the East, for the purpose of deriving inspiration from a pilgrimage to the scenes of the events in sacred history, and of studying the characteristic features of the people, their dwellings, costumes, and modes of life. That he must have failed in his attempt to reach the sublime, and even to attain the dignity ex-

Digitized by Google

sential to an embodied expression of religious sentiment, needed not the sketches of the 'Nativity,' and 'Ecce Homo,' in this volume, to make evident to all who were familiar with his works; though his earnest feeling would have redeemed defects of style, and atoned for a want of grandeur, in the estimation of all who prize the spirit above the outward form of art. Wilkie was not a sketcher, and these are not so much "sketches" as unfinished pictures, or parts of pictures: his forte lay in elaborating, not indicating: so tenaciously did his mind grasp the details of a subject, that accessories became invested with the importance of corroborative evidence, and he set such store by these *minutiæ*, that they sometimes overlay the main argument. This is remarkable in these sketches, which display individual peculiarities and subordinate points, rather than broad general characteristics. Many of the sketches are portraits, in which Wilkie was not happy; and of these, several are women, whom he was rarely successful in limning. Mrs. Moore, the wife of the British Consul at Beyrout, is a very slight but elegant study of female beauty; and the 'Beauty of Pera,' the painter's landlady, is a graceful sketch. The composition of the group of 'Three Greek Sisters,' is better than the expression of the faces, which is dull and uninteresting. The Young Sultan, Abdul Medjid, Mehemet Ali, Admiral Walker, and Mr. Cartwright, the British Consul at Constantinople, have no other merit than belongs to the likenesses; and the dragomans of the consuls are only attractive for their costumes, though the heads have strong character. The Sheikh of Lebanon, who conducted the painter and his party to the Holy land, and a Persian prince, whom Wilkie chose as a model for the head of Christ, are the finest studies of Oriental character in the volume; vigorous and animated in expression, and beautifully drawn: the little daughter of Walker Bey, in a Turkish dress, also, is a charming study of infantine character and costume. The two most complete and animated sketches are 'The Letter Writer,' and the 'Tatar Messenger telling the News of the Fall of Acre,' in a coffee-house at Constantinople; the last may vie in vividness of expression and character with the finest works of Wilkie. The scene is dramatic: the Turks, roused from their habitual apathy by the astounding intelligence, exhibit the strongest excitement; glaring on the bearer of the news with looks of incensed astonishment and contemptuous incredulity, which he meets with a calm gaze of assurance; even smoking is suspended, and the barber turns from the customer he is operating upon to scrutinize the relater.

Mr. Collins, R.A., is contributing his quota to the store of 'Painter's Etchings,' and the first of six Parts gives promise of a work that will delight all who can appreciate simplicity of style and a pure feeling for rustic character and scenery. Fishermen and children are his favourite studies, coast scenes, and cottages furnishing the backgrounds; the slightest indications tend to express the sentiment of the subject, which is never lost sight of, and is always genuine.

Our continental neighbours, the French, always before us in ornamental design, have put forth a work which shows, by comparison, how far behind are our manufacturers and decorators in taste and invention: it is a series of beautifully engraved plates, by MM. Farin frères, of designs by M. Leon Feuchère, including, under the title of *L'Art Industriel*, all that relates to the decoration and furniture of a villa, from the staircase and saloon to the bed-chamber. Ten of the eighteen *livraisons* have been sent to us by Messrs. Hering & Remington; and these contain designs in various styles, but chiefly that of the *Renaissance*, for chimney-pieces, beds, screens, toilets, cabinets, vases, lamps, clocks, brackets, tea and coffee services, &c., which combine elegant shapes and proportions with fanciful devices and elaborate details: richness of embellishment reaches the prodigal height of luxury, but rarely oversteps the bounds of good taste, for beauty of form and massiveness of ornament are rarely lost in the *ensemble*.

The advance of the French in engraving, is shown by the pair of mezzotints, by Eugene Jazet, from designs by Schopin, from Paul and Virginia, and the elaborate line engravings of the two pictures of Paul De la Roche, exhibited a few years since at the British Institution, 'Strafford on his way to execution,' and 'Charles the First insulted by Cromwell's soldiers.' The mezzotints are hard, thin, and cold, and the style and sentiment of the designs are eminently French; but for neatness of execution, and correct drawing, they are remarkable; and the ornamental finish gives an air of elegance to the prints, that enhances their slender pretensions as works of art. The line engraving of Strafford, by Henriquet Dupont, has extraordinary force and richness of effect: the very texture of the costumes is imitated, and though the flesh and hair incline to woolliness, the gradations of light are finely preserved, and the darks are clear. The Charles the First, though faithfully rendered by Achille Martinet, is cold, monotonous, and metallic; and there is a want of discrimination between the flesh tints and those of the dresses. But when we contrast the admirable drawing of both these prints, and the effect of one of them, with the lumpy feet, grotesque faces, and heavy indecision of the line engraving, by W. Chevalier, of Mr. Knight's picture of *The Saint's Day*, which the Art-Union of London has just issued to its subscribers of 1841, we cannot but fear that the pre-eminence of English engravers over those of the modern French school, is not likely to be of long duration, at least in figure subjects, unless something more be done in the way of encouragement to induce our best line engravers to resume the burin.

Mr. Burnett, one in the foremost rank, has taken to mezzotint, and has produced a print from Edwin Landseer's 'Lassie herding Sheep,' that may vie in mere executive skill with the most successful efforts of practised mezzotinters, while in painter-like feeling, and pictorial character, it bespeaks the artist. The figure of the lassie is beautifully drawn, the feet as well as the head; and the discrimination shown in the texture of her flesh and costume, and the woolly coats of the "fleecy fools" —and between the turf of the shieling and the heather, the distant hills and the sky—is admirable. Edwin Landseer has not been so well rendered in mezzotint before; and this picture is one of those true bits of nature—the aristocratic air of the lassie excepted—that we prize above portraits of well-bred dogs, high-bred horses, and drawing-room pets, whether biped or quadruped.

Here our budget of novelties must conclude, but not without a line of recognition for Mr. Wyld's complete and well-executed maps of Canada, and the Oregon district, which have a value beyond their momentary utility.

MUSIC AND THE DRAMA

PHILHARMONIC CONCERTS.—The principal novelty at the Second Philharmonic Concert was Chopin's Pianoforte Concerto in F minor, performed by Madame Dulcken. The introduction of this work suggests remark and comparison so strongly, that we must digress for a moment from the performance to the thing performed. That the pianoforte concerto, with orchestral accompaniments, has gone out of fashion, is a musical misfortune "past praying for;" we believe, however, that the neglect will not continue. But the works which will be called for again, are those in which *idea*, not passage, is the main object; a prophecy justified by the list of compositions of this class in favour even at the present time, when the appetite for execution is the most extravagant. We need not enumerate Beethoven's concertos in C minor, and E flat major, —the 'Concert Stück' of Weber,—Hummel's concertos in A minor and B minor,—Moscheles' concerto in G minor,—and Mendelssohn's Second Concerto,—to remind the reader, that though in each of these the exhibition of the pianoforte player is a main object, the deliberate elaboration of clearly-marked and well-contrasted subjects is still more evident as a purpose; and where the idea is the noblest, as in Beethoven's, the chance of permanent acceptance is the greatest. Now, on looking into Chopin's Concerto, we find no such decision of outline, still less completeness of construction. There is not a page without its exquisite delicacies of detail, sufficient to make the fortune of a dozen *notturni*, but the first movement wants breadth of contour: the leading *cantabile* passages of the *allegro* and *adagio* are too similar in style and form, while the subject of the rondo is on the scale of one of its composer's *Mazurkas*,—nothing grander,—and, however delicate and quaint, as little fitted for the broad treatment which the style of movement requires, as (for instance) the rondo which closes Weber's peerless Pianoforte Sonata in A flat. The most impressive portion is the second part of the slow movement, which was played, as indeed was the whole Concerto, with great firmness and delicacy by Madame Dulcken. But, interesting as this work must be to all who love the pianoforte and relish one of the most peculiar composers of this or any other time, it is but another proof of what we ventured to ascribe to Chopin as a characteristic (*Athen.* No. 740) "incapacity of continuous effort."* We must be brief over the rest of the *programme*. The symphonies were Beethoven's 'Eroica,' very unequally performed, under Mr. Potter's conduct, and one by Haydn, in C minor, selected, we imagine, mainly for the sake of Mr. Lindley's violoncello in the *trio* of the minuet: this was *encored*. The overtures were Spohr's 'Der Berggeist,' and Cherubini's 'Les Deux Journées.' Miss S. Flower, who appeared lately at Drury Lane as *Pippo*, in 'La Gazza Ladra,' to the delight and surprise of the audience, made her first appearance at these concerts, and was successful in the *contralto* song from Mendelssohn's 'St. Paul;' and Miss Rainforth sang with care and spirit the great *scena* from Spohr's 'Faust,' which, however, lost much by the curtailment of half the recitative, and yet more by the clumsy and commonplace English text with which she chose to sing it, as if it had not been already well mated with Italian words; the transposition of the final grand passage was inevitable, seeing that she has not the original notes in her voice. Besides this, she joined with Miss Flower in the grand duet from 'Semiramide;' and Mr. Hobbs sang the favourite tenor *adagio* from Haydn's 'Seasons.' The coming Philharmonic Concert is well worthy of patronage, for the sake of Beethoven's 'Choral Symphony,' which will be performed, under the auspices of M. Moscheles.

HER MAJESTY'S THEATRE.—The revival of 'Giselle' must not pass without being recorded as one of the most perfect performances in our recollection. The *corps de ballet* is now, indeed, at its strongest, and its members find fit occupation in the elfin drama: Dumilatre, with her floating grace,—and Guy-Stephan, with her audacious and piquant buoyancy—to say nothing of sundry "lesser lights," such as Mdlles. Camille and Planquet, each of whom deserves her line of praise, as well as her round of applause. But the most admirable thing in 'Giselle' is the pantomime of Mdlle. Fanny Elssler, in the first, and her treatment of the entire second act. We remember few finer pieces of tragic passion than her mad scene; both countenance and gesture are managed with such consummate attention to climax, and yet closeness to the terrible reality, that the addition of speech could add little impressiveness to the representation. Thus can Genius, dealing with even an exhibition so intrinsically bordering on the absurd as a *ballet*, turn conventionalities into truths, and an idle piece of dumb show into a moving history. Mdlle. Elssler's conception of the supernatural portion of the *ballet* is of the same high order of art. *Giselle* is compelled,—so runs the fantastic legend,—in her phantom state, to detain and fascinate, to his ruin, the youth she had loved while living, and whose falseness had brought her to the grave. It is hard

* We may not soon have a better opportunity than the present of noticing another and later work of a similar class by Chopin; his *Allegro de Concert* (Op. 46), which seems to belong to an unfinished Concerto. Though the form of this be more clearly defined than that of the first movement of the work in F minor, and the opening has a massive plainness, which makes it fitter for orchestral treatment, the above remarks apply also to this composition. The grand passages, though rich and complicated, want individuality and colour, till the final climax (pp. 15, 16, 17, 18) is reached; this is bolder than most of Chopin's writing. The composer's want of sustaining power, however, is curiously evidenced in the fact that there is no second part to this *Allegro*,—since, after the first grand *solo* and *tutti*, the principal melody almost immediately returns, in the original key, and then comes the final passage: the great difficulty of composition being thus avoided, on the *dolce far niente* plan of the writers of modern Italian *cavatinas*. With all its deficiencies, however, there is so much more substance in this *allegro* than in the unaccompanied *fantasias* on operatic airs, which have recently been inflicted on concert audiences, that we cannot but wish its author would complete the work of which it is a fragment;—and, complete or incomplete, that some pianist would give us an opportunity of hearing it in public.

Digitized by Google

to conceive anything at once so luxuriously engaging and so mournfully chilling as the personation to which we are referring. Taglioni, as the *Sylphide*, was graceful, aërial, and pathetic—but hers was the grace and the emotion of one who had never known the soil of mortality and the storms of earth, — Elssler is the phantom of a human being, retaining memory, passion, and pity. The fond yet mournful look rivetted on her pain-worn countenance, with which she gazes on the victim she is bidden to destroy, but resolves to save, deserves to be commemorated by the side of some of the marvellous changes of Pasta's features. It would be descending, after this, to praise such technicalities as *battemens* and *entrechats*—enough that here is a tragic performance of the finest discrimination and deepest feeling; and if it be applauded less than it deserve, it is because the ballet-haunters hardly know how to receive such a rarity, now that it has fallen into their hemisphere, and find it less amusing to see than the *Cracovienne* or the *Menuet de la Cour*, danced with Elssler as cavalier, and Dumilatre *grande dame* of the age of Louis Quatorze. The latter was enacted on Thursday, when was also given 'La Sonnambula,' for the reappearance of Mario, Fornasari taking the part of *Count Rodolpho*—of this next week.

Drury Lane.—What will the Mrs. Grundys, who were so dissatisfied with 'Norma,' so outraged by 'Elena Uberti,' so sarcastic upon 'Semiramide,' so little indulgent towards English versions of 'Le Nozze' and 'Il Matrimonio'—what, we ask, *will* these ancient gentlewomen say, at the introduction of Pacini's 'Saffo' for the first appearance, on the classical English stage, of the most famous of "the famed Novello race," as Charles Lamb hath it? We do not put the question splenetically, but for consistency's sake: to establish a principle, by calling attention to the inevitable caprices into which all must fall, who build their hopes upon impossibilities, and find faults when no remedy exists. For ourselves, we are delighted at the triumph of another Englishwoman on the English operatic stage, and cannot but rejoice, for her sake, that the Drury Lane management has been judicious enough not to enjoin her appearance in 'Acis,' or 'King Arthur,' or 'Comus,' those works of native origin, which —so said the short-sighted—were to banish all translated musical dramas.

Of course we must give the lady precedence over the opera. To say, that such a voice as Miss Clara Novello's has not been heard on the English stage in our recollection, is simply the truth. Of the richest quality, two good octaves in compass (from D to D), produced with ease and certainty, sufficiently powerful to be heard above the whole thunder of a concerted *finale*, and sufficiently strong to abide the wear and tear of three arduous acts,—this voice possesses, in itself, qualities enough to fascinate and disarm all cavil. Cultivation has done much for it since it was last heard in England; and that large and bold style of ornament, which is the fashion of the newest Italian school, is executed by Miss Novello with truth and certainty. The older graces of shake and scale-passage stand in need of further practice; and we hope that our new *prima donna* will not rest contented with what she has acquired. It is the nature of organs as beautiful and complete as hers, out of their very perfection, to be in danger of monotony; and since she must depend, for expression, upon varieties of phrase and ornament rather than varieties of tone, her *sostenuto* and *slanciato* passages will be captivating in proportion as they are not too exclusively drawn upon. We must, too, express great satisfaction in the improvement which has taken place in Miss Novello's articulation; this could hardly fail to be the consequence of thoroughly studying the Italian recitative. As to Miss Novello's powers as an actress, we have little to say, beyond the facts that she is obviously at ease on the stage, and as unexaggerated as she is unembarrassed;—with regard to the future of one so young in the dramatic profession, it would be unfair to prophesy. Enough, for the present, that her voice carried the audience along with it, from the first to the last note of her part.

This brings us to speak of the opera and Pacini's music. The titled Mrs. Malaprop who, sitting in council over some *tableaux vivans*, proposed for subject, "*Sappho and her Children struck by lightning!*" took hardly more pleasant freedom with the old Greek tale, than the Italian librettist has done. On the slender legend of the passion of the poetess for Phaon, he has constructed a second edition of 'Norma,' with a strain of Greek poetry, in place of Druidical superstition, running through it. This gives fine scope to the musician and to the actress: Sappho's last song, for instance, is an improvisation of over-wrought rapture for the nuptials of her rival with the youth who has scorned her. What an opportunity is here for an outpouring of brilliant and passionate melody, such as Rossini has lavished in his 'Otello,' or his less-known 'Zelmira'! Taking his subject at this height, Pacini is unequal to his task. He displays no evidence of having any special feeling for the intense yet voluptuous spirit of either the epoch or the tale chosen. But his opera deserves a better character than has been circulated respecting it. The composer was always successful in his single *cavatinas*, and continues to be so; as in *Climene's* rondo, so beautifully given by Mrs. Alfred Shaw as narrowly to escape an *encore;* as in the *aria* of *Phaon* (Mr. Allen), which was sung twice, "by desire." He has written, too, a popular duet for *soprano* and *contralto*—an effectively wrought *finale* to his second act; and, throughout, indulges in a more picturesque treatment of his orchestra than we were at all prepared to expect. On the whole, the music may, possibly, be less sound than Mercadante's, but it is fresher than Donnizetti's, and, as such, must be welcome to ears satiated with the compositions of the last-named master. The third act is the weakest, and stands in need of curtailment.

We have little more to say, save to record the excellent singing and graceful action of Mrs. Alfred Shaw, who fairly divided the honours with the heroine of the night. The *forte* of Mr. Phillips does not lie in modern Italian music, and his *Alcander* was better relished by the audience than ourselves. The subordinate parts were well filled, but the orchestra and chorus were once or twice "at odds," and neither is obviously habituated to the music. In the first two acts, the scenery and grouping are in the highest style of stage art,—as probable and picturesque as they are exquisitely finished. On the whole, the success of 'Sappho' is complete, as we hope the treasurer of Drury Lane will see good cause to acknowledge.

St. James's Theatre.—*French Plays.*—We must restrict ourselves this week to announcing the appearances of Madame Doche and M. Vernet, which took place on Monday last. The introduction of the latter's *Madame Pochet* to a May-Fair audience is about as odd an illustration of the encounter of extremes as the short-lived appearance of Nina Lassave, as *a lion*, in certain fashionable circles. But there is no end to the vagaries of inconsistency. 'Le Père d'une Débutante' is to be given on Easter Monday.

MISCELLANEA

Lotteries and Little-goes.—Perhaps the most curious feature of the advertising columns of the 'Tatler' is the immense number of private lotteries, announced under the convenient name of sales, in the latter part of 1710. Dipping into "the file," upon chance, we find in the number for September 21-23:—"Mr. Stockton's sale of jewels, plate, &c., to be drawn in the great room at the Duke of Marlborough's Head, on Michaelmas-day, by parish boys and out of wheels." "Mrs. Honeyman, milliner, in Hungerford Street; her *twelvepenny* sale of goods is put off till the 29th inst." "Mr. Guthridge's *sixpenny* sale of goods, at the toy-shop over against Norfolk Street in the Strand, continues." "Mrs. Help's sale of goods, consisting of plate of considerable value, being near full, is to be drawn on Tuesday sevennight at the stone-cutter's in Downing Street;" and "Mr. William Morris's proposals for several prizes; 2500 tickets, in which there are 177 prizes, the highest 100*l.*, the lowest 11*s.*, and 13 blanks to a prize; *half-a-crown* the ticket." This is rather below than above the average quantity of such advertisements in a number of the 'Tatler' about that time. The temptations held out to gumblers in this small way were varied in the extreme. One advertisement "gives notice that Mr. Peters' sale of houses in Glouster Street, of 1000*l.*, for half-a-crown, will be drawn within a fortnight at farthest." Another runs thus:—"Tickets for the house on Blackheath, &c., to begin on Thursday the 7th September next, at the Bowling-green House on the said heath, where the sale is to be; at 2*s.* 6*d.* per ticket; the highest prize 220*l.*, the lowest 10*s.* Note, the house is let at 14*l.* 10*s.* per an., and but one guinea per an. ground-rent, the title clear and indisputable." The price of tickets for "Mrs. Symonds' sale of a japanned cabinet and weighty plate, in which there is but 11 blanks to a prize," was 5*s.* each. Mr. William Morris, mentioned above, risked for his 2*s.* 6*d.* tickets "a fine diamond cross, set transparent, with a button all brilliants, plate, atlases on silk, six silk nightgowns, and several other valuable things." At Mrs. Mortly's India House, at the Two Green Canisters, on the pavement in St. Martin's Lane, were to be had "all sorts of Indian goods, lacquered ware, China fans, screens, pictures, &c., with hollands, muslins, cambrics, fine embroidered and plain short aprons, and divers other things, to be disposed of for blank lottery tickets, at 7*l.* each, and the goods as cheap as for specie. These were the "great goes," but for persons of less ample purses there were "sales" for which the tickets cost 1*s.*, 6*d.*, 3*d.*, and even as low as 2*d.* "Mrs. Painer's threepenny sale of goods is to be drawn on Tuesday next, the 15th inst., at the Queen's Head in Monmouth Street, Soho. There are some tickets yet to be disposed of there, and at her own lodgings, a clockmaker's, over-against Dean's Court in Dean's Street, St. Anne's; at Mrs. Williams,' at Charing Cross, chandler; and at the combmaker's in New Street, Covent Garden." These disguised gambling-houses germinated and multiplied in every court and blind alley of London, and the prices of the tickets were adapted to the pockets of all classes, from the duchess to the cinder-wench, as the temptations were also suited to the tastes of each. * * This plan of getting rid of stale goods with profit is not yet altogether obsolete. * * Nay, the thing seems to be threatening to raise its head once more in London, and with a delicious hypocrisy, under the pretext of patronising and improving British art. The history of this "revival" is brief. In Scotland—where the genius of economy is rampant, and also the love of patronising, a number of amateurs have for some years been in the habit of clubbing to buy pictures at the Edinburgh exhibitions, and dividing the spoil by lot. An imitative association was set on foot here, either by picture-fanciers who had a mind to get pictures, or by artists who wished to get their unsaleable stock out of their studios—no matter which. So far these associations were what they gave themselves out for. The fashion has become contagious, and now we find, starting up in every street, "little-goes" for the "sale" (to adopt the phraseology of 1710) of printsellers' and picture-dealers' unsaleable stock. The system is an admirable one for accelerating the emptying of lumber rooms with advantage to their owners, and for increasing the already portentous number of walls in respectable houses stuck all over with stiff and glaring daubs. And this device for enabling demure conventional moralists to indulge the taste for gambling inherent in all human beings, with little apparent risk or breach of decorum, is trumpeted with the hundred Stentor-power lungs of the puffing press as the day-dawn of a new and brilliant era in British art! The truth is, that the "teapots," "japanned cabinets," and "buttons of brilliants," which attracted the gulls of Queen Anne's reign, were quite as much entitled to the epithet—"works of art," as the pieces of plastered canvas vended by means of the London little-goes of the present day.—*Knight's London.*

Distributions.—The above is a true picture of the state to which we are fast approaching. Meanwhile we record progress. "T. J., Bookseller and Stationer, —— Street, begs to inform his friends and the public that on Thursday, the 13th of April, he will distribute gratuitously the undermentioned valuable works, in superb bindings, to a limited number of purchasers of either Nevin's Life and Remains—Spirit of English Wit—Sketches of Young Gentlemen of the Nineteenth Century—or a Beautiful Print of Newington Church, at two shillings and sixpence each. [Here follows a long list of books to be

Digitized by Google

distributed.] The above works are on view, at —— and will be inscribed (to the parties who obtain them) as a present from their bookseller, or exchanged for any other work in the shop of the same value." And these proceedings, we are told, are not illegal; for surely a pretence about the moral influences of literature is as good as a pretence about art, music or philosophy — pictures, musical and philosophical instruments. On this subject a correspondent observes, "The contradictory opinions of the lawyers are, in one essential point, equally absurd. Both Serjeant Talfourd and Mr. Kelly found their arguments on the assumption, that the projectors of these schemes are disinterested, the direct contrary being notoriously the fact, in nineteen cases out of twenty; and, further, that Art-Unions are beneficial to Art, whereas as you have shown, almost to a demonstration, they tend necessarily to the degradation, and ultimately to the utter ruin of Art." Another pertinently asks, "If, as Mr. Kelly asserts, these Art-Unions are legal, why was Alderman Boydell obliged to obtain a special Act of Parliament, to enable him to dispose of his pictures and prints, and why was an extension of the Act sought for in successive sessions, till he had filled his subscription list? Why were other parties in like manner obliged to obtain Acts of Parliament, before they could dispose of Tomkin's Works, Macklin's Bible, &c.?"

Dunse, 3rd April.

Meteorological Phenomena.—On the night of Wednesday the 29th ult., a very interesting display of meteorological phenomena was witnessed here. Shortly after 8 P.M. the sky became quite clear, an aurora borealis appeared in the usual quarter, which extended upwards, increasing in brightness, until it formed a well-defined luminous arch, having its apex in the magnetic meridian, at an altitude of about 10° or 12°. From this a rather brilliant display of streamers proceeded, which lasted for a considerable time. At 9h. 30m. P.M. the aurora was almost exhausted, there being only a faint light in N.W. Suddenly, at 9h. 35m. P.M., a splendid luminous streak or arch appeared, spanning almost across the sky, in a direction nearly at right angles to the magnetic meridian. Its breadth was about a degree, and was pretty uniform throughout; the intensity of the light, however, faded gradually from the west, where it was brightest, towards the east. Its course lay between the sword and belt of Orion, passing over *Beta* Canis Minoris, Presepe in Cancer, the head of Leo, the star Alpha in the Greyhounds, &c. It culminated at an altitude of about 68° above the S.S.E. point. During its whole continuance, which was upwards of twenty minutes, it did not shift its position in any perceptible degree, although it underwent several variations in its brightness. By 10 P.M. all traces of it or the aurora had disappeared. Many persons supposed it to be the tail of the comet, especially as it proceeded from about that quarter of the heavens where that unexpected celestial visitant is at present located. It was, however, nothing more than a feature of the aurora, similar phenomena having accompanied the auroræ of the 22nd of March and 19th of November, 1841. Its remaining all along in the same position, furnished an excellent opportunity for determining its altitude above the earth's surface, should it have been, fortunately, observed in other localities.—I am, &c.,

W. Stevenson.

Booksellers' Provident Retreat.—In furtherance of this benevolent project, a meeting took place this week at the Albion Tavern, and the following gentlemen were elected a committee of management.—Mr. Cosmo Orme, Mr. J. Duncan, Mr. A. Newman, Mr. J. Nisbet, Mr. E. Hodgson, Mr. J. Brown, Mr. C. Lesley, Mr. H. Foss, Mr. Baldoch, Mr. Malcolm, Mr. Rode, Mr. J. Bigg, and Mr. Sharpe.

Printers' Alms-houses.—From the Report read at the general meeting we fear that this Association has not met with the encouragement it deserves; the committee of management however express a confident hope of ultimate success.

Cemeteries.—At a late meeting of the Metropolitan Improvement Society, Mr. Hickson mentioned that in Paris three cemeteries, upon a large scale, had been considered sufficient for the population, and would have proved so, but for the practice of selling freehold plots for the erection of tombs, a practice which was about to be abolished, and which, if national cemeteries were to be formed here, should also be disallowed by our own Legislature. In Paris it was found that the freehold plots occupied by tombs had, within forty years, covered a space of 100 acres, and it was feared that if the system continued to be pursued, every town in France, within a century, would be completely encircled by monuments of the dead. The municipal council had therefore determined to sell no more freeholds, but to grant, instead, long terminable leases.

Heat and Light.—The *Emancipation* of Brussels announces that the directors of the Belgian railroads have made a discovery, and proved it by trial on the southern line, whereby the consumption of fuel may be reduced by 50 per cent. It is said to consist in improvements of the drawers of the engine and in the steam-pipe. The *Presse* mentions that a trial of a mode of lighting by means of the new voltaic pile is about to be made, on the Boulevards. It is said that the light is ten times more brilliant than that of gas.

Burns.—One of the Poet's heroines, Mrs. Hay, died on the 3rd ult. at Pau, in Berne. We learn from the Inverness Courier that Mrs. Hay was the daughter of Mr. Chalmers, and one of the favourites of Burns during his Edinburgh sojourn. "Next to Mrs. Dunlop, Miss Chalmers seems to have stood highest in Burns's estimation, and the unreserved disclosures which he made to her of his feelings and sentiments and private views are the best evidence of the entire confidence which he reposed in her admirable good sense, taste, and judgment. Mrs. Hay was also celebrated by Burns in his songs—

> My Peggy's face, my Peggy's form,
> The frost of hermit age might warm.

Burns, it will be recollected, was fond of displaying the little knowledge of French which he had picked up by a fortnight's tuition from his old preceptor Murdoch, and on this head Mrs. Hay used to relate an amusing anecdote, which we give in the words of Mr. Campbell, the poet. 'One of his friends (Mrs. Hay, then Miss Chalmers) carried him into the company of a French lady, and remarked with surprise that he attempted to converse with her in her own tongue. Their French, however, was mutually unintelligible. As far as Burns could make himself understood, he unfortunately offended the foreign lady. He meant to tell her that she was a charming person, and delightful in conversation, but expressed himself so as to appear to her to mean that she was fond of speaking; to which the Gallic dame indignantly replied, that it was quite as common for poets to be impertinent as for women to be loquacious.'"

Mrs. Honey.—The papers announce the death of this lady, on Sunday last, from the effects of inflammation, induced by over-exertion in her profession. "Her last engagement was at the City of London Theatre, and her final appearance there was on Saturday, the 25th of March. She was the daughter of Mrs. Young, an actress of some repute, and born on the 6th of December, 1817, and was therefore in her 26th year. Early in life she was engaged at Sadler's Wells, the Olympic, Victoria, and Surrey theatres, where she exhibited considerable ability under the name of Laura Bell. At the early age of sixteen she formed a matrimonial alliance with Mr. Honey. Mr. Honey was unfortunately drowned in a sailing party on the Thames, in the year 1836. Mrs. Honey was engaged at the New Strand Theatre, in 1833, where she first attracted public notice in the character of Lilias, in Leman Rede's drama of 'The Loves of the Angels' when under the management of Mrs. Waylett. Her next remove was to the Adelphi, where she became highly popular in the burletta of Cupid,' with the late John Reeve. Here she remained some seasons. Her next engagement was at the Haymarket, at which theatre she opened in Buckstone's farce of 'Open House;' from thence, having established herself as a public favourite, she visited nearly all the provincial theatres with great pecuniary advantage and *éclat*, and a few years back was lessee of the Norton Folgate theatre. She has subsequently been engaged at the Haymarket and Queen's; at the latter theatre she was engaged to appear next Easter Monday."

To Correspondents.—The increase in our subscribers has, this year, so far exceeded expectation, that the January numbers are out of print; and the announcement of our publisher, a fortnight since, that he was willing to purchase copies, having altogether failed to procure them, we have given instructions to have them reprinted. The compliment is, we admit, great, though the return courtesy is somewhat costly. While on this subject, we wish to say a few words respecting the numbers printed of this journal,—a question which naturally affects the interests of advertisers, and on which, as we are informed by our publisher, there is some misapprehension. The sale of a literary journal cannot be judged of by what are called the Stamp Returns. In 1836 there was no stamped edition of this paper: there were only two issues—the one weekly, the other monthly. In that year it was resolved to follow the example of other literary journals, and issue a stamped edition, for the convenience of persons residing at a distance from the customary bookselling channels through which the work was then exclusively distributed. The Stamp Returns, therefore, relate only to *this addition to* our circulation.

A.—An Artist—three "Constant Readers"—W. C. B.—Anti-Art-Union—received. G. R. next week.

In 12mo. illustrated by 56 Engravings, 2s. 6d. bound,
ELEMENTS of ASTRONOMY: adapted for Private Instruction and Use in Schools.
By HUGO REID, Lecturer on Natural Philosophy.
Oliver & Boyd, Edinburgh; Simpkin, Marshall & Co. London.

This day is published, in 1 vol. small 8vo. price 7s. 6d. cloth,
LEGENDS, LYRICS, and other POEMS.
By B. SIMMONS.
Wm. Blackwood & Sons, 45, George-street, Edinburgh; and 22, Pall Mall, London.

This day is published, price 6s. cloth,
THE MAN O' WAR'S MAN.
By BILL TRUCK,
Senior Boatswain of the Royal College of Greenwich.
(Originally published in *Blackwood's Magazine.*)
Wm. Blackwood & Sons, 45, George-street, Edinburgh; and 22, Pall Mall, London.

Now ready, with a large Travelling Map, post 8vo. 15s.
MR. MURRAY'S HAND-BOOK for CENTRAL ITALY, including the PAPAL STATES, ROME, and the CITIES of ETRURIA.
John Murray, Albemarle-street.

Now ready, 2nd edition, 2 vols. post 8vo. 18s.
THE GYPSIES of SPAIN; their MANNERS, CUSTOMS, LANGUAGE, and CEREMONIES.
By GEORGE BORROW, Esq.
Author of the 'Bible in Spain,' and late Agent of the British and Foreign Bible Society in Spain.
John Murray, Albemarle-street.

Now ready, post 8vo.
LETTERS from MADRAS; or, Life and Manners in various parts of that Presidency, described during a Three Years' Residence. By A LADY.
John Murray, Albemarle-street.

Now ready, with a Map, 8vo. 10s. 6d.
THE CAMPAIGN of 1812, in RUSSIA.
Translated from the German of GENERAL CARL VON CLAUSEWITZ.
John Murray, Albemarle-street.

Now ready, post 8vo. 7s. 6d.
THE INFLUENCE of FOOD on HEALTH and DISEASE; or, an ACCOUNT of the Effects of DIFFERENT KINDS of ALIMENT on the HUMAN BODY.
By MATTHEW TRUMAN, M.D.
John Murray, Albemarle-street.

Next week, with a Portrait, 3 vols. 8vo.
LIFE of SIR DAVID WILKIE: with his Journals and Critical Remarks on Works of Art during his Tours in France, the Netherlands, Italy, Spain, Germany, Turkey, the Holy Land and Egypt; and a Selection from his Correspondence. By the late ALLAN CUNNINGAM, Esq.
John Murray, Albemarle-street.

LADY SALE'S JOURNAL of EVENTS in AFFGHANISTAN, will be published NEXT THURSDAY.
John Murray, Albemarle-street.

3rd edition, with additional Essays. Fcap. 8vo. 6s. 6d.
ESSAYS and ORATIONS, read and delivered at the Royal College of Physicians. To which is added, an Account of the Opening of the Tomb of King Charles I.
By Sir HENRY HALFORD, Bart. M.D.

Also, just published, fcap. 8vo. 3s. 6d.
Nugæ Metricæ. Latin Poems and Translations.
By Sir Henry Halford, Bart. M.D.
John Murray, Albemarle-street.

Now ready, with a Portrait, 2 vols. 8vo. 28s.
MEMOIRS and CORRESPONDENCE of the late FRANCIS HORNER, M.P. Edited by his Brother, LEONARD HORNER, Esq.
"Few statesmen had more personal friends than Mr. Horner—and personal enemies, we believe, he had none. But is it right to suppress all the MS. memorials of his zeal, and ardour, and never-ending industry, until they who might have produced them to the best advantage shall have been withdrawn from amongst us?"—*Extract from the Quarterly Review*, June, 1827.
John Murray, Albemarle-street.

In 8 vols. post 8vo. price 6s. each.
HISTORY of SCOTLAND.
By PATRICK FRASER TYTLER, Esq., Second Edition. And lately, VOLUME VIII. of the First Edition, 8vo. 12s.
"One more will complete the Work, which we venture to predict will then become, and long remain, the Standard History of Scotland."—*Quarterly Review.*
William Tait, Edinburgh; Longman & Co. London.

In small 8vo. price 7s. the 2nd edition of
THE CHURCH of the FATHERS.
By JOHN HENRY NEWMAN, B.D.
Vicar of St. Mary the Virgin's, Oxford, and Fellow of Oriel College.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

In 2 vols. 8vo. price 1l. 4s.
THE CHURCHMAN'S YEAR; or, Liturgical Remarks on the Sundays and Saints' Days, and the Lives of the Apostles; with an Explanation of every Epistle, Gospel, and First Lesson.
By GEO. FYLER TOWNSEND, M.A.
Of Trinity College, Cambridge.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

THE PSALTER, WITH THE GREGORIAN CHANTS.
This day is published, a New and Cheaper Edition, in pocket size,
THE PSALTER; pointed for Chanting: to which are added the GREGORIAN CHANTS; with Suggestions as to the proper Chants to be sung to each Psalm. Price (strongly sewn in cloth) 2s.; or at a reduction to Clergymen purchasing in quantities for congregational use.
London: James Burns, 17, Portman-street, Portman-square.

This day,
THE ORDER of DAILY SERVICE, the LITANY, and OFFICE of the HOLY COMMUNION, With the Ancient Musical Notation, printed in red and black, with antique ornamental borders. Edited by WM. DYCE, Esq. Small 4to. price two guineas, extra boards. A few copies are printed on large paper at four guineas. Dedicated, by permission, to the Right Rev. Edward Lord Bishop of Salisbury.
This volume contains the Ancient Music, as adapted to the First Prayer Book of Edward VI., by John Marbecke, together with the Litany Chant, and other portions of Gregorian Music not included in his work; thus forming a complete Choral Book for the Service of the English Church. An explanatory Introduction by the Editor is prefixed.
London: James Burns, 17, Portman-street, Portman-square.

NEW WORKS.

Just ready:

1.

THE LIFE of ADDISON. By LUCY AIKIN. Illustrated by many of his Letters and Private Papers never before published. With a Portrait of Addison, engraved from the Picture by Sir Godfrey Kneller. 2 vols. post 8vo.

2.

THE RAMBLES of the EMPEROR CHING TĬH: a Chinese Tale. Translated by TKIN SHEN. Edited by Dr. LEGGE. 2 vols. post 8vo.

3.

THE HOME, or Family Cares and Family Joys. By FREDERIKA BREMER, Authoress of 'The Neighbours.' Translated by MARY HOWITT. 2 vols. post 8vo.

4.

EVA ST. CLAIR, and other collected Tales. By G. P. R. JAMES, Esq. 2 vols. post 8vo.

5.

ARTS, ANTIQUITIES, and CHRONOLOGY of ANCIENT EGYPT. From Personal Observations in 1839. By G. H. WATHEN, Architect. One vol. royal 8vo. with numerous Plates and Woodcuts.

6.

THE SCENERY of the DEVONSHIRE RIVERS Illustrated by a Series of Sketches and Studies, drawn from Nature. By F. C. LEWIS, Engraver to the Queen. With an Introductory Discourse on Landscape Painting, by the Author. Imp. 4to. with 25 Plates.

7.

THE SECOND VOLUME OF

THE CORRESPONDENCE of the FOURTH DUKE of BEDFORD. With Introduction, by LORD JOHN RUSSELL. 8vo.

8.

LECTURES on COMPARATIVE ANATOMY, delivered at the Royal College of Surgeons, in 1843, by RICHARD OWEN, F.R.S. &c., Hunterian Professor to the College; from Notes taken by WILLIAM WHITE COOPER, M.R.C.S. Fellow of the Royal Medical and Chirurgical Society, &c., and revised by Professor OWEN. To be published in Weekly Numbers, illustrated by Woodcuts, 8vo. 1*s.* each.—No. 1 is now ready.

9.

A TREATISE on FOOD and DIET, and the Dietetical Regimen suited for a Disordered State of the Digestive and other Organs: with Formulas of Dietaries for Prisons, Union Workhouses, and other Public Institutions. By JON. PEREIRA, M.D. F.R.S., Author of 'Elements of Materia Medica.' Demy 8vo.

Just published:

1.

CRITICAL and HISTORICAL ESSAYS contributed to the Edinburgh Review. By the Right Hon. THOMAS BABINGTON MACAULAY. 3 vols. 8vo. 26*s.* cloth.

2.

LAYS of ANCIENT ROME. By the Right Hon. T. B. MACAULAY. Third Edition, 8vo. 10*s.* 6*d.* cloth.

3.

THE LIFE of a TRAVELLING PHYSICIAN. 3 vols. post 8vo. with 3 coloured Plates, 1*l.* 11*s.* 6*d.* cloth.

"These volumes are replete with interest. The author possesses a quick, humorous, observant power; his style of narrative is easy and unaffected; he does not walk the world on stilts; but feels, enjoys, and describes its mingled scenes, as a well-educated man. Those who read for amusement—those who desire information, will do well to purchase these volumes, for they will find the Travelling Physician an excellent instructor, a gay companion, and a cheerful friend."
John Bull, April 1, 1843.

4.

MASTERMAN READY; or, the Wreck of the Pacific. By Captain MARRYAT, C.B. 3 vols. fcap. 8vo. with numerous Wood Engravings, 22*s.* 6*d.* cloth.

"People of all ages may derive amusement, information, and advantage from its perusal."
Naval and Military Gazette.

5.

THE RURAL and DOMESTIC LIFE of GERMANY; with Characteristic Sketches of its chief Cities and Scenery. Collected in a General Tour, and during a Residence in that Country in the years 1840-41-42. By WILLIAM HOWITT. Medium 8vo. with above 50 Engravings on Wood, 21*s.* cloth.

By the same Author,

1. THE RURAL LIFE of ENGLAND. New edition, medium 8vo. with Engravings on Wood, by Bewick and Williams, uniform with 'Visits to Remarkable Places.' 21*s.* cloth.

2. VISITS to REMARKABLE PLACES—Old Halls, Battle Fields, and Scenes illustrative of Striking Passages in English History and Poetry. New edition, medium 8vo. with 40 Illustrations by S. Williams. 1*l.* 1*s.* cloth.

3. VISITS to REMARKABLE PLACES, Second Series; chiefly in the Counties of Durham and Northumberland, with a Stroll along the Border. With upwards of 40 highly-finished Woodcuts, medium 8vo. 1*l.* 1*s.* cloth.

6.

ROBERT SOUTHEY'S POETICAL WORKS. First and only Complete Edition. Collected and edited by Mr. SOUTHEY. With Autobiographical Prefaces. 10 vols. fcap. 8vo. with Portrait, and 19 other Plates, 2*l.* 10*s.* cloth; handsomely bound in morocco, with gilt edges, 4*l.* 10*s.*

The following may be had, separately, in cloth—

*** A few copies printed on prepared paper of great beauty, 2*l.* 2*s.* ultra-marine cloth.

10.

AN ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical. By J. GWILT. One thick vol. 8vo. of 1100 pages, illustrated by upwards of 1000 Engravings on Wood, 2*l.* 12*s.* 6*d.* cloth.

11.

A DICTIONARY of SCIENCE, LITERATURE, and ART; comprising the History, Description, and Scientific Principles of every Branch of Human Knowledge, with the Derivation and Definition of all the Terms in general use. Edited by W. T. BRANDE, F.R.S.L. & E.; assisted by JOSEPH CAUVIN, M.A. One very thick volume, 8vo. illustrated by Wood Engravings, 2*l.* cloth.

12.

AN ENCYCLOPÆDIA of GEOGRAPHY; comprising a complete Description of the Earth; exhibiting its relation to the Heavenly Bodies, its Physical Structure, the Natural History of each Country, and the Industry, Commerce, Political Institutions, and Civil and Social State of all Nations. By HUGH MURRAY, F.R.S.E.; assisted by Prof. WALLACE, Prof. JAMESON, Sir W. J. HOOKER, and W. SWAINSON, Esq. New edition, brought down to 1840, with 82 Maps drawn by Sidney Hall, and upwards of 1000 other Engravings on Wood, from Drawings by Swainson, T. Landseer, Sowerby, Strutt, &c. representing the most remarkable objects of Nature and Art in every region of the Globe. One very thick vol. 8vo. 3*l.* cloth.

13.

A DICTIONARY, Practical, Theoretical, and Historical, of COMMERCE and COMMERCIAL NAVIGATION. By J. R. M'CULLOCH, Esq. New Edition, with Supplement, corrected to September last, with Maps and Plans, 8vo. 2*l.* 10*s.* half-bound vellum.

The New Supplement, containing the New Tariff, and other important Articles, separately, 5*s.* sewed.

14.

A DICTIONARY, GEOGRAPHICAL, STATISTICAL, and HISTORICAL, of the various Countries, Places, and Natural Objects in the WORLD. By J. R. M'CULLOCH, Esq. Two thick vols. 8vo. with 6 large Maps, 4*l.* cloth.

15.

ENCYCLOPÆDIA of PLANTS; including all the Plants which are now found in, or have been introduced into, Great Britain; giving their Natural History, with such Descriptions and Figures as may enable a beginner, who is a mere English reader, to discover the name of every Plant which he may find in Flower. Edited by J. C. LOUDON, F.L.S. H.S. &c. New Edition, with a New Supplement, one very large volume, 8vo. with nearly 10,000 Engravings on Wood, 2*l.* 13*s.* 6*d.* cloth.

"The most useful and popular botanical work which has ever appeared in the English language."
Professor Jameson's Philosophical Journal.

By the same Author,

ENCYCLOPÆDIA of GARDENING. 2*l.* 10*s.*
ENCYCLOPÆDIA of AGRICULTURE. 2*l.* 10*s.*
HORTUS BRITANNICUS. 1*l.* 11*s.* 6*d.*

16.

Maunder's Popular Treasuries.

1. THE TREASURY of KNOWLEDGE and LIBRARY of REFERENCE: a Dictionary of Universal Knowledge. New edition (the 14th), revised and enlarged. Fcap. 8vo. 8*s.* 6*d.* cloth; embossed roan, with gilt edges, 10*s.* 6*d.*

2. THE BIOGRAPHICAL TREASURY: a Dictionary of Universal Biography; comprising 12,000 Memoirs. New Edition (the 4th), with a Supplement, completing the Work to 1842. Fcap. 8vo. 8*s.* 6*d.* cloth: embossed roan, with gilt edges, 10*s.* 6*d.*

"Riddle's Dictionary is the best of its kind in our language; and we rejoice to hear that in our principal schools it is fast superseding all others. The Abridgment is a careful condensation of the original."—*Athenæum.*

20.

REPORT on the GEOLOGY of the COUNTY of LONDONDERRY, and of Parts of Tyrone and Fermanagh. Examined and described under the Authority of the Master-General and Board of Ordnance. By J. E. PORTLOCK, F.R.S. F.G.S. M.R.I.A. M.R.D.S. &c. With a large coloured Map, 9 large Sections (most coloured), 45 Plates of Fossils, containing very numerous Figures, 26 Illustrations on Wood, and above 800 pages of Letter-press. 8vo. 24*s.* cloth.

21.

BIOGRAPHICAL DICTIONARY of the SOCIETY for the DIFFUSION of USEFUL KNOWLEDGE, the First Part of the Second Volume. 8vo. 12*s.* cloth.—This half-volume comprises Alexander of Selecta to Auguste Ameil, and includes Lives of Alfieri, the Alfonsos, Alfred, the Alis, the Alvarez, &c.

*** Vol. II., Part 2, will be published on the 1st of May.

"It has rarely fallen to our lot to examine a work of this kind, the general execution of which has been so creditable to the learning and taste, both of the editor and of his several contributors. The various and profound learning which it displays, the impartiality of its criticisms, its sound judgment and freedom from prejudice both political and religious, promise to render the Dictionary alike honourable to the Society with whom the undertaking has originated, and commensurate with the wants and capabilities of our present literature."—*Eclectic Rev.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In demy 8vo. price 8s. 6d. cloth, with a Map,
THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.
By WILLIAM DESBOROUGH COOLEY.
"A truly classical work....This work, well considered, is historical rather than geographical and ethnographical: it is unquestionably the only truly-critical work hitherto undertaken and completed on the subject."—Count Gräberg da Hemsö, in the *Rivista Europea*, May, 1842.
"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated....The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great. ....The book is characterized throughout by acuteness and sound judgment."—*Royal Geogr. Society's Journ.* Vol. XII.
"We owe all our accurate knowledge of the early movements of the Moors and Arabs in Negroland to the researches of the judicious Cooley. 'The Negroland of the Arabs' well deserves perusal."—*Friend of Africa.*
"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*
London: J. Arrowsmith, 10, Soho-square; and all Booksellers.

Rivingtons, St. Paul's Churchyard, and Waterloo-place.
Of whom may be had, by the same Author,
The *Fifth Edition* of the First Part. In 8vo. 6s. 6d.

DARLEY'S SCIENTIFIC LIBRARY, for the Use of Schools, Private Students, Artists, and Mechanics.
It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics, these little works will be found particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind, and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.
1. A System of Popular Geometry. Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading Truths and general Principles. By George Darley, A.B. Fourth Edition. 4s. 6d. cloth.
2. Companion to the Popular Geometry. In which the Elements of Abstract Science are familiarised, illustrated, and rendered practically useful to the various purposes of Life, with numerous Cuts. Second Edition. 4s. 6d. cloth.
3. A System of Popular Algebra, with a Section on Proportions and Progressions. Third Edition. 4s. 6d. cloth.
4. A System of Popular Trigonometry, both Plane and Spherical; with Popular Treatises on Logarithms, and the Application of Algebra to Geometry. Second Edition. 3s. 6d. cloth.
"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra.'—*Library of Useful Knowledge, Article 'Mechanics.'*
Taylor & Walton, Booksellers and Publishers to University College, 28, Upper Gower-street.

A FULL REPORT of the PROCEDURE at the TWENTY-NINTH ANNUAL GENERAL COURT of the SCOTTISH (Widows' Fund) LIFE ASSURANCE SOCIETY, held on the 7th March, 1843, may be obtained at the Head Office, No. 5, St. Andrew's-square, Edinburgh; or of any of the Society's Agents.

Donald Maclean, Esq.	Joseph Pulley, Esq.
Moses Mocatta, Esq.	John Peter Rasch, Esq.

Auditors—Francis Bligh Hookey, Esq., and Jos. Pulley, jun. Esq.
Actuary, Charles Ansell, Esq. F.R.S.
Solicitor—J. B. De Mole, Esq.
Surveyor—Thomas Hopper, Esq.
Assistant Surveyor—Thomas Lloyd, Esq.
FIRE DEPARTMENT.
RETURNS.—The Directors have the satisfaction of announcing to the Assured in this Office, that a return of premium at the rate of 20 per cent. for the five years up to Christmas last, will be payable at the head Office, or through the Company's Agents in Great Britain, on all Policies for 200l. and upwards, which were in force and had been so for one entire year at Christmas.
RENT.—This Office (independent of the Returns and the late reduction in the rates of premium), offers to persons effecting Assurances, the further advantage of an allowance for the loss of rent on buildings rendered untenantable by Fire.
RENEWALS.—Policies due on Lady Day should be renewed within fifteen days thereafter.
LIFE DEPARTMENT.
The attention of the Public has, in the advertisements and proposals of this Company of late years, been called to a Table of Additions applicable to and expectant on Policies of particular dates and ages; the Directors now beg to refer to a Statement (which may be obtained on application at the Office in Cheapside, or to any of the Agents in the Country) of Sums *actually paid*, showing the sums respectively assured and the Bonuses thereon.
Persons assured for the whole term of Life in *Great Britain* or *Ireland* respectively, will have an Addition made to their Policies every seventh year, or an equivalent Reduction will be made in the future payments of Premium, at the option of the Assured.
The Fourth Septennial Valuation will be made up to Christmas 1844.—Assurances for Short periods may now be effected in this Office at considerably reduced rates of Premium.
The Company's Rates and Proposals may be had at the Office in London, or of any of the Agents in the Country, who are authorized to report on the appearance of Lives proposed for Assurance.
HENRY DESBOROUGH, Secretary.
92, Cheapside, June, 1842.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION,

At the WESTMINSTER FIRE OFFICE, No. 27, King-street, Covent-garden.

A DIVIDEND OF THE PROFITS OF THIS SOCIETY WAS DECLARED ON THE 1st JANUARY, 1849, by which an addition, amounting on the average to 45 PER CENT. on the Premiums received was made to all Policies entitled to share therein.

FOUR-FIFTHS, or 80 PER CENT. of the total profits, are divided among the Assured at intervals of five years; and all Policies on which two payments have been made, participate in the division.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.*, or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.

W. M. BROWNE, Actuary.

UNIVERSAL LIFE ASSURANCE SOCIETY.

LONDON, CALCUTTA, MADRAS, and BOMBAY.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Colonel Sir Richard Armstrong, C.B. K.C.T. & S.	William Kilburn, Esq.
John Bagshaw, Esq.	Francis Macnaghten, Esq.
Augustus Bosanquet, Esq.	Charles Otway Mayne, Esq.
Charles Dashwood Bruce, Esq.	Robert Saunders, Esq.
Ellis Watkin Cunliffe, Esq.	James Duncan Thomson, Esq.
Raikes Currie, Esq. M.P.	Capt. Samuel Thornton, R.N.

The Directors of the Universal Life Assurance Society invite attention of Assurers to the returns afforded to Policy holders by their office, as detailed in the statement below, and having every reason to expect that the returns in future years will be equally favourable, the Directors recommend an early application to secure so important a benefit.

The following Table will show the operation of the Reductions made by the Society:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduction.	Annual Premium payable in 1840-41-42.
20	May 1834	£1,000	£19 6 8	£11 12 0	£7 14 8
30	—	1,000	24 8 4	14 13 0	9 15 4
40	—	1,000	31 10 0	18 18 0	12 12 0
50	—	1,000	42 15 0	25 13 0	17 2 0
60	—	1,000	66 11 8	39 19 0	26 12 8

D. JONES, Actuary, 1, King William-street.

Agents, with a Board of Management, at

Calcutta.....	Messrs. BAGSHAW & CO.
Madras	— HALL, BAINBRIDGE & CO.
Bombay.....	— LECKIE & CO.

PELICAN LIFE ASSURANCE OFFICES,

70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Nixon Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

ARGUS LIFE ASSURANCE COMPANY,

39, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.

In addition to the subscribed Capital of 200,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and unaccumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 3 7	2 0 7
40	1 5 0	1 6 9	3 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.*

This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.

The *extra Premium* discontinued on restoration of the Assured to permanent health.

Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease.

Members of Consumptive Families assured at Equitable Rates.

Healthy Lives are assured at *Lower Rates* than at most other Offices.

F. G. P. NEISON, Actuary.

FOUNTAINS, VASES, TAZZAS, FIGURES,

&c. in Marble, Artificial Stone, and Parker's Cement, to be seen at WYATT, PARKER & CO.'S WHARF, Holland-street, Surrey foot of Blackfriars-bridge. Also, a large Collection of Chimney Shafts, Pedestals, Capitals, Consoles, Trusses, &c.

BASS'S EAST INDIA PALE ALE.—This

particular kind of Ale is prescribed by the most celebrated Physicians. Dr. Prout, who has examined it, in his work upon diseases of the stomach, &c., after condemning common ales, especially recommends this to weakly persons. In excellent condition, in casks or bottles, at their appointed Agents, Henry Barry & Co. 3, St. James's-street.

H. PAPE, Pianoforte-maker to his Majesty the

King of the French, 104, New Bond-street.—PATENT GRAND, SQUARE, CONSOLE, and TABLE PIANOFORTES.—H. PAPE, in opening the above establishment, trusts that his instruments will command in this country the same preference they have enjoyed on the Continent for the last 25 years. The sale of nearly 4,000 of them is the best proof of the superiority of his new system of construction, in which the hammer, contrary to the usual mode, strikes the string downwards. The excellence of these instruments for keeping well in tune, for obedience and elasticity of touch, and for their great solidity, is now well known, and a FAIR examination will prove that they are also far superior to all pianofortes of the ordinary construction in power and sweetness of tone. Amongst those at present in the ware-rooms may be seen a Grand Piano of eight octaves, as well as a very remarkable Square, covered with one single sheet of ivory. This was the most remarkable pianoforte present at the Grand National Exhibition at Paris; and for it H. Pape obtained the Gold Medal, and was created, by His Majesty, Chevalier of the Legion of Honour.

MESSRS. BARRY & SON, Stationers and En-

gravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, Crests, &c. for book plates, in their proper HERALDIC COLOURS, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 5*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 7*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their Warehouses,

EGYPTIAN HALL, PICCADILLY, and 192, BISHOPSGATE-STREET WITHIN,

or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.* 12*s.*, and 8*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large, and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting books, Bibles and Prayers, gold and silver pencil-cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papetorie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices.

CHARLES F. BIELEFELD respectfully informs

ARCHITECTS, BUILDERS, DECORATORS, &c. that he has re-published his Quarto Volume, with a Tariff, at a very reduced price, viz. 20*s.* (formerly 3*l.* 3*s.*) containing nearly 1000 patterns of ARCHITECTURAL ORNAMENTS in every style, principally from designs by eminent architects. The ornaments may be had manufactured in the improved PAPIER MACHÉ, at the Works, 15, Wellington-street North, Strand. The book will be forwarded to the country on a receipt of a Post Order for 20*s.*

"This is unquestionably a most valuable invention."—*Literary Gazette.*

"We deem it a duty to make as widely known as possible one of the most admirable inventions of the present day; we allude to the Papier Mâché of Mr. Bielefeld," &c. &c.—*Court Journal.*

"A large Quarto Volume on the use of the improved Papier Mâché in Furniture, the interior Decoration of Buildings, &c., has been placed in our hands; and certainly until we had perused its preface, and glanced over its pictured contents, we had no conception of the number of purposes for which paper was available. Every possible description of Ornaments for ceilings, cornices, panelling, mouldings, &c., which, from the lightness and durability of the material, and susceptibility of high finish, are more than twice the value of any composition."—*Observer.*

"Mr. Bielefeld has shown not only the use of Papier Mâché, but its beauty, so clearly, as to make his volume a sad temptation to persons of more taste than fortune."—*Athenæum.*

"Its lightness, sharpness of outline, and flexible tension of substance, render it, at all events, of incalculable value as a substitute for plaster and wood-carving, or rather as a *vast improvement* on either."—*Polytechnic Journal.*

Papier Mâché Works, 15, Wellington-street North, Strand.

TO CLERGYMEN AND CHURCHWARDENS.

GILBERT J. FRENCH, BOLTON-LE-MOORS, LANCASHIRE,

Respectfully intimates, that in anticipation of Easter, he has prepared an adequate supply of the following much approved accessories to the Church:—

1.

DAMASK LINENS, with appropriate symbolical devices, for the Communion service.

2.

ALTAR CLOTHS in various materials, at prices varying from 1*l.* 10*s.* to 50*l.*

3.

APPROPRIATE COVERINGS for the FLOOR of the COMMUNION or CHANCEL, in Pede Cloths, and Cloths printed with fac-similes of ancient Encaustic Tiles.

4.

SURPLICES of much improved form and durable material, from 30*s.* to 60*s.*

These articles have received the sanction and warm approbation of a large body of influential Clergy and Gentlemen interested in promoting the consistent adornment of the Church. They have been prepared with great care, and at so moderate a price, as to be within the reach of almost any Village Church. It is to be hoped that they may supersede the use of the vulgar and unmeaning patterns and materials so frequently misapplied for the purpose.

A list of prices, with patterns, and every information can be forwarded on application through the post.

Specimens may be seen at No. 13, Henrietta-street, Covent Garden, London, or at Bolton, to which place all correspondence is requested to be addressed.

Parcels delivered in London free of expense.

WATCHES by WEBSTER & SON, Chrono-

meter Makers to the Lords of the Admiralty (Established 132 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

ELECTRO-PLATED and GILT ARTICLES.—

ELKINGTON & Co., patentees, beg to announce, that to meet the increasing demand for this manufacture, they have OPENED an ESTABLISHMENT at

No. 22, REGENT-STREET (CORNER OF JERMYN-STREET), where every variety of articles for the Sideboard, Dinner, Dessert, and Breakfast tables may be inspected. They have also a similar assortment at their City Establishment,

No. 45, MOORGATE-STREET, CITY,

where they have a MANUFACTORY for PLATING and GILDING, RE-PLATING and RE-GILDING, ARTICLES of every description, and of ALL METALS.

With reference to articles of their manufacture, the patentees beg to state, that they differ from all goods hitherto offered as "plated goods," or "substitutes for silver," being made in the same manner as SOLID SILVER, from which they cannot be known, and being also composed of a hard white metal, strongly coated with silver, by the Electro process.

Silver articles of every kind or pattern exactly copied.

Every article made by the patentees or under their licence bears their stamp. (E. & Co. below a crown.)

METCALFE'S NEW PATTERN TOOTH-

BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

DR. GREEN'S SULPHUR, FUME, MEDI-

CATED, and VAPOUR BATHS, 40, Great Marlborough-street.—For more than twenty years Dr. Green's attention has been directed to the remedial agency of baths of different kinds upon the human body; and for the same length of time he has superintended an Establishment for their due and proper administration.

Judiciously employed, Fume and Vapour Baths are beyond all question invaluable as principal or auxiliary means in the treatment of many kinds of chronic disease, particularly Rheumatism and Rheumatic Gout, Affections of the Skin, and impaired functions of the great Abdominal Viscera.

These Baths are accessible at all hours of the day to the public at large, and to members of the medical profession, with their patients, in cases where it is desirable that the medical attendant should witness and direct the administration of the bath.

CARD-PLATE ENGRAVED TO ANY

PATTERN 2*s.*, and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and Name, 5*s.* Note paper 4*s.*, 6*s.*, 8*s.*, and 12*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 1*s.* 4*d.* per quire: no charge for the die. Wafers from the die, 1*s.* per 100, or 6*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, watches, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY—Terms: 1*l.* 5*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

NORTON'S CAMOMILE PILLS are confi-

dently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headache, Bilious and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without, and nearly all Medicine Venders.

DELICACY OF COMPLEXION.—The use

of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a preserver it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.* 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

Exposé of the folly of ascribing Nervousness to Stomach, Liver, and Bowel Complaints.—Just published, 3rd edition, by Dr. Moseley, price 5*s.* ("This is the best book on nervousness we have."—*Prof. S——, Surgeon.*)

ELEVEN CHAPTERS on NERVOUS or

MENTAL COMPLAINTS. Simpkin & Marshall, and all Booksellers. A clergyman of Cambridge University, having cured himself of a nervous complaint of fourteen years' duration, and in eight years, out of 9,000 patients, knows not 20 uncured, offers, from benevolence rather than gain, to cure others. Low spirits, sleeplessness, mental debility, exhaustion, determination of blood to the head, vertigo, groundless fear, failure of memory, incapacity for study and business, restlessness, irresolution, wretchedness, indecision, delusion, melancholy, thoughts of self-destruction, insanity, &c., are curable by this discovery. Most recover in six weeks. Means of cure sent to all parts at the cost or half the cost prices, and no fee for advice demanded. Apply to, or address, post paid, Rev. Dr. Willis Moseley, 9, Charlotte-street, Bloomsbury. At home from 11 till 3.

IMPORTANT WORKS

Published this day by ADAM & CHARLES BLACK, Edinburgh;

And sold in London by LONGMAN & Co.; SIMPKIN, MARSHALL & Co.; WHITTAKER & Co.; and HAMILTON, ADAMS & Co.: and JOHN CUMMING, Dublin.

Beautifully printed in 8vo., and illustrated with a Map of Palestine, constructed expressly for the work, by WILLIAM HUGHES, Professor of Geography in the College of Civil Engineers,

PART I., price 2*s.* 6*d.*, of

A CYCLOPÆDIA OF BIBLICAL LITERATURE,

By JOHN KITTO, Editor of the 'Pictorial Bible,' &c.

Assisted by numerous able Scholars and Divines, British and Continental, whose initials will be affixed to their respective Contributions.

The design of the Editor is to produce an Original Work which, within reasonable limits, and at a moderate price, shall present a comprehensive digest of all the information considered necessary in a work of this description, and embracing the results of those modern researches in Biblical Literature and Science with which it is so important that English readers should be acquainted.

The work is printed in double columns, in a clear and distinct type, and will appear in Monthly Parts, each of which will be embellished either with a highly-finished Engraving on Steel, or with a Map. The volume will also be profusely illustrated with Wood Engravings, representing Landscapes, Buildings, Monuments, Plants, Animals, Illustrations of Manners and Customs, and whatever can be more clearly displayed by pictorial than by written description, or by which the written text may be in any degree elucidated.

Closely and beautifully printed in 8vo., Part I., price 3*s.*, of

A NEW EDITION OF

A SYSTEM OF UNIVERSAL GEOGRAPHY,

FOUNDED ON THE WORKS OF MALTE-BRUN & BALBI,

TO BE COMPLETED IN TEN MONTHLY PARTS.

This work having now received the general approbation of the Press, as one of the most comprehensive and best compiled Systems of Geography in the English language, the Publishers are induced to bring out the new and improved edition in a form which renders it accessible to all classes.

The volume embraces a Historical Sketch of the Progress of Geographical Discovery, the Principles of Mathematical and Physical Geography, and a complete Description, from the most recent sources, of all the Countries in the World, with numerous Statistical Tables, and an alphabetical Index of 12,000 names.

"Executed with masterly ability."—*Atlas.* "The most complete existing book upon Geography in one volume. We strongly recommend it as a book of reference."—*Examiner.* "One of the most comprehensive and best compiled books of the class ever published."—*Britannia.* "The task of reducing, within just limits, the somewhat prolix eloquence of the learned Dane has been ably executed by the Editor of this volume, which, though we have styled it an abridgment, yet extends to more than 1000 closely printed pages. It has an Index also which contains more names than are to be found in most Gazetteers.....A work the careful elaboration of which is equal to its utility."—*Athenæum.*

Part I., price 6*s.*, of a New Edition of

BLACK'S GENERAL ATLAS OF THE WORLD,

TO BE COMPLETED IN EIGHT MONTHLY PARTS,

Comprehending Sixty-one Folio Maps, engraved on Steel in the first style of the art, by Sidney Hall, Hughes, and others, with Geographical Descriptions, Statistical Tables, and an Index of all the Names occurring in the several Maps, amounting to upwards of 50,000, with their Latitude and Longitude, and the No. of the Map in which they will be found.

To the present edition have been added a new map of INDIA on a large scale, with the scene of the recent warlike operations West of the Indus; maps of CHINA, NEW ZEALAND, VAN DIEMEN'S LAND, WESTERN AUSTRALIA, SWAN RIVER, and NEW SOUTH WALES. For the accommodation of the readers of Ancient and Scripture History, there have also been added, two maps of the WORLD as known to the Ancients, maps of the Travels of ST. PAUL, and LOWER EGYPT, while important improvements have likewise been made on the map of PALESTINE.

The work having been revised and corrected throughout, the Publishers are satisfied that in every respect it is accommodated to the present advanced state of Geographical Research, and whether on the ground of accuracy, beauty of execution, or cheapness, they invite a comparison with any other work of the class.

Now completed, in 21 vols. 4to., illustrated by 506 Engravings on Steel, and many thousands on Wood, with a General Index of upwards of 68,000 references,

THE ENCYCLOPÆDIA BRITANNICA,

SEVENTH EDITION.

EDITED BY PROFESSOR NAPIER.

"This is the really cheap Encyclopædia, for that only is cheap which is excellent."—*Athenæum.* "It is our firm conviction that the British public was never before in possession of a work of this class so complete in all its departments, so varied in its subjects, so profound in its information, or sanctioned with the stamp of such great authorities, in every branch of the Arts, Sciences, and General Literature."—*Dublin Evening Mail.* "The first thinkers, writers, and *savans* of the age, have in this book consolidated a body of Philosophy, History, Belles Lettres, Biography, Science, and Art, which fulfils whatever is required from a complete circle of Literature and the Sciences."—*Tait's Magazine.* "For extent of usefulness, and moderation of price, it appears to us unparalleled; and to men whose fortunes and rooms do not permit them the enjoyment of a large collection of books, we cannot conceive a more valuable acquisition than this edition of that most comprehensive of all works,—the 'Encyclopædia Britannica."—*John Bull.*

The work has been reviewed in the strongest terms of commendation by the *Quarterly Review*, the *Athenæum*, and many other of the most ably conducted and authoritative periodicals of the day.

In paper, printing, and embellishment, as well as in the literary value of its contents, the work is accommodated to the improved taste and advanced information of the times; and whether for the purpose of systematic study or occasional reference, the proprietors are satisfied that the seventh edition of the 'Encyclopædia Britannica' will be found to be the most valuable addition which can be made to a modern library.

With Four Engravings, price 7*s.* 6*d.* No. 66, for APRIL, of the

EDINBURGH NEW PHILOSOPHICAL JOURNAL.

Edited by PROFESSOR JAMESON.

Among the Contents of this Number may be mentioned—Prof. Daubeny on the Writings and Philosophical Character of Decandolle—Mr. Henwood on Temperature in Mines—Prof. Ehrenberg on the Fossil Animals of the Chalk Formation—Mr. Galbraith on the English Arc of the Meridian—Dr. Petzholdt on the Diamond—Capt. Stuart's Notice of the Explosion at Dover—Prof. Traill on the Application of Granite to Ornamental purposes—G. P. Blom on the Lapland Rein-Deer, &c.—Meteorological Tables—Proceedings of the Royal Society and the Wernerian Natural History Society—Scientific Intelligence—New Publications—List of Patents, &c.

With Two Engravings, price 6*s.*

The NUMBER for APRIL (CLV.) of the

EDINBURGH MEDICAL and SURGICAL JOURNAL.

Among other Original Articles this Number contains,—Mr. E. Robertson's Medical Notes on Syria—Dr. Holland on certain Conditions of the Blood—Dr. R. Hamilton on Ophthalmic Science—Dr. Dymock's Case of Dislocated Humerus—Mr. Spence's Case of Excision of the Lower Jaw—Dr. Craigie on Aneurism of the Heart, &c.

Among the Books reviewed are,—Drs. Davidson and Trusman on Diet—Mr. Guthrie on Injuries of the Head—Dr. Black on Homœopathy, &c.

The Number concludes with numerous interesting Articles of Medical Intelligence.

In 2 vols. post 8vo. price 21*s.*

A VOYAGE ROUND THE COASTS OF SCOTLAND AND THE ISLES.

By JAMES WILSON, F.R.S.E. M.W.S. &c.
Author of the Treatise on Angling in 'The Rod and the Gun.'

With a Map of Scotland, exhibiting the Tract of the Voyage; a Chart of St. Kilda: Twenty Etchings on Steel, by Charles H. Wilson, A.R.S.A., from Sketches during the Voyage, by Sir Thomas Dick Lauder, Bart.; and numerous Wood Engravings from the same Sketches, drawn by Montague Stanley, Prior, and Sargent, and engraved by Branston, Landells, and other Artists.

"Written in a flowing and animated style.....Those who wish to know Scotland in its Coasts and Islands, will derive from this work both instruction and pleasure; those who desire to know the value of their country, and its institutions, as shown even in the most inaccessible parts of its remotest provinces, will ponder over its contents; and the general reader, who seeks only for that rational amusement which the personal narrative of a lively and intelligent tourist never fails to yield, will find it in these volumes."—*Edinburgh Review.*

Price 12*s.*, in a handsome volume, post 8vo., with numerous Illustrations on Wood and Steel, after drawings by Cooper, Alken, Barenger, and Ferneley, of Melton Mowbray,

THE HORSE AND THE HOUND;

their various Uses and Treatment, in-doors and out; including Practical Instructions in Horsemanship. To which is added a TREATISE on HORSE-DEALING, wherein is enforced the necessity for "*Caveat emptor*," and a recital given of some of the first Legal and Veterinary Authorities on the question of Soundness and Unsoundness of Horses.

By NIMROD.

*** The Engravings on Steel include Portraits of a Racer—a Hunter—a Hackney—and of a celebrated Fox Hound. Among the other Illustrations (after designs by Alken), are the Finish of a Race—Unharbouring the Stag—Horseman Mounting—The Good and Bad Seats—The Faulty Hound—Selling a Horse, &c.

Price 6*s.* with numerous Illustrations on Wood and Steel,

THE SHOOTER'S HAND-BOOK; being the Treatise on Shooting in the 'THE ROD AND THE GUN.'

By the Author of 'THE OAKLEIGH SHOOTING CODE.'

*** The 'Oakleigh Shooting Code' is now withdrawn from circulation, the present volume embracing all the contents of that work which the author deemed worthy of preservation, as well as much new matter, the result of his enlarged experience and more matured opinions.

A TREATISE on the NATURE, PROPERTIES, and APPLICATIONS of STEAM, and on STEAM NAVIGATION.

By JOHN SCOTT RUSSELL, M.A. F.R.S.E. Vice-President of the Society of Arts of Scotland. Illustrated with upwards of Eighty Engravings on Wood, and Fifteen Folding Plates on Steel. Post 8vo. 9*s.* cloth.

"A work on Steam and Steam Navigation, in which science and interesting information are equally combined."—*Mechanics' Magazine.*

By the same Author,

A TREATISE on the STEAM ENGINE.

Illustrated by 248 Engravings on Wood, and 15 Folding Plates on Steel. Post 8vo. 9*s.* cloth.

"Most complete and circumstantial."—*The Surveyor, Engineer, and Architect.*

In small 8vo. price 4*s.*

THE SCOTTISH PEASANT'S FIRESIDE;

a Series of Tales and Sketches illustrating the Character of the Peasantry of Scotland.

By ALEXANDER BETHUNE, Labourer.

Mr. Bethune's former volume was thus noticed by *The Athenæum*:—"It is the perfect propriety of his taste, no less than the thorough intimacy with the unobtrusive subjects he treats of, which gives Mr. Bethune's little book a great charm in our eyes." The work was reviewed in terms equally favourable by *The Spectator*, *Tait's Magazine*, *Chambers' Journal*, and other Periodicals.

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by JOHN FRANCIS; and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh:—for IRELAND, J. Cumming, Dublin.

21, Regent-street, April 7, 1843.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

The Medals of the Institute will be awarded next year to the Authors of the best Essays on the following subjects:—

1. On Cruciform Churches;—their origin, their comparative advantage for the form of worship of the period when they were introduced, and for that of the present age; their general applicability as matter of composition, and their comparative economy with reference to the Ecclesiastical Buildings of other forms.

2. On the form and construction of the early Spire and Tower, and of the Spires and Towers of the later periods of Pointed Architecture, with sections and constructive details, particularly in respect of the junction of the Spire with the Tower, of the thickness of the walls, and the angles of inclination (if any) of the beds of the masonry, and the entasis, or visual correction.

The Soane Medallion will be awarded for the best Design for the enlargement of Greenwich Hospital, so as to embrace the addition, inter alia, of a Public Naval Gallery for Pictures and Statues illustrative of our Naval Victories, and presenting some important feature so as to complete the composition by a central object.

The competition is not confined to Members of the Institute.

The Essays and Drawings are to be sent in on or before the 31st of December, 1843.

Further information may be had on application to the Secretaries, by letter, pre-paid.

CHARLES FOWLER, } Honorary
GEORGE BAILEY, } Secretaries.

16, Grosvenor-street.

MR. MOON, having received Her Majesty's gracious permission, has the honour to announce the private VIEW, by card, of the ROYAL CHRISTENING, painted by C. R. Leslie, Esq. R.A., for the Royal Collection, Windsor Castle.

20, Threadneedle-street, April 8, 1843.

Full particulars, and Hints to Secretaries of Book Societies, sent by post.

CHELTENHAM.—Considerable excitement exists in this town relative to the great sale of the effects of the late Mr. Jonathan Lea, which commences on the 25th of this month. His collection of pictures offers some remarkable specimens of Ancient as well as Modern Art. The Murillo, Paul Potter, Claude, Rubens, Poussin, and some others of the Ancient pictures, are unquestionable. Mr. Lea had devoted a life to the subject, had resided long on the Continent, had discovered and rescued many works, which bore a critical comparison with those in the Public Galleries of Europe. His gallery contains also many fine works of Modern Artists. All, it is expected, will be offered for sale.

OFFICE for PATENTS of INVENTIONS and REGISTRATION of DESIGNS, No. 14, Lincoln's Inn-fields, where all business relating to the Securing and Disposing of BRITISH and FOREIGN PATENTS, Preparation of Specifications, Drawings of Inventions, is expeditiously and economically effected.

Also REGISTRATIONS under the New Consolidated Copyright of Designs Act, 5 & 6 Vict. cap. 100.

A Prospectus, containing much useful information, may be obtained, and references to an Alphabetical List of Patents and Registrations made, on application to Mr. Alexander Prince, 14, Lincoln's Inn-fields.

TO AMATEURS OF ANTIQUITIES.

A DISCOVERY has been recently made in the neighbourhood of Chiusi, the ancient Clusium of the Etrurians, of several spacious Sepulchres, containing Urns, with splendid Bas-Reliefs on them: they are mostly of the finest statuary marble; besides Etruscan Vases, Pateræ, and many other curious objects in bronze.

The proprietor of the land on which these curious and valuable reliques are found, wishes to make it known to such persons who would desire to undertake their excavation. He has already collected some of the articles, which may serve to show what is to be expected from a more attentive research; and he would be willing to dispose of their eventual product to any one who would consider the speculation worthy of attention. The owner of the land will be happy to receive any gentleman desirous of visiting the spot, and afford him accommodation at his own villa on the same property. The Advertiser's address may be had by applying (post paid) to Messrs. J. & R. M'Cracken, 7, Old Jewry.

8, New Burlington-street, April 18, 1843.

"More delightful volumes have rarely come under our notice."—*Observer.*

Saunders & Otley, Publishers, Conduit-street.

UNPUBLISHED LETTERS OF HORACE WALPOLE.

In the press, 3 vols. 8vo. with Portraits from Original Paintings, &c.

LETTERS OF HORACE WALPOLE, EARL OF ORFORD, TO SIR HORACE MANN,

H.B.M. RESIDENT AT THE COURT OF FLORENCE,

From the Year 1760 to 1785.

NOW FIRST PUBLISHED FROM THE ORIGINAL MSS.

Concluding Series.

In the year 1833 the late Lord Holland confided the care of editing these Letters to the late Lord Dover. At that time it was thought advisable to terminate the publication at the period of the death of George the Second, on the ground, that some of the immediate descendants of the persons of whom anecdotes are given might be then alive. A period of ten years has elapsed since that publication; and we are now enabled, by the decision of the surviving executors of the late Earl of Waldegrave, with the concurrence of the present Earl, to lay before the public the remainder of this celebrated Collection, which extends over a period of thirty years, embracing the most striking events in modern English History.

RICHARD BENTLEY, New Burlington-street,
(Publisher in Ordinary to Her Majesty.)

Just ready, 2 vols. 8vo. with Portraits and other Illustrations,

GEORGE SELWYN AND HIS CONTEMPORARIES,

COMPRISING

MEMOIRS AND LETTERS OF

THE EARL OF CARLISLE.	EARL OF HERTFORD.	GENERAL FITZPATRICK.
LADY SARAH BUNBURY.	SIR CHAS. HANBURY WILLIAMS.	HON. T. RIGBY.
GILLY WILLIAMS.	VISCOUNT SYDNEY and the TOWNSHEND FAMILY.	LORD GRANTHAM.
LORD HOLLAND.	COL. CHARLES CHURCHILL.	LORD MACARTNEY.
FOX.	ANTHONY MORRIS STORER.	BISHOP WARBURTON.
HORACE WALPOLE.	EARL OF FIFE.	LORD AUCKLAND.
THE DUKE OF QUEENSBERRY.	DR. WARNER.	LADY EMILY HERVEY.
EARL and COUNTESS of COVENTRY.	JAMES HARE.	LADY DIANA BEAUCLERK, &c. &c.
VISCOUNT BOLINGBROKE.		

With Notes and Illustrations.

EDITED BY J. HENEAGE JESSE, ESQ.

Author of 'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover.'

This body of Letters, illustrative of the Court Life, Town Life, and the fashionable Card and Jockey Clubs of St. James's during the latter half of the last century, is now nearly ready for publication. These letters, like those of Horace Walpole's, (for they are of a congenial spirit,) are full of anecdotes, *bon-mots*, *persiflage*, and the more *recherchée* gossip of the times. At the head of the writers stands Walpole's friend, inimitable George Selwyn, the idol of the then existing fashionable Clubs. With his Letters are included Epistles (hitherto unpublished) of that remarkable knot of personages, male and female, whose peculiar character, humour, and wit, gave so distinctive and so thoroughly English an aspect to the court and fashionable circles during part of George the Third's reign.

RICHARD BENTLEY, New Burlington-street.

A CATALOGUE OF BOOKS

Published by CHARLES KNIGHT & Co.

FOR 1843.

May be had at 22, LUDGATE-STREET, and of respectable Booksellers.

SEVERAL of the more important of the Serial Publications in the Catalogue are rapidly approaching to their completion. The limits of these Works, namely, the PENNY CYCLOPÆDIA, the PICTORIAL EDITION of SHAKSPERE, the PICTORIAL HISTORY of the REIGN of GEORGE the THIRD, and the LONDON, have now been strictly defined, and will be rigidly adhered to by the Editors and the Publishers. The number of volumes, therefore, and the price of each completed Work, are given in the Catalogue, and the exact period is stated at which each will terminate.—It is requested by the Publishers that the order for any selection from their Catalogue may be given through a Bookseller.

THE PICTORIAL HISTORY OF ENGLAND;

Being a History of the People as well as a History of the Kingdom.

Illustrated with many hundred Woodcuts of Monumental Records; Coins, Civil and Military Costume; Domestic Buildings; Furniture, and Ornaments; Cathedrals and other Works of Architecture; Sports and other Illustrations of Manners; Mechanical Inventions; Portraits of Eminent Persons, and Remarkable Historical Scenes.

By GEORGE L. CRAIK and CHARLES MACFARLANE,

ASSISTED BY OTHER CONTRIBUTORS.

In 4 vols. super-royal 8vo. handsomely bound in cloth, price 4*l.* 16*s.*, or arranged in 6 vols. at the same price.

Extracts from Reviews.

"The Pictorial History of England now before us seems to be the very thing required by the popular taste of the present day; adding, to the advantage of a clear historical narrative, all the varied illustrations of which the subject is capable. After the fashion first introduced by Dr. Henry, the authors have divided their subject into periods; the narrative of civil and military events in each being followed by chapters on the history of religion, the constitution and laws, the condition of the people, national industry, manners, and customs; and almost every page in the earlier volumes is enriched with appropriate woodcuts, generally of able execution,—dresses, arms, industrious employments, sports, copied from illuminated manuscripts of the periods to which they belong—views of scenes rendered famous by historical events, taken from drawings or prints as near the period as could be obtained—ample illustrations of architecture and sculpture; portraits and fac-similes—and here and there cuts from historical pictures."—*Edinburgh Review.*

"We value the 'Pictorial History' as a repertory of facts, which, as far as we have examined, appear to have been carefully scrutinized; but we estimate it still more because it suggests to the reader the true philosophy of history—the connexion between events, institutions, and opinions....The work will long continue without a rival, its cheapness and its merits defying competition."—*Athenæum.*

"We cannot but regard the 'Pictorial History of England' as a work of great national value. While it includes all the ordinary details contained in our best histories, it displays an attention to all subjects involving antiquarian research, peculiar, we may say, to itself. As a popular and cheap undertaking, it may be imagined, perhaps, by some, that it was wanting in that minute accuracy which ought to attach to a professed History of England and her people; but we can assure our readers that such an impression would be ill-founded, as very few of our histories will be found safer guides, upon all vital points, than the 'Pictorial History of England.'....Any one wishing to know the military tactics, the state of religion, of government, of national industry, of literature, science, and arts, of manners and customs, and of the social condition of the people, during the reign of any of our sovereigns, may find all these topics handled in an able and instructive manner, under separate heads. But the attention paid by the spirited authors of this history to the subject of our national antiquities entitles them to the highest praise. By keeping their eye steadfastly fixed on this interesting branch of inquiry, they have succeeded in throwing an air almost of romance over their labours, which cannot fail to draw attention to the 'Pictorial History of England' among persons of inquisitive habits of mind. An intelligent child, of ten years of age, having been found poring over the work with great avidity for a whole morning, was asked by her mother, why she was applying so long at a time? Her reply was, 'Mother, I cannot help it, the book won't let me leave it.' This is really a very just description of the effects which the work produces upon more matured minds. Then the pictorial illustrations are exceedingly attractive, and are in general remarkably well executed. The moral, religious, and political bearings of the work are ordinarily very correct, so that it may safely be put into the hands of youth."—*Evangelical Magazine* for January, 1843.

In the advertisement to the concluding volume of the above work, the editor states, that "the whole, if printed in the manner of the Oxford edition of 'Burnet's History of His Own Times,' would make thirty-five such octavo volumes as those of that work, containing about four hundred and fifty pages each." Notwithstanding the extent of this work, which, after all, is very limited, when we consider the great variety of detail to be embraced, it was found necessary to devote a much larger proportionate space to the history of the most recent period. The present work, therefore, terminates with the conclusion of the reign of George II. But a continuation was immediately commenced under the title of 'The Pictorial History of England during the Reign of George III.,' in which the progress of Legislation, Institutions, Arts, Literature, and the Condition of Society in all its departments, as well as the progress of events, is pursued, as far as possible, after the same plan, and by the same authors.

THE PICTORIAL HISTORY OF ENGLAND;

DURING THE REIGN OF GEORGE III.

Being a History of the People as well as a History of the Kingdom.

Illustrated with several hundred Woodcuts.

By GEORGE L. CRAIK and CHARLES MACFARLANE, assisted by other Contributors.

In the original announcement of this work, it was stated that it would be "The History of the American and French Revolutions, and of the long and eventful war produced by the latter, in which it had involved all Europe, our own country on the one side bore the part as France did on the other, blended with the history of a contest of parties and principles at home also most fiercely waged, and the most ennobled by brilliant displays, of any recorded in the annals of the Constitution, and accompanied, moreover, by the history of an activity and advancement in commerce, manufactures, and every other field of peaceful industry and enterprise, making the social aspect of the subject vie in interest with the military and the political." In carrying out this idea, the subject has unavoidably expanded under the hands of the writers. The History of the American Revolution was here, for the first time, to be told with any completeness, and authorities, perfectly new to the historian, had to be consulted for a right understanding of a contest as full of complexity as of interest. The progress of the British Empire in India was of itself a great history. But, above all, the French Revolution required, if treated at all fully, to be gone into with the most searching investigation of original authorities; and it may be safely affirmed that so complete a narrative as is here given of that great event does not exist in English literature. It is a narrow view of the subject to suppose that the history of the events of the French Revolution does not properly belong to a History of England: our history, for a quarter of a century, is entirely dependent on that Revolution. The History of the War against the Power of Bonaparte concludes this eventful narrative. The work therefore extends to four volumes, instead of the three originally announced; but it will be completed in those four volumes on the 1st of December, 1843, price 4*l.* in cloth.

The entire History, in Eight Volumes, comprises nearly Two Thousand Woodcut Illustrations.

The sums paid for the authorship of extensive works have always formed an interesting subject to the Bibliographer; and in the class of historical works the price of the copyright to Hume and Gibbon, amounting to several thousand pounds for each history, has been matter of record. The large body of purchasers of 'The Pictorial History of England' may be gratified in knowing that the work which they have so liberally supported has not been inadequately remunerated—that the authors have received a payment for their arduous and unremitting labours which may assure their readers that cheap literature, whatever may be said to the contrary, is not without its proper reward, when competent writers are engaged in the production of books of universal and permanent instruction. The copyright of 'The Pictorial History of England' has cost the proprietors little short of TEN THOUSAND POUNDS. The unwearied industry of the writers, during the period of seven years in which the work has been in regular monthly course of publication, has enabled them to produce the only complete History of England.

PORTRAIT ILLUSTRATIONS OF THE PICTORIAL HISTORY OF ENGLAND.

One volume super-royal 8vo. with Chronological Index, bound in cloth uniform with 'The Pictorial History of England,' price 2*l.* 2*s.*

This publication consists of a selection of 100 of the most beautiful and authentic Portraits of the most distinguished Characters of modern times, engraved on steel by the first artists of this country. In making such a selection it has been the intention of the publishers to place within the reach of the Subscribers to 'The Pictorial History of England,' at the most moderate price, a complete series of portraits of the master spirits who have most assisted in the progress of our country's greatness. As the object of 'The Pictorial History of England' is to exhibit a history of the people as well as a history of the kingdom, and as it accomplishes this object by describing not only the political events of each period, but the advance of literature, of science, and of the arts; so this collection of Portrait Illustrations includes not only the great statesmen and warriors, but the divines, the lawyers, the physicians, the men of letters, the men of science, and the artists, who have most elevated our national character by contributing the largest portions to our intellectual riches. It is to be observed that this collection of portraits is wholly supplementary to the woodcut illustrations contained in the Pictorial History, and that the portraits of historical personages therein given, in no degree supersede the work now announced.

LONDON, SATURDAY, APRIL 15, 1843.

REVIEWS

The Life of Sir David Wilkie; with his Journals, Tours, and Critical Remarks on Works of Art;—and a Selection from his Correspondence. By Allan Cunningham. 3 vols. Murray.

THE circumstances under which this work appears are calculated to do anything rather than harden the critic's heart, or sharpen his pen. They bring before him two lives, two careers, two death-beds, in place of one! and thus forcibly led into contemplation of the Valley of the Shadow, he is but little disposed to weigh and to question with the usual strictness. Still, however, we must look forward, to the time when,—all adventitious and personal interest having passed,—the public will demand in what manner Allan Cunningham executed the biography of his countryman David Wilkie; and we are therefore bound to say, that the biographer's cares confine themselves to the earlier period of the artist's life—to the manse at Cults, and to the Trustees' Academy at Edinburgh. When once the painter has reached London, we read only as much of his ways of living, thinking, and speaking, as his own journals and letters to a restricted circle of correspondents reveal. This is not all that could have been told of Wilkie. Copious as is the store from which these volumes have been compiled, it might have been quadrupled; and we do not exaggerate in saying, that there can hardly be a London diary or collection of *ana* treating of Literature or Art, during the last twenty years, which will not, when published, furnish additional touches to the self-drawn outline portrait of the Teniers of England here presented.

So recently was it our pride and pleasure to discuss Wilkie's claims as a British artist (*Athen.* Nos. 764, 5, 6), and to point out closely the several stages through which, as it seemed to us, his genius had passed, that we are absolved, on the present occasion, from doing more than tracing his personal career. His father, David Wilkie, a frugal, simple man, was minister of Cults, on the banks of Eden-water, in the county of Fife; and our David was the third son, born of a second marriage, on the 18th November, 1785. The minister's circumstances were but narrow, and it required all the thrift of his wife to keep bed, table, and wardrobe in that decent order which should distinguish a pastor's household. She had time, however, to teach little David his alphabet; though he has been heard to declare that "he could draw before he could read, and paint before he could spell." He was early seen sprawling on the floor, with chalk in his hand, "making," to quote his child's language, "bonnie Lady Gonie" (for *Balgonie*). At seven years old he was sent to the parish school of Pitlessie; but he was fonder of drawing heads on his slate than "doing sums," and made but little progress:—

"'I mind him weel,' said an old man from the banks of Eden-water; 'and I mind his brithers, too; but he was a quieter kindlier lad than his elder brithers; and liked better to stand and look on at his companions at their games, than join in their play. I think I see him now standing smiling wi' his hands in his pouches! Ay, but he liked best to lie *a groufe* on the ground with his slate and pencil, making queer drawings.'"

In the year 1797 he was removed from the school of Pitlessie to that of Kettle, which was then kept by Dr. Strachan, the present Bishop of Toronto. This gentleman—

—"has been heard to declare that Wilkie was the most singular scholar he ever attempted to teach; that, though quiet and demure, he had an eye and an ear for all the idle mischief that was in hand; that he drew readier than he could write; loved to draw figures on the slates, benches, and walls; and when his head was down as all imagined at his lesson, instead of mastering his task, he was filling the margin of his book with heads in all postures and of all expressions, though the whimsical prevailed."

David, in fact, was picking up and practising other accomplishments, beside those taught in books. He became a skilful mechanician with his hands, and constructed miniature wind and water mills, frames for winnowing corn, &c.; is said to have learned the souter's trade, as an amateur; to have amused himself with wielding a blacksmith's fore-hammer; nay, even to have conquered the shuttle and the treddles of a loom. But drawing was his master-passion. When Professor Gillespie succeeded to the care of Cults, he found in the nursery abundant traces of Wilkie's precocity, in the form of heads and hands, mercilessly obliterated by whitewash; and it is not long before we read of a more orthodox drawing-book, a folio, happily still extant, and containing some score of sketches of home and rural subjects. Little imagination was discernible in these, but there was much of that literal and direct exactness which was to play a part so important in his after compositions.—

"It was observed of him then that he disliked to listen to a confused story, and never hesitated (and this was true of him in after-life) to turn the narrator back till all was made clear that seemed dark or perplexed."

This resolution to come to the truth of every thing was not confined to Wilkie's childish days. We have seen him in society perplex and amuse those who were not familiar with his peculiar habit of mind, by breaking out into mirth at a joke which had gone round at a former *act* of the conversation, or as suddenly adding finishing touches to an anecdote or description which every one else had dispatched a good hour earlier. The laugh, however, if it came late, was always pertinent, and the additional trait, however originally handled, worth having.

To return—it became presently evident to all interested in "sunny-haired David," that he would be nothing if not an artist. His grandfather groaned in spirit at this, having desired, like Dominie Sampson's mother, to see the youth "wag his pow in a pulpit," and earnestly persuaded the boy to addict himself to divinity. The wiser minister of Cults, even, had serious fears and misgivings; but he saw that to yield these was a less risk than to thwart the nature which had so decidedly manifested itself; and accordingly placed the boy, when he was fourteen, at the Trustees' Academy of Edinburgh, where instruction in drawing was given. This was not done without some difficulty. Though David was recommended by the Earl of Leven, Mr. George Thompson, the Secretary, found little to praise in his specimen drawings: even when the boy had (by the further aid of the Earl) overcome the scruples against his admission, his copies from the antique were but unsatisfactory things to show. One, of a foot, exhibited by the proud minister of Cults to an elder, provoked an exclamation more plain-spoken than polite: "A foot!" cried he, after a second look, "its mair like a fluke (*i. e.* a flounder) than a foot." But David worked sedulously, if not academically;—frequented trystes and markets, and especially an auction-room in the High Street, where etchings after Rembrandt and Ostade were to be seen. A competition being opened by the heads of the Trustees' Academy for the best study in oil from 'Macbeth,' Wilkie selected, as his subject, Lady Macduff defending her boy from the murderers, and was praised by Graham, the principal of the Academy, for "the fine expression of the head of young Macduff." This, however, did not win his picture the prize; and he was more lucky in 1803, when he carried off the ten-guinea premium for a picture of 'Calisto in the Bath of Diana.' The domestic affections of the man showed themselves in the boy's expenditure of this noble sum. With part of it he bought himself a silver watch; but he also "purchased and presented a small token of remembrance to his mother, whose tenderness was seldom out of his mind."

The first distinct and characteristic manifestation of Wilkie's peculiar genius was now at hand. A kind and clever friend, Thomas Macdonald, perceiving whither David's eye and hand were tending, endeavoured to engage him upon a humorous illustration of the 'Tam O'Shanter' of Burns. But Wilkie never worked either willingly or successfully upon suggestion, and had already been *visited* by a thought from Hector Macneil's 'Will and Jean,' contained in "the verses which described the country tippling club, and the resolution of the members to meet oftener over their potations and politics." He had sketched, in short, 'The Village Politicians' in fancy, and went on his way, adding, changing, listening to advice, but not to be dismayed or turned aside; gentle, good-humoured, eccentric, and resolute, as we think the following sketch proves:—

"It is related by some who were Wilkie's fellow-students in Edinburgh, that the more restless of their number, when they saw him musing much, or in a study, often tried to tease, but could never perplex, or put him out, as they said. He received all such interruptions with tranquillity of looks, and though they sometimes put their jokes into a practical form, he never remonstrated nor complained, but was resolved to overcome them by imperturbable good humour, as he seemed determined to conquer them in art by resolution and study. * * When his fellow-students followed him into his two-pair-of-stairs study in Nicholson Street, they found all in keeping, they said, with his demeanour in the Academy. The Bible and The Gentle Shepherd, a sketch or two on the wall, a table and a few chairs, with a fiddle whose strings, when he grew tired with drawing, he touched to a favourite air, were the chief articles: neither lay-figures covered with silk, nor easels of polished mahogany were there; a few brushes and a few colours, and a palette made by his own hands, may be added. The fiddle was to him then and long after an useful instrument; its music, he said, not only soothed himself, but put his live models, who sat for his shepherds and husbandmen, into the sort of humour which he desired; nay, he often pleased so much, that one of them, an old rough mendicant—

Whose wallets before and behind did hang,

to whom he had played a welcome air, refused the pence when offered, and strode down the stair, saying, 'Hout! put up your pennies, man; I was e'en as glad o' the spring as ye were!' He sometimes, too, in a land where living models of any other part save the head or hand are difficult to obtain for either love or money, made himself into his own model; and with a bared foot, a bared ancle, or a bared knee, would sit at the looking-glass till he confessed that he was almost benumbed by exposure. Nor did he desist when a friend knocked; he would say, 'Come in,' nor move from his posture, but deliberately explain his object, and continue to draw till he had made the sketch."

When Wilkie was eighteen he left the Trustees' Academy, and returned to Cults, tempted to devote himself to portrait painting, as the most lucrative employment of his talent, and encouraged thus to fix his choice by the success which had attended Jameson, Ramsay, and Raeburn. But, fortunately for the world, Humour touched his elbow, with solicitation too irresistible to be withstood, and provoked him to try his hand at a field-preaching, or a village

Digitized by Google

fair. He was deterred from the first subject by fears of the "unco' gude"—he was invited to the second by the circumstance that at Pitlessie he could find an original for the scene, and for every character he was to paint. Accordingly he made an easel out of a chest of drawers, got a canvas, and set to work. The herd-boy sat to him: and of those who were coy or surly, he possessed himself by stratagem; sketching sundry heads on the blank leaf of his bible, as their owners sate or slept through the Sunday discourses: happy for our artist that the Scottish ministers are so lengthy in exposition! No small scandal was excited by the promulgation of this fact: but David allayed this by an excuse as *pawkie* as if it had been made by one of Galt's worldly-wise heroes. "On being expostulated with"—so Professor Gillespie informed Mr. Cunningham—Wilkie "said that any one who practised portrait painting, knew that the ear was not engaged in the work, for, being a business of the eye and hand alone, he could draw as well as listen." This 'Country Fair' was painted for Kinnear of Kinloch, and, according to the artist's judgment, "had more subject, and more entertainment in it than any other three pictures" he afterwards produced. During his sojourn in Fife, too, he produced several portraits, and began 'The Village Recruit.' But by this time he began to feel that he had sustaining power sufficient to maintain him in London, and hither accordingly he came as a student of the Royal Academy on the twentieth of May, 1805.

With this event begins the most interesting portion of the work before us, conflict being always more interesting than conquest, and nowhere such an arena to be found, as our own metropolis. For two months, Wilkie, having hired a room in the house of a coal-merchant, and hung up his pictures in a window near Charing Cross, had to wait, ere he could be admitted into the Academy as a probationer. This advance, however, he procured by a drawing from the 'Niobe.'

"Something of his Edinburgh fame had come before him; Jackson, at that time a student, seems to have seen as well as heard of him, for he wrote to Haydon, then young and ardent, to hasten from Devonshire, for that a tall, pale, thin Scotsman had just come to study at the Academy, who had done something from Macbeth, of which report spoke highly. 'Touched with this,' said Haydon, 'I came at once to London and went to the Academy; Wilkie, the most punctual of mankind, was there before me. We sat and drew in silence for some time: at length Wilkie rose, came and looked over my shoulder, said nothing, and resumed his seat. I rose, went and looked over his shoulder, said nothing, and resumed my seat. We saw enough to satisfy us of each other's skill, and when the class broke up we went and dined together. Wilkie was, as Jackson had described him, tall, pale, and thin, with blue and uncommon bright eyes, a nose rather short, and a mouth full of humour of the quietest and richest kind."

Wilkie early made himself famous in his class for indefatigible industry. He soon, too, became acquainted with others besides Haydon; found Fuseli "a very kind good sort of a man" (what a description of Fuseli!) and was astonished at the "grandeur of design, clearness of colouring, and correct outline," of West's works—discerning however, "the flatness about them." He was enraptured, too, at the "clear touching" of some pictures by Teniers which he saw—but "did not understand Turner's method of painting." His domestic habits, were economical, but not to the point of puritanically rejecting indulgence and enjoyment. The ordinary at which he dined, in Poland Street, kept by a man of the name of Charles, was frequented by amusing foreigners: he went to all manner of public places with Robert Wilkie; and ere long introduced himself to Mr. Stodart the pianoforte maker, being desirous to buy "a pianoforte for Helen" his sister. Many were the doubts and fears—the encouragements and the disappointments, ere he could indulge his brotherly affection in this luxury. The visit to Stodart, however, was a lucky one, since he happened to be married to a Wilkie,—like most musical men, to love painting,—and to have business relations with the Countess of Mansfield and her son the Earl. To the latter he mentioned the young Scottish genius. But, in spite of these auspicious prospects, the golden shower fell so slowly, that the minister of Cults began to write of "applying to Lord Crawford for the loan of a few pounds—fifteen or twenty"—to replenish the painter's purse: while the latter was reduced to practise the economy of becoming his own shoe-black: in the January of the following year (1806) and, wrote home, that he had only just succeeded in keeping out of the pawnbroker's.

Early in the spring, however, matters began to mend—Lord Mansfield gave him a commission for 'The Village Politicians,' or rather—

—"inquired what his price would be for painting him a picture from his study. The artist answered fifteen guineas, to which the Earl made no answer; and Wilkie, who seems to have felt that his strength lay in that direction, proceeded to paint the picture, as he said at a venture. As it approached completion, the rumour ran that it was a work of great genius, and likely to create a change in art. It chanced one day that Sir George Beaumont and Lord Mulgrave were praising the Dutch School, when Jackson, who was present, said if they would come with him, he would find them a young Scotsman who was second to no Dutchman that ever bore a palette on his thumb. 'We must go and see this Scottish wonder, Jackson,' said Sir George; and they followed him to Wilkie's abode, where they found The Village Politicians all but finished."

Subsequently the Earl became possessed of the picture for 30*l.*, after an attempt—not the most noble—to hold our artist to the price he had mentioned as a sum agreed upon by both parties. Once, however, in the hands of an amateur, so amiable and so enthusiastic as Sir George Beaumont, one disappointment more or less mattered but little; the painter was on the high road to distinction, and we are not surprised to find him shortly afterwards writing thus of London to his relative, James Anderson:—

"I have no doubt but you would like London as well as you did Edinburgh. For my part, I like it a great deal better; for the people are much more affable and free, and my circle of acquaintance is much more extensive here than ever it was in Edinburgh."

The minister of Cults, however, seemed still unwilling to believe in the good prospects rapidly opening for his son, and it was only after very earnest representations, that the affectionate father was pacified at the idea of David fairly establishing himself in London instead of Fifeshire or Auld Reekie. 'The Village Politicians' was exhibited at the Academy in 1806. From that time, neither parent nor son could have had further misgiving, so great was the sensation excited by its appearance:—

"At the dinner with which the Royal Academicians open their Exhibition—a dinner given to the prime of the land for rank and talent—the generous Mr. Angerstein was so moved by the excellence of Wilkie's picture, that, declaring it had all the spirit of Teniers and the humour of Hogarth, he pointed it out to the company as the star of the collection. * * The Royal Academy, as a body, was far from insensible to the merits of the performance, though some did not find in it the principles of that high art, which the professors found it easier to preach than practise. Northcote openly designated the style of Wilkie the Pauper Style; and Hazlitt, a little of a painter, and esteemed as a critic, re-echoed the snappish saying. Nor was Fuseli silent: he pointed to the picture, and said to Wilkie, in his own enigmatic way, 'Young man, that is a dangerous work.' 'Ay, ay,' said Wilkie, 'really now.' 'That picture will either prove the most happy or the most unfortunate work of your life."

The next move made by Wilkie, (now universally noticed by our leading *dilettanti*) was to begin his 'Alfred,' by way of contribution to a series of pictures from English history, then collecting by Alexander Davison. Shortly afterwards he will be found working at 'Sunday Morning,' and 'The Rent Day,' with a laborious and literal patience which we shall presently have occasion to show. A glimpse or two at his powers of *imitation* in various branches from the testimony of others, will, in the meanwhile, be welcome. The following are from a letter by Mr. Andrew Wilson:—

"We met for the first time one morning at William Thompson's: there were present, besides Wilkie, young Haydon, William Havel, David Maclagan, and a Mr. Callendar, all seemingly very intimate; and I was told that it was their practice to meet in this way at one another's lodgings to converse about art. To be admitted into such society was very agreeable to me. Wilkie I always found very cheerful; and as we did not devote the whole of our time to the professed object of our meeting, on one occasion, after some solicitation, he sung us one of Liston's songs, and imitated him in voice and manner so happily, that I all but thought I heard that eminent actor's voice. * * He had taken lodgings beyond Tottenham Court Road, partly for his health, and partly to avoid interruptions from ill-timed visitors. I sometimes took breakfast with him, and it was there I became acquainted with Jackson the painter. I remember the quiet glee with which Wilkie told us, that one day Bannister the actor called, and was shown in while he was sitting on a low seat, dressed as a woman, with a looking-glass before him, performing the part of model for himself. Wilkie was not the man to be in the least discomposed at being found in such a plight. Bannister gazed on him for a moment or so, and then said, 'I need not introduce myself.' 'Truly no,' said Wilkie; 'I know you very well; but you see I can't move lest I spoil the folds of my petticoat. I am for the present an old woman, very much at your service.'"

In the midst of these hours of agreeable companionship and careful labour, it is pleasant to find notices of the manse of Cults, in the shape of "a cask of London porter to his mother, for whose complaint Dr. Grace had prescribed it," and the much-canvassed pianoforte for Helen.

"He also aided in sending out to India a young lady, Miss Walker, a minister's daughter of Fifeshire, who was betrothed to his elder brother John, an officer in the service of the East India Company."

In the spring of 1807, Wilkie spent a few weeks among those whom his fame and his thoughtful affection had gladdened. How strong was the hold maintained over him by home, is amusingly shown in a letter which he wrote to his sister in 1814, discussing his widowed mother's removal to London:—

"I know you will regret selling many things; but I do not think there will be any great loss, as the same money will nearly purchase as good ones here. My father's publication of the 'Theory of Interest' should, I think, be packed up in some box, and carefully brought with the other things. Of the kitchen furniture I do not know that you should bring any, except the old brass pan for making jelly, and anything else you may consider of value. There is an old Dutch press in one of the closets, that my mother got from Mrs. Birrell; what state is that in? If it were not an article of great weight, might not that be brought?"

In May, 1808, begins a series of journals, as minute upon the subject as the veriest Boswell of easel-matters could desire. We are delighted with the painter's entries, which, indeed, are so many traits of character; though too often merely conveyed by *a dot* where we wish for a complete line, or a full blush of colour. One day he dines with Farrington and an agreeable party of painters; another goes with "Cleghorn and Mrs. Clarke," (Kean's patroness?) to study characters at Brook-green Fair; a third evening is spent by him at Mr. Neate's musical

Digitized by Google

party, listening to Haydn's compositions. A fourth entry chronicles "a delightful sermon from Sydney Smith." In a fifth we find that he "got a good way on" with the carpet in 'The Sick Lady.' The chronicle of the details of his pictures is valuable and curious. We are told of the bird-cage "put into the corner of the picture of 'The Sick Lady,' with a cloth over it, as if to prevent the bird from disturbing her with its song,"—of the purchase of a Jew's harp! for the capital picture which bears its name,—of progress made in "the sleeve of the boy"—how the artist "put in, from Nature, the hand of the girl snatching the knife out of the boy's hand, in 'The Cut Finger,'"—how he altered the colour of the boy's pinafore, time after time, as Seguier suggested—how "he did a little more to the white-washed wall,"—or had a fowl "plucked for me to paint from,"—or "put in the small chips on the chair in 'The Cut Finger.'" There is more than one of our young painters, in his own conceit a Luca *fa presto*, who will deride these confessions, and the careful practice they disclose, as but one degree less mechanical than the action of the sun in a Daguerréotype. Would that they were only willing to look to the consequences in Wilkie's European renown! We may add, that, better than despise Mr. Beard and M. Claudet's artist, they might study his handling, if they would learn the artistic charm of truthful finish. Other entries from these journals are of more general interest—or amusing, as indicating character:

"This being Twelfth-night, I went by appointment to Sir William Beechey's, where we had a very splendid entertainment; the Hoppners were there, and after listening for some time to music, in which the Miss Beecheys are great proficients, we had a dance, which lasted till supper time. I there met, for the first time, the too celebrated Lady Hamilton; she had with her a girl supposed to be the daughter of Lord Nelson, a creature of great sweetness: Lady Hamilton, knowing me by name, called me and said that her daughter had the finest taste imaginable, and that she excelled in graceful attitudes. She then made her stand in the middle of the room with a piece of drapery, and throw herself into a number of those elegant postures for which her Ladyship in her prime was so distinguished. She afterwards told me of all else her daughter could do, and concluded by asking me if I did not think her very like her father. I said I had never seen that eminent person. Lady Hamilton is lusty and tall, and of fascinating manners, but her features are bold and masculine. Her daughter's name is Horatia Hamilton. After supper we were entertained by some songs from Lady Hamilton, and with a fine piece of mimicry by Mr. Twiss, who gave us a speech in the manner of Pitt, which many pronounced excellent. * * Home, and was told that my laundress had absconded; lose by her about two pounds; thankful it was not greater.—21st, Had my usual walk in the morning; heard that St. James's Palace had been on fire, and some damage done: the Earl of Essex sent me a coffee cup of a Flemish pattern, which he thought I might use in my portrait of the Marchioness of Lansdowne. * * 17th, Went to-day to see the proceedings in the House of Commons, and hear the debates: the first thing that occupied the attention of the House was a complaint of Beresford against the *Morning Post*, for misrepresenting what had passed between him and Mr. Wardle the night before. An animated debate arose out of this small beginning, in which Percival, Whitbread, and Sir Vicary Gibbs, bore a part: they then proceeded to call witnesses relative to the conduct of the Commander-in-Chief: several were examined. Mrs. Clarke was at last brought in, but unfortunately not examined, so that we had no opportunity of hearing her speak. The House grew oppressively hot, and the examination exceedingly uninteresting, and Jackson and I came away without any reluctance at one o'clock. * * Went to dine with Mr. Murray, in Fleet Street, where I met Mr. Westall, Mr. Ballantyne, and, for the first time, Walter Scott, whom I found most entertaining in conversation: he seems to possess a very rich mind, is very communicative of the all but universal knowledge he has acquired: he talked principally about the ancient Highlanders under the feudal system, and enriched his observations with interesting anecdotes; he repeated one of Campbell's poems (Lochiel's Warning). I sat till half-past twelve.—18th, Went to a place in St. Martin's Lane to see the pugilists sparring; it amused me while it lasted very much; Gregson and several others were stripped; their energy and muscular action were interesting as studies.—19th, Painted seven hours, and finished the window shutter, and put in most of Mrs. Neave's shawl."

A Reynolds pilgrimage into Devonshire offers little matter for extract, but the following passages, from a diary kept while the painter was at Coleorton, afford a pleasing impression both of himself and his hosts, the Beaumonts:—

"21st, I had a walk with Sir George and Lady Beaumont in the fields this evening: looked through the telescope at the moon, which shone uncommonly clear. Sir George then read us that paper in the Spectator which gives an account of Sir Roger de Coverley's visit to the theatre.—22nd, Went and painted from the group of trees at the farm, and made an useful sketch.—23rd, Went to paint the well at the house which I saw on the 20th. The woman of the house allowed me to sit within the door; she talked incessantly to me all day; she was such a dame as I should suppose the neat-herd's wife was who scolded Alfred about burning her cakes. Yet, for all her roughness of manner, she showed me much kindness. A young woman came in with a very beautiful countenance and a young child at her breast, daughter-in-law to the old woman. * * Sir George, in the evening, read us Addison's comedy of The Drummer.—24th, Painted for an hour before breakfast at the window of The Gardener's Cottage. Sir George in the evening, read us from Holinshed the account of Macbeth, which supplied Shakespeare with materials for his tragedy. The similarity of many of the circumstances, and some of the expressions, is surprising.—25th, Made some sketches of various scenes: finished that of the well; and introduced it as a background to a sketch of Mrs. Knight, with whom I had a bicker about religion, very violent, yet very civil.—26th, I began to paint, but as I was rubbing in the broken surface of a sandy road for a foreground, I was told that Lady Beaumont wished me to paint a gipsy-woman who was then in the house. I went at once: this woman seemed a singular character. I sketched in the head, and as her child lay sucking at the breast, I put it in also, although it had nothing interesting in its appearance. I finished this sketch a good deal to my satisfaction, and for the first time tried the effects of yellow lake on the flesh, which even surpassed my expectations. It has the singular quality of giving a warm and fleshy tone, without the heaviness which I have found inseparable from all other yellows.—27th, Lady Beaumont requested me to read, after breakfast, Wordsworth's Preface to his Poems, which, with some of the poems to which it alluded, and a letter in the poet's hand-writing, I read accordingly; but could not be brought at all to coincide with the fundamental principles of his system, or to admire as elegant the pieces which are pointed out as examples of his style. This was not, however, the case with her ladyship, who admires Wordsworth's productions next to those of Shakespeare and Milton. I rode with Sir George to the distance of three miles, where we saw some rocks which Haydon has been painting: they are both massy and rugged. We had a beautiful view from this spot of Coleorton and the more distant country. On our way home we passed an old abbey in ruins: the chief circumstance which renders it interesting is, that it is the birth-place of the celebrated Beaumont, who wrote in conjunction with Fletcher. After making some hasty sketches of these interesting ruins, and looking at some cottages which were very picturesque, we got home early in the evening."

It was late in the year 1809 that Wilkie and George Dawe were appointed Associates of the Royal Academy: this was shortly after the former had begun the 'Ale House Door,' now called 'The Village Festival,' and among the treasures of our National Gallery. In the year 1810, a passing notion seems to have been entertained, by some of Wilkie's evil-wishers—nay, and in the sensitiveness of their regard for his fame, by some among his friends also—that the newly-discovered genius of Edward Bird might jeopardize our artist's popularity. He was advised by some among the more timorous to withdraw from the Academy Exhibition the picture of the 'Man with the Child's Cap'.—

"Sir George Beaumont, with a delicacy of which only fine minds are capable, a day or two after the opening of the Academy, and the presence of the painter's genius was missed, wrote to him, saying,—'My dear Wilkie, I have long felt deeply in your debt, but your delicacy has always stood in the way of its discharge. I thought of deferring it to another opportunity; but it may be so long before that occurs, that I am, for various reasons, induced to send you the enclosed—let this be a secret between us.' The high and still rising fame of the painter had, indeed, increased so much the value of The Blind Fiddler, that he might safely intimate, which he did, that he regarded himself as still in his debt; yet there can be no doubt, that Sir George, in his delicate way, desired to sustain the sensitive mind of Wilkie, which he was afraid might require such support; neither, perhaps, was it out of his thoughts that the sale of his pictures, by which he lived, might be injured. That Sir George Beaumont addressed a spirit akin to his own, may be gathered from the following reply.

To Sir George Beaumont, Bart.

[No date.]

"Dear Sir George,—The letter which I had the honour to receive from you this morning, enclosing a cheque for fifty pounds, took me so much by surprise that some time was necessary for reflection. But the more I weigh the matter in my mind, the more inexcusable should I think myself were I to harbour a thought of receiving any further consideration for what I have already been so much overpaid. In order to show that I am not actuated by mere feelings of diffidence, I beg leave to state, that for the permission you have so kindly given me to have The Blind Fiddler engraved, which, by the bye, I had no right to expect, and could not ask for from every person that has got my pictures, I am to receive fifty guineas. This, in addition to what I considered on a former occasion to be a fair and liberal price, would make it an absolute act of injustice in me not to refuse what you have sent me. I therefore, with the highest sense of your generosity, beg of you to receive the cheque again, and take the liberty of enclosing it. D. W."

The summer of 1810 was marked by sickness and consequent cessation of labour, and by the zealous kindness of his friends to assist him and alleviate his illness. Whatever misgivings either friends or enemies had been vexed or comforted by, touching Wilkie's "having painted himself out," received a final check by his election as Academician in the year 1811, on the decease of Sir Francis Bourgeois. The good minister of Cults lived to see this honour paid to his son: it was in the last year but one of his life. He died in 1812, and in the subsequent year the Royal Academician effected the removal to London of his mother, "Helen," and their household stuff ("the brass pan for making jelly" not forgotten). He established himself and them comfortably at Kensington. A better point than this cannot be found for the interruption of our hasty narrative,—to be resumed next week.

Lectures on Colonization and Colonies, delivered before the University of Oxford. By Herman Merivale, A.M., Professor of Political Economy. 2 vols. Longman & Co.

On the appearance of the first of these two volumes we briefly noticed its publication and subject-matter (*Athen.* No. 722); reserving ourselves for the completion of the work to deal with it in detail, if such a step should appear desirable. That the doubt here implied should be possible, will strike the professed student of political economy as rather extraordinary, possessed, as he must be, with a strong opinion upon the vast importance of his science, and of

Digitized by Google

the deep interest which all minds, capable of thought, should take in its discussions. There are, indeed, few engaged in productive industry, who must not have felt how closely the management, or mismanagement, of colonial affairs affects their own well-being, and who cannot lay their finger on some legislative error, that has fatally interfered to paralyze, or at least to check, their lawful exertions. Convictions are thus, from time to time, brought home to the least intelligent; while those best acquainted with the subject will readily allow, that, in colonial arrangements most especially, the Swedish chancellor's *quam parva sapientia* has its most extensive application.

In all this we perfectly coincide; and most willingly should we enter upon a formal examination of Mr. Merivale's clear and able statements, were ours a journal suited to the subject. But the *Athenæum* addresses itself to a general public; and we should be more likely to weary the mass of our readers, than to enlist their feelings, by an approach even to an exhausting investigation of any abstruse and partially cultivated inquiry. Still we cannot consent, altogether, to pass over unnoticed a work possessed of so much intrinsic and extrinsic importance: for whether we consider these Lectures as conveying valuable information in a simple and intelligent form, and as affording a readable statement of the elementary truths of the subject, or in reference to the scene of their delivery, they are equally well worthy of attentive consideration. We shall, therefore, adopt a middle course; and without attempting a summary of Mr. Merivale's reasonings, shall dip into his pages, in search of an occasional fact, or point of doctrine, likely to be appreciated by the universal public.

The first Lectures are purely historical, and they embrace a succinct and perspicuous abridgment of the influential circumstances which have prevailed in the attempts at colonization made by the different nations of modern Europe; touching principally on such of them as have proved most pregnant in good or in evil in the subsequent developement of the particular colony. In a second part, the author proceeds to investigate the economic effects of colonization on the parent state, as regards the elements of capital and labour at home, and the consequences of colonial trade, with the various restrictions placed upon it. Lastly, in a third part, he displays the manner in which the interests of the colony itself are affected, in reference to its peculiar conditions of land, capital, and labour, and under the modifications impressed on it by the legislative authority of the mother country. Although the subject is thus generally announced, in its treatment everything, more or less, immediately refers to English colonization, not only as most intimately interesting to the English student, but as embracing those recent, striking, and most important emigrations, which must result in spreading the Saxon race and language over the remotest regions of the habitable globe. Those conversant with parliamentary debates, or with the proceedings of our missionary and trading associations, will be aware of the many and vast questions incidental to this inquiry, which are yet under decision, and which await all the additional lights that experience and reason can display.

The first thing that strikes us, on reviewing the history of modern colonization, is, that it was in the earliest instance undertaken without any experience, either as to its proposed ends, or the means by which those ends should be pursued. The Greeks, probably, when they undertook their migrations to the continent of Asia, had still preserved a traditional knowledge of the circumstances under which they had fixed themselves in the mother country; at least they proceeded with much method, foresight, and success; but on the discovery of America, all popular memory of the emigrations of the Northmen had ceased: not only was the world of America new, but the position of the emigrant, his hopes, his legitimate expectations, the causes which drove him forth, and the advantages which awaited him in his new seat, the goods within his reach, and the means by which they could be realized, all were unknown, misunderstood, or decked out in the false colouring of the imagination. The failures of these expeditions, which history has recorded, were a natural consequence; and the incidental loss of human life, and destruction of human happiness, were immeasurable. Two errors alone were abundantly fatal;—the pursuit of the precious metals, as a primary object, and the cruel mistake of Christianizing savages by brute force. Other ignorances, less salient or less easily summed up, were probably not far inferior in the amount of misery they occasioned. But this much is certain, that most of the early attempts at colonization have left little but the memory of their faults behind them; and the most necessary experience, thus acquired, was bought by deplorable sacrifices. Of this, Mr. Merivale adduces an instance, the more remarkable from its recent date, in the French attempt to colonize Cayenne in 1763. The story is thus told by the author:

"The vices of administration incidental to a government so corrupt as that of old France, were sensibly felt in her foreign dependencies, notwithstanding the partiality with which they were treated by her legislators. Court favour was the only source which supplied them with governors and other executive officers—a source even more tainted than that of parliamentary interest among ourselves. Men without fortunes or character, ruined in their own country, eagerly sought and obtained these appointments, which were commonly regarded as the last resource of a spendthrift. Much ignorance, as well as much corruption, prevailed in all the details of office. * * In accordance with a theory of the day, it was determined to raise at once a full grown colony on the continent of America. No less than twelve thousand unfortunates were embarked from France, and landed in Cayenne, without an attempt towards preparing the tropical wilderness for their reception. They were amply supplied with two years' provisions at an enormous expense; but it had never occurred to the managers of the expedition, that provisions would not keep in such a climate, and before cultivation had commenced they were starving. Famine and fevers in a few months almost destroyed them; of the few survivors about 1500 were removed to an alluvial spot on the coast; a sudden rise of one of the rivers of the interior took place, and all were swept away in a single night."

This is but an epitome of most of the first attempts at colonization, when undertaken under the control of distant and incompetent authorities.

Passing over a vast variety of facts in the history of colonial blunders, we can only state, that the great lesson derived from the historical part of Mr. Merivale's work is this, that, powerful as legislation and its artificial combinations may be, in working immediate weal or woe to those submitted to its operations, yet nature is more potent still; and in the long-run it overpowers and defeats all human opposition to its laws. Thus the slave cultivation, rendered for a time available, by the productive richness of a virgin soil, but being by the great laws of Nature inevitably a wasteful and expensive employment of force, is not destined for perpetuity, but must eventually, and despite all legislation, be abandoned: so too, protection and prohibition, from similar causes, must one day disappear before the common sense and common honesty of free trade. In conformity with this verity, it has happened, that the commerce of our West India Islands, propped and bolstered by both these abuses, has long been sinking into progressive decay, and must eventually perish, though both should be continued. The real and prevailing source of West Indian prosperity, was the possession of an unworked soil; but the immense advantages incidental to that condition must necessarily disappear in the working, and the planters be subjected to the common condition of ordinary cultivators. Thus arises a natural succession of local prosperity and decline, developed in different colonies, in the chronological order of their respective exploitation. This process is thus generalized by the author:—

"The opening of a fresh soil, with freedom of trade, gives a sudden stimulus to settlement and industry; the soil is covered with free proprietors, and a general but rude prosperity prevails. Then follows a period of more careful cultivation, during which estates are consolidated, gangs of slaves succeed to communities of freemen, the rough commonwealth is formed into a most productive factory. But fertility diminishes; the cost of production augments; slave labour, always dear, becomes dearer by the increased difficulty of supporting it: new settlements are occupied, new sources of production opened: the older colonies, unable to maintain a ruinous competition, even with the aid of prohibitions, after a period of suffering and difficulty, fall back into a secondary state, in which capital, economy, and increased skill, make up, to a certain extent only, for the invaluable advantages which they have lost. Thus we have seen the Windward Islands maintaining at one period a numerous white population; afterwards importing numerous slaves, and supplying almost all the then limited consumption of Europe. We have seen Jamaica rise on their decay, and go through precisely the same stages of existence. We have seen how St. Domingo, in its turn, greatly eclipsed Jamaica; but St. Domingo was cut off by a sudden tempest, and never attained to the period of decline. Lastly, we have seen the Spanish colonies of Cuba and Portorico, after so many centuries of comparative neglect and rude productiveness, start all at once into the first rank among exporting countries, and flourish like the exuberant crops of their own virgin soil, while our islands, still rich in capital, but for the most part exhausted in fertility and deficient in labour, were struggling by the aid of their accumulated wealth against the encroaching principle of decay. The life of artificial and antisocial communities may be brilliant for a time, but it is necessarily a brief one, and terminates either by rapid decline, or still more rapid revolution, when the laboriously constructed props of their wealth give way, as they sometimes do, in sudden ruin."

These facts must necessarily modify the abstract bearings of the slavery abolition on the labour market, and on the trade dependent on it. Mr. Merivale, in allusion to the failure of some favourable anticipations, observes:—

"Nothing can be farther from my thoughts than to detract from the merit of that crowning measure, almost a solitary instance in the history of many centuries, of a national act of disinterested self-denial. To be the citizen of the state which has accomplished it, is to my feelings a higher title of distinction, than to be the countryman of the conquerors of the East, or of the commercial sovereigns of the West. But now that both the violent prejudices and the sanguine hopes which obscured the view of the ablest politicians at the time when that act was performed have passed in some measure away, we may, I think, perceive, with a little attention, that emancipation, although of the highest importance in a moral and political point of view, will not, and cannot in the nature of things produce any very great revolution in the economical progress of events, unless, indeed, by laying the seeds of some great future changes, of which no eye as yet sees even the beginning. It is evident that the real blow was struck. I will not say at the prosperity of our sugar colonies, but at the system under which they had grown up, when the slave-trade was abolished. It was the confident hope of the advocates of that measure, that it would improve the economical prospects of the colonies: they

Digitized by Google

were unfortunately deceived, as we have seen. With a free trade in slaves, our planters might have struggled on, under a vicious and wretched system, no doubt; but still their monopoly might have been longer maintained. Without it, that system must have come to ruin: sooner or later this country must have gone elsewhere for the supply of those increasing wants, which their cramped energies could not meet. Emancipation, taken at the worst, can only have brought this inevitable result a little nearer; taken at the best, it may have laid the foundation of a new and more solid edifice of colonial prosperity; it may have given a turn to the course of events, and opened for our magnificent tropical empire of the West a new cycle of destiny."

This is somewhat obscurely expressed. The author has already declared, that the West Indian sugar trade (abolition or no abolition, monopoly or no monopoly,) must eventually be attended by such a ruinous expense, as the mother country will not and cannot pay. But the whole difference in the cost of production, as respects mere abolition, is between slaves dearly fed and freemen dearly paid. If wages were higher in the islands than in other countries, free labour would eventually flow in, and a further rise be prevented. So, too, if food were freely imported from the cheapest sources, labour, whether free or enforced, might be maintained on a par with that of other countries. Whatever inconveniences, then, can be supposed to result from abolition, supposing all restraints upon trade removed, would depend upon the improbability, that the cost of importing labour and food from abroad, would exceed the difference between the value of the freeman and that of the slave. Supposing, therefore, that by some improvements in husbandry, the West India soil could be rendered sufficiently valuable to support an unprotected culture, which should be at the same time unfettered by restrictions, (the only admissible data of any sound argument,) we may safely rely upon the known superiority of free labour, to conclude in favour of the economy, as well as of the morality, of the Abolition Act. With an ungrateful soil, on the contrary, any amount of protection, whatever the shape, (slave trade privileges, or monopoly,) only can protract a state of things which ought to cease and make way for sounder conditions. Whatever, then, might have been possible with slave labour, would, *à fortiori*, be possible now, were the labour and provision markets open; and that, we suspect, is what the abolitionists intended.

Among the more amusing pages of this work is that which relates to the Jesuits' government in Paraguay, where their missionaries obtained the command of a large population of converted Indians:—

"The great Jesuit republic, or rather republics, consisted of three different sets of Reductions, comprehended within the same Spanish government, namely, the lieutenancy of Buenos Ayres, but at a considerable distance from each other; those of the Guaranis, the Chiquitos, and the Moxos. The first of these were the most ancient and the most famous, and comprehended the most numerous population; they were situated, not within the limits of the modern republic of Paraguay, celebrated in our times as the seat of the singular despotism of Francia, but in a neighbouring district, now forming part of Brazil. The Guaranis were a very numerous people, whom the Jesuits found the means of reconciling to Christianity during the seventeenth century. Unwilling to lose the fruit of their labours by the reckless violence of the Brazilian slave-hunters on the one hand, or through the contaminating society of the Spanish colonists on the other, they obtained by degrees from the crown the privilege of governing these Indians under laws of their own contrivance, arming them for their own defence, and excluding from the limits of their territory all strangers, sojourners, and even all visitors whatever, unless admitted for their own purposes. They contained, at one time, from 100,000 to 150,000 souls. They were divided into missions, each of which held several thousand. The people of each mission were collected into a large village or town. In each there resided two ecclesiastics of the order; namely, one with the title of Curate, the other a sub-director, or assistant, to whom the details of the temporal management of the mission were entrusted; and no other white whatever. The Indians of each elected their own municipal officers, after the usage of all Spanish towns; but the nomination was subject to the approval of the curate, and in point of fact, their authority was titular only; every function of power, from the highest to the lowest, was lodged in the hands of the spiritual governor. All the natives were armed and officered by Indians of their own nation, being occasionally put under temporary training by Spaniards, under the especial superintendence of the priests. The houses of each town or village were exactly alike, and no distinction admitted in dress, or in the enjoyment of domestic comforts and luxuries. The only sumptuous building was the church; its adornment, and the pomp of divine worship, almost the only mode in which the surplus wealth of the community could be expended. The land of the village was divided into two portions; the field of the community, and the field of God. The latter was cultivated by the labour of all, for the purpose of raising articles which were exchanged by the Jesuits for such commodities as were wanted for the purposes of maintaining the splendour of their ritual, and supporting establishments for the sick and orphans, and for such other charitable ends as so simple a society could require. The other field was cultivated for the sustenance of the community, and for obtaining by exchange those manufactured articles which they did not themselves produce."

But the most interesting feature of this republic was, the community of goods, in which it bears a striking similarity to Mr. Owen's, the St. Simonian, and some other modern schemes of polity, and the lesson it affords to such innovators is worth consideration. But, first, of the success of the experiment, which the author well explains:—

"The principle that every man's labour belongs to the community; that his right of property extends only to his aliquot part of the produce of the co-operating industry of all; the regulated exchange, under fixed laws of value, between the produce of the day's labour of each separate artisan or labourer; the exclusion of the use of money; all these, whether asserted in theory or not, were actually practised by the Jesuit rulers of Paraguay, and that for more than a century, with uninterrupted success; whereas no scheme of Socialism, or Saint Simonianism, or any other of the philosophical dreams of modern times, has ever endured the test of above a few years' imperfect application. And the reason is obvious. While men are born with different tendencies and unequal powers, no means of maintaining equality among them can be found, except of a compulsory nature. Now, not a single one of the various systems to which I allude has ever contained, or, from its very nature, could contain, any provision for enforcing the observance of that equality on which they all insist. The Jesuits had the means at hand; their subjects were bound to them by ties of absolute unqualified obedience, such as no government but that which controls the spirit of man can command. And it is probably no very adventurous philosophical speculation, to foretell that no scheme of social equality will ever develope itself among mankind except under a hierarchy."

Notwithstanding, however, this advantageous lever, the machine did not continue to work. The Indians, in a long succession of years, dwindled in numbers, and made no moral advances; while an extensive system of kidnapping was in vain employed to fill the void thus created. This fact is thus explained:—

"And in these days, when the very idea of freedom of action for the half-instructed man is connected in the eyes of many with those of licence, self-will, and infidelity, I know not whether some may not be tempted to contrast the content and the quiet morality of this theocracy with the turbulent passions and vices which deform human society in every other shape. Were I to combat these views on ethical grounds alone, it would be difficult perhaps to meet, certainly to convince, the adversary; because, were I to say that the minds of men kept in this slavish condition are brutalized and degraded, we should probably not agree in the definition of those words: apathy and contentment, ignorance and simplicity, obedience and servitude, are terms which often so nearly approximate in practical application, that an argument founded on the difference between them could scarcely be conducted to a satisfactory issue. But there is another and a very singular test of the success of the experiment of these religionists. It is this: ..... What was the reason why people well fed, well cared for, entirely without spirituous liquors, inhabiting the climate to which they were accustomed, exempt for the most part from external hostility, not only did not multiply, but uniformly failed to keep up their numbers? Was it not want of liberty? Is it not the most probable solution of the phenomenon, that where the mental action is restrained altogether, the physical constitution likewise suffers: that men in a state of complete servitude, like caged animals, will not multiply: that in the absence of all excitement and care the faculties become torpid, the bodily strength sinks, and the man dies early of a premature and painless decay? while communities composed of men, thus circumstanced, waste away by that unseen destruction, which Hesiod enumerates among the calamities inflicted on guilty nations. Such are the consequences of contravening the laws of nature: of which it is assuredly one, that man shall provide for himself by the sweat of his brow, whatever the suffering with which that condition of life may often be accompanied; and another, that man shall choose his own course of action, and distinguish for himself between the right and the wrong, however dangerous the liberty thus enjoyed, however beset with snares the path of self-guidance may be."

But to return. A very large part of Mr. Merivale's second volume is expended in considering Mr. Wakefield's system of colonization; but it would be impossible for us, by any abridgment, to give a connected exposition of his arguments and their results. On the whole, the volumes are sufficiently popular in their construction to meet the wants of the least cultivated mind that can apply itself with steadiness to any investigation; and is not wholly averse from all grave consideration of questions of general and vital importance. We lament that we cannot affirm such readers to be Legion.

A Voyage of Discovery towards the North Pole, performed in His Majesty's Ships Dorothea and Trent, under the Command of Capt. D. Buchan, R.N. By Capt. F. W. Beechey.

[Second Notice.]

WHEN we last week parted from the Expedition, Capt. Buchan had resolved to proceed westward, and follow the outline of the ice-barrier towards Greenland. Scarcely, however, had they started when a gale sprung up, and they were reduced to storm-stay-sails.

"An hour had scarcely elapsed, when the main body of ice, which had been lost sight of for a short time, was seen close upon the lee-beam, with the sea beating furiously upon it. The imminent danger to which the vessels were now exposed induced us to press them with all the sail they would bear, by setting the close-reefed main-topsail and foresail, but they availed us nothing; we settled down gradually upon the danger, and were soon amongst the large pieces of ice, which in windy weather skirt the edge of the pack. These pieces consist of the heaviest ice, or that which has the greatest hold in the water, and remain at the edge in consequence of their being less operated upon by the wind. As we could not afford to lose an inch of ground by bearing up to avoid these masses, we received many very heavy concussions in turning them out of our course. The Dorothea, having been more to leeward than the Trent when the gale sprung up, was so close to the ice at half-past nine o'clock in the forenoon that, in order to escape immediate shipwreck, it became necessary for her to take refuge amongst it,—a practice which has been resorted to by whalers in extreme cases, as their

Digitized by Google

only chance of escaping destruction. As she bore away, we watched the result of the evolution with the greatest anxiety,—since, from the formidable aspect of the ice under our lee, it did not appear possible for any ship to survive an encounter with it, and we could not but be aware that the fate of our own vessel might soon be connected with the issue of her daring exploit. We were, however, left in the most distressing uncertainty as to both, for the Dorothea was almost immediately obscured by the foam and spray of the sea, which were carried up to a great height. Thus circumstanced, our first impulse was to run our own ship into the ice by the side of our consort, in the hope that by so placing the vessels they might be of service to each other; but, calling to mind that the frame of the brig was weak in comparison with that of the Dorothea, we did not think it probable that we could render her any assistance; and, consequently, as the wind at that moment favoured an expectation of our own vessel being able to reach into smoother water, we held on our course a little longer. We, however, soon found that we had nothing left but to follow the example of the Dorothea, and began to make every preparation in our power to withstand the encounter. It evidently appeared that we should have most to apprehend from the first concussion; and in order to avert the effect of this as much as possible, a cable was cut up into thirty-feet lengths, and these with plates of iron four feet square, which had been supplied to us as fenders, together with some walrus's hides, were hung round the vessel, especially about the bows. The masts, at the same time, were secured with additional ropes, and the hatches were battened and nailed down. By the time these precautions had been taken, our approach to the breakers only left us the alternative of either permitting the brig to be drifted broadside against the ice, and so to take her chance, or of endeavouring to force fairly into it by putting before the wind, as the Dorothea had done. Had we been permitted to witness the fate of that ship, we should not have hesitated to follow her example, but, as it was, a momentary doubt rested upon our minds as to the prudence of so desperate a measure. At length, the hopeless state of a vessel placed broadside against so formidable a body became apparent to all, and we resolved to attempt the latter expedient."

All eyes were now strained, in the hope of finding some spot more open than the general pack, but in vain.

"All parts appeared to be equally impenetrable, and to present one unbroken line of furious breakers, in which immense pieces of ice were heaving and subsiding with the waves, and dashing together with a violence which nothing apparently but a solid body could withstand, occasioning such a noise that it was with the greatest difficulty we could make our orders heard by the crew. This scrutiny, although but of momentary duration, allowed us more narrowly to examine the scene around us, and I wish I could in this place communicate to the reader any just conception of it, but I am utterly at a loss for words in which to embody its description. No language, I am convinced, can convey an adequate idea of the terrific grandeur of the effect now produced by the collision of the ice and the tempestuous ocean. The sea, violently agitated and rolling its mountainous waves against an opposing body, is at all times a sublime and awful sight; but when, in addition, it encounters immense masses, which it has set in motion with a violence equal to its own, its effect is prodigiously increased. At one moment it bursts upon these icy fragments, and buries them many feet beneath its wave, and the next, as the buoyancy of the depressed body struggles for reascendancy, the water rushes in foaming cataracts over its edges; whilst every individual mass, rocking and labouring in its bed, grinds against and contends with its opponent until one is either split with the shock or upheaved upon the surface of the other. Nor is this collision confined to any particular spot; it is going on as far as the sight can reach; and when, from this convulsive scene below, the eye is turned to the extraordinary appearance of the blink in the sky above, where the unnatural clearness of a calm and silvery atmosphere presents itself, bounded by a dark hard line of stormy clouds, such as at this moment lowered over our masts, as if to mark the confines within which the efforts of man would be of no avail, the reader may imagine the sensation of awe which must accompany that of grandeur in the mind of the beholder. * * We were now so near the scene of danger as to render necessary the immediate execution of our plan, and in an instant the labouring vessel flew before the gale. Each person instinctively secured his own hold, and with his eyes fixed upon the masts, awaited in breathless anxiety the moment of concussion. It soon arrived,—the brig, cutting her way through the light ice, came in violent contact with the main body. In an instant we all lost our footing, the masts bent with the impetus, and the cracking timbers from below bespoke a pressure which was calculated to awaken our serious apprehensions. The vessel staggered under the shock, and for a moment seemed to recoil; but the next wave, curling up under her counter, drove her about her own length within the margin of the ice, where she gave one roll, and was immediately thrown broadside to the wind by the succeeding wave, which beat furiously against her stern, and brought her lee-side in contact with the main body, leaving her weather-side exposed at the same time to a piece of ice about twice her own dimensions. This unfortunate occurrence prevented the vessel penetrating sufficiently far into the ice to escape the effect of the gale, and placed her in a situation where she was assailed on all sides by battering-rams, if I may use the expression, every one of which contested the small space which she occupied, and dealt such unrelenting blows that there appeared to be scarcely any possibility of saving her from foundering. Literally tossed from piece to piece, we had nothing left but patiently to abide the issue, for we could scarcely keep our feet, much less render any assistance to the vessel. The motion, indeed, was so great, that the ship's bell, which in the heaviest gale of wind had never struck of itself, now tolled so continually that it was ordered to be muffled, for the purpose of escaping the unpleasant association it was calculated to produce. In anticipation of the worst, we determined to attempt placing the launch upon the ice under the lee, and hurried into her such provisions and stores as could at the moment be got at. Serious doubts were reasonably entertained of the boat being able to live amongst the confused mass by which we were encompassed; yet, as this appeared to be our only refuge, we clung to it with all the eagerness of a last resource. After some time had elapsed without any improvement in our situation, and when, on the contrary, it became more and more evident, from the injury the vessel repeatedly received, that she could not hold together very long, we were convinced that our only chance of escape depended upon getting before the wind, and penetrating further into the ice. To effect this, with any probability of success, it became necessary to set more head-sail, though at the risk of the masts, already tottering with the pressure of that which was spread. Watching an opportunity, some of our expertest seamen gained the fore-topsail-yard for this purpose, and let a reef out of the sail, while the jib was dragged half way up its stay by means of the windlass. This additional pressure upon the fore part of the vessel happily succeeded beyond our expectations. The brig came into the desired position, and with the aid of an enormous mass under the stern, she split a small field of ice, fourteen feet in thickness, which had hitherto impeded her progress, and effected a passage for herself between the pieces. The situation of the vessel was now greatly improved, so much so that, by carefully placing the fenders, particularly the walrus hides, between the ice and her sides, the strokes were so much diminished that we had scarcely any doubt of saving her, provided the gale did not last long. How often and anxiously did we at this time turn our telescopes in the direction in which we had last seen our consort; for though conscious that neither could render the other any immediate assistance, yet it would have been a great consolation to have known that she was still afloat, and that in the event of the worst happening to one, there was yet a remote chance of ultimate relief from the other vessel. But between the Dorothea and ourselves there was interposed a dense cloud of spray, which limited our view to a few fathoms only, and effectually prevented our obtaining any information as to her condition."

After four hours of fearful suspense, the gale abated almost as suddenly as it had risen. The *Dorothea* was seen still afloat; but made known by signals that she had suffered severely. Great exertions were now made to liberate the vessels.

"It was a difficult task which we had to perform, and one that was by no means yet free from danger; but the blows which the vessel now encountered were so comparatively light with respect to those she had already withstood, that we thought little of them; besides, the necessity of the measure seemed so urgent that we persevered in our endeavours, and about four o'clock succeeded in getting the Trent quite clear of the ice. The Dorothea, however, was too much damaged to risk the heavy blows which attended this operation, and continued embayed in the ice until six o'clock the following morning, when, with the assistance of our boats, she also effected her release. Thus, by the blessing of Divine Providence, both vessels were again in an open sea; and that heart must indeed have been obdurate which did not, secretly, at least, return thanks to the Almighty for a deliverance from such imminent danger. But we could not conceal from ourselves that although now unfettered by the ice, our prospects were widely different from those with which, but a few hours before, we navigated an open sea. Then everything was before us, and the mind was buoyant with the prospect of fresh enterprises. Now both vessels were disabled, and one, at least, was in a foundering condition. So that although ignorant of the full extent to which either had suffered, it was nevertheless quite evident that, as regarded the main object of the Expedition, they were both useless. In a leaky state, we made the best of our way to Fair Haven, in Spitzbergen, and thence to a secure anchorage in South Gat, in the same island. * * As soon as the Expedition was securely moored at South Gat, an inspection of the hulls of both vessels took place. The Trent was found to have sustained less injury than the Dorothea, which had the greater part of her timbers either broken or shook, and several of her beams sprung. The larboard side had been forced in so much, that several spare oak planks, four and five inches in thickness, which were stowed in the wing, were found broken in various places. The spirit-room, which was built in the centre of the ship, was forced in; many casks of provision, stowed in the body of the hold, were stove, and even some that were bedded in coals in the ground tier had their staves broken. It is hardly possible to imagine such extensive mischief occurring to any vessel without her immediately foundering, and it is quite evident that, under Providence, nothing but the judicious precaution of lining the vessels with felt prevented the occurrence of that disaster."

This examination satisfied Capt. Buchan that the only safe course was to return home. While the vessels were under repair, the coast was carefully surveyed:—

"We found the shores of this part of Spitzbergen in general very steep, for, with the exception of here and there a narrow flat bordering upon the sea, they speedily rise into mountains of from two thousand feet and upwards in height, increasing to a far greater altitude in the interior. These hills are, for the most part, inaccessible, either on account of the abruptness of the ascent, or of the treacherous nature of their surfaces, upon which large stones and fragments of the mountain are so lightly poised, that the smallest additional weight precipitates them to the bottom of the hill. * * Almost all the valleys in Spitzbergen, which have not a southern aspect, are occupied either by glaciers or immense beds of snow. These beds afford almost the only feasible mode by which the summits of the mountain ridges can be gained; even these are very steep; and in descending by them extreme care is necessary to avoid being precipitated from the top to the bottom, especially when the snow has been rendered hard by a succession of thawing and freezing. This process frequently takes place in the summer, and occasionally glazes the surfaces so highly, that when the sun shines they reflect a brilliant lustre, and give to the coast a curious and pleasing aspect, which, though upon an incomparably more extensive scale, brings to the recollection of those persons who have visited Quebec, the singular effect produced by the mass of tinned roofs and steeples which used to crown the heights of that place. Of the danger which attends the traversing these acclivities we had nearly received a serious proof, for we narrowly escaped

Digitized by Google

losing one of our best and most active seamen in an attempt to descend by one of these inclined planes. * * Near Dane's Gat there are several glaciers, similar to those already described in Magdalena Bay, the largest being about ten thousand feet in length, by two to three hundred feet in perpendicular height. Like the former, they all occur between steep mountains, and partake of the peculiarity of all the glaciers in Spitzbergen, none of them having a *southern* aspect, but all invariably occupying such valleys as are either very obliquely inclined to the noonday sun, or are entirely screened from it by the surrounding hills. * * In the Arctic regions, the upper surface of the glacier presents a smooth and slightly convex plain, free from those ridges and pinnacles which characterize the southern glacier. It often extends two or three miles inland, in an inclined direction until it attains the mountain ridge, and is surmounted only by the dreary rocky peaks from which the glacier in part receives its supply. The surface of this plane is occasionally rendered hard and crisp by frost, and is then capable of being traversed on foot, but in so doing it is necessary to guard against the danger of falling into the fissures, which are sometimes both numerous and of considerable depth. Like the southern glacier, streams of water from the thawing snow around fall in bold cascades into these fissures, and rush into the icy bowels of the berg, there to be converted anew into ice, or to find an exit at the face of the glacier. In the large iceberg at Dane's Gat, one of these streams was in constant operation during the day, gushing out of the perpendicular face of the glacier and falling into the sea, while another was discharged at the head of a cavern at the surface of the sea. The face, or front, of the glacier is generally perpendicular, and occasionally projects a considerable distance into the sea, apparently descending to a great depth also. Throughout the whole extent of its surface it presents a wall of pure ice. Caverns sometimes occur near the water's edge, and the sea washing into them occasions long pendent icicles, which have a pleasing effect. The sea in the vicinity of almost all the glaciers which fell under our observation was deep. In some places we could find no bottom with our deep sea-lines, as close as we dared go; and in others, as in Magdalena Bay, the water deepened from the centre of the bay to the large glacier at its upper extremity, and towards all the bergs formed in that harbour there was a tendency to an increase of depth; whereas, on the opposite side of the bay, where there are no glaciers, there is comparatively shallow water from one end to the other. * * In consequence of the immense pieces of ice which occasionally break off these glaciers, it is very dangerous for a boat to approach them. On two occasions we witnessed avalanches on the most magnificent scale. The first was occasioned by the discharge of a musket at about half a mile distance from the glacier. Immediately after the report of the gun a noise resembling thunder was heard in the direction of the iceberg, and in a few seconds more an immense piece broke away and fell headlong into the sea. The crew of the launch, supposing themselves beyond the reach of its influence, quietly looked upon the scene, when, presently, a sea rose and rolled towards the shore with such rapidity that the crew had not time to take any precautions, and the boat was in consequence washed upon the beach, and completely filled by the succeeding wave. As soon as their astonishment had subsided they examined the boat, and found her so badly stove that it became necessary to repair her in order to return to the ship. They had also the curiosity to measure the distance the boat had been carried by the wave and found it ninety-six feet. On another occasion we were viewing the same glacier, and had approached tolerably near when a similar avalanche occurred, but, fortunately, we were not near the shore, and, by attending to the direction of the boat's head, we rode over the wave it occasioned without any accident. This occurred on a remarkably fine day, when the quietness of the bay was first interrupted by the noise of the falling body. Lieutenant Franklin and myself had approached one of these stupendous walls of ice, and were endeavouring to search into the innermost recess of a deep cavern that was near the foot of the glacier, when we heard a report as if of a cannon, and, turning to the corner whence it proceeded, we perceived an immense piece of the front of the berg sliding down from a height of two hundred feet at least into the sea, and dispersing the water in every direction, accompanied by a loud grinding noise, and followed by a quantity of water, which, being previously lodged in the fissures, now made its escape in numberless small cataracts over the front of the glacier. We kept the boat's head in the direction of the sea, and thus escaped the disaster which had befallen the other boat; for the disturbance occasioned by the plunge of this enormous fragment caused a succession of rollers which swept over the surface of the bay, making its shores resound as it travelled along it, and at a distance of four miles was so considerable that it became necessary to aright the Dorothea, which was then careening, by immediately releasing the tackles which confined her. The piece that had been disengaged at first wholly disappeared under water, and nothing was seen but a violent boiling of the sea, and a shooting up of clouds of spray, like that which occurs at the foot of a great cataract. After a short time it reappeared, raising its head full a hundred feet above the surface, with water pouring down from all parts of it; and then, labouring as if doubtful which way it should fall, it rolled over, and, after rocking about some minutes, at length became settled. We now approached it, and found it nearly a quarter of a mile in circumference, and sixty feet out of the water. Knowing its specific gravity, and making a fair allowance for its inequalities, we computed its weight at 421,660 tons. A stream of salt water was still pouring down its sides, and there was a continual cracking noise, as loud as that of a cart-whip, occasioned, I suppose, by the escape of fixed air."

On the 30th of August the Expedition again put to sea. Though the Captain had resolved not to expose the ships to further risk, he sailed northward to examine the ice, and found it in exactly the same state as when he left in July. The Expedition therefore started on its return, and arrived on the 22nd of October. Now for a few words on the probabilities of the future.

Hitherto all explorers have been stopped by a barrier of ice extending apparently from Nova Zembla to Greenland. This barrier, however, is not fixed and permanent; where the ice has in one season opposed further progress, an open sea has been sailed over in another. Capt. Parry, for example, reached 150 miles beyond the point where Capt. Buchan was stopped. Hence, and from other circumstances, it has been inferred that it is possible, at some fortunate moment, to find an opening in this barrier which will enable us to penetrate to an open sea. Captain Beechey seems to rest his hopes on steam and the screw propeller:—

"The openings in the ice are generally of short duration, perhaps for eight or twelve hours only, during which time an ordinary sailing vessel, threading the many tortuous channels, does not advance above ten or twenty miles in a direct line before the closing of the fields puts a stop to her progress; whereas a steamer, regardless of wind—and it is in calm weather mostly that the ice opens—would be able to accomplish three or four times the advance in the same period; and perhaps to come to some land in the north, which if reached, would materially improve her prospect of success. In the event of the ice closing, the propeller could be instantly drawn up into the body of the vessel, and when wanted could be as expeditiously replaced, especially as smooth water generally prevails between the floes of ice. In case of frost, the screw is wholly under water, and entirely free from that accumulation of ice, which would take place about the paddle floats and boxes of an ordinary steam-vessel, to the great detriment, if not the entire destruction, of the wheel. Should the vessel be caught and compelled to winter, a steam-apparatus for warming the vessel throughout could be fitted with little trouble. And as the propeller is only intended to be used as an auxiliary power, a small high-pressure engine would be all that would be required, and consequently it would take up but little of the stowage of the vessel. In short, it seems as if this invention had appeared about this time to stimulate us to further exertion, and the auspicious return of Captain James Ross from the Antarctic seas, with officers and seamen already accustomed to the ice, and with two vessels ready strengthened, to which the propellers could be applied at a moderate expense, appears to mark the present as a period at which arctic research might be most advantageously resumed. In connexion with this attempt, that most interesting and important question, of the compression of the earth at the Poles, might undergo an investigation, by a direct measurement of an extensive arc of the meridian at Spitzbergen. * * With such an undertaking, other interesting objects might be connected. * * Much requires to be done in magnetism. The correct determination of the position of the magnetic poles; the present Dip and Magnetic intensity, as compared with results obtained twenty years ago, during which period the needle has begun to retrograde, would be particularly desirable. And, amidst other natural phenomena, the stupendous ice formations, which have recently excited much attention, are not unworthy of investigation: whether they really have a progressive motion, tearing their icy bases from the firmly-frozen earth beneath, or whether they remain immovably fixed, and are thus icy monuments of at least four thousand years' antiquity, are inquiries full of interest, although they sink into insignificance compared with the magnitude of the propositions above mentioned. It has been shown that the highest latitude has been reached in the vicinity of Spitzbergen, and, consequently, that is the point from which any expedition sent upon this service should start. And as the sea here does not become clear of ice until the summer is well advanced, the ships would have ample time to land, and to settle the party engaged in the measurement of the arc of the meridian, and to push other useful inquiries, before they would be required to start on their grand enterprise. If they should chance to arrive at an auspicious moment during one of these favourable openings in the ice, and if any land should be discovered in, or near the situation marked in an old Dutch chart, and its coast should stretch to the northward, and be approachable, there is but little doubt that the expedition would be able to advance along its western side, owing to the prevailing motion of the ice, and perhaps attain a very near approach to the Pole. In any case we shall have acquired knowledge, and a positive benefit to science, by a more accurate determination of the figure of the earth than we have hitherto possessed."

These are the suggestions of an intelligent officer, whose opinion is entitled to respectful attention. We leave the chances of success to be judged of by our readers; and will only add, that from rumours which have reached us, we think it not improbable that the experiment will be tried.

The Works of Lord Bolingbroke; with his Life. 4 vols. Philadelphia, Carey & Hart.

THE arrival of a new and complete edition of the works of Bolingbroke from America has set us speculating on the special interest which our transatlantic brethren can find in the writings of one who is now but rarely studied in this country.

In his own times, Bolingbroke attracted the attention of all Europe. It was agreed, as by common consent, that never had a more powerful speaker appeared in parliament; he was deficient in no attribute of an orator; he possessed a fine person and a harmonious voice, a graceful and flowing delivery, a prompt memory, a lively fancy, and a clear, rapid, apprehensive intellect. His style was brilliant and captivating: a rich diction, profuse imagery, apt allusions, and a highly polished wit adorned all his speeches. Powerful in parliament, he was even more formidable in council. Singularly shrewd in his perception of individual character, he was sagacious in his schemes for the success of whatever cause he was embarked in. Fertile in projects, with untiring energies, and a resolute character, seldom has the world witnessed a man endowed with such capacity for public affairs. And yet how little he effected! It was not by him that the entrance of the Tories to power was achieved. The intrigues of Harley were more useful than the eloquence of

Digitized by Google

Bolingbroke. Driven from power, he committed himself with the Pretender and the Jacobites, but his new friends speedily cast him off. He was then an exile, and attainted by both the rival houses of Hanover and Stuart! Though permitted to return to his native country, he could not succeed in obtaining admission to the House of Peers, and, in despair, turned pamphleteer and political writer. In society, he fixed on himself the attention of all observers. The excesses of his youth furnished gossip for the town; his pretensions to learning and wisdom were gravely discussed in halls and colleges. The fame of his eloquence, the charms of his conversation, the graces of his person, the variety of his acquirements, his startling career, and his versatile genius, dazzled his contemporaries of all classes. He was a man to be wondered at. He was pre-eminently the greatest "lion" of his age.

But what is the fame of Bolingbroke now? How comes it that posterity does not regard him with the admiration which he received from his contemporaries? Why is it that his memory has no hold upon our affections? Because he was a wonderful, but not an admirable character, and sympathy rather than astonishment connects us with the great men of past times. His writings are void of that charm which earnestness and sincerity can alone impart.

In our days the reputation of Henry St. John depends on his literary works, which, although admirable in many points of view, do not display those wondrous powers which Pope, Chesterfield, and Swift rivalled each other in panegyrizing. The loss of his speeches does not we think detract from his fame. On the contrary, *omne ignotum pro magnifico* is very applicable to his oratorical renown. The genius of Chatham immortalized itself in a few startling sentences of sublime effect, but the copious, ornate, and diffuse eloquence of Bolingbroke could not be appreciated, except when set off by the orator's matchless elocution. There can be no doubt that Bolingbroke spoke both splendidly and persuasively, but we do not believe that he ever said *great things*, like Lord Chatham.

Of his philosophical works, Burke asked, "Who reads Bolingbroke now? who ever read him through?" and whatever differences of opinion may exist as to their merit, this same question might be asked now as then. His political writings are of a different character. Politics had been his pursuit for the greater part of his life. He had zealously devoted himself to public affairs, and had acted a conspicuous part in the House of Commons, before he wrote on politics; and he brought to the subject a mind intimately familiar with it in all its bearings. England, probably, has never had a statesman more expert in the craft of politics, and he was one of the first political philosophers who pointed out the actual working of the British Constitution. If any one wishes to study the British Constitution as it exists in the minds, habits, and characters of Englishmen, he should carefully peruse the admirable 'Dissertation on Parties,' and 'Remarks on the History of England.' It is to the constitution therein described that the British statesman (Whig or Tory) will appeal as a standard for his actions, and not to that baseless vision, lauded by De Lolme and Blackstone. There was not a spring in the machine of which Bolingbroke was ignorant. He well deserves the fame of having been the first writer who luminously treated of the more practical parts of English political science. Many have understood the theory, and many have understood the working of the Constitution, but none before his time, and hardly one since, knew both so thoroughly.

Coleridge remarks in his Lectures that the English language has been corrupted since the time of Swift, and it is true that essayists, divines, and political writers have been too prone to take Bolingbroke for a model. He is the most ornate of our classics. The divines of the seventeenth century were lavish in the use of imagery, but it was of an oriental character, introduced from Scripture, and employed on subjects where imagination has a large exercise. But on the commonest topics Bolingbroke indulges in ornament. This florid character of his style is agreeably relieved by the racy homeliness which frequently diversifies his language. It is evident that he had closely studied Cicero, and considered him as a model. The pompous diction, swelling sentiments, and sonorous oratory of the Roman, are strongly reflected in Bolingbroke. But as if to relieve the effects of his flowing periods, he frequently writes in short sentences. In rhythm he has never been surpassed. The euphony of Burke's rhetoric has been greatly admired, but his artistical effects are often cloying, and pall upon the ear, which longs for more natural strains. Bolingbroke struck the exact chord, between a harsh and cloying cadence, in the construction of his periods.

We shall be much surprised if Bolingbroke ever becomes a favourite author with the American people. Nor do we see the especial value to them even of his political writings. Unlike Burke, who is much read in the United States, Bolingbroke was not embarked in politics which have a permanent interest. The Jacobite struggles were as transitory in importance, when compared with the French Revolution, as the Treaty of Utrecht yields in social value to the Declaration of American Independence.

The edition of his works now before us, and which has startled us into a few words of comment, is well got up, in four large volumes, with excellent print and paper. There is also a very good index. The 'Life' prefixed is wretchedly poor, being a clumsy compilation from Cooke's 'Memoirs,' and articles from the *Edinburgh* and *Quarterly Reviews*. It is a tame and uninteresting catalogue of events, rather than a biography.

OUR LIBRARY TABLE.

Conchologia Systematica, by Lovell Reeve, 2 vols. 4to. with 300 plates.—We congratulate Mr. Reeve on the completion of this beautiful work. The opinions which we have expressed, upon the various numbers during its progress, are fully borne out by it in its complete form; and the great quantity of new plates with which the latter numbers are enriched, and the many novelties now for the first time represented, cannot but fail to render the work one of standard excellence. We regret, however, that there are no specific characters given of the species figured; nor is there any list of the habitats: thus, for instance, we find not a word about the geographical distribution of the Eburnæ, which are confined to the Indian and China Seas—the Cymbyæ, to the African Seas, nor the Terebella, to the Indian Archipelago. On the subject of species we find some few detached observations materially at variance with the generally received opinions respecting their permanence and limits: as, however, the work does not profess to be devoted to the elucidation of species of shells in general, but only to a selection, in order to illustrate the genera, we willingly pass them over. Respecting the groups adopted by Mr. Reeve as genera, we are not always inclined to agree with him, considering that he has in many instances rejected groups, proposed by others, which possess a generic rank, or at least a set of conventional characters, as important as those which distinguish many of the groups which he has adopted. Science is not stationary, nor is the system of Lamarck the *ne plus ultra* of conchological science. We are aware that much diversity of opinion exists among naturalists as to the real character and distinctions of genera—a subject we shall not here enter further upon—but we are convinced that in numerous cases Lamarck himself would have adopted genera which are sunk in the 'Conchologia Systematica.' At all events, the species which have been deemed of sufficient importance to have generic names given to them by other conchologists, ought to have been figured, which is not always the case—*Cypræa Capensis* for example,—the type of Gray's genus Cyprovula [a name, by the way, at variance with the Linnæan canon *Nomina generica ab uno vocabulo generico fracto altero integro composita, indigna sunt*]. We have noticed a few errors in the text, both typographical and grammatical, as well as some irregularities in the references to the plates and figures (plate 278, fig. 3, and pl. 275, p. 245, for example). Notwithstanding these drawbacks, we again repeat our conviction of the high value of the work before us, comprising as it does so many hundreds of figures beautifully executed, and representing many splendid novelties with which our cabinets have recently been enriched by the voyages of Cuming, &c., whence it may be considered that at least one-fourth of the figures represent species of which no former drawings have been published.

Manual of Diseases of the Skin, by M. H. Burgess, M.D.—This is a translation, with notes and additions, of the work of Messrs. Cazenave and Schedel, which will, we imagine, prove acceptable to our professional readers, although the most that can be expected in the present state of this branch of medicine, is some nearer approach to truth than that which had been previously achieved. The attempts hitherto made at precision and classification, have chiefly been conducted with reference to the external characters of the disease, which, though a vast improvement on the absence of all order and method, has yet the demerit of obscurity, where perspicuity might have been anticipated, and the still greater inconvenience of distracting attention from the physiological and constitutional symptoms which constitute the essence of the maladies of the skin, in common with all other diseases. The tendency resulting from this classification, is in course of disappearance under the generally improved state of medical investigations, and a time is not far distant, when the existing classifications, like those of Linnæus, will be retained for mere facility of reference, while the analogies and treatment of each disease will rest on their own scientific grounds.

The Fancies of a Dreamer, by H. H. Davis.—Mr. Davis is one of "the mob of gentlemen who write with ease," and whom it is desirable to remind, from time to time, what hard reading it is possible for easy writing occasionally to be. In the present case it is unprofitable, too; and we cannot counsel any reader of ours to such an occupation of his time.

Love and Duty, and other Poems, by T. Clarke.—Mr. Clarke is one of "the mob of gentlemen who write"—but *not* with ease. To him we can but say, what we have already said to so many authors of his class, that their plea of "unfavourable circumstances" is not admissible in the critic's court. "The turmoil of an active and laborious life, every moment of which would appear, to a casual observer, to have its own duties and responsibilities," is a sufficient argument against the author's meddling with the poet's art at all; but is so far from furnishing an excuse for mediocrity of execution, that nothing short of a positive inspiration can justify a man, with such claims upon his time, for any dalliance with the Muses. As with the dealers in revolution, success is the sole justification in such a case; and of the author before us, it may be predicated with certainty, that he will never entitle himself to the benefit of any such plea.

The Man-of-War's-Man, by Bill Truck.—One of *Blackwood's* standard novels; or, in other words, a republication, from the pages of the Magazine, of a tale published there twenty years ago. The author, in his preface, claims it as the progenitor, if not the prototype, of the 'Peter Simple' class of fictions; and informs us that he was compelled to discontinue it, owing to the indignation of gentlemen in "the service," who loaded the Edinburgh mail with remonstrances addressed to Christopher North, against the propriety of allowing such vulgar stuff to be put forth as a chronicle of their doings and their dialogue. Verily, a score of years have wrought a change! Bill Truck does not write like 'Cecil'; his periods are more redolent of tar and grog, than of *eau de Mousseline* or Tokay; but he is a positive sea-Pelham, if compared with some of his progeny; while, as the first, though not the best of the race, his adventures deserve to be issued in their present compendious form.

ROYAL ACADEMY.

Sir R. Westmacott's Lectures on Sculpture.

LECTURE V.

THE example of the school of Phidias maintained its influence, and was followed in bright but varied succession through several ages; but that simplicity and vigour, that tranquil grandeur, the peculiar character of his style, cannot be considered to have been fully sustained for more than fifty or sixty years.

The art which succeeded was of a more voluptuous kind, and the decided forms of the former were often dissolved into the androgynous, or mixed character of the two sexes.

The first example of the union of the two styles may be seen in a female torso discovered in the ruins of the amphitheatre at Capua; the beauty and breadth in the head, the sweetness and, at the same time, dignity of its expression, are not surpassed by any work in sculpture known to exist. Throughout the body there is a truth in the imitation and a grace in the flowing of the lines which make us regret that so small a portion of so exquisite a work should have been recovered. We probably contemplate in this fragment the actual forms, with very little variation, of a Grecian woman. The marble has all the appearance of having been worked from a cast from nature.

As the revolution in art, by the dismissal or rejection of symbolical or rather prescribed forms, was effected by no violation of the established principles of the art itself, as it was practised in the schools of Argos, Sicyon, or Corinth, the general sentiment became easily reconciled to the change, and it was soon extended, not only over the mother country, but also throughout the colonies of Greece.

The sublimity which Phidias had imparted to his works,—the diligence, precision, and grace which characterized those of Polycletus,—and the executive skill of Agoracritus, Alcamenes, and Ctesilas, preserved their force through all the vicissitudes of art; but their value in combination has, perhaps, in no instance been more beautifully illustrated than in the two statues of the Venus of Capua, at Naples, and that known as the Venus of Melos, now in the Louvre. The received opinion that it was the custom of that, and certainly of preceding ages, to clothe the statues of females, (even those of Venus, which goddess there can be no doubt these works personify,) may be considered an objection to attributing these statues to this period of art. It is, however, the only argument which can be adduced against it, for, from a careful examination of them, and comparison with the draped groups from the pediment of the Parthenon, we find in both, but more particularly in the Venus of Melos, the same style of form and peculiarities in the naked parts, and precisely the same treatment and mode of execution in the drapery, while they offer, in their whole, examples of all the higher qualities of the art belonging to that time.

The Professor said, it was not his intention to extend his consideration of the elementary qualities of Art further than was necessary for the illustration of his remarks on the several works to which he might have occasion to refer; but Expression being intimately connected with almost every object of this period, and as many works, either in the original or in ancient copies, remain to us in so perfect a state as to allow of our reasoning on their motives, he should offer, incidentally, any observations on this, or any other quality which the subject might demand, rather than make them the subject of a distinct discourse.

As every action of the body depends upon, or is influenced by, the mind, and as the great aim both of the sculptor and the painter is to endow his work with the passions and affections he himself conceives to be appropriate to his subject, and to communicate them and make them obvious to the spectator, the countenance and the gesture or action should necessarily be in perfect accordance or agreement. Of the attention the Greeks paid to this, and as an instance how forcibly they felt the necessity for its observance, no stronger example can perhaps be offered than the statue commonly called the Dying Gladiator. In the remarks which were offered in the first lecture of this course, on the qualities which were common to all works of the Greeks, as belonging to a class, this statue was particularly alluded to, and doubts were expressed as to the propriety of admitting it into the class of athletæ. The following are some of the reasons for excluding it:—This statue has been ascribed by some to Ctesilas, but upon what authority it is difficult to conjecture. The character of his works was elevation; and he is spoken of generally, but by Pliny more particularly, as being remarkable for adding nobleness to that which was already noble. Now this work, although inimitable both in its accordance throughout, and in its fidelity to nature, is evidently the representation of a man of low condition. This is expressed in the head and in the left hand, and more especially in the feet. In this statue there are none of the distinctive marks of a figure adapted to, or educated for, athletic exercises. There is neither compactness of form nor decision of parts, such as we find even in our own prize-fighters, after the course of training necessary for their contests. That this work may have been of the time of Ctesilas is highly probable, as we have examples, though few indeed remaining, of works expressing, like this, individual nature, as in the Whetter, or Listening Slave, in the Tribune at Florence, in the well known statue of the Boy drawing the Thorn from his Foot, the Imploring Genius, at Berlin, and the fine fragment in the British Museum, of the Two Boys quarrelling over the Tali. But, admitting this statue to be of this age, it could not represent a gladiator; human sacrifices, it is true, were common at very remote ages, but these had been discontinued for many centuries, and gladiatorial exhibitions were first introduced into Greece by Antiochus Epiphanes, at a very late period, probably not earlier than one hundred years before Christ, and more than three hundred years after Ctesilas. Winckelmann has suggested that this statue may represent a dying herald; and on the authority of Pausanias, has imagined it may be Antemocritus, the Athenian herald, who was killed by the Megarean—a violation of the laws of arms so strongly resented by the gods, that, says Pausanias, their city was never able to recover from it. That this event had been considered of no slight importance by the Greeks, is evident from their having erected a monument to the same herald on the road from Athens to Eleusis. It must be borne in mind that the accessories of the short sword and belt, and also the right arm of the statue alluded to, are restorations.

A very fine example of accordance of action with expression is afforded in the statue of Aristides, at Naples, in which the firm, uncompromising character of the head is not more expressive of mind than are the composed position of the arms and the attitude of the whole figure. In the same class of individual nature, and it is probably of the same period, may be classed the two statues of Philosophers, in the collection at Petworth. They have all the characteristics of fine art, and are also valuable specimens of the mode of conducting portrait sculpture.

Expression depending, as has been observed, on the mind, it becomes impossible to lay down any fixed rules for the guidance of the student. The principal features of particular passions may be defined, but their modifications and treatment must depend upon the degree of force required, and on the direction of the genius of the artist, whose mind, indeed, may be considered a kind of mirror, upon which the images of external objects are received, and from which they are reflected in his works.

In the sympathies which it excites, and in the examples which it affords of gradation of expression, no work offers a wider field for observation than the group of Niobe and her Children. This great work may be considered rather as the precursor than as immediately belonging to the school of Praxiteles. It appears that doubts were entertained even in the time of Pliny (who says that these statues adorned the Temple of Apollo Sosianus, at Rome), whether they were to be attributed to Scopas or Praxiteles. The passage in Pliny is short and rather ambiguous, and might lead at first sight to the supposition that Scopas and Praxiteles were considered contemporaries, whereas the former flourished nearly eighty years before the last named. The same subject had been treated by Phidias, and was one of those which adorned the throne of the Elean Jupiter. The statues referred to may more properly be ascribed to Scopas, from the character and simplicity of the draperies in several of the daughters, and from the markings in some of the eyelids, especially in the figure of Niobe herself, and which indicate a style more severe and vigorous than belongs to the sculpture of Praxiteles. Although these statues cannot, with respect to execution, be ranked in the first class, they must always, from their variety and expression, be considered as powerful efforts of the mind; and the balance of parts, and the character and sentiment appropriate to the subject, are so happily preserved throughout, that, as a whole, they fully deserve to be regarded as amongst the finest examples left us of ancient sculpture. In this assemblage there are no fewer than fourteen different objects under the influence of fear, and the effects of grief, expressed with all the circumstance and variety which Nature dictates. The profile of the face of Niobe is of the most sublime harmony; the forehead is small and well rounded, the eye well encased, of fine form and admirable expression; the eyebrow is gently arched, the line at the same time being rather sharply indicated along the bone, a distinction of treatment peculiarly suited to the severe style, opposed to the more graceful treatment of a later age, which rounded the parts. The chin, and the whole contour of the lower jaw is full and round. The mouth, which is gently opened, is of inexpressible sweetness; its breadth, from the dilatation of the nostrils, scarcely exceeds that of the nose, the fulness of the lips preserving an harmonious proportion with the lower part of the face and chin; the hair, bound by a fillet, falls in easy, but graceful, negligence over the shoulders; the arrangement, indeed, of the whole bust shows it to be of the best time of art, and as a model of beauty it may be considered of the purest form. It is impossible to regard this head without feeling pleasure from the harmonious assemblage of the parts, and without at the same time being moved with pity from the strong image of grief which it offers. The chest and breasts are full without being too much charged, an effect which was avoided by the Greeks, even in the forms of women of a more advanced age. The statue of the daughter clinging to the principal figure equally demands our attention. The forms chosen and the beauty expressed, though distinct from that of the mother, are appropriate to the age of incipient womanhood, and appear, in conjunction with the mother, in form and beauty so perfectly in accordance as to be only so many modifications of unity itself. Fear is strongly expressed in her coun-

Digitized by Google

tenance, but it is the fear of innocence and of that expression of quickness and sudden impulse with which a girl would fly, on apprehension of danger, for refuge to a mother. She is represented of an age to admit the tender developements of form, the better to express which the sculptor has judiciously draped her only to the hips, with the simple *chiton*, which served as a shift, and was fastened by a button to each shoulder; the robe, which forms more ample masses, encircles the lower part of the figure. Without recurring to signs or allegories, the sculptor has by action or form rendered apparent the several degrees in which the mind is influenced. In one this is effected by a slight movement of the head; in another by the motion of parts only; in others by the entire action; indeed, whether regarded for their conception, composition, beauty, or expression, there are few works in existence which afford examples of more perfect unity, greater variety, or purer style.

There are passions, and even degrees of passion, which declare themselves in the countenance by contractions so disagreeable, and in the body by action so violent, that they are incompatible with, and destructive of, beauty. The Greeks, perceiving this, invariably took that middle course by which a certain degree of beauty was always preserved; and it is remarkable that there is no instance, in the best times of Art, of any violent passion, such as Anger or Despair, being personified. Desolation, as we see in the Niobe, was marked by simple affliction, and everything which could debase the beauty of nature was avoided.

To avoid any excess of expression which might offend, even the Furies were characterized rather by attributes, and were personified under agreeable forms. Pan also was represented anciently with human feet, and appears in the coins of Arcadia as a beautiful young man. All the statues of that god, as seen with goats' feet, and an expression in the head of that animal's propensities, are believed to be of a later age.

But to return to the school of Praxiteles, in which the stern dignity of Sculpture was displaced by an almost feminine tenderness both in feeling and execution, the rigid character of the earlier schools almost expiring with the younger Myron.

Undoubted examples of the great master of this period may be seen in the Apollo Sauroctonos, or Lizard Killer, and in the statue of 'Cupid bending his Bow.' There is also a beautiful little specimen in the British Museum, a copy, most probably of the same period, from the celebrated statue which occasioned the pleasant story of Phryne, the Mistress of Praxiteles. The small statues, also in the British Museum, of the Peribœton, are received as the work of Praxiteles; but the Apollo Sauroctonos, in the Villa Albani, the most precious monument in bronze which probably exists, is the most characteristic of his style. The Apollino, in the Tribunal of Florence, is another example of youthful beauty and grace. There is no antique statue that surpasses it in elegance of proportion or harmony of form. We may also class as a work of this period, a bust of Atys in the British Museum.

In the ideal style of that class of art termed androgynous—in its treatment, uniting the forms of the two sexes—this age supplies many examples, in statues of Apollo, Bacchus, Cupid, and Adonis.

An ideal standard of female beauty, according to fixed principles, had long preceded the Praxitelian age; but it was a beauty raised above the limits of mortality. In the combination of grace, and all which could add loveliness to form, this age was peculiarly distinguished. The art of the former school had its foundation in religion, and was intended to command respect, rather than to excite pleasure; but not many years after the expulsion of the Persians luxury had attained to an Asiatic pomp, and every refinement was sought after that could please the senses. But we must not confound the state of Athens with the country around it. That city, according to Dicearchus, who wrote about the period of the death of Alexander the Great, being of the meanest character, as regarded the houses of the citizens, whilst unbounded magnificence reigned in these country residences of the Athenians. Their minds, in the interval of peace, had received that polish which the cultivation of the graces bestows, and the artist found his talent as equally in demand for pleasurable as for sacred purposes. Every motive had, from the earliest times, been given by the Greeks for the cultivation and improvement of beauty: games had been instituted at Elis, and the prizes were consecrated in the Temple of Minerva; and so cautious were they to avoid everything which could distort, or even discompose the features, that Alcibiades refused to play upon the flute, as it had that effect, and was, in this, as in many of his habits, followed by all the youth of Athens.

Among the statues of this period, one of Venus, at Woburn Abbey, and another at Newby Hall, may be classed as examples of the highest beauty. The statue at Woburn is rather below the standard of nature, being not more than four feet ten inches in height. The accessories in the Newby statue, as well as in the Venus de Medicis, leave little doubt that both were executed after the age of Lysippus, or about the dispersion of his immediate school. The Cupids which are attached to the dolphins in the latter, under the form of winged children, are a late personification; Eros, or Love, in earlier periods, being represented as a beautiful youth.

After the subjugation of Greece by Philip of Macedon and his son, the history of the Arts, as of the country itself, declines in interest. The jealousies and collisions for power with the princes who had followed, and the struggles of the people to recover their independence, had destroyed that calm which had contributed so much to the promotion both of Sculpture and Painting. The former was, however, partially supported, and works of the time are still found in a pure style; but in Greece generally, adulation to succeeding, but more particularly to successful princes, introduced a new practice, which seems to have hastened the fall of Sculpture. Their money, which, from immemorial times, had been sacred to the gods, and, except a local device, bore their image only, was now impressed with the forms and types of their princes, and, about 280 years B.C., the age of portrait sculpture commenced, and heroic art declined.

But nothing perhaps contributed more to the degradation of Art, than the disuse of the means afforded for the contemplation of beautiful nature in the decline of the public games. The olive crown had ceased to inspire its wonted emulation, in the cultivation of the body for athletic rivalry; and that manly and patriotic feeling which had hitherto distinguished the Greeks generally, but the Athenians more particularly, was debased by the frequent and barbarous exhibitions of hired combatants.

Under the Ptolemies and Seleucidæ Art occasionally found munificent protection, and, though rapidly approaching its decline, it still was tempered with a portion of that sublimity of which we have several very beautiful examples remaining; but its power had ceased with the causes which produced and sustained it, and with Lysippus the Golden Age of Sculpture expired.

CHARACTERS IN 'CYMBELINE.'

On the Acting of this Play, as recently revived at Drury Lane, and chiefly on the performance of the part of Imogen.

WE proceed, for the purpose of illustrating more thoroughly the beauties unfolded in the dramatic developement of the character of Imogen, to consider the personation of it by Miss Helen Faucit, its present representative on the boards of Drury Lane.

By her appropriate manner of delivering that sagacious reflection—"Oh, dissembling courtesy," &c.—which forms the very opening of the part, this actress gives at once that tone of dignity, moral and intellectual, as well as of person and of rank—that unaffected majesty of mind, as well as bearing—the accustomed absence of which, in the commonplace conception of the character, has deprived even its exquisite sweetness of its most delicious charm. Her Imogen forgets not for a moment that, in person and character, she is to be no less "the noble" than "the sweet." She makes us feel this throughout—no less in the tender parting scene with her husband, and her kind communings respecting him with her delicately affectionate servant, than in her vindication of her own conduct against her father's injustice, and her rebuking of the vulgar contempt heaped by her odious suitor upon her banished lord. Her scene with Iachimo demands a more particular consideration, for it is here that those storms begin to assail the inmost heart of the heroine, which are to heave it so deeply through the rest of the drama. Here, too, it is that Imogen's representative is first called upon for a large display of that mute acting which constitutes so much of the most delicate and difficult execution belonging to this part, seeing that the actress has to personate, almost throughout the scene, a most interested and most agitated *listener*. From the commencement of Iachimo's exclamations of affected abstraction, begins that course of silent but expressive acting which calls for the highest qualities of the performer, consisting as it does of such variety, such fine gradation, of delicate yet significant touches. And now it is that the eye of the auditor, if he would apprehend the inmost spirit of the scene, should be intently fixed upon every gesture, upon every the slightest change of countenance, in the heroine's representative. Here, if ever on the present stage, will he be made to feel how much there is of the noble and the exquisite in Shakespeare's dramatic creations, that cannot be realized in the closet. He will be vividly reminded of the fact which we emphatically indicated in commencing these critical notices—that Shakespeare dramatized, not to a *reading*, but to a *seeing* and *hearing* public—and that for this reason chiefly, amongst others, the more thoroughly any reader shall have possessed himself of the true spirit and meaning of any portion of Shakespeare's dramatic text, the more will he be in a condition to receive that additional and crowning illustration which no critic or commentator can give him—which can only come from the performer whom Nature and Shakespeare have themselves inspired, and which is indispensable to give us the realization of that living and breathing creation which each of these dramas *primarily* was in the mind of its author. Nor is it because we can never hope, any more than he himself could ever expect it, to see any one of his dramatic works completely rendered to us by an adequate personation of all its characters, that we should neglect to derive such scattered illustrations as even a very imperfect theatrical representation may afford us. Speaking from the experience of our own hearts and minds, we should say that the more earnestly and cordially any reader shall have applied himself to follow up the dramatic spirit and expression of any one of our great poet's productions, to the utmost limit to which the verbal text can lead him, the more thankfully will he repair to the scene where he may be gratified and instructed by that far more complete, more vivid and precise expression which the truly inspired actor or actress will always convey to him—even though that perfectness of expression should be confined to a single character in any given play; and in this spirit it is that we return to an attentive consideration of Miss Faucit's acting in the first great scene of 'Cymbeline.'

Here, especially, we find the advantage of this lady's figure, and the dignity which pervades her conception of the part. To this scene, above all others, the absence of these requisites would be peculiarly fatal. They are demanded by its every circumstance; but we see more particularly the truth and force which they lend to Iachimo's expressions of admiration upon first beholding the princess; for we must be permitted to observe, that although the mental powers of a performer can do a great deal in overcoming personal disadvantages, no amount of them would be enough to overcome the absurdity, for instance, of Iachimo's exclamation, "All of her that is out of door most rich!" &c., addressed to an actress of ungraceful or undignified aspect, whether as to manner or to figure. Nevertheless, it is far more important, as well as interesting, to trace in the performer the intellectual powers and graces—the nice and just discrimination of those rapidly rising or sinking gradations of feeling which pass over the heroine's heart, from the beginning of Iachimo's exclamations to the end of his retractation—which, as we have remarked already, the actress is here called upon to render, much less by the brief words that drop from her lips in the intervals of Iachimo's speeches, than by that mute expressiveness of figure as well as feature, which is so familiar to the consideration of every true physiognomist, as well as to every genuine professor of histrionic art.

After showing us, then, in the opening of the scene, that unalterable dignity of the woman, noble in

Digitized by Google

mind yet more than in station, which is requisite to prevent the soliloquy,—

A father cruel and a step-dame false, &c.—

from degenerating into merely weak and querulous complaining,—and her sudden joy at receiving the news from her husband, and grateful cordiality towards the bearer, from taking the commonplace character of a childish fondness and thankfulness,—this actress proceeds through the first great trial of her more delicate skill, in exhibiting to us the changing and deepening impressions which Iachimo's exclamations and disclosures make upon Imogen's mind, until it sinks oppressed by the full consciousness of her husband's falsehood. In the varying aspect of the performer, we read, successively, the look of mere surprise at his first exclamation, "What! are men mad?" that of inquiring interest at his rumination upon the difference "'twixt two such shes;" the anxious curiosity as his meaning begins to unfold itself —deepening into the most painful concern when she is told how her lord "laughs from's free lungs" at those who believe in feminine constancy—and so on, by the nicest gradations, to that appealing look and gesture of unutterably agonizing suspense, with which she urges him,—

Since doubting things go ill, often hurts more
Than to be sure they do,—

to declare explicitly what is the matter. Then see the whole expression of that face and figure, thus wound up to the highest pitch of painful expectation, relaxing gradually, yet rapidly, under Iachimo's direct intimation of her lord's infidelity, "Had I this cheek," &c., until we trace, in their look of blank and utter desolation, that dying of the heart which prompts the faint ejaculation, "My lord, I fear, has forgot Britain!"

The bursting into tears with the exclamation, "Revenged! how should I be revenged?" so naturally expressing the first convulsive effort which the overcharged heart makes to relieve itself, gives also the fuller effect to that sudden transition of idea and of feeling which takes place in her mind, while she listens to the few brief sentences that convey Iachimo's most unexpected and most insulting proposal. Here we think that Miss Faucit's mute acting is peculiarly happy. The sudden passing away of the whole cloud that had gathered over Imogen's mind and heart—the silent conviction so instantly wrought within her, that the man addressing her is a villain—are vividly and beautifully set before us, in that withdrawing of the hands from the weeping face, that gradual elevating of the depressed brow, and recovery of the drooping form, till they reach that thorough clearness of the countenance and firmness of the figure with which she delivers her first call to Pisanio. So far, however, we are come only to the look and tone of prompt decision. That one step further of Iachimo's, "Let me my service tender on your lips," raises, most properly, both the look, and voice, and attitude of the actress to a pitch of proudly and even fiercely indignant expression, the contrast of which to the habitual gentleness, not tameness, of manner in Imogen's representative, is in strict accordance with the contrast which the indignant bitterness of the speech, "Away! I do condemn mine ears," &c., presents to the tone of the heroine's ordinary language. This particular passage is one of those which display to the highest advantage those characteristic powers of this lady as a Shakespearian performer, which we have had occasion to point out in a former notice of her acting.

Again, the relaxing of the whole aspect, in the course of Iachimo's apologetic retractation, until it reaches the dignified complacency with which she says, "All's well, sir: take my power i' the court for yours," requires no less delicacy of discrimination and execution than is demanded by all the earlier parts of the scene. And in the verbal text of the dialogue that follows, there is nothing beyond the difference between "You are *kindly* welcome," and "You are *very* welcome," to mark the difference of manner which undoubtedly the dramatist conceived his heroine as displaying, notwithstanding her recovered good-will towards her Italian visitor, after his presumptuous experiment. Here, again, we regard Miss Faucit's performance as truly illustrating that implied blending of the graceful pride of offended delicacy with the kind complacency of a generous forgiveness.

So far as violent revulsion of feeling can make it so, the passage where Imogen reads the letter from her husband commanding Pisanio to kill her, is the most arduous of all in this diversified part. To have her joyful anticipation of the affectionate meeting with her beloved lord checked at its height by a communication like this—what a shock of feeling for the actress to represent, with no more precise indication to guide her than Pisanio's exclamation—

What shall I need to draw my sword? The paper
Hath cut her throat already.

In expressing to us the stunning blow given to the adoring wife by the very first words, "Thy mistress, Pisanio, hath played the strumpet in my bed;" the staggering and faltering of her eye and voice, in sheer bewildered incredulity, until she comes to the murderous command, "Let thine own hands take away her life;" the fainting away of her accents at the close, under the withering conviction that her eyes had not deceived her, but that her calamity was real; the sinking senseless to the ground; and the hysterical reviving; in all these the actress has had nothing to direct her but her own instinct, as to the true spirit of the character and the situation. That instinct, we think, has directed her aright, leaving us indebted to her for so much genuine illustration of the dramatist's conception.

And here, in justice to the performer, we must point out a certain misconception as to the predominant spirit of this scene, which her judgment has led her to avoid. Mrs. Jameson, for example, tells us, in relation to it, that, after Imogen's "affecting lamentation over the falsehood and injustice of her husband," "she then resigns herself to his will with the most entire submission." The critic here falls into the error of making Imogen desire Pisanio to "do his master's bidding" simply from a motive of *obedience* to the will of a man whom she is all the while so emphatically assuring us that she feels called upon to regard with indignant pity. This, however, is but one instance of the mistakes occasioned by the low estimate of Imogen's character, in her conjugal relation, which has been so unaccountably prevalent among the critics; abasing her from her proper station as a noble, generous, and intellectual woman, whose understanding has sanctioned the election of her heart, to that of a creature blindly impassioned and affectionate, ready to submit quite passively to any enormity of indignity and injustice inflicted upon her by the man to whom she has devoted herself. The present actress of the character makes herself no party to this degradation. The most nobly characteristic passages which she ought to deliver in this scene are, indeed, struck out, on the principle, no doubt, of indispensable saving of time, especially the grand one cited in our last paper:—

Though those that are betrayed
Do feel the treason sharply, &c.

But it is plain that she has studied them attentively; and so has raised her conception and expression of the heroine's character, as shown in this trying situation, to that noble elevation which the poet has so clearly indicated. She gives the true *dignity* of tone, as well as the true *feeling* to every sentence; the pathetic indignation with which the slandered wife first repels the charge,—

False to his bed!—what is it to be false?—

the deep grief with which she feels herself compelled to retort it,—

Iachimo,
Thou didst accuse him of incontinency, &c.;

and then the intensity of despair, *not the excess of mean, slavish submission*, which dictates that most affecting appeal,—

.....Come, fellow, be thou honest, &c.

By delivering the words, "A little witness my obedience," in that tone of pathetic irony which shows how truly she apprehends the meaning of what follows:—

Look!
I draw the sword myself: take it, and hit
The innocent mansion of my love, my heart.
Fear not; 'tis empty of all things but grief:
Thy master *is not* there; who *was*, indeed,
The riches of it.—

she makes us feel convincingly, that it is from no submissiveness to the unjust will of him whom her heart at this moment *rejects*, but from the very extremity of heart-rending anguish that *his* heart should have so revolted from her as to be capable of issuing such a command, that she exclaims—

Pr'ythee, despatch!
The lamb entreats the butcher. Where's thy knife?
Thou art too slow to do thy master's bidding,
When I desire it too.

Still, one of the greatest tests which this drama affords of the truth and delicacy both of conception and expression in the actress, appears to us to be the share assigned her in that great concluding scene, from the moment when Imogen recognizes the diamond on Iachimo's finger, to that where the latter restores the stolen bracelet; for here, perhaps, it is, in all the part, that the poet has imposed on the performer the most of that task of *completion*, which we indicated at the close of our foregoing paper. Here, again, the world of anxious, and then delighted feelings, which, in that interval, rush in rapid succession upon the heroine's heart, while for the most part she is a silent auditor, are rather suggested than expressed in the mere text of the dramatist. The tide of happy affections that flows back so plenteously into the lately desolate bosom of Imogen, have to be rendered to us by the actress, for the most part, independently of any direct indications afforded by the dialogue.

Here we must express our regret at the omission, in the present acting, of that affecting passage which forms the proper starting-point of this interesting *dénouement*. The Roman commander, Lucius, after begging of the conqueror the life of his affectionate page, is expecting that the latter will avail himself of Cymbeline's offer, of granting him any boon he may desire, even though he "do demand a prisoner, the noblest ta'en," to ask in return the life of his generous master:—

I do not bid thee beg my life, good lad;
And yet, I know, thou 'wilt.

And, at this moment, the auditor feels as if he knew so too; for all that he has learned both of the character and the circumstances of Imogen, leads him inevitably to this conclusion. Her husband being, she supposes, dead,—her servant treacherous,—her father, though present to her eyes, yet lost to her heart,—the only ray of sympathy that beams upon her soul amid the settled gloom of its deep though calm despair, is that which she finds in the paternal kindness of the noble Roman. Can Imogen, then, do otherwise than petition for his life? Yes; for—

Alack,
There's other work in hand.

Upon the finger of the captive Iachimo she has recognized the consecrated jewel, even that "diamond that was her mother's," which, when she had last beheld it, her beloved Leonatus was putting on his finger, saying—

Remain thou here,
While sense can keep it on!

Again, therefore, her doubts are cruelly awakened as to her deceased lord's fidelity—

I see a thing
Bitter to me as death.

And the craving of her heart for the final solution of this horrible enigma, makes her eagerly forego the last human tie that slenderly binds her to existence—

Your life, good master,
Must shuffle for itself.

This explicit rejection of the opportunity to save her "good master's" life, should be retained in acting, to give, as we have hinted before, its full effect to the intensity of interest with which she looks upon the ring.

From the beginning, however, of Iachimo's confession, the countenance and gesture of the present performer express to us, in their delicate variation, what Shakespeare's text can but dimly suggest, even to the most thoughtful and imaginative reader. In them we trace, in vivid succession, the intensely fixed attention of the heroine to the commencement of Iachimo's narrative,—the trembling anxiety as it proceeds,—the tenderly mournful delight on receiving the full conviction of her husband's fidelity,—and then the grateful, tearful, overpowering joy, on seeing him so suddenly alive, and hearing his repentant exclamations,—and that most difficult, perhaps, as it is the most pathetic stroke of all, the coming forward, forgetful of her male disguise, to discover herself to him, and relieve him from that intolerable anguish, which her generous heart can no longer endure to contemplate. We might dwell upon the charming expression given to the words—

Why did you throw your wedded lady from you? &c.—

Digitized by Google

but that we regard as a higher merit in this actress her power of entering so thoroughly into that affectionate nature of Imogen, which makes even her sudden restoration to conjugal happiness but cause her bosom to overflow with grateful benevolence towards every one who has any claim to share it. Many a woman, we are persuaded, would be found capable of adequately representing to us, in such a scene, the gratified feelings of the lover or the wife, for one that could render, with a truth at once so genial and so delicate, the passage, for instance, where Imogen goes up to her brothers, and expresses her delight at their restoration to her:—

> O, my gentle brothers,
> Have we thus met? O, never say hereafter,
> But I am truest speaker: you call'd me brother
> When I was but your sister; I you brothers,
> When you were so indeed!

We cannot call to mind anything more full of affectionate grace, than the tone and gesture with which these lines are delivered by this heroine's present representative.

The queen, the wicked stepmother of Imogen,—the "woman that bears all down with her brain"—the "crafty devil," "hourly coining plots"—the hypocritical and systematic assassin—is personated by Miss Ellis, who, we are bound to remark, affects a juvenility of dress in this part, which, how well soever it may become her as a woman, is quite inconsistent with that sinister and formidable gravity which Shakespeare has assigned to this personage. We are little inclined to enter into criticism of theatrical costume, except where we find some error which is offensive no less to reason than to taste. In the present instance, the impropriety in question appears peculiarly glaring in the actress who represents the mother of so mature-looking a Cloten as the one personated by Mr. Compton; while, on the other hand, it tends greatly to destroy the dramatic contrast which Shakespeare has, in every respect, so strongly drawn between the youthful princess and the queen mature in years and wickedness.

Mr. Compton's personation of the booby prince has the merit of being consistent throughout, and possesses genuine humour. Neither do we doubt that he has considered the part in that spirit which enables *his peculiar powers* to make it the most effective. It is not, therefore, with a view to cast censure on him in his professional capacity, but simply to obviate misconception in the auditor's own mind as to the dramatist's true meaning, that we state our own conviction that Shakespeare has clearly indicated his conception of "that harsh, simple, noble nothing," as Imogen so expressively terms him on one occasion, or "that irregulous devil," as she calls him on another,—as being no habitually solemn coxcomb, as Mr. Compton represents him, but a much more bouncing, blustering sort of fool. We hear him told by one of his attendant lords, "you are most *hot* and *furious* when you win:" and certainly, from the mouth of his representative on the stage, we ought to hear "the snatches in his voice, and burst of speaking," which Belarius tells us were so habitual with him. Here, again, the general effect of the drama suffers from the substitution of a grave booby for that more petulantly awkward coxcomb, who must be more irritatingly odious to a woman endowed with Imogen's peculiarly harmonious grace of mind as well as person.

On the present acting of Posthumus, we shall make no comment—only observing, that all possible *dignity* of figure, of countenance, and of bearing, should be given to this personation, even in its most impassioned passages, in order to sustain in any adequate degree our sympathy in the interest which this personage possesses in the breast of a heroine so ideally exalted; the more so, as the mental and moral qualities of Leonatus, though not unworthy of Imogen's affection, are yet distinctly portrayed by the dramatist as inferior to her own.

On Mr. Macready's performance of Iachimo, however, we venture one word of remark. The actor, we think, has here done his very best: his conception is spirited; his execution brilliant and effective. The performer seems to have well understood how to adapt the *histrionic* reading of the part to the displaying of his peculiar capabilities to the best advantage; and so stands professionally absolved for any inevitable deviation from the dramatist's conception into which he may thus have been led. Least of all are we entitled to quarrel with Iachimo's representative because, both in figure and in feature, so far from having anything of an Italian look, he is thoroughly and peculiarly British. Nevertheless, the auditor must not be betrayed, by what he sees on the boards of Drury Lane, into forgetting that "*yellow* Iachimo" of whom Posthumus so emphatically tells us in his first soliloquy. This epithet naturally reminds us of that clear, sallow complexion which we see, so transparent and so life-like, in Titian's portraits—that genuine Italian hue with which we commonly associate slenderness of feature and pliancy of figure. It is, above all, in Iachimo's great scene with Imogen, that we feel the want of a truer personation of the artfully insinuating Roman.

That blending of earnestness of devotion with delicacy of feeling, which we have indicated as forming the groundwork of the character of Pisanio, is, we think, rendered with truth in the present performance by Mr. Elton; the actor is well identified with the part he is enacting; so that, of all the greater tragic scenes, that one in which Pisanio discloses to Imogen the commission which he has received to murder her, is the one most completely brought home to the feelings of the audience.

As affecting the truth and beauty of the scenes where Imogen is wandering in disguise, we must point out a considerable error as to costume in the present acting of the play. Shakespeare's text affords no warrant whatever for representing Belarius and the two young brothers, in their exterior, as a sort of half-naked savages. They inhabit a cave, it is true: but so, for instance, does the banished duke in 'As You Like It,' who, the play tells us, was living "like the old Robin Hood of England." Belarius himself is a noble exile, living, disguised, in the condition of an outlaw. Under the homely but not savage garb in which he ought to be represented, he should preserve the dignified and even graceful bearing of the man who had been long a courtier as well as a distinguished warrior. Only such a man could give to the young princes, even in his now rustic way of life, such a training as could fit them to attract so immediately the affection of a being so peculiarly graceful as Imogen.

OUR WEEKLY GOSSIP.

THE suggestion which we threw out (No. 783), when noticing the noble conduct of Miss Martineau in respectfully declining to receive the pension offered her both by the governments of Lords Grey and Melbourne, is, we rejoice to find, by the following circular, about to be acted on. We trust that this private testimonial will receive the support it deserves, and be not an unworthy offering to one whose virtuous life has been actively devoted to the benefit of mankind:—

Testimonial of esteem to Miss Martineau.—Many friends of Miss Harriet Martineau have intimated a wish that an opportunity might be afforded them of expressing their sympathy and esteem, and of giving some Testimonial of the sense they entertain of the valuable public services rendered by that lady in various ways, and of the exalted motives which have uniformly influenced her conduct. In order to give effect to the wishes of such persons, the following gentlemen have agreed to receive subscriptions, and it is proposed that the sum subscribed should be left entirely to the disposal of Miss Martineau:—E. Darwin, Esq., 43, Great Marlborough Street; the Rev. W. Harness, 19, Heathcote Street, Mecklenburgh Square; W. E. Hickson, Esq., 12, Park Lane; R. Hutton, Esq., Putney Park; the Rev. Dr. Hutton, 5, Hamilton Place, King's Cross; J. Robertson, Esq., 122, Pall Mall; S. Smith, Esq., Combe Hurst, Kingston; H. Wedgwood, Esq., 16, Gower Street, Bedford Square. The Messrs. Coutts have also consented to receive subscriptions.

Mr. John Allen, the master of Dulwich College, died on Monday last, at Lady Holland's residence in South Street. Mr. Allen for many years had been a resident in Lord Holland's family, having first entered it, we believe, as the medical adviser. He, with Jeffrey, Leonard Horner, and others, was one of the originators of and for many years a steady contributor to the *Edinburgh Review*,—and his opinions, on all points of constitutional history, were held in much esteem by the political party with which Lord Holland was allied. His best known work was the 'Rise and Growth of the Royal Prerogative.' In addition to his mastership of Dulwich College, he held the office of Auditor of the Duchy of Lancaster. He was above seventy years of age.

The papers also announce the death, on the 5th inst., at his residence at Portsea, of Mr. Henry Thomson, R.A., and late keeper of the Royal Academy.—In the same paragraph we may give a line, to record the death at Paris, under the name of Leven—in which he devoted himself to literary pursuits, and was, for twenty years, attached to the *Courrier Français*—of a person more conspicuously known as the Count Ribbing, who was involved in the accusations that followed on the murder, by Ankerstrom, of Gustavus III., of Sweden. We learn from the correspondent of *The Times*, that "Count Ribbing arrived in Paris from Sweden at the most violent period of the Revolution, and became, in consequence of his crime, highly popular. He was tall, well made, and 'good looking,' advantages which procured for him from Madame de Staël (as you know) the title of her '*beau régicide*.' His income was limited, but as it arrived to him in gold, at a moment when 20 francs in that metal were worth 20,000 francs in paper (*assignats*), he employed his little means with so much judgment, that he purchased very considerable property with it; in fact, he was at one time the owner of the superb domain of Rainey. He married an ex-nun (*chanoinesse*), of noble family, by whom he had a son, who survives them. He subsequently fell into pecuniary embarrassments. He professed Republican opinions to his death, but was often heard to lament—if not his crime—the exaltation that led him into it, and consequently into suffering and poverty. Count Ribbing was of a noble Swedish family—his mother of the equally noble family of Leven, which name he added to his patronymic."

Letters have been received from Dr. Lepsius's party, dated the 15th of March. They were proceeding with their excavations and explorations, and were in excellent spirits; although the Doctor himself had been slightly indisposed. Some of the party had made an excursion to Fayoum, and examined an extraordinary pyramid, built of inclined walls, inclosing a mound of earth, the masonry very perfect. This pyramid had never been opened.

The drawings and sketches of our enterprising countryman, Mr. Daniell, whose death, in Lycia, we announced some time since (No. 787), have safely arrived in London; and we had the melancholy pleasure, on Saturday last, of examining them at the house of his friend, Mr. Nasmyth, of George Street. The series is surprisingly extensive,—or rather, we should say, the collection includes many series: one, and a very fine one, on Egypt; a second on Greece; a third on the Holy Land; and a fourth on Lycia, and especially the Valley of the Xanthus, whence the marbles were taken which are now in the British Museum; besides many views marking the progress of his route. To add to our pleasure, we had the good fortune to meet Mr. Forbes, his fellow traveller, and Mr. Fellows, to whose exertions we are so essentially indebted for the Xanthian Marbles; and their kindness added a delightful and illustrative commentary, full of personal as well as historical interest.

Mr. Moon has this week exhibited the picture of 'The Christening of the Princess Royal,' painted by Mr. Leslie for her Majesty, and which is about to be engraved. It is one of the series commemorative of events of personal interest to her Majesty; which her Majesty has been pleased to have thus immortalized. If we put our trust in the prospectus, "no incident of modern times is calculated to supply a more important and valuable theme," for the artist; if in common sense, we must admit that the subject is difficult, and somewhat intractable. Mr. Leslie was not at liberty to arrange his figures in natural groups; all such matters were duly and formally ordered by Garter King-at-Arms. This formality again is increased by the nakedness of the walls in the drawing-room where the ceremony was performed. The picture, considered with reference to these unavoidable difficulties, is entitled to praise. The portraits are of various merit, but this is a point difficult to be judged of, and opinion often depends on the more or less of familiarity; some struck us as excellent, and amongst the best, that of the King of the Belgians.

A Portrait of *Velasquez*, which many connoisseurs consider a veritable work of that master, has been lately purchased by Lord Francis Egerton from Messrs. Farrer, who got it from France, whither it was "conveyed" (as Pistol says) from the Escurial—under escort of a French colonel, we are told, who had nine points of the law to warrant his appropriating it when secure. It is far mellower than any Velasquez we have ever seen, and softer in tone,

Digitized by Google

being what Italians would call *ifumato e sugoso* to an extreme; but it is of less vigorous design, and does not exhibit that cold silveriness in the flesh-tints and sketchy *staccato* touch, so characteristic of this most original painter. The portrait must at all events be admitted a beautiful production, admirable for Spanish dignity of demeanour and suavity of workmanship. It obtained the liberal price of 600*l.*

A distinguished German, whose opinion in all matters relating to art is entitled to great respect, thus writes to us—"Among the numerous works of art which have been lately produced in Munich, I wish to direct your attention to the shield of Hercules, designed and modelled, according to Hesiod's description, by the celebrated sculptor Schwanthaler. On the circumference, of the usual form of Greek shields, three feet two inches in diameter, the artist has succeeded in arranging more than 200 figures, in a manner as distinct and skilful as it is true to the poet's description. The single groups and forms have the spirit of antique beauty and grace, and are finished with the greatest care and feeling. This fine production will be interesting in England as a sort of *pendant* to Flaxman's master-work, the celebrated shield of Achilles after Homer, and I think that repetitions of the shield of Hercules, for which Schwanthaler is now making arrangements, might be desired by English lovers of art. The casts will be executed with the utmost exactness in bronzed tin or in bronze, at different prices."

At Messrs. Christie & Manson's was sold, last Saturday, a Mr. Bond's collection of Pictures. It contained but three or four works deserving particular notice, and among these but two of celebrity. The *Lichfield Ruysdael*, deemed by Admiral Lord Anson his greatest prize, and by his successors a most precious heir-loom, the very cynosure of Shugborough Hall,

Which shone all painted glory into shade,

has become, like one of the variable stars, without any actual change of dimensions, a brilliant of the second instead of the first magnitude; time was it would have brought far more than 580 guineas. We confess its splendour never dazzled us; at the Exhibition of Ancient Masters, three years since, it looked dim beside other Ruysdaels of less reputation. All the elements of a fine landscape unite in it; lofty rocks, majestic woods, and foaming waters; thunder-clouds rest on the distant hill tops, and blue ethereal spaces admit sunlight over the whole scene; finished execution would appear to have secured perfection in the details. But it wants poetic character, the composition wants interest: we do not object to its desolate air or chill gray tone—there is no sublime bleakness about its barrenness, its coldness might make our heart-blood curdle, if it only warmed our imagination. Such are our objections to the Lichfield Ruysdael, which will however retain much of its ancient credit, be they as valid as we think them. A 'Twelfth-night Scene,' by *Jan Steen*, was passed. A 'Fruit-piece,' by *Rachel Ruysch*, from Sir Simon Clarke's collection, hard, feeble, and flat, doubtful to us, if even authenticity were any set-off against demerit, 145 guineas. 'The Contest between Apollo and Marsyas,' by *Parmegiano*, a fierce wild sketch, crude in colour, but poetic in composition, and very mannered, but in Parmegiano's manner, 75 guineas. By the bye, let us mention here, for the benefit of precisians, that *Parmegianino* is the correct name of this artist; when our countrymen eulogize *Parmegiano* as a grand historic painter, they are really dubbing an obscure dauber of landscapes with the sonorous title. 'River and Boats,' by *De Koning*, a piece of coarse effectiveness, engraved as the work of *Rembrandt*, (so much for professional criticism!) 44 guineas.

Speaking of pictures, we may mention that a French paper, the *Illustration*, publishes a curious analysis of the Aguado sale,—and mentions, among other facts relating to it, the following:—In 1839, when M. Aguado insured his gallery, he valued at 3,039,950 francs, the 383 pictures which composed it then. The amount of his delusion may be estimated by the fact, that the present sale, of 393 pictures and fifty marbles, produced no larger a sum than 635,436 francs.

A curious collection, called the Napoleon Museum, has been this week opened at the Egyptian Hall, Piccadilly. It consists of a very extensive assemblage of all things—state papers, letters, medals, miniatures, &c.—directly or indirectly relating to the history of Europe, from the time of Louis XIV. to the death of the Emperor.

A letter from a member of the Colonial Council of Guadaloupe, published in the *Journal des Débats*, gives some particulars of the fearful calamity with which that island has been visited: "The ground," he says, "opened on the quays, in the *Place de la Victoire*, and other parts,—throwing to a great height quantities of muddy water. The great rivers, the Lamentin and Moustique, are, to this day, streams of mud instead of water. The crests of nearly all the mountains have been torn away, and a portion of the Soufrière has fallen. The conflagration which spread so rapidly, and issued from so many parts at once, is not, it is now thought, to be attributed to the scattered ovens and furnaces, but to gases vomited from the earth, and ignited by contact with the air. No pen can describe *the Point:* it is Palmyra—Sodom—Babylon—some ruin over which two thousand years have already passed! There is no such thing as a shelter, properly so called, in all the town. Gold, silver, crystals, iron, lead, have been fused together, and lie about in combinations extremely curious. Mass is performed under the trees on the Promenade; and there, this morning, I took part in a service for the dead. A great and moving spectacle was that of a whole people, thus prostrate before the God who has so fearfully smitten them. The sky was superb, and the green leaves shaded off its brightness. On one hand were our ruined houses,—on the other, the ships which are our hope. Oh! what reflections crowded on my heart, as the memory of all my dead friends arose there! with what anguish I strove to picture to myself all their unimaginable pangs!"

We have received the following letter, headed "Mrs. Sigourney and her Traducers":—

Will you allow me, in the character of the 'friend' of this high-principled and much respected lady, to afford two words of explanation to the very harsh and unjust remarks which you, inadvertently, I am quite sure, quoted from a contemporary last week; I allude to the passage in which she is charged with "*interpolating*" Mrs. Southey's letter with "*phrases implying intimacy and ejaculations of pathos, not one of which she ever penned!*" Surely, before you quoted this harsh and sweeping sentence, it might have been advisable to verify it, by turning to the letter itself, as given in Mrs. Sigourney's 'Pleasant Memories of Pleasant Lands.' Had you done so, you would have seen, that not only there are no "*phrases implying intimacy*," but also no "*ejaculations of pathos*" contained in the letter, and, of course, the whole of this calumnious charge falls to the ground! Nothing can be easier than for you to convince yourself of the truth of this assertion; but as all your readers may not have the book alluded to at hand, allow me to request, as a matter of justice, that you reprint the passage, that thus they may judge for themselves. Yours, &c. HIRAM BEECHER.

Upper Baker Street, April 12th, 1843.

It is unnecessary to republish the passage, as our readers can refer to it, *ante*, p. 139. But what can Mr. Beecher mean by asserting, that it contains "no phrases implying intimacy, no ejaculations of pathos"? Have we not both in the single exclamation, "Alas! my friend"? But this is a very minor point, and we are quite content to leave it in abeyance. The real question is the moral wrong in publishing a private letter at all, especially such a letter so obtained—a letter which we felt to be so "painful and affecting," that we noticed it with reluctance—a letter which we described as too "sad and sacred" for the common gaze—a letter so solemn in its revelations that, in our charity, we assumed that it could only have become public by strange inadvertence or accident—but which we now learn was published by this "high principled lady" herself, as soon after her return to America as she could hurry a volume through the press.

Easter Holydays.

ROYAL POLYTECHNIC INSTITUTION.

A complete arrangement of COTTON SPINNING MACHINERY, consisting of a CARDING, ROVING, and SPINNING FRAME. Cary's NEW MICROSCOPE, magnifying SEVENTY-FOUR MILLION TIMES. A NEW SERIES of DISSOLVING VIEWS. The SCIENCE of ELECTRICITY demonstrated by the COLOSSAL ELECTRICAL MACHINE at a Quarter to Three Daily, and at Eight in the Evenings. Models of STEAM ENGINES and various kinds of MACHINERY IN MOTION. Lectures Daily on CHEMISTRY and NATURAL PHILOSOPHY, including the Steam Engine, by Dr. Ryan and Professor Bachhoffner. The CLASS LECTURES are continued as usual. Admission, 1*s.* Schools, half-price.

THE MISSOURIUM THERISTOCAULODON and KOCH'S ANTEDILUVIAN MUSEUM, is NOW OPEN for Exhibition at the EGYPTIAN HALL, Piccadilly. The Missourium is the greatest natural curiosity ever brought to light from the Antediluvian world; its length is thirty feet, its height near fifteen feet; from point to point of the tusks, twenty-one feet. Admission, 1*s.* Doors open from Nine in the Morning till Dusk.

BRITISH INSTITUTION, PALL-MALL.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS is OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1*s.*: Catalogue, 1*s.*

WILLIAM BARNARD, Keeper.

SCIENTIFIC AND LITERARY

GEOGRAPHICAL SOCIETY.

April 10.—W. R. Hamilton, Esq., President, in the chair.—The paper commenced was, 'Notes on the Geography of Texas,' by Mr. Bollaert; when the whole shall have been read, it will be reported in our columns.

GEOLOGICAL SOCIETY.

April 5.—The President, Mr. Warburton, in the chair.—Mr. Murchison announced a munificent donation to the Society from Lord Francis Egerton, consisting of the original drawings of the great work of Prof. Agassiz, on Fossil Fishes, purchased by his Lordship for 500*l.*, in order to enable the author to publish his researches.

The following papers were read:—1. 'On the Structure of the District on either side of the North Downs of Surrey,' by R. Austen, Sec. G.S.—In this paper the author gives an account of his observations on the number and order of the component formations of the district, and on the evidences of the successive conditions which they offer. The various subjects treated of are too numerous to admit of abridgment in a short notice such as the present. His conclusions on the subject of the Neocomian formation, to which he refers the argillaceous division of the lower greensand, are especially interesting to the British geologist. Mr. Austen states, that the beds which rest upon the blue wealden shales of the valley of the Pease Marsh, consist of blue and yellow clays. The general character of this portion of the cretaceous series is argillaceous, but it also contains subordinate nodular concretions in the lines of bedding of great size and thickness, and cemented into an exceedingly hard rock by calcareous matter, rich in organic remains. Besides the fossils contained in the calcareous nodules, the intermediate clay beds contain in great abundance a large oyster with coarse foliaceous structure. These beds form the lowest portion of the cretaceous series in this part of England, and are either peculiar to this locality, or have been overlooked elsewhere. Strata have been described by some of the French geologists, which correspond exactly in position, mineralogical character, and included fossils, with his argillaceous group. The French strata occur at the base of the cretaceous series of the Paris basin, and are described by MM. Leymerie and Corneul under the names of the *Argile ostréene* and the *Calcaire à spatangus*, and belong to the Neocomian group. In thus comparing the lowest argillaceous division of the greensand of the S.E. of England, with the Neocomian of continental geologists, Mr. Austen inquires into the value of the latter, and the extent to which it has been recognized. The fossils of the upper Neocomian beds, with one doubtful exception, are altogether wanting in English strata, and so far the establishment of an additional group to the cretaceous series, as it has been made out by English geologists, has been strictly in accordance with the principles in which divisions have been made in older rocks, and in the absence of figures and descriptions of some of the remarkable shells which this group contains, the continental geologists have concluded that it is wanting in the English series. Some of these have, however, been found by Mr. Austen in the lower argillaceous division of the cretaceous series of the S.E. of England, such as *Pinna sulcifera*, *Perna mulleti*, *Gervillia anceps*, and *Nautilus radiatus*. The author gives the following reasons for constituting his subdivision:—1. Distinct mineralogical characters in constant position in the series, in which respects it is of the same value as most other geological arrangements: 2. Agreement in this respect with the nearest portions of the cretaceous series in France: 3. Its position beneath the lowest portion of the series which is to be found described in works on the subject; and 4. A distinct and peculiar suite of organic remains.

2. 'Notice of the occurrence of Beds containing Fresh-Water Fossils in the Oolitic Coal-field of Brorn, Sutherlandshire,' by Mr. A. Robertson.—During a short excursion to the oolitic district of Sutherlandshire, in the course of last summer, Mr. Robertson discovered among the reefs of shale and coal opposite

Digitized by Google

the old salt-pans at Brora, two beds abounding in Cyclas and other fresh-water fossils, which have hitherto escaped notice, and are approachable only at low water. They lie beneath the beds of calcareous sandstone, considered by Mr. Phillips to represent the gray limestone of Cloughton and other localities in Yorkshire. The uppermost is shale, with fossils, about an inch in thickness; it contains remains of fishes of the genera Lepidotus and Megalurus, mollusca of the genera Paludina and Cyclas, and crustacea of the genus Cypris. The lower bed of clay, with fossils, about thirteen inches thick, and contains fish-remains of the genera Lepidotus, Acrodus, and Hybodus; mollusca of the genera Paludina, Perna, Unio, and Cyclas, the same species of Cypris as in the upper bed, and minute fragments of carbonized wood. Nearly the whole mass of both beds consists of fossils. No marine fossils, with the exception perhaps of the scales of Lepidotus, are found in the upper bed, and Mr. Robertson regards it as a fresh-water deposit, whilst the mixed nature of the fossils of the lower one conclusively point out its estuary nature.

3. 'Observations on the occurrence of Fresh-Water Beds in the Oolitic Deposits of Brora, Sutherlandshire, and on the British Equivalents of the Neocomian System of French Geologists, by Mr. Murchison.—After showing that the beds described by Mr. Robertson in the previous paper, are inclosed in the heart of the oolitic series, being found in reefs of rock, which unquestionably lie beneath the Oxford clay, and are not far above the roof of the Brora coal, the author proceeds to inquire into the relations of the shells described with those formerly discovered by Prof. Sedgwick and himself in the Hebrides, at Loch-Staffin in Skye, formerly referred to the wealden. The identity of the characteristic species in both beds induces Mr. Murchison to consider the Skye deposit as interstratified with the middle oolite; and for similar reasons he is disposed to refer the Elgin beds, discovered by Mr. Malcolmson, to the oolite series. From the identity of the fresh-water shells in these oolitic deposits with the species found in the wealden, combined with the evidence afforded by other wealden and oolitic fossils, the author is led to conclude that the wealden is more naturally connected with the oolitic or Jurassic than with the cretaceous system; and also that the Neocomian formation of foreign geologists ought not to be placed in the same parallel. He examines the relations of the Neocomian to English strata, and maintains that it is little more than an equivalent of the lower greensand of British geologists, in which view he is borne out by the researches of Count Keyserling, in the Neocomian of the Caucasus. In confirmation of his opinions, he adduces evidence from the researches of Dr. Mantell on the wealden, of Prof. Owen on fossil reptiles, and of Prof. Agassiz on fossil fishes. The evidences of the geologist and zoologist combine in establishing that the wealden fossils are, upon the whole, the terrestrial and fluviatile remains of the great oolitic period. Eventually, we may find that while the larger portion of the wealden must be classed with the oolitic series, its uppermost part is of the same age as the lowest Neocomian strata, and thus we may connect that portion of it with the cretaceous system.

Linnean Society.—*March* 21.—The Bishop of Norwich in the chair. Mr. Henfrey was admitted an Associate. Capt. Jones presented specimens of a rare lichen, the *Placodium canescens*, found in Sussex. J. Janson, Esq., exhibited living specimens of the *Paspalum exile*, grown from seeds of the plants which had afforded the description read a short time since to the Society. A collection of nineteen Ferns from the Himalayas, and not in the Society's Herbarium, was presented by T. Edgeworth, Esq. A paper was read from Prof. E. Forbes on several new species of Star-fishes, belonging to the family Ophiuridæ, which he had discovered in the Ægean Sea. A continuation of Mr. Griffith's paper on the Developement of the Ovulum of Santalum, Viscum, and allied genera, was also read. Seeds of the *Cæsalpinia coriaria*, the Dividivi or Libidibi plant, were presented for distribution.

April 4.—E. Forster, Esq., in the chair. Mr. Sutter, of Paramatta, N.S.W., was elected a Fellow. A collection of plants, procured during a journey through Nordland and Finmark, was presented by Mr. N. Lund. Mr. Cuming presented several specimens of fruits and seeds from the Philippine Islands; amongst others the true St. Ignatius Bean, or Colleolonga seeds, which are used by the natives as a remedy in cholera; also acorns from a species of Quercus unknown. Mr. Parkinson presented a specimen of the Ambigo, or navel orange, brought to this country from Pernambuco, where it is cultivated in considerable quantities; it is seldom seen in the British market. Prof. E. Forbes presented a specimen of *Goniaster abbensis*, a new British starfish, discovered by Mr. Maclaurin. A continuation of Mr. Griffith's paper on the Ovule of Santalum, &c. was read.

Institution of Civil Engineers.—*April* 4.—Mr. Cubitt, V.P., in the chair.—The paper read was by Mr. Mackain, Engineer of the Glasgow Water-Works, giving an historical account of the various plans projected and executed for supplying that city with water. The statement commenced in 1755, at which period Mr. Gibson, in his history of the city, noticed the want of foot-pavements, street-lights, and supply of water, &c., which was at that time drawn from wells in the streets. In 1780, it was proposed to bring, for the supply of the whole city, the water of a spring, which is now found inadequate to the wants of a House of Refuge, since erected near it. At that period, many plans were proposed, particularly one by Mr. Henry Bell (who subsequently introduced steam navigation to this country); he objected to steam-engines for pumping up the water, "because they would be a nuisance, and hurtful to surrounding property, and their consumption of coals would increase the price of fuel in the city." Mr. Telford was consulted, and on his recommendation, two steam-engines were erected, with reservoirs, &c. His estimate of the requisite supply for a population of 80,000 persons, was 500 gallons per minute, supposing that 6,000 families would become renters, and the produce, at 2*l.* each family, would be about 12,000*l.* per annum. The population in 1842 was 300,000, and the annual income was about 30,500*l.*, making the average payment about 9*s.* per annum for each family. There are now thirteen steam-engines, with their requisite filters, reservoirs, &c. The facts detailed were valuable for reference. —The monthly ballot took place, when the following gentlemen were elected:—Messrs. B. Cubitt and S. Hall, as members; Lieut.-Col. Colquhoun, Messrs. W. Thompson, M.P., A. A. Croll, W. T. Grant, G. Snell, J. F. Porter, and G. Mills, as associates.

April 11.—J. Field, V.P., in the chair.—The meeting was commenced by reading an appendix to Mr. Mackain's account of the Glasgow Water-works. It described the construction of a reservoir for supplying the new portion of the city, situated nearly four miles from the works, at a height of nearly 106 feet above the Clyde: in order to take the utmost advantage of a limited space, the sides of the reservoir were made of cast-iron plates, connected with a floor composed of Arbroath pavement, fastened together with iron cramps, and the joints pointed with cement; it is supported upon consecutive layers of sand, clay, and rubble; the interior dimensions are 123 feet long, 85 feet 6 inches wide, and 11 feet deep, and the whole is covered by three wrought iron roofs, each of 28 feet 6 inches span.

A drawing was exhibited of the Great Coradino Tank, erected in Malta, in the years 1841 and 1842, by Mr. Arrowsmith. It is the largest modern covered tank in Europe, as it will contain 15,000 tons of water. It is destined to form part of the projected water-works for supplying Malta, a description of which was promised.

A letter was read from the late Sir John Robison, giving a short account of the Artesian well at Paris. After detailing the various disasters attendant upon the work, before the water was reached at a depth of 1794 feet English, and at a cost of upwards of 12,000*l.* sterling, the letter proceeded to give Sir John's objections to the idea of the contortions suffered by the copper tube, being due to the hydrostatic pressure; he attributed it to the violent manner in which it had been forced down the bored hole, and even more so in withdrawing it.

A description was read by Mr. Baker, of the Water Pressure Engine, constructed by Herrn Brendel, at Freyberg. This engine is placed in the Alte Mordgrübe Mine, at a depth of 360 feet beneath the mouth of the pit. The power employed is a column of water, which acting alternately upon the pistons of two cylinders, (each 18 inches in diameter, with 9 feet stroke,) gives motion to 44 pumps, in two sets of 22 each, placed at an angle of 45° with the horizon; the suction pipes of the highest pumps descend for 30 feet, dipping into the delivery cisterns of those immediately below them, and this is repeated downward for the whole series: thus raising the water to the point where it runs off by an adit. The engine requires little attention, or repair, and it is stated that the duty performed is as 70 to 100.

Some specimens were presented of Screws cut in Lathes, constructed by Messrs. Shanks. They were sent by the late Sir J. Robison, who described the principal advantages of the arrangement of the lathe, to consist in the cutters acting during the incursion as well as the excursion of the slide, and, when cutting long screws, in their being alternately stayed on the side opposite to the tool which was in action: that good work could be produced with such dispatch, as to reduce the cost of turned and screwed bolts as low as that of similar articles produced by screwing machines, which worked by dies with compression. The specimens were cleanly cut, and superior to the ordinary quality of screws. It was remarked, that although the machine was ingenious, it was not new, a somewhat similar lathe having been in use at Messrs. Maudslay's for fifteen years, and that the screwing dies, invented by Mr. Whitworth, cut out the threads of screws as cleanly as those done by a chasing tool, and without compression.

Microscopical Society.—*March* 15.—A paper from the Rev. J. B. Reade, was read, 'On the existence of Ammonia in vegetable substances, described as containing nitrogen.' After stating that minute portions of sulphate of lime in snow may be rendered manifest by means of the microscope, and also that the almost inappreciable quantity of ammonia, mentioned by Liebig as existing in the atmosphere, would be capable of detection, by the same means, he proceeded to show the existence of ammonia in the seeds of plants, which he stated may be rendered apparent by burning the common field bean in a spirit lamp until flame and smoke entirely cease. The gas given off is to be received on slips of glass moistened with pure hydrochloric acid. The salt thus obtained he describes as a salt of ammonia, which he considers as produced by the decomposition of an ammoniacal salt previously existing in the bean, and not by the destructive distillation of an organic body in contact with the atmosphere. This presence of ammonia he looks upon as proved in various ways, viz., by the before-mentioned production of crystals of hydrochlorate of ammonia, when the gas from the bean is exposed to the vapour of volatile hydrochloric acid; by the odour of this gas when received into an 8 or 10 ounce bottle, being clearly that of ammonia; by the production of crystals of bitartrate of ammonia, on the addition of a little tartaric acid to the hydrochlorate; by the action of the supposed ammoniacal gas on test papers, furnishing a proof of the presence of volatile alkali; and lastly by an experiment in which he sublimed over hydrochlorate of ammonia in an unchanged state into a drop of condensed distilled water. The acid with which the ammonia is combined he supposes in some instances at least to be silicic acid. In answer to an objection that the ammonia is chemically formed by the destructive distillation of the vegetable compound, in contact with the atmosphere, he adduced in his opinion both negative and positive evidence; the former founded on the known reluctance of nitrogen to enter into combination with any other substances, and the latter principally from the evolution of ammonia from bean meal, heated in a glass tube, with the mouth inserted into hydrochloric acid, thus preventing contact with the atmosphere. He concluded by describing a method of readily obtaining, as a standard of measurement, a minute quantity of hydrochlorate of ammonia, equal to about one ten-thousandth of a grain.

Medico-Botanical Society.—*March* 22.—H. Gibbs, Esq., in the chair. The sequel to Mr. Ley's paper on the Indian Hemp was read, consisting chiefly of the details of cases in which he had found the remedy of service. These were instances of rheumatism, dropsy of the joints, housemaid's knee,

Digitized by Google

enlarged ganglia, cholera, chorea, and a singular case of tetanic convulsion, or spasm, resulting from diseased spine. In the latter case, every anodyne and medicine that could be thought of had been tried to check these spasms, but unavailingly; when Mr. Ley determined to give the hemp resin, of which he had just heard, a trial. The dose he gave was one grain every hour; five pills induced a trance-like sleep, on awaking from which, the patient was nearly free from pain, and the subsequent attacks of her malady were rendered considerably milder by it.

ELECTRICAL SOCIETY.—*March* 21.—The Secretary communicated a translation of 'Observations on Diaphragms,' by M. Becquérel.—He then read a translation of M. Matteucci's note 'On some recent experiments on the Torpedo,' which tend to establish, according to the author, the parallelism between muscular contraction and electric discharge. He poisoned torpedos; and, having placed prepared frogs on their backs, he produced convulsions in the frogs, by merely slightly touching the fish. Among other experiments, he removed the electric organ, and produced muscular contraction, every time he divided a nerve with a knife. He infers that it is impossible to admit the least analogy between piles, secondary coils, batteries and the electric organ.—Mr. Walker then read a few 'Observations on the property of trees in condensing aqueous vapour.' He considers, with Mr. Pine, that the effects of ordinary condensation, in connexion with radiation, are by no means adequate to produce the copious deposit of water, which, under certain circumstances, occurs beneath large trees. This was especially evident, during the morning and evening of the 19th inst. when the water was falling in a dense shower, and lay in large pools beneath the trees, now waking from their winter sleep. He considers that the withdrawal of the electricity from the atmosphere, by means of the pointed terminations of the tree, is the prime cause.

MEETINGS FOR THE ENSUING WEEK.

TUES. Horticultural Society, 3, P.M.
— Linnean Society, 8.
— Electrical Society, 8.
— Chemical Society, 8.
WED. Microscopical Society, 8.
— Society of Arts, 8.—Mr. Potter will describe the Process of Silver-plating as practised at Sheffield.
FRI. Botanical Society, 8.

MUSIC AND THE DRAMA

HER MAJESTY'S THEATRE.—The appearance of Signor Fornasari in 'La Sonnambula,' tends to confirm the best hopes entertained of him as a singer. The vocal exhibition, it is true, confines itself to the well-worn air 'Vi ravviso': but this, as a whole, was more evenly executed than anything in the 'Belisario': while the slight nasal tone which made us hesitate in praising the artist without drawback, was not heard. On the other hand, Signor Fornasari's acting (or rather demeanour,) was a little exaggerated and uncouth; it remains to be seen, whether in parts of *mezzo carattere* he will fill the blank left by Tamburini. The return of Signor Mario calls for notice, inasmuch as he is now *primo tenore* of London and Paris, and sings accordingly,—that is, with the confidence belonging to one in the highest position. The delicious *bloom* of his voice is gone: the tone may be steadier than formerly, but in its general delivery it is certainly coarser.

SACRED HARMONIC SOCIETY.—The hundredth public performance of this interesting society was 'The Messiah,' given on Wednesday evening, and attended by a crowded and enthusiastic audience. Curiosity, too, was excited, as to the possible repetition of a scene which took place on the previous performance of the same oratorio: on which occasion Miss Clara Novello by resisting, and the public by enforcing, an *encore*, had contrived to throw the meeting into "most admired disorder." While we cannot but object on principle to all *encores*, and especially in sacred music, we should be grieved if the latest-returned, and most richly-endowed of our singers, were thus early in her home career, by want of circumspection, to acquire a character for ungraciousness. No gifts of person, voice, or execution will make atonement for this with an English public. On the other hand, we should be glad to see audiences more considerate and sensible, sometimes admitting unwillingness to mean incapacity, arising from fatigue, but always resenting any such manifestations as come under the head of "airs," by *silence*. No singer thus admonished would offend a second time. We make these general remarks all the more willingly, seeing that they were not called for by any event at the centenary performance. Miss C. Novello gave the pastoral recitative with a positive *glory* of voice: delivering the sacred text with great force and clearness: she willingly, too, repeated, 'I know that my Redeemer liveth.' The *contralto* share of the 'Messiah' was excellently given by Mrs. Alfred Shaw. The beauty of this lady's utterance makes her stand alone among the singers of Handel. What a change, by the way, has passed over vocal art in England since our first acquaintance with the 'Messiah'; what a splendid advance is such a performance as Wednesday's over that old, heterogeneous thing, a Lent oratorio at one of the theatres! We could not but feel how infinitely more of an *artiste* is our new *soprano* than most of the warblers, with their indefinite pauses and die-away cadences, who used to pass for fine singers. Whereas we were formerly obliged to borrow a Catalani for the first-class songs, we can now lend a *prima donna* to Italy or Germany. But the change is yet more admirable if we come to the next voice of the quartett: we remember when a fat gentleman, with a few nasal *falsetto* tones, oily and weak, and an inaudible shake, was the interpreter of 'O thou that tellest,' and (worse still) of 'He was despised.' It is something to know, that the male counter-tenor, at least as a *solo* voice, is an abomination sent to the tomb of the Capulets. But now comes the drawback to this cheering view of progress. For a tenor we *had* Braham. It is difficult, sometimes, to conceive what the young men of England are about, that they do not see how alone a singer is now to gain distinction;—not by getting up one ballad, one show song, one part: not by going from ——'s Handelian graces to ——'s Italian *fioriture*—not by learning their profession in the presence of the public. Will no one, for the sake of such results as Englishwomen have of late won, try a few years of self-sacrifice and labour before foreign audiences, which have no reason to applaud, save such as the artist's merits afford? Mr. Manvers did his best; and more renowned tenors have sung worse. Miss Williams was the second *soprano*, and Mr. Phillips the bass: he is always at home, always impressive in Handel's songs. We could write a chapter on what the chorus did and what it did not; but this is superfluous, seeing that our opinion has been already fully given in former notices of the Sacred Harmonic Society, and there is a condition of affairs in which continued remark becomes provocation. May, then, the Exeter Hall meetings flourish for many another hundred performances!

WESTERN MADRIGAL SOCIETY.—We advert with reluctance to the recent transaction between the Gresham Professor of Music and the Western Madrigal Society, feeling that novel-writing lords and travelling poetesses have of late done enough to bring "our order" into disrepute. The affair, however, has been too widely noised abroad, and too eagerly discussed in our musical circles, to be passed over.

The facts of the case, we believe, are these:—that the prize awarded last year by the Western Madrigal Society, fell to a composition which had been sent in by Prof. Taylor; that the successful madrigal was performed in Prof. Taylor's presence at the Anniversary Festival (and subsequently, we believe, at a meeting of the Concentores Society); that, on subsequent examination, a passage of fifteen bars, or one-fifth of the whole composition, proved to be a transcript from Luca Marenzio; that an explanation was demanded by the Society—and given; that an official minute has been since passed, absolving the Professor of any deliberate attempt to impose upon the Society; that the premium of 10*l.* has been returned; and that the former candidates, Prof. Taylor excepted, have been invited to compete anew for the prize. The substance of that gentleman's explanation (as published in a letter to the *Morning Post*) is, that some years ago he was accustomed, as an exercise in part-writing, to borrow passages from the ancient madrigalists; that in 1828 he wrote a madrigal on this principle, introducing the fifteen bars in question; that in 1839 he replaced the borrowed passage by original matter; that in 1841 he revised the work with a view of offering it in competition, and that owing to carelessness in delivering a wrong manuscript to the copyist, the first, not the second, madrigal was sent in to the Society.

Now, upon this explanation, a comment or two suggest themselves. It is easy to understand how, by way of exercise, the subject for a fugue may be taken to be wrought out in a new manner, or a melody selected to be clothed with fresh harmonies; but it is not easy to understand what purpose was to be served by such wholesale quotation as the above, *in the middle of a composition* already undertaken. The selection of a patched-up exercise, too, when a prize was to be competed for, is strangely indicative of poverty of resource. It is still more strange that the competitor, who was too indifferent to inspect the MS. he was sending in, should have transcribed six lines of his own rhyme (apparently written for the occasion) on the cover by way of motto; and that a Lecturer on Ancient Music—bound, by his profession, to have all the stores of the past at his fingers' ends—having written an exercise introducing a passage from another man's writings, and then substituted a passage of his own, being a fifth of that exercise, and afterwards revised the work,—should hear the former executed in place of the latter, and the work discussed too, without becoming aware of the mistake!

Since writing the above, we have carefully inspected the original madrigal by Luca Marenzio, the exercise by Mr. E. Taylor, dated 1828, and the work which he altered from the above in 1839, and revised in 1841. In the latter there is no change of the slightest importance, save the substitution of fresh matter for the borrowed passage. We must think the prize was won by the Italian, not the English musician. The Professor is right; the work is an exercise,—schoolboy idea, and schoolboy science. Anything in the sprightly style, more colourless, more vague in response, more feeble in figure, it would be hard to cite; nor is there eleven years' improvement in the new bars replacing the borrowed matter. The utter dissimilarity between the old and new material, is calculated, we think, even to strike the eye; how much more, then, the ear listening to its performance! Prof. Taylor has not, we think, mended his case by rushing into print.

MR. BLAGROVE'S SÉANCES MUSICALES.—We have never been present at any performance which more imperatively called for detailed notice, than the first of this series. Our attention had been solicited by a rather singular prospectus, which contained the following passage:—

"In respectfully soliciting the *attention of Musical Amateurs to these Concerts*, Mr. Blagrove begs to state, that, added to his performances on the Violin, the principal object in giving these Entertainments will be to produce some new *vocal artistes*, as yet unknown to the public (who have been for some time preparing under experienced guidance to appear before musical judges); and it is hoped that the present undertaking will be favourably received, when the public are informed that the *chief end is to enhance the credit of English musical talent in performance, and to endeavour in some measure to diminish the long-existing prejudices against it.* Mr. Blagrove also trusts to be enabled, in minor points, to offer to those who may honour him with support several novel and agreeable arrangements."

When we have said that the Hanover Square benches were divided into elbowed stalls (the room being arranged as at the Quartett Concerts), we have noticed all the novelty in "minor points," and only advert to Mr. Blagrove's grandiloquence in setting forth matters so totally insignificant, because it is a type of his whole proceeding. Bad taste is everywhere, from the French title for a professedly English concert, to the italicized statement of "*long existing prejudices*" against native musical talent. Now, if any of our artists have a right to complain of "prejudice" it is assuredly not Mr. Blagrove. We have extolled his execution and pure tone on the violin; and never owned, until the truth is now forced from us by the covert arrogance of his announcement, that neither in France, Belgium, nor Germany (were he a native of any of the three countries) would he hold as good a position as he does in England. On the contrary, while every good point, whether in his concerted or *solo* performances, has been made the most of, both by our critics and our public—a want of animation, at times so freezing as to neutralize the utmost amount of acquired gifts and graces, has been unanimously allowed for and excused, on no other grounds than national sympathy. Since

Digitized by Google

we must proceed, Mr. Blagrove's claims to be considered a sound musician, suffered cruel damage on this occasion. If to exhibit the violin was his object, how was it that he had selected no music more sterling than an incoherent rhapsody by Kalliwoda, an elegy by Ernst, and an introduction and rondo by Mayseder? His *programme* could have been amended, and an historical interest given to it by exchanging the *capriccio* for some of the antique violin *solos*—say by Bach or Geminiani—and by replacing the elegy with some of those very compositions by Spohr, we longed for last week. Yet more unworthy of a true artist was our violinist's manner of execution: Kalliwoda's *capriccio* is written for an orchestral accompaniment with lengthened *tutti*, &c. Could Mr. Blagrove suppose that he was maintaining English credit "in performance," by the substitution in such a work of a meagre tinkling pianoforte for a full band?—a pianoforte, too, treated as we never elsewhere heard pianoforte treated in accompaniment? The player, we presume, was one of those "yet unknown to the public:"—we are sorry to say that he exhibited every conceivable fault. In his filling-up of the pauses between *solo* and *solo*, and in his symphonies to the songs, we had all the affectations of one aspiring to undue prominence, while to sustain or follow the violinist or singer, he was utterly unequal: witness his extinction of the piquant and flowing *arpeggio* in the duet by Mercadante: witness his lumbering caricature of Handelian stateliness in the bass song from 'Alexander's Feast,' which he took at about two-thirds of its right speed. It is painful to proceed, but we must now come to "the vocalists, who have been for some time preparing under experienced guidance," &c. We know how fear and want of habit may influence a voice and impair executive powers, and have sympathy with all beginners: but we have no sympathy with Mr. Blagrove for such a promise as the above, when it was to be kept by vulgarities of dialect and crudities of vocal utterance beyond our experience;—and by affectations, of which Mr. John Parry's *falsetto* drolleries are hardly caricatures. In stating the fact, the cruelty to the parties permitted to exhibit is Mr. Blagrove's, not ours. In part the dreariness of the evening was relieved by Miss Birch and Miss Masson, and by Mr. Jarrett's horn playing: but, as a whole, the performance was as discreditable to English artistic taste as the announcement had been pretending. What a contrast to Mr. Blagrove's unambitious, but agreeable, Quartett Meetings in former seasons!

MISCELLANEA

Paris Academy of Sciences, April 3.—The business of the sitting commenced with the report from M. Arago on the comet, which however added little to what was already known. M. Arago estimates the rate of speed at which this comet travels as 104 leagues per second, or 15 times swifter than the earth. —A paper by M. Agassiz, on the following question, "What is the age of the largest glacier of the Swiss Alps?" was then read. M. Agassiz states that the beds of snow which fall annually on these elevated regions may be easily ascertained, and concludes that the entire mass of ice and snow, of which the glacier of the Aar, one of the largest in Switzerland, is composed, will, in less than two centuries, have given way, and be replaced by the new deposits which will be made during that period. According to M. Agassiz, the glacier of Aletsch, the largest in Switzerland, has melted away, and been renewed within three or four centuries.—It has long been stated that oil poured upon the waves of the sea in a storm has the effect of reducing them, and establishing a comparative calm on the part where it is thrown. M. Van Beeck has addressed a paper to the Academy on this subject, accompanied by a report from one of the three commissioners appointed by the Institute of the Netherlands to report on the experiments. It states that oil certainly appeases the agitation of the waves produced by the wind, but has no effect upon that regular movement which constitutes the flux and reflux. —The dispute between M. Liebig, and Messrs. Dumas, Payne, and Boussingault, as to the component parts of alimentary substances, was again brought upon the tapis by another letter from M. Liebig, in which he repeats his assertions, and relates the numerous experiments by which he has tested their correctness. Messrs. Dumas and Boussingault addressed the Academy in refutation of some of the positions laid down by M. Liebig, but they did not bring forward any facts in disproof of his experiments. —A communication was received from M. Malgaigne, relating a new surgical operation. When spots upon the cornea are of long date, and have resisted medical treatment, they are considered as incurable by operation. This is shown to be an error.

Lotteries.—Estates, houses and fields were the occasion of lotteries in the seventeenth century. In the west of England great assemblages of persons took place when the day for drawing arrived. The interference of the legislature is attributed to the circumstances of a lottery at Winford Eagle in Dorsetshire, where Mr. Sydenham, a descendant of the great Dr. Sydenham, resided upon his estate. His affairs being embarrassed, this country gentleman proposed a lottery of his estate, always intending that the prize should fall to a young lady, a dependant and inmate of the family, who he never doubted would readily give back the property to him for a mere trifle. This young lady had long maintained a close correspondence with a lover, who soon learnt the gratifying news that a ticket was provided for her. He was near the spot at the drawing; and the winner speedily joined him with the joyful intelligence. At the next stolen meeting the young lady informed her lover of the attempts made to induce her to sign away her prize. The lover confirmed her resolution not to do so. Mr. Sydenham could not be induced to make over the estate, till proceedings were brought against him. He ended his days in gaol, and the affair, which attracted great notice, led to the interference of the legislature. *See Hutchins's Dorset.*

G. R.

Hotel, Belfast, April 9th.

Lotteries.—Allow me to hand you another proof of the spread of "Little-goes," which I have picked up in one of the retired nooks I occasionally visit:—

Ballot of Splendid Oil Paintings: value Seventy-eight Pounds. —The following Oil Paintings, &c., are intended to be Disposed of by Ballot. Tickets *2s. 6d.* each. Due notice of the time and place of Drawing will be given. * * The number of Tickets has been limited to 400, at *2s. 6d.* each, thus giving Paintings of the value of Seventy-eight Pounds for Fifty!

"*Duplicate Poets.*—It is a remarkable fact, and one perhaps not very generally known, that there have been three poets of the respective names of Walter Scott, Samuel Rogers, and James Grahame, before the excellent authors of 'Marmion,' 'The Pleasures of Memory,' and 'The Sabbath.' Specimens of their published works may be found in Mr. Southey's 'Later English Poets;' and they all three existed (we cannot say flourished) between the latter part of the seventeenth and eighteenth centuries—the very dark ages of English poetry. Walter Scott was the author of the 'History of the Right Honourable Name of Scott,' often quoted by his greater clansman, Sir Walter; but his verses are very humble. Mr. Samuel Rogers was a parson, and published in 1782, two volumes of ordinary familiar epistles; but they trod very closely, in point of time only, upon our venerable contemporary's first work, the 'Epistle to a Friend.' Mr. James Grahame the first, was a Scotchman, like the author of 'The Sabbath,' and being such, his whole works are preserved in Dr. Anderson's collection of the poets; but, although the following passage be not a fair specimen of them, we may venture to say that they will never be read again. The poet supposes it to be debated in Heaven how to reward the distinguished virtue of Archibald Hamilton, Esq.

> Shall he at once our happy mansions tread,
> From life's low cares and flesh's fetters freed?
> Or rather with some kindred spirit know
> All that can be conceived of heaven below?
> 'Tis fixed; and who shall question Heaven's award?
> *Be Miss Dinwiddichis divine reward.*"

New Monthly Magazine.

Hampton Court.—You will be glad to hear, that restorations are still going on at this palace. On the west side, since my last visit, I observe the substitution of several pinnacles and mullions for the modern frames of windows. On the towers of all the courts, the Emperors' heads, the work of Luca della Robbia, which were presented by Leo X. to Wolsey, have been renovated and—I am sorry to add—*painted:* yes, the terra cotta actually *painted.* I hear too, that a stained glass window is to be inserted in the east end of the great hall, corresponding to that at the west, and will be finished by June.

Meteors.—The phenomena, mentioned last week in the letter of Mr. Stevenson, was seen at Sir J. Brisbane's Observatory at Makerstown—where a considerable disturbance of the magnets was observed in the Magnetic Observatory from 6h. 30m. P.M. till midnight—the time of greatest disturbance being from 9h. 20m. till 10h. P.M.

Extraordinary Phenomenon.—When the *Anne Bridson*, which arrived in this port from Valparaiso last week, after a quick passage of 84 days, was off the River Plate, the captain and crew suffered the greatest inconvenience from the state of the atmosphere, which for two days was so fetid and oppressive as to make it difficult for them to breathe; and the effects of their exposure to this air did not cease when the atmosphere became pure, but continued to be felt during the remainder of the voyage, many of the crew having been ill from that time until their arrival in this port. Nothing was seen or heard which could enable the captain to account for this state of the atmosphere.—*Liverpool Times.*

Novel Steam-boat.—The *Journal de Saint-Etienne* speaks of a new kind of steam-boat. It is called the *Grapin*, and is remarkable for having, in addition to the usual paddle-wheels, a large cast iron one of about 15 feet in diameter, and weighing 500 quintals, which rises or falls, according to the depth of the Rhône, and is armed with strong teeth, which take hold on the ground. The *Grapin* is used for the transport of ore from Lavotte to Givors, and has carried, on an average, 300 tons a day.

Interesting Fossil.—Mr. Bensted has discovered a unique specimen in the Iguanodon Quarry. The fossil is of the order Testudinata, and is apparently a marine turtle. It has a circumference of nearly three feet, and some of the marginal and other plates may be seen in their proper position, but some of the ribs are displaced. Two or three vertebræ with fragments of the carapace or shield are very distinct. In clearing the stone Mr. B. expects to find more bones than are now visible.—*Manchester Journal.*

Education, Science, and Art.—By a statement laid upon the table of the House of Commons of the estimates for 1843-4, for the purpose of education, science, and art, it appears that there will be required for public education in Great Britain, 50,000*l.*; ditto in Ireland, 50,000*l.*; schools of design, 4,411*l.*; Professors at Oxford and Cambridge, 2,006*l.*; University of London, 5,148*l.*; Universities, &c., in Scotland, 7,380*l.*; Roman Catholic College in Scotland, 8,928*l.*; Royal Irish Academy, 300*l.*; Royal Hibernian Academy, 300*l.*; Royal Dublin Society, 5,600*l.*; Belfast Academical Society, 1,950*l.*; British Museum Establishment, &c., 32,576*l.*; ditto buildings, 37,485*l.*; ditto purchases, 5,275*l.*; National Gallery, purchase of pictures and expense of the Gallery, 1,600*l.*; Museum of Economic Geology, 2,008*l.*; and Scientific Works and Experiments, 4,000*l.*;—the total for the year 1843-4 is 210,967*l.*—*Times.*

Houses of Parliament.—A return made to the House of Commons states that the total amount already expended for building the new Houses of Parliament is 380,483*l.* 10*s.*: the amount voted has been 438,500*l.*, and consequently 58,016*l.* 10*s.* is in hand unexpended, which will be required to complete the works now in progress. It is estimated that a further sum of 578,424*l.* 12*s.* 9*d.* will be required to complete the buildings. The total amount of Mr. Barry's estimate will therefore be 1,016,924*l.* 12*s.* 9*d.*, besides what will be required for completing the landing-places, making good the pavings, furniture, and fittings, and for decoration by works of art.

Gigantic Fossil.—A fine specimen of what geologists term the *Plesiosaurus macrocephalus* has recently been found in the lias formations at Barrow-upon-Soar. It measures fourteen feet in length, and is the only one of the kind that has been found in that neighbourhood.—*Derby Reporter.*

TO CORRESPONDENTS.—C. O.—A. W.—A Brother—W. C. B.—J. D.—A Medical Student—received.—T. C. D., several last year and this.—The communication from Oxford unfortunately arrived too late.—We know no more about the egg-hatching apparatus than was given in our Report of proceedings of the Society.—"A Terrestrial" is pleasant and plausible, but his "if" begs the whole question.

JOHN of HAPSBURG. A Tragedy.
By RICHARD LEWIS, Esq.
John Murray, Albemarle-street.

BRITISH ASSOCIATION.
Just published, with 2 Plates, price 10s. 6d.

REPORT of the TWELFTH MEETING of the BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE, held at Manchester in June, 1842.
John Murray, Albemarle-street.

SYSTEMATIC COLONIZATION.
This day is published, fcap. 8vo. price 6d.

THE SPEECH of CHARLES BULLER, Esq. M.P., in the HOUSE of COMMONS, on Thursday, 6th April, 1843, on SYSTEMATIC COLONIZATION.
John Murray, Albemarle-street.

Now ready, post 8vo. 9s. 6d.

LETTERS from MADRAS; or, Manners and Society in different parts of that Presidency, described during a Three Years' Residence. By a LADY.
John Murray, Albemarle-street.

3rd edition, with additional Essays. Fcap. 8vo. 6s. 6d.

ESSAYS and ORATIONS, read and delivered at the Royal College of Physicians. To which is added, an Account of the Opening of the Tomb of King Charles I.
By Sir HENRY HALFORD, Bart. M.D.

Also, just published, fcap. 8vo. 3s. 6d.

Nugæ Metricæ. Latin Poems and Translations.
By Sir Henry Halford, Bart. M.D.
John Murray, Albemarle-street.

Price 2s.

RETROSPECTIVE or SCATTERED MEMORIALS of CALAIS. Second edition, with Additions.
Sold by Batchellar, King's Arms Library, Dover; Onwhyn, Catherine-street, Strand; and Le Leux, Calais.
N.B.—A gentleman thus speaks of the first edition of this pamphlet—"The numerous anecdotes and biographical incidents it records are truly interesting, and will richly repay its perusal."

Now ready, price 4s. 6d.

RURAL CHEMISTRY.
By EDWARD SOLLY, Esq., jun. F.R.S.,
Experimental Chemist to the Horticultural Society of London, Hon. Mem. of the Royal Agricultural Society, and Lecturer on Chemistry at the Royal Institution.
London: 3, Charles-street, Covent-Garden.

A TALE OF THE WALDENSES.
In 3 vols. post 8vo.

THE PASTOR-CHIEF;
Or, The ESCAPE of the VAUDOIS:
A Tale of the Seventeenth Century.
Now ready at all the Libraries.
Cunningham & Mortimer, Publishers, Adelaide-street, Trafalgar-square.

NEW WORK BY MRS. STONE.
Will be ready on Monday, in 1 vol. 8vo. price 10s. 6d.

THE YOUNG MILLINER:
A Tale of Facts of the Day.
By MRS. STONE,
Authoress of 'The Art of Needlework,' 'William Langshawe, the Cotton Lord,' 'Miss Pen and her Niece.'
Cunningham & Mortimer, Publishers, Adelaide-street, Trafalgar-square.

NEW BARONETAGE.
Just published, price 7s. 6d. cloth gilt, with Illustrations,

THE BARONETAGE of the BRITISH EMPIRE for 1843, differing in arrangement, information, and several important features from any existing work on the subject. It is elegantly illustrated with Engravings of the different Insignia, and with examples of arms charged with the exterior heraldic ornament incidental to the Order.
Cunningham & Mortimer, Publishers, Adelaide-street, Trafalgar-square.

TRACTS FOR COTTAGERS,
BY THE REV. W. C. COTTON.
In 12mo. price 6d., or 5s. per dozen, with Woodcuts,

MARY THOMPSON'S COTTAGE WALLS.
By the Rev. W. C. COTTON, M.A.
Student of Christ Church, Oxford; Chaplain to the Bishop of New Zealand; and Author of 'My Bee Book.'
Rivingtons, St. Paul's Churchyard, and Waterloo-place.
Also, just published, by the same Author,
1. The Village. 2. The Village School, Part I. (To Children.) 3. The Village School, Part II. (To Parents.) 4. The Village School, Part III. (To School Masters and Mistresses.) 6. On Bee Management. 7. On the Natural Theology of Bees. Price 6d. each, or 5s. per dozen.

This day is published, in 3 vols. royal 8vo. price 5l.

A TREATISE on the CRIMINAL LAW of IRELAND; comprehending all Crimes and Misdemeanours punishable by Indictment, and Offences cognizable summarily by Magistrates, with the mode of proceeding upon each.
By JOSEPH GABBETT, Esq., Barrister-at-Law,
Author of 'The Digest of the Statute Law.'
The author's object has been to embrace the whole science and practice of the criminal law; and it is confidently expected that the volumes will be found to contain much matter which will not only be found useful to magistrates, and others connected with the administration of justice in Ireland, but also to the bar, and the various members of the profession of the law; and from the author's experience as a magistrate, it is hoped that this work will be found to embrace every matter which would be most useful to justices of the peace, whether called upon to administer justice in their chambers, or at petty or general sessions.
Dublin: printed for John Cumming; and Simpkin, Marshall & Co. London.

GUTHRIE'S GEOGRAPHY IN MINIATURE,
By DAVENPORT.
In one very large pocket volume, consisting of 824 pages, closely printed in pearl type, and embellished with 7 Maps, price 7s. cloth, or 7s. 6d. bound,

A GEOGRAPHICAL, HISTORICAL, and COMMERCIAL GRAMMAR in Miniature, exhibiting the Present State of the World. By WILLIAM GUTHRIE, Esq.; the Astronomical part by JAMES FERGUSON, F.R.S. A new edition, revised, greatly enlarged, and brought down to the end of 1842, by R. A. DAVENPORT.
London: printed for Thomas Tegg, Cheapside, where may be had, just published, Mr. FINDLAY'S Miniature Edition of BROOKE'S GENERAL GAZETTEER, price 7s.

New Edition, 18mo. price 1s. bound,

ALDERSON'S ORTHOGRAPHICAL EXERCISES, in a Series of Moral Letters. To which is added, a Selection of Essays, &c., taken from the best English Writers. Revised by the Rev. THOMAS SMITH.
Longman & Co.; J. G. F. & J. Rivington, Hamilton & Co.; Whittaker & Co.; Sherwood & Co.; Duncan & Malcolm; Simpkin, Marshall & Co.; W. Edwards; Souter & Law; Harvey & Darton; T. Tegg; Houlston & Stoneman.

LIVY—NEW EDITION, WITH VARIOUS READINGS.
Just published, complete, in 3 thick vols. 8vo. price 1l. 11s. 6d. bds.

LIVY, from the TEXT of DRAKENBORCH, with CREVIER'S Notes. A New Edition. To which are added the various Readings of Gronovius, Crevier, Kreyssig, and Bekker. With a copious Index of Matters.
London: Whittaker & Co.; Longman & Co.; Duncan & Malcolm; Simpkin, Marshall & Co. Oxford: J. H. Parker.

This day is published, price 4s. 6d.

THE MECHANICAL EUCLID; containing the Elements of Mechanics and Hydrostatics demonstrated after the Manner of the Elements of Geometry. By WILLIAM WHEWELL, B.D., Master of Trinity College, and Professor of Moral Philosophy in the University of Cambridge. The 4th edition, carefully adapted to the Ordinary Examination for the Degree of B.A.
For J. & J. J. Deighton, Cambridge; sold by Whittaker & Co., and Simpkin, Marshall & Co. London.

Just published, price 5s., by Simpkin & Marshall, with an Appendix of Scripture Proper Names,

THE CLASSICAL PRONUNCIATION of (5,000) PROPER NAMES, established by Citations from the Greek and Latin Poets, Greek Historians, Geographers, &c.; with a Terminational Synopsis of Analogy and Etymology, fixing the Pronunciation of all other Names not resting upon direct authority. By THOMAS SWINBURNE CARR, Esq. Classical Master in King's College School.—"Indispensable for the school, the senate, the pulpit, and the bar, for all persons who aspire to a correct pronunciation." *Labbe.*—Carr's History and Geography of Greece, with a series of 3,000 Examination Questions, 7s. 6d.—Latin Homonyms, or Words similar in Sound but different in Sense, 3s.—Roman Antiquities, 6s. 6d.

Twenty-fifth Edition, square 12mo. 7s. 6d. bound,

NUGENT'S POCKET DICTIONARY of the FRENCH and ENGLISH and ENGLISH and FRENCH LANGUAGES; carefully revised and arranged by J. C. TARVER, French Master to Eton College, &c.
Also, the 24th edition, square 18mo. uniform with Graglia's Italian and Rabenhorst's German Dictionaries, 5s. 6d. bd.
London: Longman & Co.; T. Cadell; J. M. Richardson; J. Carpenter; Hatchard & Son; J. G. F. & J. Rivington; Hamilton & Co.; Whittaker & Co.; Sherwood & Co.; Cowie & Co.; Duncan & Malcolm; Dulau & Co.; Simpkin & Co.; Souter & Law; Smith, Elder & Co.; Houlston & Stoneman; B. Fellowes; Harvey & Darton; Orr & Co.; Darton & Clark; J. Van Voorst; C. Dolman. Edinburgh: A. & C. Black. Cambridge: J. & J. J. Deighton.

Foolscap 8vo. 5s. 6d. boards,

THE IMPROVEMENT of the MIND; or, a Supplement to the Art of Logic: containing a variety of Remarks and Rules for the attainment and communication of Useful Knowledge in Religion, in the Sciences, and in Common Life. To which is added, a Discourse on the Education of Children and Youth. By ISAAC WATTS, D.D.

Also, New Edition, 12mo. 4s. bound,

A Short View of the Whole Scripture History; with a Continuation of the Jewish Affairs from the Old Testament to the time of Christ.
London: Longman & Co.; J. M. Richardson; Rivingtons; Hamilton & Co.; Whittaker & Co.; Duncan & Malcolm; Simpkin & Co.; Souter & Law; Harvey & Darton; Houlston & Stoneman; E. P. Williams; and J. Parker, Oxford.

HUTTON'S MATHEMATICS, ETC.
Recently published, in 8vo. price 12s. boards,

VOLUME 2 of HUTTON'S MATHEMATICS; composed for the Use of the Royal Military Academy. The 11th edition, with many corrections and improvements.
By OLINTHUS GREGORY, L.L.D. F.R.A.S. &c.
The present volume comprises, by a new arrangement, the substance of the second and third volumes of the former edition.
Vol. I. (also lately published), comprising the Course to Mensuration and Land Surveying inclusive, with additions, &c. By T. S. Davies, F.R.S. &c. 8vo. price 12s.

Hutton's Arithmetic. 12mo. 3s. bound.

Hutton's Compendious Measurer. 12mo. 4s. 6d. bd.

A Key to the Same. 12mo. 5s. bound.

Hutton's Mathematical Tables. Royal 8vo., 7th edition, 18s. boards.

Davies's Solutions of the Principal Questions of Hutton's Mathematics. 8vo. 9s. boards.

London: Longman, Brown & Co.; Baldwin & Cradock; J. G. F. & J. Rivingtons; Hamilton & Co.; Whittaker & Co.; Sherwood & Co.; Duncan & Malcolm; Simpkin, Marshall & Co.; Cowie & Co.; Smith, Elder & Co.; Allen & Co.; Houlston & Stoneman; Harvey & Darton; T. Bumpus; R. Mackie; Capes & Co.; J. Green; H. Washbourne; C. Dolman; E. P. Williams; Souter & Law; T. Allman; and G. Routledge. Oxford: J. Parker. Cambridge: J. & J. J. Deighton. Edinburgh: Stirling & Kenny.

GOLDSMITH'S HISTORIES ABRIDGED FOR SCHOOLS.

GOLDSMITH'S HISTORY of ENGLAND, Abridged, with a Continuation to the Present Time. New edition, with portraits of the Queen and Prince Albert. 12mo. price 3s. 6d. bound.

2.

Goldsmith's History of Greece. A new edition, 12mo. price 3s. 6d. bound.

3.

Goldsmith's History of Rome, Abridged. 12mo. 3s. 6d. bound.
London: Longman, Brown & Co.; T. Cadell; J. M. Richardson; J. G. F. & J. Rivington; E. P. Williams; Sherwood & Co.; Hamilton & Co.; Whittaker & Co.; Simpkin, Marshall & Co.; Harvey & Darton; Houlston & Stoneman; Darton & Clark; E. Hodgson; W. Edwards; J. Jackson; and C. Dolman.

Nearly ready,

NATIONAL GALLERY.—An Edition of Felix Summerly's CATALOGUE of the NATIONAL GALLERY, with Reminiscences of the Pictures, drawn expressly from the Originals by Messrs. J. J. and W. Linnell.
G. Bell, 186, Fleet-street.

Just published, 8vo. 8s. 6d. cloth,

JUDAS: a TRAGIC MYSTERY.
By DIGBY P. STARKEY, Esq.
"In theme, style, and plot, it is original, bold, and startling, and we deem it one of the finest efforts of poetic genius that has for many years come before the public—possessing poetic vigour, profound and philosophic views, and a power of stirring all the deeper sympathies of our nature. To its execution the author has brought great erudition, most unwearied industry, and a profound sense of the sacredness of all holy things."—*Dublin University Magazine.*
London: Longman, Brown & Co. Dublin: Curry & Co.

Now publishing,

BAXTER'S OIL-COLOURED PORTRAITS OF THE MISSIONARIES,
WILLIAMS and MOFFAT.

Price of each Portrait, in Oil Colours, 10*s.* 6*d.*; Proofs, 15*s.*; Mezzotinto proofs, 3*s.* 6*d.*; India proofs, 5*s.* Gold Frames and Glass only 10*s.* 6*d.* each, if required.

Just before Mr. Moffat left England to resume his arduous duties in Africa, he said, "Mr. Baxter, the Portrait you have in hand is a very faithful likeness, and the scene of the Bechuana Parliament most true; indeed I fancy myself again in Africa."

"We have been delighted by the sight of two portraits by Baxter, in his most beautiful style, and the execution is admirable."—*Evangelical Magazine.*

"It would be quite superfluous to recommend these memorials of two eminent benefactors of the heathen to their immediate friends, but we hope they will be purchased by many others of our own, and of all other Evangelical denominations."—*Baptist Magazine.*

"We have seen oil pictures of Mr. Baxter's before; but we certainly were not prepared to see portraits possessing so completely the character of coloured originals as he has given to them."—*Wesleyan Magazine.*

"Mr. Baxter's process gives to each print the force and character of an original drawing, and presents a delicacy of touch and minuteness of object in the distant landscape, that are truly wonderful."—*Congregational Magazine.*

"These pictures will form a splendid pair of ornaments for the parlour walls of the friends of missions. The African landscape, which forms the background to Moffat's portrait, is perfectly delicious, and alone worth the whole price of the picture."—*Patriot.*

"To every drawing-room in Christendom these prints would be an ornament. Moffat, with the landscape and Parliament in the distance, is the most exquisite gem we ever saw."—*Sunday School Magazine.*

"Let all who can do it order this pair of pictures."—*Christian Examiner.*

New Monthly Periodical.

On the First of May will be published, No. I. price 8*d.*, of a New Monthly Periodical, to be called

TEGG'S LONDON MAGAZINE.

The design of this undertaking originated with the Publisher; but in bringing it to maturity he has been assisted by gentlemen whose sound judgment, distinguished scholarship, and practised pens, combined with his own experience in the conduct of literary undertakings, give every assurance that the objects he has in view will be carried out in a manner equally satisfactory to the public as to himself.

The motive which actuates him is a strong feeling that the numerous periodicals now in existence do not effect their proper object—the creation of a healthy appetite for reading of a higher order—but rather tend to deprave the taste, and to frustrate the end for which they were originally projected. The young, particularly, to whom the current periodical literature is very attractive, are most open to injuries from its vitiating tendency, and most in need of a work which shall furnish them with a more pure supply.

It is proposed therefore to produce a Monthly Miscellany, which shall be surpassed by none in variety and excellence of matter, and which, keeping pace with the rapid advance of science and art so particularly distinguishing the nineteenth century, shall record each successive improvement, and at the same time trace back its history to its birth.

The wonderful progress of Modern Discovery by sea and land, and the never-ceasing changes and improvements throughout the world; illustrated Descriptions of the most remarkable objects, either natural or artificial, which are to be found throughout its wide extent; Delineations of Natural History, more especially of the Animal and Vegetable Kingdoms in newly-settled colonies; Historical Details, drawing from their venerable repositories accounts of the Customs and Manners and Pastimes of the ages long gone by, and comparing them with those for which they have been exchanged; Biographical Sketches; Articles of Fiction, and others of general interest, which scarcely admit of classification: all these subjects, together with numberless others which it is impossible to particularise, developed by able heads and ready pens, and further elucidated and adorned by woodcuts and engravings of first-rate excellence, will, it is hoped and believed, combine to form a Magazine of an excellence yet unattained, and which can scarcely require further security for its success than to be generally known to the heads of families, the conductors of education, and the reading portion of society.

Among the more important objects to which attention will be particularly directed, is the History of Man in his Social State—a subject hitherto but very slightly touched on in any professedly popular work; of deep importance, yet yielding at the same time an exhaustless store of entertainment, to which no human being can be indifferent. It is here proposed to treat of the Varieties of the Human Species, showing the influence of Climate, Habit, and Education upon mankind. The advantages of this peculiar study, to a people who are annually emigrating in thousands into countries occupied by aboriginal tribes, are highly important, and cannot fail to give a peculiar value to any work which shall discuss the subject in a manner at once scientific and popular.

One other peculiarity attending this New Cabinet of Useful and Entertaining Literature requires to be mentioned. The Publisher, after much reflection, has decided upon making a novel experiment—or rather reviving an excellent practice now fallen into desuetude—one that will augment his own labour, but be inevitably attended with wide-spread advantages, and a high degree of pleasure, to those for whom alone it is intended. *He purposes to offer monthly prizes* (the works of some admired author) *for the best Articles, Essays, or Papers, on given subjects*; these will be regularly announced on the wrapper of each Number. This competition must inevitably awaken talent that otherwise might have slept for ever; and experience teaches us, that precocity or presumption seldom indicates a high order of intellect.

The Publisher offers no pledge to the youth of England for his future conduct in catering for their intellectual entertainment. He appeals confidently to the vast amount of entertaining knowledge which he has already furnished them. To others, he feels that no promise of future exertion is necessary. A long life of commercial industry and enterprise passed amongst them will secure their confidence. Never were the results of that experience and intercourse which his position has given him, more likely to prove beneficial to his patrons than in the present instance; for he has resolved upon devoting (as a source of self-gratification) a large portion of his time to the selection and accumulation of materials to be placed in the hands of his Editor. And he would further observe that, from the quantity of matter, variety and value of its contents, frequent introduction of illustrations, and unprecedented accumulation of interesting facts, TEGG'S LONDON MAGAZINE will be decidedly the cheapest periodical of its kind ever published.

The subject proposed for the first prize is

"Influence of Ballad Poetry on the People."

CONDITIONS AND PLAN.

1. The Work to be published in Monthly Numbers at Eightpence each, printed on fine royal paper made at the Nash Mill by Messrs. Dickinson & Co., and printed by Messrs. Bradbury & Evans.

2. Each Number will consist of Two Sheets, closely printed in small royal octavo, and occasionally ornamented with Wood Engravings.

3. A few Advertisements, principally of a literary character, will be admitted at a moderate rate, as per printed scale.

London: printed for THOMAS TEGG, 73, Cheapside; Griffin & Co. Glasgow; and T. Le Mesurier, Dublin: to whom all communications for the Editor are requested to be addressed.

MR. JAMES'S NEW ROMANCE.
Now ready, in 3 vols. post 8vo.

FOREST DAYS.
A ROMANCE of OLD TIMES.
By G. P. R. JAMES, Esq.
Author of 'Morley Ernstein,' 'The Robber,' &c.
"....Into this host of gallant things—the splendid pageantry of tilt and tournament—this association of knight and ladye—this concentration of all that charms and fascinates us in our retrospection of olden times has Mr. James here carried us..... Scene after scene of vivid and vigorous interest succeeds each other, while village life is portrayed with such a May-day freshness that we seem to linger over the sweet odour, almost unwilling to be lured away by even the pomp of chivalry or the grandeur of baronial castle."—*Metropolitan.*
Saunders & Otley, Publishers, Conduit-street.

A FULL REPORT of the PROCEDURE at the TWENTY-NINTH ANNUAL GENERAL COURT of the SCOTTISH (Widows' Fund) LIFE ASSURANCE SOCIETY, held on the 7th March, 1843, may be obtained at the Head Office, No. 5, St. Andrew's-square, Edinburgh; or of any of the Society's Agents.

The total amount of assurances effected since the commencement of the Society is very nearly £6,000,000 0 0
The capital accumulated and invested is now upwards of 1,270,000 0 0
The annual revenue of the Society is upwards of 200,000 0 0
Other sums in proportion: £1,000, assured in 1815, is this year increased to 1,745 16 10
£3,000, assured in 1825, is this year increased to 4,157 0 3
£5,000, assured in 1835, is this year increased to 5,910 0 0

Later assurances have proportionate additions.
Whole profits divisible among the assured.
London Office, 7, Pall Mall, April, 1843.
HUGH M'KEAN, Agent.

UNION ASSURANCE OFFICE—FIRE, LIFE, ANNUITIES—Cornhill and Baker-street, London; College-green, Dublin; and Esplanade, Hamburgh: instituted A.D. 1714.

Examples of the Bonus in Great Britain.

No. of Policy,	420	Sum Insured, £2,500	With Bonus, £3,106
..	1,103	.. 5,000	.. 6,149
..	2,903	.. 1,100	.. 1,365
..	3,118	.. 1,000	.. 1,165

FIRE INSURANCE effected upon every description of property, including rent; and policies should be renewed within 15 days after each quarter-day. THOMAS LEWIS, Sec.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 24, Bridge-street, Blackfriars, London; established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.
CAMPBELL JAMES DOWNER, Sec.

DISEASED AND HEALTHY LIVES ASSURED.

Healthy Lives are assured at *Lower Rates* than at most other Offices. F. G. P. NEISON, Actuary.

NATIONAL PROVIDENT INSTITUTION, 48, Gracechurch-street, London, (established at 13, Nicholas-lane, King William-street, December, 1835,) for Mutual Assurance on Lives, Endowments, Deferred Sums, Immediate and Deferred Annuities, enrolled under the Acts of Parliament relating to Friendly Societies.

Directors.

C. P. Bousfield, Esq.	Robert Ingham, Esq.
John Bradbury, Esq.	Joseph Jansop, Esq.
William Cash, Esq.	S. Bayhurst Lucas, Esq.
Thomas Castle, Esq.	C. Lushington, Esq.
James Crofts, Esq.	John St. Barbe, Esq.
John Feltham, Esq.	Richard Shortridge, Esq.
Joseph Hargrave, Esq.	Samuel Smith, Esq.
Thomas Hodgkin, M.D.	

Medical Directors.
J. T. Conquest, M.D. F.L.S. | Thomas Bevan, M.D. F.L.S.
Solicitors—Messrs. Hardwick & Davidson.

THIS INSTITUTION completed the Seventh Year of its establishment on the 15th of December, 1842, and, in accordance with a Rule made at its commencement, a careful valuation of its liabilities and assets has been made by an eminent Actuary, Charles Ansell, Esq., for the purpose of making the first division of profits amongst its members, the gratifying result of which is exemplified in the following instances, showing the profit assigned to policies which have existed from one to seven years:

Policies in Existence.	Age at commencement.	Sum Assured.	Amount of Bonus.	Original Premium.	Reduction in Premium in lieu of Bonus.	Equal to a Reduction per Cent. on the Original Premium of
7	36	1,000	163 11 6	63 0 0	27 17 2	44
6	52	2,000	227 19 0	97 11 8	34 5 10	35
5	31	1,000	91 3 0	47 2 6	13 6 4	28
4	43	500	28 19 0	17 13 1	3 13 3	20
3	46	800	37 8 0	31 18 8	4 18 10	15
2	68	3,000	149 15 0	234 15 0	23 11 7	10
1	43	2,000	36 14 0	79 8 4	3 3 0	4

The Directors refer with great confidence to the above statement, as exhibiting the most satisfactory proof of the superiority of the principle on which this Institution is founded, namely, that of MUTUAL LIFE ASSURANCE, carried out under the protection and advantages afforded by the acts of Parliament relating to FRIENDLY SOCIETIES, and fully warranting them in thus directing the public attention to the peculiar privileges secured to all assurers.

Members, whose renewal premiums became due on the 1st instant, are reminded that the same must be paid within 30 days from that time.

The Report of the Directors to the Annual Meeting of the Members, held on the 15th of December last, Prospectuses, and every other information, may be had on application at the Office, or to the Country Agents.
London, April 5, 1843. JOSEPH MARSH, Secretary.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

H. WALKER'S NEEDLES (by authority the Queen's Own), in the illustrated Chinese Boxes, are now in course of delivery to the trade. The needles have large eyes, are easily threaded (even by blind persons), and have improved points, temper, and finish. Each paper is labelled with a likeness of Her Majesty or H.R.H. Prince Albert, in relief, on coloured grounds. Every quality of needles, fish-hooks, hooks and eyes, steel pens, &c. for shipping. These needles or pens for the home trade are sent free by post, by any respectable dealer, on receipt of thirteen penny stamps for every shilling value. H. Walker, Manufacturer to the Queen, 30, Maiden-lane, Wood-street, London.

FOUNTAINS, VASES, TAZZAS, FIGURES, &c. in Marble, Artificial Stone, and Parker's Cement, to be seen at WYATT, PARKER & CO.'S WHARF, Holland-street, Surrey foot of Blackfriars-bridge. Also, a large Collection of Chimney Shafts, Pedestals, Capitals, Consoles, Trusses, &c.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

H. PAPE, Pianoforte-maker to his Majesty the King of the French, 105, New Bond-street.—PATENT GRAND, SQUARE, CONSOLE, and TABLE PIANOFORTES.—H. PAPE, in opening the above establishment, trusts that his instruments will command in this country the same preference they have enjoyed on the Continent for the last 25 years. The sale of nearly 4,000 of them is the best proof of the superiority of his new system of construction, in which the hammer, contrary to the usual mode, strikes the string downwards. The excellence of these instruments for keeping well in tune, for obedience and elasticity of touch, and for their great solidity, is now well known, and a FAIR examination will prove that they are also far superior to all pianofortes of the ordinary construction in power and sweetness of tone. Amongst those at present in the ware-rooms may be seen a Grand Piano of eight octaves, as well as a very remarkable Square, covered with one single sheet of ivory. This was the most remarkable pianoforte present at the Grand National Exhibition at Paris; and for it H. Pape obtained the Gold Medal, and was created, by His Majesty, Chevalier of the Legion of Honour.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, Crests, &c. for book plates, in their proper HERALDIC COLOURS, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 7*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their Warehouses,

EGYPTIAN HALL, PICCADILLY, and 122, BISHOPSGATE-STREET WITHIN,

or sent on application any distance free of expense. Superfine letter papers, 37*s.*, 32*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.* 12*s.*, and 8*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 6*s.*, and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large, and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting books, Bibles and Prayers, gold and silver pencil-cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices.

ELECTRO-PLATED and GILT ARTICLES.—ELKINGTON & Co., patentees, beg to announce, that to meet the increasing demand for this manufacture, they have OPENED an ESTABLISHMENT at No. 22, REGENT-STREET (CORNER OF JERMYN-STREET), where every variety of articles for the Sideboard, Dinner, Dessert, and Breakfast tables may be inspected. They have also a similar assortment at their City Establishment,

No. 45, MOORGATE-STREET, CITY,

where they have a MANUFACTORY for PLATING and GILDING, RE-PLATING and RE-GILDING, ARTICLES of every description, and of ALL METALS.

With reference to articles of their manufacture, the patentees beg to state, that they differ from all goods hitherto offered as "plated goods," or "substitutes for silver," being made in the same manner as SOLID SILVER, from which they cannot be known, and being also composed of a hard white metal, strongly coated with silver, by the Electro process.

Silver articles of every kind or pattern exactly copied.

Every article made by the patentees or under their licence bears their stamp. (E. & Co. below a crown.)

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

DR. GREEN'S SULPHUR, FUME, MEDICATED, and VAPOUR BATHS, 40, Great Marlborough-street.—For more than twenty years Dr. Green's attention has been directed to the remedial agency of baths of different kinds upon the human body; and for the same length of time he has superintended an Establishment for their due and proper administration.

Judiciously employed, Fume and Vapour Baths are beyond all question, invaluable as principal or auxiliary means in the treatment of many kinds of chronic disease, particularly Rheumatism and Rheumatic Gout, Affections of the Skin, and impaired functions of the great Abdominal Viscera.

These Baths are accessible at all hours of the day to the public at large, and to members of the medical profession, with their patients, in cases where it is desirable that the medical attendant should witness and direct the administration of the bath.

FRAMES FOR ART-UNION PRINTS.

C. F. BIELEFELD begs to call the attention of Artists, Printsellers, &c. to his numerous assortment of PICTURE-FRAMES, appropriate for the Art-Union and other Prints, &c., manufactured in his improved Papier Mâché. "The specimens of these frames which we have seen are certainly very beautiful." *Globe*, 17th Jan. 1843.—"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness we have seldom or never seen obtained in composition." *Art-Union.*

C. F. B. has just published a New Tariff of the Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on receipt of six post-office stamps.—Works, 15, Wellington-street North, Strand.

CARD-PLATE ENGRAVED TO ANY PATTERN 2*s.*, and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and Name, 5*s.* Note paper 4*s.*, 6*s.*, 8*s.*, and 10*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 4*s.* 4*d.* per quire; no charge for the die. Wafers from the die, 1*s.* per 100, or 6*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY —Terms: 3*l.* 3*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE,' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged goût, pronounce it to be "the only good sauce;" and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietor's stamp over the cork of every bottle.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARBICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	£. s. d.		£. s. d.
Table Spoons and Forks, per doz.	16 6	Mustard Spoon	0 6
Dessert ditto, ditto	12 6	Tea Spoons, per dozen	5 6
Fish Knives	5 6	Gravy Spoons	3 6
Soup Ladles	6 6	Salt ditto	0 6
Sauce Ladles	1 6	Sugar Tongs	1 0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.

C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.

TEA TRAYS, and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 35*s.*; a best Gothic border 30-inch Japan tray, 18*s.*; a dozen ivory table knives, 11*s.*; dessert ditto, 9*s.*; a pair of carvers, 4*s.* 6*d.* A Palmer's Candle Lamp, bronze or lacquered, 9*s.*; a solar ditto, to burn common oil without smoke or smell, 25*s.*; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1*s.* each; best ivory-handle razors, 8*s.* 6*d.* per pair.

41 and 42, Barbican, and at 16, Norton Folgate.

INFLUENZA, COUGHS, AND COLDS.

SIMCO'S ESSENCE of LINSEED is the most efficacious remedy ever discovered for the relief of persons suffering from Influenza; the two first doses generally arrest the progress of this distressing complaint, and a little perseverance completely removes it. Children's Coughs, as well as recent ones in adults, will be removed by a few doses (frequently by the first), and asthmatic persons, who previously had not been able to lie down in bed, have received the utmost benefit from the use of it. Sold by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate-street Without, London, and all Medicine Venders, in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each.

BUTLER'S COMPOUND CONCENTRATED DECOCTION, or FLUID EXTRACT of SARSAPARILLA, is the original of the now numerous concentrated preparations of the kind. A dessert spoonful of it, diluted with water, makes half a pint of the compound decoction, of the same strength and composition as that ordered by the British Pharmacopœias. It is prescribed as an alterative in scrofula, scurvy, eruptions of the skin, and all cutaneous diseases; also has been found extremely useful in chronic rheumatism, in secondary symptoms, and after an improper use of mercury.

Prepared and sold in pint bottles 20*s.*, half-pints 10*s.*, and quarter-pints 5*s.* 6*d.*, by Thomas Butler, Chemist, 4, Cheapside, (corner of St. Paul's Churchyard,) London; and may be obtained of J. Sanger, 150, Oxford-street; Davenport & Co. Waterloo-place, Edinburgh; or, by order, through any respectable Druggist.

*** No. 4, Cheapside, the corner of St. Paul's Churchyard. No connexion with any other establishment of the same name.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send me without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years; he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.

Yours, &c. JOHN KILVINGTON,

To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.

OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off; a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.*, and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

13, *Great Marlborough Street, April* 15, 1843.

MR. COLBURN'S NEW PUBLICATIONS.

I.

HISTORY OF OUR OWN TIMES.

By the Author of 'The Court and Times of Frederick the Great.'

VOL. I. price 10*s.* 6*d.* bound, with Illustrations.

"The History of Our Own Times will exhibit all the extraordinary scenes of the French Revolution, and detail the events of the long series of wars consequent on that revolution in all parts of the globe. The emancipation of the Spanish-American colonies—the deliverance of Greece from Turkish Thraldom—the daring but unfortunate insurrection of the Poles—the transfer of the crown of France to a new branch of the house of Bourbon—the foundation of the kingdom of Belgium—and the cruel civil wars in the two divisions of the Spanish Peninsula, form more recent features in this great moving drama. It is scarcely necessary to add that the means by which the power and prosperity of the British empire have meanwhile been gradually extended and consolidated, will claim the particular attention of the historian. In short, it will be his aim to furnish, in a popular form, a faithful and impartial record of every event of public importance that has taken place during the last fifty years."—*Extract from the Preface.*

II.

LIVES OF THE PRINCES OF WALES,

Heirs to the British Throne,

FROM THE MOST AUTHENTIC PRIVATE AND PUBLIC SOURCES.

Douglas Jerrold, Esq.	
Sir Rich. Paul Jodrell, Bart.	

Tickets, 20s. each, may be had of the Stewards, and of the Secretary, at the Chambers of the Society, 73, Great Russell-street. The amount of Grants applied to the relief of distressed Authors, their Widows, and Children, during the past year, was 1,255*l.*; and the total amount applied by the Committee to these benevolent objects, from the foundation of the Society, is upwards of 29,000*l.* Donations and Subscriptions, in aid of the charitable purposes of the Institution, will be thankfully received and acknowledged by the Treasurers, John Griffin, Esq., 21, Bedford-place; Sir Henry Ellis, British Museum; William Tooke, Esq., 12, Russell-square; and by

OCTAVIAN BLEWITT, Sec.

THE WESTMINSTER REVIEW.—The forthcoming Number will contain an Article upon the CORPORATION of LONDON and MUNICIPAL REFORM, with various Papers of philosophical and literary interest. BILLS and ADVERTISEMENTS intended for insertion should be sent to the Publisher's not later than Monday, the 24th instant.

Samuel Clarke (Successor to H. Hooper), 13, Pall Mall East.

CITY OF LONDON SCHOOL, Milk-street, Cheapside, established by Act of Parliament, and under the Superintendence of the Corporation of London; Head Master, the Rev. G. F. W. MORTIMER, D.D., of Queen's College, Oxford. This SCHOOL will be RE-OPENED after the Easter Vacation, on TUESDAY, the 25th of April. Persons desirous of entering their sons as pupils, may obtain prospectuses of the school, containing also particulars of the foundation scholarships and exhibitions attached to it, together with forms of application for admission, at the Secretary's Office, between the hours of ten and four.

THOMAS BREWER, Secretary.

SOLO SINGING.—To VOCAL AMATEURS.—It is a very frequent occurrence that Ladies highly musical both in theory and practice, sing but indifferently. Madame GOULD PANORMO begs to say she can give the highest testimonials of the success of her mode of instruction, and undertakes to capacitate pupils in this delightful accomplishment in SIX or TWELVE interesting LESSONS, guaranteeing a superior style of articulation, expression, and intonation, in English or Italian; likewise the several classes of Scotch, Irish, and English ballad, bravura, sacred, and sentimental music. She receives Ladies and Junior Pupils at her residence, 5, Piccadilly, on Wednesdays and Saturdays.

TO PARENTS AND GUARDIANS.

IMPORTANT BUSINESS EDUCATION, LONDON.

ARCHITECTURE, ENGINEERING, and the dependent Arts of Decoration, based upon a course of practical and scientific training, and united to a complete general Education.

All the advantages of the Metropolitan Schools of Art and Scientific Institutions, together with a strict supervision and domestic comfort, are secured to the Pupils.

Mathematical and Mechanical Science allied to the lighter accomplishments of the Artist.

Mr. HANSOM, Architect of the Birmingham Town Hall, &c. &c., receives Pupils as APPRENTICES, or for improvement, and is assisted by superior practical Masters in each department.

Terms moderate.—Apply at the Office, No. 27, Foley-place, London.

CONCHOLOGY.—LOVELL REEVE begs to inform the Nobility and Gentry that he has now a splendid assortment of Shells, and respectfully solicits the honour of a call or correspondence. Parties residing in the country are requested to apply for a catalogued consignment of specimens for selection.

On the 1st of May, to be continued Monthly, price 10s. coloured, No. IV. (size quarto,) of the

CONCHOLOGIA ICONICA; containing Drawings and Descriptions of the following species of Shells, twenty of which are entirely new to science.

Lovell Reeve, Conchologist, 6, King William-street, Strand.

ART-UNION OF LONDON.—The Subscribers are respectfully informed that the ANNUAL GENERAL MEETING, to receive the Report of the Committee, and to distribute the amount subscribed for the purchase of Works of Art, will be held in the THEATRE ROYAL, DRURY LANE, (by the kind permission of W. C. Macready, Esq.) on TUESDAY NEXT, the 25th instant, at 11 for 12 o'clock precisely,—

His Royal Highness the Duke of CAMBRIDGE, President, in the Chair.

Subscribers will be admitted on presentation of the receipt for the current year, at the entrance in Brydges-street.

*** A notice will be forwarded by post, on the 26th instant, to all who may become entitled to prizes.

GEORGE GODWIN, } Honorary
LEWIS POCOCK, } Secretaries.

April 22, 1843.
4, Trafalgar-square, Charing-cross.

ROYAL MANCHESTER INSTITUTION.—The ANNUAL EXHIBITION of PICTURES in Oil and Water Colours, Specimens of Sculpture, and Casts, Architectural Designs, and Proof Impressions of Modern Engravings, will OPEN on the 1st June next (instead of in the Autumn). Works of Art intended for exhibition must arrive at the Institution not later than the 10th to the 20th May. No carriage expenses will be paid by the Institution, except on works from those Artists to whom the exhibition circular has previously been forwarded.

Artists in London are referred to Mr. GREEN, 14, Charles-street, Middlesex Hospital.

The following Prizes are offered:—

The Heywood Medal in gold, to the Artist of the best Oil Painting, size not less than 4 feet, by 2 feet 10 inches.

The Heywood Medal in silver, and 10*l.* in money, to the Artist of the best Water Colour or Ornamental Drawing, size not less than 30 inches by 20 inches.

T. W. WINSTANLEY, Hon. Sec.

SIR DAVID WILKIE'S SKETCHES IN TURKEY, SYRIA, and EGYPT, Lithographed in the finest style of Art by JOSEPH NASH, Esq.

This splendid Work, consisting of fac-similes of the original drawings Sir David Wilkie intended as studies for composition, but which his untimely death prevented, includes the beautiful subjects of 'The Letter-Writer,' 'The Tartar announcing the Fall of Acre,' 'Portraits of the Sultan,' 'The Pasha of Egypt,' and many others not less beautiful in costume than striking for Eastern character.

Price:—Twenty-six Plates, imp. folio, half morocco, *il. 4s.*
Coloured and mounted, in exact imitation of the original Drawings, 10*l.* 10*s.*

A few Copies printed uniform with 'ROBERTS'S HOLY LAND,' price 6*l.* 6*s.*

Published by Henry Graves & Company, 6, Pall Mall, London.

CHELTENHAM.—Considerable excitement exists in this town relative to the great sale of the effects of the late Mr. Jonathan Lea, which commences on the 25th of this month. His collection of pictures offers some remarkable specimens of Ancient as well as Modern Art. The Murillo, Paul Potter, Claude, Rubens, Poussin, and some others of the Ancient pictures, are unquestionable. Mr. Lea had devoted a life to the subject, had resided long on the Continent, had discovered and rescued many works, which bore a critical comparison with those in the Public Galleries of Europe. His gallery contains also many fine works of Modern Artists. All, it is expected, will be offered for sale.

COLD-WATER CURE.—The Hydropathic Establishment at STANSTEAD BURY HOUSE, near Hertford, is now in full operation, with Baths of every description. The place is delightful; situated on a hill noted for its salubrity; and the water, walks, and drives excellent. The Director, Mr. Weiss, is thus referred to in Capt. Claridge's book, "The prevalent opinion amongst the visitors to Gräfenberg seemed to be, that Mr. Weiss understood and practised the Water-Cure with greater safety and more undeviating success than any other of its professors, with the exception of Preissnitz himself." A prospectus (price 1s.) may be had of Simpkin & Co., Paternoster-row, and all Booksellers, by order.

BOOKSELLERS' PROVIDENT RETREAT, 60, Paternoster-row. Established April 6th, 1843.

Committee.

James Nisbet, Esq., 21, Berners-street, *Chairman.*
Thomas Brown, Esq., 32, Paternoster-row, *Treasurer.*
Cosmo Orme, Esq., 35, Fitzroy-square.
James Duncan, Esq., 37, Paternoster-row.
Ant. K. Newman, Esq., 33, Leadenhall-street.
Edm. Hodgson, Esq., 193, Fleet-street.

Mr. R. Baldock, 85, High Holborn.	Mr. S. Low, 42, Lamb's Conduit-street.
Mr. James Bigg, 53, Parliament-street.	Mr. Fred. Malcolm, 37, Paternoster-row.
Mr. Geo. Copland, 17, Paternoster-row.	Mr. Thos. Rodd, 9, Great Newport-street.
Mr. H. Foss, 61, Pall Mall.	Mr. W. Sharp, 30, Paternoster-row.
Mr. C. D. Leftley, 37, Soho-square.	Mr. T. B. Sharpe, 187, Piccadilly

Mr. S. Ives, 14, Paternoster-row, *Hon. Secretary.*

This Society has been established for the purpose of providing a comfortable habitation for the aged Members, and Widows of Members, of the BOOKSELLERS' PROVIDENT INSTITUTION, being in the Receipt of an Annuity from that Institution, and who may require such a residence.

Every Person subscribing One Guinea a Year, or giving a Donation of Ten Guineas at one time, is entitled to one Vote at all Elections; and so in proportion for every additional Subscription of One Guinea a Year, or Donation of Ten Guineas; and is also eligible to become a Member of the Committee of Management.

The very general approbation which has been given to the formation of this Society, and the liberal support it has already received, afford the most encouraging assurance that the sanguine anticipations of its benevolent projectors will be crowned with ultimate success.

The present Contributions amount to Fifteen Hundred Pounds and the Committee feel assured that they have only to make the object more extensively known, in order to secure the sum which is necessary to complete this desirable undertaking.

Subscriptions and Donations will be thankfully received by Thomas Brown, Esq., *Treasurer*, 29, Paternoster-row; by Messrs. Smith, Payne & Smiths, *Bankers*, 1, Lombard-street; and by any Member of the Committee.

Digitized by Google

FIVE HUNDRED to ONE THOUSAND POUNDS.—A GENTLEMAN forty years of age, of good abilities and education, will give the above sum to any influential person for an introduction to some APPOINTMENT of a SCIENTIFIC or MERCANTILE CHARACTER.—Address to D. E., Messrs. Rolfe & Fletcher, Booksellers, Cornhill, London.

LONDON LIBRARY, 49, PALL MALL.—Patron, HIS ROYAL HIGHNESS PRINCE ALBERT.—The Subscribers are respectfully reminded that the Annual Subscription (Two Pounds) becomes due on the FIRST OF MAY, on or before which day the amount is requested to be paid to Messrs. Bouverie & Co., Bankers, 11, Haymarket. New Members are admitted on the usual terms, viz.:—Entrance fee, Six Pounds; Annual Subscription, Two Pounds; or Life Subscription, Twenty-six Pounds. The Reading Room will be opened at the beginning of May. The Catalogue, with the Supplement, containing a total of 17,000 volumes, is now ready, price 3s.; or the First Supplement, separately, price 1s.
By order of the Committee,
J. G. COCHRANE, Secretary and Librarian.

TERMS of SUBSCRIPTION to CHURTON'S LIBRARY, 26, HOLLES-STREET.
FOR A SINGLE FAMILY, 4, 5, or 10 guineas per annum.
FOR A BOOK SOCIETY, 6, 8, 10, 12, or 16 guineas per annum.
Any number of Members can join in the same Book Society subscription,—no charge is made for Box or Catalogue. The standard collection consists of 25,000 volumes, and every New Work is added the day it issues from the press.
Full particulars, and Hints to Secretaries of Book Societies, sent by post.

NEW ADVANTAGES FOR READERS throughout GREAT BRITAIN: now ready, Gratis and Post-free.
BULL'S NEW SYSTEM FOR FAMILIES AND BOOK-SOCIETIES.
FAMILIES paying 6l. 6s. the year, have all the New and Standard Works they order: 12 vols at a time in Town, or 24 Country; Catalogues and Boxes free of expense, and Two Guineas' worth of New Books to KEEP, at the end of each year.
SOCIETIES can subscribe at the rate of 1l. per Member only. The New Post Catalogues, with full particulars, sent *Gratis* and *Post-free*. Apply to Mr. Bull, 19, Holles-street, London.

PLAIN HINTS FOR READING SOCIETIES.
Now ready, Gratis and Post-Free,
HINTS for the FORMATION of READING SOCIETIES.—The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature, the choice of all the most valuable works in the various languages, and that of extending the choice of New Books to the entire productions of the press. It is especially adapted to provincial readers, as, by a small annual subscription, the perusal of all the New Works, as they appear, may be obtained.
Saunders & Otley, Publishers, Conduit-street.
*** THE NEW LIBRARY TERMS, on which *single* Families are supplied with all the New and Standard Works for perusal, are as follows:—
FIVE GUINEAS per ANNUM,
SIX GUINEAS —
or
EIGHT GUINEAS —
All extras are included in the above; and to each subscriber is furnished, monthly, and without charge, 'The Library Circular; or, Guide to the Choice of New Publications.' Application as above.

CATHOLIC BOOKS.
F. A. LITTLE, Catholic Bookseller, 34, Henrietta-street, Covent-garden, has just published the Second Part of her 'CATHOLIC BOOK LIST,' which abounds in rare and curious Catholic Works printed in the 15th and 16th centuries. F. A. L.'s Stock is well selected, and will be found to contain all the Modern Catholic Publications, including the Works of Archbishop M'Hale, Bishops Milner, Wiseman, Dr. Lingard, and others of standard Catholic literary reputation. F. A. L. has Catholic Prayer-Books in great variety, in very elegant bindings, including 'The Preparation for Death,' by St. Liguori, 'The Soliloquy of the Soul,' by St. Thomas à Kampis, and the 'Manual of Scriptural Prayer,' beautiful large type. Her Stock of Bibles and Testaments is very complete, as also of Office Books for the Clergy, including Psalters, Rituals, &c. The 'Mores Catholici,' 11 vols. boards, very clean, now as a perfect work very scarce.—The Catalogue, Part II., forwarded post-free on application. Old Catholic Books bought or exchanged.

MILLER'S GENERAL CATALOGUE of CHEAP BOOKS, PART THE FIRST, containing upwards of One Thousand Articles, published this day, GRATIS, as usual. In a few days will appear the SECOND PART. Also to be had the following Works, at the low prices affixed:—
Arabian Nights' Entertainments. A new and improved Translation, with copious Notes, by Edward William Lane, Esq., many years resident in Arabia and Egypt, illustrated by upwards of 1,000 woodcuts, after the designs by Harvey, 3 vols. imperial 8vo. elegantly half bound calf extra, marbled edges, 2l. 8s. 1836
Beaumont and Fletcher's Comedies and Tragedies, the first folio edition, 15s. 1647
Beaumont and Fletcher's Dramatic Works, 10 vols. plates, light gilt calf, extra, old style by Clark, very elegant, 2l. 2s. 1778
The Holy Bible—An Exposition of the Old and New Testament, with Practical Remarks and Observations, by Matthew Henry, 6 thick vols. 8vo. elegantly bound in morocco, gilt edges, 3l. 15s. 1839
Churchill's Collection of Voyages and Travels, with an Introductory Discourse on the History of Navigation; the work contains besides about 300 engravings, 6 vols. folio, fine copy, calf gilt, 2l. 12s. 6d. 1704
Encyclopædia Londinensis; or Universal Dictionary of Arts, Sciences, and Literature, illustrated with beautiful frontispieces, portraits, and very numerous plates, complete in 24 vols. 4to., the fine paper edition, only 8l. 8s.; sells for 60 guineas. 1820
All the plates illustrative of Natural History are finely coloured after Nature.
Johnson's (Dr. S.) Entire Works, including his Debates, superbly printed at the Oxford Press, 11 vols. 8vo. calf gilt, very elegant, 4l. 10s. Pickering, 1825
Lingard's History of England from the Invasion of the Romans, 14 vols. 8vo. half morocco, top edges gilt, the best Library Edition, 4l. 4s. 1825-31
New Monthly Magazine, from the commencement in 1821 to the end of 1840, a very neat, uniform bound set, in half [illegible], 60 vols. 8vo., 8l. 8s. 1821-40
John Miller, 404, Oxford-street.

On view four days before the Sale. Applications for Catalogues (inclosing a postage stamp) to be made to
E. GREEN, Auctioneer, Cheltenham.

Just published, price 16s.
THE SKETCHER'S GUIDE; a light and portable Apparatus for Drawing Landscape, and other Outlines, in Perspective, *without* Elementary Knowledge. To which is added, a Compendium of the Rules of Perspective and Effect. By W. F. ELLIOT, Esq.
There are few persons, unacquainted with the art of drawing, but have (either when travelling, or at other periods of their lives), had frequent occasion to lament that deficiency. The difficulties in the way of sketching objects correctly, without a knowledge of the laws which regulate *optical perspective*, have been so great, and hitherto so forcibly felt, as to be considered insuperable. Messrs. Fuller, however, are happy to announce, that, in the 'Sketcher's Guide,' they have perfected an apparatus, extremely simple, and as portable as a hand-book, by means of which those obstacles are overcome; and any person, by simply attending to the printed instructions, may draw Landscapes, or other objects, as faithfully as they are presented to the eye.
And, in order to simplify and encourage the study of *perspective* and pictorial composition, they have added to the above a synopsis of the Rules of PERSPECTIVE and EFFECT; clearly and popularly written, and containing numerous Illustrative Examples.
London: published by S. & J. Fuller, at their Temple of Fancy and Artist's Repository, 34, Rathbone-place.

Modern Botany for Ladies; or, a Popular Introduction to the Natural System and Classification of Plants.

Also, with 45 Woodcuts, 16mo. 4s.

Natural History for Young Persons, arranged for Every Month in the Year.

John Murray, Albemarle-street.

BRITISH BOTANY.

5th edition, with 155 Figures, 12mo. price 10s. 6d.

WITHERING'S BRITISH PLANTS: corrected and condensed; preceded by Instructions adapted for Persons commencing the Study of Botany. By W. MACGILLIVRAY, A.M., Professor of Natural History in the Marischal College and University of Aberdeen.

This work contains familiar descriptions of all the indigenous flowering plants of Great Britain, Ireland, and the Channel Islands, so full as to enable the young botanist to determine every species he may meet with, without the assistance of others.

Lately published,

Macgillivray's Manual of Botany; comprising Vegetable Anatomy and Physiology, or an Account of the Structure and Functions of Plants; with Woodcuts and 214 engraved Figures. Price 6s. 6d.

London: Scott, Webster & Geary, Charterhouse-square.

In demy 8vo. price 8s. 6d. cloth, with a Map,

THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.

By WILLIAM DESBOROUGH COOLEY.

"A truly classical work....This work, well considered, is historical rather than geographical and ethnographical; it is unquestionably the only truly critical work hitherto undertaken and completed on the subject."—Count Gråberg da Hemsö, in the *Riviста Europea*, May, 1843.

"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated....The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great. ....The book is characterized throughout by acuteness and sound judgment."—*Royal Geogr. Society's Journ.* Vol. XII.

"We owe all our accurate knowledge of the early movements of the Moors and Arabs in Negroland to the researches of the judicious Cooley. 'The Negroland of the Arabs' well deserves perusal."—*Friend of Africa.*

"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*

London: J. Arrowsmith, 10, Soho-square; and all Booksellers.

PRICE ONE SHILLING, STAMPED.

THE ART-UNION:

A Monthly Journal of the Fine Arts.

CONTAINING 24 PAGES CONSISTING OF 72 COLUMNS.

ILLUSTRATED BY WOODCUTS.

THE ART-UNION has been Four Years in existence; it has obtained the confidence of Artists, and enjoyed a large share of public patronage. It was published to supply a desideratum in British Periodical Literature. Its pages afford ample evidence that the Editor has obtained the zealous co-operation of many of the most able practical members of the profession; and the following passages (selected from above one hundred commendatory notices), from some of the leading works of the day, will sufficiently prove the estimation in which it is held by the public.

"A monthly Journal, very ably conducted, and promising to be of great utility."—*Blackwood's Edinburgh Magazine.*

"The critical notices are written in a very impartial yet searching spirit. The original papers are good; and the details of objects of interest, hitherto imperfectly recorded, are full of attraction."—*Morning Herald.*

"An interesting journal, devoted to the subject of the Fine Arts."—*Examiner.*

"A periodical exclusively devoted to matters of art, which very ably effects the object it contemplates."—*Globe.*

"A journal of authority on all matters concerning art."—*United Service Journal.*

"A valuable and agreeable paper. Its feeling is right and good towards native talent and its patrons."—*John Bull.*

"Admirably calculated to advance the objects of artists, and increase the growing taste for works of art. We strongly recommend it to all who feel interested in the important subject."—*Britannia.*

"We have observed the general impartiality which it displays."—*Sun.*

The subjects usually introduced in each Number are:—ORIGINAL ESSAYS; contributed by Artists of matured knowledge and experience. CORRESPONDENCE; being communications to the Editor upon all topics connected with art; suggestions of improvements, experiments, comments upon discoveries, &c. &c. SOCIETIES IN CONNEXION WITH ART.—Reports of their proceedings. EXHIBITIONS of Metropolitan and Provincial Societies for promoting the Arts. OBITUARY.—Memoirs of Artists, and Patrons of the Arts, recently deceased. ART IN THE PROVINCES.—Notices of intended Exhibitions in the various cities and towns of Great Britain; criticisms upon them; and statements of the results of each, more especially in reference to purchases made. FOREIGN ART.—Intelligence from the several Continental states, gleaned from Foreign Journals, or contributed by Correspondents; with critiques on the Exhibitions in the leading cities of Europe. VARIETIES.—A gathering of Memoranda upon all topics of interest and utility to the Artist, the Connoisseur, and the Amateur. REVIEWS of new Publications, Engravings and Illustrated Works, &c. &c.

*** The Work is especially recommended to Families, in which the Arts are studied as sources of rational and intellectual enjoyment. To the Student in Drawing it will be at all times a most desirable aid, and to SCHOOLS a very valuable auxiliary. To the AMATEUR, indeed, the work abounds in useful information, upon the variety of subjects concerning which he desires to be make acquainted; inasmuch as it is arranged with a view to communicate *knowledge* freed from confusing technicalities.

Although the articles are usually printed anonymously, they are supplied by the safest and best authorities in the kingdom.

N.B.—The Number for MAY—No. 52—will be issued

WITH AN EXTRA HALF-SHEET,

CONTAINING ABOVE 30 SPECIMENS OF WOOD ENGRAVINGS,

BEING THE ILLUSTRATIONS OF

'THE BOOK OF BRITISH BALLADS.'

EDITED BY S. C. HALL, F.S.A.

Engraved by the most eminent Engravers, from Drawings by accomplished Artists of the British School.

Publisher, J. How, 132, Fleet-street,

To whom orders may be addressed; or the Publication may be obtained from any Bookseller or News-Agent in the Kingdom.

On the 1st of MAY will appear, price 3s. 6d. full coloured, PART II. of a New Edition of

BETTS'S

FAMILY ATLAS,

To be completed in FOURTEEN MONTHLY PARTS, each containing Four single or Two double Sheet Maps, and embracing ALL PARTS OF THE KNOWN WORLD.

The Proprietor has much satisfaction in appearing before the Public with a NEW EDITION of a work which has already elicited for him much public and private commendation, and of thus affording (he trusts to many individuals) the opportunity of supplying themselves with a valuable work, at a very reasonable price, and on a plan which is found most convenient by a large portion of the community.

The present Edition will possess the advantage of the introduction of several new and very important Maps, and the whole work having also undergone a thorough revision, every new and important discovery and settlement will be found carefully introduced. The Maps of ENGLAND, WALES, SCOTLAND, and IRELAND, are on an unusually large scale, correctly showing the various lines of RAILROAD, the Turnpike and principal Cross Roads, Rivers, Canals, &c. (that of England and Wales alone embracing no fewer than 8,900 names.) The Maps of the BRITISH COLONIES are also on a large scale; and, as a whole, the Proprietor feels satisfied that the work will be found fully to support the character it has obtained, and he confidently anticipates even a larger share of patronage than on its first appearance. Extracts from a few of the Literary Notices of the former Edition are subjoined:—

"This work is correctly described in its title—it is a GOOD FAMILY ATLAS; compiled with care, executed with great beauty, and sold at a moderate price; and we observe that creditable exertion has been made to bring down the information to the latest moment."—*Athenæum.*

"This is a very elegant and faithful book of maps, the whole of which appear to have been got up with great care, and to be exceedingly accurate: they are printed from steel plates, and are remarkably clear....Mr. Betts deserves the thanks of the public for the manner in which he has executed his labours."—*Times.*

"Independently of these claims to notice, the cheapness of the work, and its elegance of appearance, must insure its popularity."—*Morning Herald.*

"Here the expense of the old and elaborate, as well as the errors of the hasty and superficial, are happily avoided, and the *Family Atlas* is worthy of its name."—*Atlas.*

"The work is a valuable one: we have tested its accuracy in districts as familiar to us as the face of a country possibly can be, and we feel ourselves quite secure in recommending it to all who wish to supply themselves with a *first-rate Atlas.*"—*Conservative Journal.*

Just published, in small folio, strongly bound in cloth, price 14s., or half-bound in turkey morocco, 16s.,

a NEW EDITION of

BETTS'S SCHOOL ATLAS.

This may with safety be recommended as the best School Atlas, at the price, extant; the Maps are on a much larger scale than ordinary, and, for clearness and beauty of execution, cannot be surpassed at any price.

"If beauty of execution, combined with extreme cheapness, can recommend a work of the kind, BETTS'S SCHOOL ATLAS will be certain to have a most extensive circulation."—*Courier.*

BETTS'S NEW MAPS

OF

ENGLAND, SCOTLAND, and IRELAND.

These Maps have been compiled with great care upon the basis of the PARLIAMENTARY RETURNS of the amount of Population, and annual value of Property, and have the RAILROADS laid down with great accuracy and clearness, and the various stations marked and named; also the Turnpike Roads, Rivers, Canals, &c.

ENGLAND and WALES, measuring 3 ft. by 2 ft. 6 in., mounted on cloth, in a case for the pocket, price 7s.
Mounted on roller, ledge, and varnished, 10s. 6d.

ENGLAND and WALES, measuring 2 ft. 6 in. by 2 ft. 1 in. mounted on cloth, in case for the pocket, price 7s. 6d.
Mounted on roller, ledge, and varnished, 10s. 6d.

SCOTLAND, same size as the last named, mounted on cloth, in case for the pocket, price 6s. 6d.
Mounted on roller, ledge, and varnished, 9s. 6d.

IRELAND, same size as the last named, mounted on cloth, in case for the pocket, price 6s. 6d.
Mounted on roller, ledge, and varnished, 9s. 6d.

BETTS'S

GEOGRAPHICAL SLATES.

Each Slate has TWO OUTLINE MAPS permanently engraved upon it, and is accompanied by Two corresponding KEY MAPS, mounted on a mill-board: size of slate, 13 in. by 11. Price, with Key, 2s.

London: JOHN BETTS, 7, Compton-street, Brunswick-square:
SIMPKIN & MARSHALL; WHITTAKER & Co.; HAMILTON & Co.; and R. GROOMBRIDGE.
Liverpool: G. PHILIP.

LONDON, SATURDAY, APRIL 22, 1843.

REVIEWS

A Journal of the Disasters in Affghanistan, 1841-2. By Lady Sale. Murray.

THIS book will travel, as fast as railroad can carry it, to the remotest corner of the three kingdoms, and no Englishman, or woman either, will pause for a moment to inquire of the critic as to its merits or its character—enough that it contains the journal of one whose very name lightens up the eye and gladdens the spirit—of one whose "story shall the good man tell his son"—the journal of our high-minded noble countrywoman, Lady Sale. Having thus introduced the writer, we shall at once make our bow and retire:—

"I have," says Lady Sale, "not only daily noted down events as they occurred, but often have done so hourly. I have also given the reports of the day, the only information we possessed; also such news as was telegraphed from the Bala Hissar, or sent in by the King or by Capt. Conolly to the Envoy; and many other reports brought by Affghan gentlemen of Capt. Sturt's acquaintance, and by others of lower degree, who having had dealings with him in the engineer department and public works, and having received kindness from him, gave him such intelligence and warning as was in their power: all of which he communicated [to his superior officers] at different times; but the warnings were not attended to; and as when he gave his advice it was seldom adhered to, he became disgusted, and contented himself with zealously performing his duties and making himself generally useful, acting the part of an artillery officer as well as that of an engineer. Had poor Sturt's life been spared, it was his intention to have worked up my Rough Notes, and to have added much valuable information: he was too much overworked to afford leisure to give me assistance at the time. His plans, drawings, &c., with his public and private papers, were lost, except a note or two that were, just a few days before we left Cabul, put with my Journal. I believe several people kept an account of these proceedings, but all except myself lost all they had written; and had recourse to memory afterwards. I lost everything except the clothes I wore; and therefore it may appear strange that I should have saved these papers. The mystery is, however, easily solved. After everything was packed on the night before we left Cabul, I sat up to add a few lines to the events of the day, and the next morning I put them in a small bag and tied them round my waist. * * A much better narrative of past events might have been written, even by myself; but I have preferred keeping my Journal as originally written, when events were fresh, and men's minds were biassed by the reports of the day, and even hour."

As we did not hesitate to state our objections to the somewhat obtrusive, and, under circumstances, objectionable comments of Lieut. Eyre, we think it right to acknowledge that Lady Sale fully confirms all he stated as to the infatuation, imbecility, and folly of those in authority, and which appear to have marked the whole of their proceedings, from the first taking possession of the camps and cantonments to the last hour of surrender or slaughter:—

"It is easy to argue on the wisdom or folly of conduct after the catastrophe has taken place. With regard therefore to our chiefs, I shall only say that the Envoy has deeply paid for his attempt to outdiplomatize the Affghans. Gen. Elphinstone, conscious that his powers of mind had become enfeebled with those of his body, finding there was no hope of Gen. Nott's arrival to assume the command, called in another officer to his aid, who had but one object in view (to get back, at all hazards, to Hindostan). He averred that a retreat to the Bala Hissar was impossible, as we should have to fight our way (for one mile and a half)! If we could not accomplish that, how were we to get through a week's march to Jellalabad? Once in the Bala Hissar, which would have been easily defended by one thousand men, we should have had plenty of troops for foraging purposes; and the village of Ben-i-shehr, just under the Bala Hissar, would have given us a twelvemonth's provisions if we had only made the demonstration of a night march, to have the appearance of taking them by force. Sallies from thence might also have been made into the town, where there was always a party, particularly the Kuzzilbashes, who would have covertly assisted us, until our returning fortunes permitted them to do so openly. Independent of ——'s determination to return to India, he often refused to give any opinion when asked for it by the General, a cautious measure whereby he probably hoped to escape the obloquy that he expected would attach to the council of war, composed of Gen. Elphinstone, Brig. Shelton, Brig. Anquetil, and Col. Chambers. I might say nominally composed; numerically it was much more extended. Capt. Grant, with cold caution, obstructed every enterprise, and threw all possible difficulties in the way; Capt. Bellew was full of doubts and suggestions, all tending to hamper and retard operations; and numbers of young men gave much gratuitous advice; in fact, the greater part of the night was spent in confusing the General's ideas, instead of allowing a sick man time by rest to invigorate his powers. Brig. Shelton was in the habit of taking his rezai with him, and lying on the floor during these discussions, when sleep, whether real or feigned, was a resource against replying to disagreeable questions. Major Thain, a sincere friend and good adviser of the General's, withdrew in disgust from the council: and Sturt, who was ever ready to do anything or give his opinion when asked, from the same feeling, no longer proffered it."

The Journal here published commences in September, 1841, and ends in September, 1842. We, of course, can only select such passages as will best mark the progress of events. The narrative opens with accounts of outbreaks, skirmishes, and perplexing rumours, and the departure of Sale's brigade. On the 26th of September, the record runs,—

"There being a report that all was peaceably settled at Tézeen, I became very anxious for intelligence. Two letters were brought to me, but alas! neither of them were to my address, one being from Capt. Havelock to Gen. Elphinstone, the other from Capt. Paton to Major Thain. After giving them a reasonable time to ruminate over their news, I wrote to Major Thain, requesting him to give me any information in his power; and informing him that I had no letter, I got the provoking reply that the Sahib was gone out. Some time afterwards Major Thain called: he owned he was puzzled as to what was going on, but hoped that affairs would remain quiet until we got out of the country. * * Capt. Havelock mentions that all is settled and hostages given, but remarks that, since the pacification, the camels have been fired on, as also our outposts, but says, the one may be attributable to the arrival of a chief, who was in ignorance of the treaty, and the other, to their people not being well in hand, a pretty sounding phrase; but are we to understand that our men are so well in hand as not to resent it? Capt. Paton writes mysteriously, that he has much to communicate, 'better spoken than written,' and says the enemy have consented regarding the obnoxious chief (some person who they did not wish should participate in the benefits of the treaty). He adds that a force to be of any use in that country must not be hampered with camels, tents, or baggage, and that the ammunition should be carried only on mules or yaboos. * * Last year, when Sir Willoughby Cotton commanded, and during the disturbances in the Kohistan, every despatch from Sale, who commanded the troops there, was promulgated in orders, and the present system of keeping information close is disgusting; there can be no secrets regarding what passes in action in the field. The general impression is that the Envoy is trying to deceive himself into an assurance that the country is in a quiescent state. He has a difficult part to play, without sufficient moral courage to stem the current singly. About two months since Sir William wrote to Lord Auckland, explaining to him the present state of Affghanistan, and requesting that five additional regiments should be sent to this country, two of them to be European. To these statements a written war succeeded between the Envoy and the Supreme Government of Bengal. Letter after letter came calling for retrenchment. Sir William had been appointed from home Governor of Bombay, and was particularly chosen for the office from his being a moderator and a man unlikely to push any violent measures; he hoped affairs might take a turn for the better, and was evidently anxious to leave Cabul and assume his new appointment. In an evil hour he acceded to the entreaties of Sir Alexander Burnes (who appears to have been blinded on the subject) and wrote to Lord Auckland to nullify his former request for additional troops, and to say that part of those now in the country might be withdrawn."

Reports now arrived that Sale's brigade had never pitched a tent since they left Khoord Cabul—that the rear-guard had been attacked daily, and the bivouack fired on every night—that the camels were dying forty of a night, from cold or starvation—and that they were in want both of carriages and provisions. On the 29th—

"Capt. Sturt hearing that Capt. Johnson's (paymaster to the Shah's force) house and treasury in the city were attacked, as also Sir Alexander Burnes's, went to Gen. Elphinstone, who sent him with an important message, first to Brig. Shelton at Siah Sung, and afterwards to the King, to concert with him measures for the defence of that fortress. Just as he entered the precincts of the palace, he was stabbed in three places by a young man well dressed, who escaped into a building close by, where he was protected by the gates being shut. Fortunately for my son-in-law, Capt. Lawrence had been sent to the King by the Envoy, and he kindly procured a palkee, and sent Sturt home with a strong guard of fifty lancers, but they were obliged to make a long detour by Siah Sung. * * I cannot describe how shocked I felt when I saw poor Sturt; for Lawrence, fearing to alarm us, had said he was only slightly wounded. He had been stabbed deeply in the shoulder and side, and on the face (the latter wound striking on the bone just missed the temple): he was covered with blood issuing from his mouth, and was unable to articulate. From the wounds in the face and shoulder, the nerves were affected; the mouth would not open, the tongue was swollen and paralysed, and he was ghastly and faint from loss of blood. He could not lie down, from the blood choking him; and had to sit up in the palkee as best he might, without a pillow to lean against."

The insurrection now openly manifested itself—the Treasury was attacked, the guard massacred, and Burnes and his brother butchered. Lady Sale observes,—

"The state of supineness and fancied security of those in power in cantonments is the result of deference to the opinions of Lord Auckland, whose sovereign will and pleasure it is that tranquillity do reign in Affghanistan; in fact, it is reported at Government House, Calcutta, that the lawless Affghans are as peaceable as London citizens; and this being decided by the powers that be, why should we be on the alert? Most dutifully do we appear to shut our eyes on our probable fate. The Shah is, however, to be protected, whatever may be the fate of the English in the city; and Brig. Shelton is sent with the Shah's 6th, some of the 44th Queen's, and three horse artillery guns under Capt. Nicholl, to the Bala Hissar. The King, as he well may be, is in great consternation. At about 9 A.M. Capt. Sturt arrived at Siah Sung from the cantonments, bearing orders from Major-Gen. Elphinstone for the 54th N.I., Capt. Nicholl's three horse artillery guns, and a company of the 44th, accompanied by the Shah's 6th regiment, to hold themselves in readiness to march at a moment's notice to the Bala Hissar. As they had all been on the *qui vive* since daybreak, they were ready in an instant, and eagerly expecting orders to march, when a note came from Capt. Lawrence (the Envoy's military and private secretary), dated Bala Hissar, 10 A.M., telling them, 'Stay where you are,—all is quiet; you need not come.' This caused great surprise, as the firing was brisk in the city. After waiting another hour under arms, the Brigadier ordered Sturt to go in and see what was going on:

Digitized by Google

this he gladly did, and, accompanied by eight suwars of the Shah's 2nd cavalry, went to the Bala Hissar. In half an hour a suwar returned, saying he had been badly wounded entering the palace gates, and bearing an order for an immediate advance of the troops. 'Forward' was the word; and, anticipating an attack on the city, the troops gladly set out, and arrived unopposed in presence of the King, when, to their sorrow, instead of receiving *hookm* to enter the city, Shah almost rudely inquired why they had come!"

On this occasionrthe Shah's troops were driven in with great loss, many deserted, and all was indecision in the Bala Hissar, and confusion in cantonments:—

"The Envoy mounted his horse and rode to the gateway, and then rode back again,—the best thing he could do; for had the Affghans either killed him or taken him prisoner, it would have given them a decided advantage on their part. Sir William and Lady Macnaghten had vacated the residency before 11 o'clock A.M., and came into cantonments; a circumstance which no doubt was soon known to the insurgents, and must have given them an idea that we greatly dreaded an attack from them, which was threatened at night."

"Yet," observes Lady Sale, "it was only two days ago that Lady Macnaghten told Mrs. Sturt that the country was all quiet, except the little outbreak near Tézeen."

"In the evening the rebels appeared in considerable numbers near Mahommed Khan's Fort, and between that and the Commissariat Fort, situated 300 yards from cantonments. We have only three days' provisions in cantonments: should the Commissariat Fort be captured, we shall not only lose all our provisions, but our communication with the city will be cut off. This fort (an old crazy one, undermined by rats) contains the whole of the Bengal commissariat stores, valued at four lakhs of rupees, including about 12,000 maunds of ottah, wheat, and barley, and all the medical stores, &c. No military steps have been taken to suppress the insurrection, nor even to protect our only means of subsistence (the storehouses), in the event of a siege. The King, Envoy, and General appear perfectly paralysed by this sudden outbreak: the former is deserted by all his courtiers, and by even his most confidential servants, except the Wuzeer, who is strongly suspected of having instigated the conspiracy; and suspicion attaches to his Majesty again. * * That the insurrection could have been easily crushed at its commencement, is evident from the circumstance that on the 2nd of November a considerable number of chiefs went to Capt. Trevor's house to lend him assistance. * * It is further worthy of remark, that Taj Mahommed Khan went to Sir Alexander Burnes the very day before the insurrection broke out, and told him what was going on. Burnes, incredulous, heaped abuse on this gentleman's head; and the only reply he gave him was, 'Shuma beseeah shytan ust!' on which Taj Mahommed left him. This anecdote was told us by himself."

The indecision at this moment determined the fate of the expedition: the detached forts were lost almost without an effort to retain them, and the enemy permitted to approach to the very walls of the cantonments.

"Sturt, having fretted himself half mad at everything going wrong, determined, weak and ill as he was, to go out and do his duty. He is the only engineer officer at Cabul. He was unable to dress, but went out in his shirt and pyjania to the works. Although he was out himself a little after 6 o'clock, he could not get things or people into their places until 10. General Elphinstone gave him permission to make any arrangements he considered as safe from chance of failure for taking the small fort; but when he had with great exertion got three nine-pounders and two twenty-four pound howitzers at work (the latter across the road), Major Thain was sent to him to desire he would be careful not to expend ammunition, as powder was scarce! there being at the time a sufficiency for a twelvemonth's siege! * * Lady Macnaghten told me to-day that Sir William had written to inform Sale that we had been in siege since the 2nd, and to request his return with the force under his command; to leave the sick and wounded in safety at Gundamuk, under charge of the troops there. To this the General assented, and signed the letter; but afterwards he said it would be abandoning the sick and baggage, and refused to recall Sale's brigade. I was asked if I could send a letter from Sir William to Sale, through Sturt's influence with the natives; but if, with secret service money at his command, the Envoy cannot bribe a messenger, how are poor people like us to do so? * * A note from Thain mentions that Sale has been sent for, but, from the very cautious wording of the order, it appears doubtful whether he can take such responsibility upon himself as it implies. He is, if he can leave his sick, wounded, and baggage in perfect safety, to return to Cabul, if he can do so without endangering the force under his command. Now, in obeying an order of this kind, if Sale succeeds, and all is right, he will doubtless be a very fine fellow; but if he meets with a reverse, he will be told, 'You were not to come up unless you could do so safely!'"

Even at this time, it is believed that energy and resolution might have saved us from subsequent defeat and disgrace; and that, by retiring into the Bala Hissar, our troops might have held out till reinforcements arrived. On the 8th of November the journalist records:—

"At daybreak, finding Sturt's servant still in the verandah, and knowing that his master was to have been up at half-past four, I went to the door to inquire, and found that the General, or rather his advisers, had decided that nothing was to be done. The enemy are using our guns against us, throwing shot into cantonments from Mahmood Khan's fort. Our men are so over-worked that it is intended to give them rest to-day. Sturt went out early this morning, and found the garden next the Commissariat fort unoccupied; he immediately took the sappers under Lieut. Laing with fifty of the Juzailchees under Mackenzie to cover them, and sent for two companies of Sipahees as a covering party whilst they pulled down the wall, which was quickly accomplished. There is a report that we are to be attacked in cantonments to-night. Sturt went to Gen. Elphinstone and Brig. Anquetil, who both gave him *carte blanche*, and desired that all his instructions should be obeyed. He has accordingly placed 15 guns in position. * * Sturt is gone to lie down to recruit his strength, knowing that I never dose now till daylight, but sit up to watch passing events, and give the alarm if need be, and have kept my nightly watch ever since the insurrection commenced. Our troops as yet are stanch; and if we are attacked, and succeed in repelling the enemy, we shall be able to keep our own until Sale's brigade arrives."

Every day the Affghans grew more and more daring, and the British generals more passive and fearful; and it was only when the Envoy offered to take the responsibility on himself, that the troops were permitted to attack the forts which more immediately annoyed them. So many interesting incidents of the siege were anticipated in Eyre's Journal, that we, who have but a limited space, must pass on to the 21st:—

"At dinner time Brig. Shelton sent to Mr. Eyre, stating that the Envoy had information that 80,000 foot and 10,000 horse were coming to set fire to our magazine with red-hot balls! How these balls were to be conveyed here red hot is a mystery, as the enemy have no battery to erect furnaces in: but nothing is too ridiculous to be believed; and really any horrible story would be sure to be credited by our panic-struck garrison. It is more than shocking, it is shameful, to hear the way that officers go on croaking before the men; it is sufficient to dispirit them, and prevent their fighting for us. * * Our useless expenditure of ammunition is ridiculous. At the captured fort last night the garrison popped away 350 rounds at shadows, probably of themselves: however, we have plenty of it; 13 lakhs made up, and 900 barrels of powder, shot, bullets, &c. in store in profusion. Shelton croaks about a retreat; and so much is openly said of our extremity, that were we obliged to fall back on Jellalabad, it is more than probable that there would be much desertion amongst the Mussulmans. * * Sturt has in vain suggested that a picket of infantry and cavalry with a couple of guns be sent at daybreak up the hill towards Siah Sung, to cut off the supplies we see daily going into the town. By purchasing them, we might induce the people to supply us largely, and at all events prevent the enemy obtaining them. I have no patience with those who say, 'Oh, it is not ottah, it is only charcoal.' Now our foes require charcoal as much as we do food, for they cannot make their gunpowder without it."

On the next day the report is—

"Grand dissensions in military councils. High and very plain language has been this day used by Brig. Shelton to Gen. Elphinstone; and people do not hesitate to say that our chief should be set aside—a mode of proceeding recommended a fortnight ago by Mr. Baness, the merchant. The poor General's mind is distracted by the diversity of opinions offered; and the great bodily ailments he sustains are daily enfeebling the powers of his mind. He has lost two of his best advisers in Paton and Thain; the former confined by his wound, the latter declining to offer advice, from disgust at its being generally overruled, by the counsel of the last speaker being acted on. There is much reprehensible croaking going on; talk of retreat, and consequent desertion of our Mussulman troops, and the confusion likely to take place consequent thereon. All this makes a bad impression on the men. Our soldiery like to see the officers bear their part in privation; it makes them more cheerful; but in going the rounds at night officers are seldom found with the men. There are those that always stay at their posts on the ramparts, and the men appreciate them as they deserve. To particularize them would be too openly marking the rest; but their names will, I trust, be remembered to their honour and advantage hereafter. Amongst these, Capt. Bygrave, the Paymaster-General, was conspicuous; he never slept away from his post (the battery near his house) for a single night, and took his full share of fatigue, without adverting to his staff appointment. Col. Oliver is one of the great croakers. On being told by some men of his corps, with great *jee*, that a certain quantity of grain had been brought in, he replied, 'It was needless, for they would never live to eat it.' Whatever we think ourselves, it is best to put a good face on the business."

The particulars here given of the disgraceful rout when the attack was made on Behmaru, fully confirms Lieut. Eyre's account. Lady Sale, too, was an eye-witness from her old position, on the top of her house, "whence," she naïvely observes, "I had a fine view of the field of action, and whence, by keeping behind the chimneys, I escaped the bullets that continually whizzed past me." A treaty was now secretly opened with the enemy, but endeavours were made not to let the circumstance be known. On this subject the journalist observes:—

"Whenever the political horizon clears a little, mystery becomes the order of the day. 'Out of the abundance of the heart the mouth speaketh;' and when overwhelmed with perplexity, the directors of events here are not so close. However, events do transpire, and we know that treaties are on foot with the Ghilzye chiefs; though that too is denied to-day."

On another occasion, she shrewdly remarks:

"Amongst other political barometers, the manner in which persons are spoken of indicates whether affairs are going on well or ill: just now, things are looking up again. A few days ago people spoke of 'The Macnaghtens;' then they became again 'Sir William and my Lady;' and to-day they have left their refuge in a tent in cantonments, and are gone into the great house again, which they think will have a good effect, and tend to quiet people's minds. The politicals are again very mysterious, and deny that any negotiations are going on, &c.; but letters come in constantly; and we know they are treating with the Ghilzyes."

The state to which the forces were now reduced, is forcibly depicted in a paragraph:—

"This day Sturt was fortunate in purchasing a bag of otta (flour) sent in to him by Taj Mahommed; whose man brought another which our servants were purchasing. In a moment there was a cry of otta! and the garden was filled with camp followers and Sipahees. I never saw such a scene: the joy of those who got a handful for a rupee, the sorrow evinced by those who were unsuccessful, and the struggles of all

Digitized by Google

to get close to the man! The gentlemen had to stand with thick sticks to keep the people off. There was no weighing; at first the man gave two handsful for a rupee, but the quantity soon diminished in consequence of the great demand for it. To prove our good faith and belief in that of the chiefs, we are to-day placed entirely in their power. They know that we are starving; that our horses and cattle have neither grain, bhoosa, nor grass. They have pretty well eaten up the bark of the trees and tender branches; the horses gnaw the tent pegs. I was gravely told that the artillery horses had eaten the trunnion of a gun! This is difficult of belief; but I have seen my own riding-horse gnaw voraciously at a cart-wheel. Nothing is *satisfied* with food except the Pariah dogs, who are gorged with eating dead camels and horses. * * 18*th Nov.*—A very strange circumstance occurred last night. Some persons were endeavouring to remove the barricade at the gate of the mission compound: on being discovered, two Europeans gallopped away, who were not recognized. The third, ——, a writer in Capt. Johnson's office, was taken prisoner: he refuses to name his companions, and says they were going to Mahommed Akbar Khan to obtain provisions for the army. * * 19*th*.—More strange things have occurred. Brig. Shelton wrote privately to Mahommed Akbar Khan for forage for his own use, and obtained ten loads of bhoosa. He made the man who brought it a present (writing to Sir William that he wished to have a pair of pistols or a chogah of small value from the Tosha Khana to present to a respectable native), and the present was sent with a bill attached to it for 30 rupees. On its arrival Shelton left the room to receive it, and during his absence the Affghan appropriated to himself a sword which had been a gift to the Brigadier from Shah Shoojah. On this he applied to the Envoy for its restoration, which brought the whole story to light; and occasioned the Brigadier to receive an admonition for having, unknown to the Envoy, entered into correspondence with one of the chiefs."

The negotiations were continued, we ought perhaps to say concluded, for forts and ammunition, &c. were given up to the enemy:—

"Taj Mahommed Khan came again to see Sturt; and through his servants we got some new cheese. He told us that Shamsuddeen's brother died last night. Taj Mahommed assures us of the intended treachery of Akbar; and says the force will be annihilated, and is most anxious that we should accept such protection as he is willing to afford us somewhere in the hills until the return of the English;—for that a strong force will be sent to retake Cabul, and avenge the meditated destruction of our army, is a general opinion amongst the thinking Affghans, several of whom, as well as Taj Mahommed Khan, obtained written testimonials of their friendship towards the English, that they may hereafter produce them for their advantage. We can only thank him for his good intentions. It is difficult to make these people understand our ideas on military subjects; and how a proceeding, which was only intended to save a man's life, conjointly with that of his wife and mother, can in any way affect his honour. Certain it is that we have very little hope of saving our lives."

Each succeeding day brought its own misery and humiliation. On the 23rd Macnaghten was entrapped and massacred. On the 27th, and after this bold-faced treachery, the treaty was ratified:—

"The Council—Elphinstone, Shelton, Anquetil, and Chambers, with Major Pottinger—have ratified the treaty. No one but themselves exactly knows what this same treaty is; further than that it is most disgraceful!"

On the 6th January the Retreat commenced. Its horrors are known to our readers: we shall therefore only glean a few passages of personal interest:—

"There were no tents, save two or three small palls that arrived. All scraped away the snow as best they might, to make a place to lie down on. The evening and night were intensely cold: no food for man or beast procurable, except a few handfuls of bhoosa, for which we paid from five to ten rupees. Captain Johnson, in our great distress, kindly pitched a small pall over us: but it was dark, and we had few pegs; the wind blew in under the sides, and I felt myself gradually stiffening. I left the bedding, which was occupied by Mrs. Sturt and her husband, and doubled up my legs in a straw chair of Johnson's, covering myself with my poshteen. * * Previous to leaving cantonments, as we must abandon most of our property, Sturt was anxious to save a few of his most valuable books, and to try the experiment of sending them to a friend in the city. Whilst he selected these, I found, amongst the ones thrown aside, Campbell's Poems, which opened at Hohenlinden; and, strange to say, one verse actually haunted me day and night:—

> Few, few shall part where many meet,
> The snow shall be their winding sheet;
> And every turf beneath their feet
> Shall be a soldier's sepulchre.

I am far from being a believer in presentiments; but this verse is never absent from my thoughts."

Next day Lady Sale observes—

"We left Cabul with five and a half days' rations to take us to Jellalabad, and no forage for cattle, nor hope of procuring any on the road. By these unnecessary halts we diminished our provisions; and having no cover for officers or men, they are perfectly paralysed with the cold. The snow was more than a foot deep. * * Numbers of unfortunates have dropped, benumbed with cold, to be massacred by the enemy: yet, so bigoted are our rulers, that we are still told that the Sirdars are faithful, that Mahommed Akbar Khan is our friend!!! &c. &c. &c.; and the reason they wish us to delay is, that they may send their troops to clear the passes for us! That they will send them there can be no doubt; for everything is occurring just as was foretold to us before we set out. * * 8*th*.—At sunrise no order had been issued for the march, and the confusion was fearful. The force was perfectly disorganised, nearly every man paralysed with cold, so as to be scarcely able to hold his musket or move. Many frozen corpses lay on the ground. The Sipahees burnt their caps, accoutrements, and clothes to keep themselves warm. * * Sturt, my daughter, Mr. Mein, and I, got up to the advance; and Mr. Mein was pointing out to us the spots where the 1st brigade was attacked, and where he, Sale, &c. were wounded. We had not proceeded half a mile when we were heavily fired upon. Chiefs rode with the advance, and desired us to keep close to them. They certainly desired their followers to shout to the people on the height not to fire: they did so, but quite ineffectually. These chiefs certainly ran the same risk we did; but I verily believe many of these persons would individually sacrifice themselves to rid their country of us. After passing through some very sharp firing, we came upon Major Thain's horse, which had been shot through the loins. When we were supposed to be in comparative safety, poor Sturt rode back (to see after Thain I believe): his horse was shot under him, and before he could rise from the ground he received a severe wound in the abdomen. It was with great difficulty he was held upon a pony by two people, and brought into camp at Khoord Cabul. The pony Mrs. Sturt rode was wounded in the ear and neck. I had fortunately only *one* ball *in* my arm; three others passed through my poshteen near the shoulder without doing me any injury. The party that fired on us were not above fifty yards from us, and we owed our escape to urging our horses on as fast as they could go over a road where, at any other time, we should have walked our horses very carefully. * * The 37th continued slowly moving on without firing a shot; being paralysed with cold to such a degree that no persuasion of their officers could induce them to make any effort to dislodge the enemy, who took from some of them not only their firelocks, but even the clothes from their persons."

Night brought even more than its usual horrors:—

"Poor Sturt was laid on the side of a bank, with his wife and myself beside him. It began snowing heavily: Johnson and Bygrave got some xummuls (coarse blankets) thrown over us. Dr. Bryce, H.A., came and examined Sturt's wound: he dressed it; but I saw by the expression of his countenance that there was no hope. He afterwards kindly cut the ball out of my wrist, and dressed both my wounds. Half of a Sipahee's pall had been pitched, in which the ladies and their husbands took refuge. We had no one to scrape the snow off the ground in it. Capt. Johnson and Mr. Mein first assisted poor Sturt over to it, and then carried Mrs. Sturt and myself through the deep snow. Mrs. Sturt's bedding (saved by the ayah riding on it, whom we kept up close with ourselves) was now a comfort for my poor wounded son. He suffered dreadful agony all night, and intolerable thirst; and most grateful did we feel to Mr. Mein for going out constantly to the stream to procure water: we had only a small vessel to fetch it in, which contained but a few mouthfuls. To sleep in such anxiety of mind and intense cold was impossible. There were nearly thirty of us packed together without room to turn. The Sipahees and camp followers, half frozen, tried to force their way, not only into the tent, but actually into our beds, if such resting-places can be so called—a poshteen (or pelisse of sheep skin) half spread on the snow, and the other half wrapped over me. Many poor wretches died round the tent in the night. * * 9*th*.—Before sunrise the same confusion as yesterday. Without any order given, or bugle sounded, three-fourths of our fighting men had pushed on in advance with the camp followers. As many as could, had appropriated to themselves all the public yaboos and camels, on which they mounted. * * Mrs. Trevor kindly rode a pony, and gave up her place in the kajava to Sturt, who must otherwise have been left to die on the ground. The rough motion increased his suffering and accelerated his death: but he was still conscious that his wife and I were with him; and we had the sorrowful satisfaction of giving him Christian burial."

It was now arranged that the married men, with their wives and children, should be placed under the protection of Akbar Khan, and they were forthwith marched off to the Khoord Cabul forts, and thence to Jugdaluk:—

"It would be impossible for me to describe the feelings with which we pursued our way through the dreadful scenes that awaited us. The road covered with awfully mangled bodies, all naked: fifty-eight Europeans were counted in the Tunghee and dip of the Nullah; the natives innumerable. Numbers of camp followers, still alive, frost-bitten and starving; some perfectly out of their senses and idiotic. Major Ewart, 54th, and Major Scott, 44th, were recognised as we passed them; with some others. The sight was dreadful; the smell of the blood sickening; and the corpses lay so thick it was impossible to look from them, as it required care to guide my horse so as not to tread upon the bodies."

At Jugdaluk we must leave the prisoners for the present.

A Treatise on the Law of Copyright. By Peter Burke, Esq., of the Inner Temple. Richards & Co.

Every man of letters, to whom literature is at all an affair of business, ought to possess some such synopsis as this of the state of the law affecting literary property; just as the possessor of acres does well to be provided with a manual of the law of landlord and tenant.

In addition to this, the law of literature is a branch of literature itself; so that a treatise upon the subject has a two-fold claim to attention. It would have been easy to have produced a much larger work upon the law of copyright, than the one before us, without exhausting the materials at the author's hand, or over-estimating the importance of the subject. Mr. Burke, has, however, done wisely, we have no doubt, in preferring the immediate and practical usefulness of a book of convenient size and moderate expense, to a more complete discussion, which would have demanded a larger volume, and proportionably diminished the number of purchasers and readers.

On the importance of the law of copyright, as established by the two statutes of the last session of Parliament—the Literary Copyright Act, and the Copyright in Designs Act—Mr. Burke thus observes in the preface:—

"The author cannot omit to notice here the vast

Digitized by Google

importance of the matter of this treatise. Among the many acts passed during the last session of Parliament, none, perhaps, are of event more momentous and beneficial than the two which tend to the perfection of the copyright law. Protected by one of these statutes, the manufacturer, no longer fearing piratical plunder of his property, will increase in inclination to foster those humbler, but highly meritorious schools of design, which beautify civilisation by the continual addition of new grace, in pattern or form, to almost every article of wear, ornament, or use. The other act has a still prouder aim, 'the affording,' to borrow its own words, 'of greater encouragement to the production of literary works of lasting benefit to the world.' That labour of the brain, which in general estimation stands the most eminent, has security there; and genius finds a shield which is to guard it from even its own proverbial improvidence. May the statute have the desired effect, and realize, in some measure at least, the great and good intentions of the poet-statesman, and his brother legislators, whose eloquence and exertions, during so long a struggle, led to its enactment. The change in the law of copyright, at any rate, does one thing: it places the nation on an equal footing with other countries in preserving the just rights of manufacturers and authors. There will no longer attach to us the blame, that, superior to foreigners in so much, we are inferior to them in that; since our boast may be for the future,

——— sunt hic etiam sua præmia laudi."

The present is a fair opportunity for calling attention to some of the leading provisions of the Literary Copyright Act. We shall do so very briefly: and first as to the duration of copyright:—

"It is enacted, 'That the copyright in every book, which shall, after the passing of this act (the 1st July, 1842), be published in the lifetime of its author, shall endure for the natural life of such author, and for the further term of seven years, commencing at the time of his death, and shall be the property of such author and his assigns: Provided always, that if the said term of seven years shall expire before the end of forty-two years from the first publication of such book, the copyright shall in that case endure for such period of forty-two years; and that the copyright in every book which shall be published after the death of its author shall endure for the term of forty-two years from the first publication thereof, and shall be the property of the proprietor of the author's manuscript, from which such book shall be first published, and his assigns.' Thus, according to the present law, the copyright of a book published in its author's lifetime is to last for forty-two years certain, commencing from the date of its first publication; and for longer, if the natural life of the author, and the seven years after his decease, reach to a more extended period. The copyright in a book produced after the author's death will endure for a certain term of forty-two years from the date of its first publication."

A literary composition whilst in manuscript, and the right to its first publication, are the exclusive property of the author, and "*he may keep the work in that condition for ever*," a right which it would be much for the interests of literature that writers should exercise more generally than they do. When a work is printed and published, the title to the property in it—

—"belongs, during the period of copyright, to the author of the composition, his representatives or assigns. The 25th section of the 5 & 6 *Vict.* declares all copyright personal property, transmissible by bequest, or, in case of intestacy, subject to the same law of distribution as other personal property; and in Scotland is to be deemed personal and moveable estate."

In a country where the principle of primogeniture has such great sway as in England, it is surprising that no attempt was made to make the estate in a tragedy or a novel descendible, like a freehold, to the eldest son. Chattel interests, however, have latterly been rising in dignity amongst us, of which there can be no better proof than the making of an epic poem, or a history, a chattel by act of parliament. The public has a remedy against the proprietor of the copyright of a book, should he refuse to republish it after the author's death. The proceeding is by complaint to the Judicial Committee of the Privy Council, who may license the complainant to publish the work under conditions. The remedy is limited to "books of importance to the public," by the preamble of the fifth section of the act; the Committee being, of course, the judges of the importance, the first instance of a literary jurisdiction vested in an English court of justice.

There can be no copyright in any work of an immoral or libellous nature, a principle which unfortunately tends to the multiplication of copies of such works, inasmuch as no publisher would be restrained by a court of equity. The rule is not a new one, being founded upon an old legal maxim, "that there can be no property in what is publicly injurious." The law upon this point has been laid down explicitly by Lord Eldon, who observed,—

"He (the Lord Chancellor) knew it to be said, that in cases where the work contained criminal matter, the Court, by refusing the injunction, allowed the greater latitude for its dissemination. But his answer to that was, that this Court possesses no criminal jurisdiction. It could only look at the civil rights of the parties; and therefore, whether a different proceeding were hereafter instituted against the defendant or the plaintiff, or both, was a circumstance with which he had nothing to do."

There seems to be not a little inconsistency in declaring that the court would not check the dissemination of an immoral book on the ground, that it "has no criminal jurisdiction," when it is nothing else but the opinion of the court, that the book is immoral which disentitles the plaintiff to claim property in it, and obtain an injunction upon that ground. The principle of the civil courts, borrowed in this instance by the courts of equity, is clearly one of criminal jurisdiction. Your book is an offence against public morals, therefore you shall have no remedy against a piratical publisher, either by action at law or injunction in equity. It is mere pedantry to say, there is no criminal jurisdiction exercised, where the law deprives a man of a civil right, upon the express ground that he has acted criminally.

The copyright in articles in periodicals belongs to the proprietors thereof, when such articles have been paid for, and are published upon the terms, that the copyright shall belong to them. This copyright is as full as that of the authors of books, with the following important limitations for the benefit of contributors to periodical works:—

"After twenty-eight years from their first publication, the right of publishing them in a separate form shall revert to the author for the remainder of the term given by this act. But, during the twenty-eight years, the proprietor of the review, magazine, or similar periodical, cannot publish an article separately, without the previous consent of the author or his assignees. There is then a proviso which affects encyclopædias, reviews, and all the publications mentioned in the section: it is this—that an author may publish his composition in a separate form, if, by contract, express or *implied*, he have reserved the right to do so; but he will be entitled to the copyright in his composition when so separately published, according to this act, without prejudice to the rights of the proprietor of the encyclopædia or periodical."

The law of copyright in Lectures is not altered by the late act. Lectures, printed and published by the lecturer, have the same term of copyright as other literary productions. The act provides for a registration of literary copyright at Stationers' Hall. The effect of registration is thus stated:—

"The 24th section of the 5 & 6 *Vict. c.* 45. enacts that no proprietor of copyright in a book first published after the passing of this act shall maintain any action or suit at law or in equity, or any summary proceeding, for infringement of his copyright, unless, before the commencement of such action, suit, or proceeding, he shall have made an entry of the book pursuant to this act, at Stationers' Hall: *provided always*, and this should be particularly observed, *that the omission to make such entry shall not affect the copyright in a book, but only the right to sue or proceed in respect of the infringement of that copyright.*"

Since the 54 Geo. 3, the law has required the gratuitous delivery of eleven copies of every book published to certain public libraries in England, Ireland, and Scotland. This hardship has been mitigated by the late act, which only requires the delivery of five copies, one to the British Museum, one for each of the English universities, one for the Library of Advocates at Edinburgh, and one for Trinity College, Dublin. There is an important distinction, however, between the right given to the British Museum and the rights of the other institutions. It is thus stated by Mr. Burke:—

"According to these provisions of the act, the main distinctions between a presentation to the British Museum and a presentation to any of the other four libraries, are these,—first, that the delivery to the Museum is to be made without demand on the part of that institution; whereas delivery to one of the other libraries need not be made at all, unless there be a written demand within twelve months after publication; and, secondly, that the copy presented to the Museum must be one from the best copies of the work, while that for any of the other libraries need be only a copy from the set the most numerous. Thus, if a publisher produce a superior and an inferior edition at the same time (as in cases of quarto and octavo editions, so frequent in illustrated works), he must give a copy of the more valuable impression to the Museum; whereas he need only make presentations to the other libraries from the set of lesser cost, provided that set exceed the other by even a single copy."

Summary proceedings are provided by this valuable act in case of the importation of pirated books:—

"The 17th section enacts, that after the passing of this act, it shall not be lawful for any person, not the proprietor of the copyright or some one authorized by him, to import into the United Kingdom, or other parts of the British dominions for sale or hire, any printed book, first composed or written, or printed and published, in the United Kingdom, wherein there is copyright, and reprinted in any country or place out of the British dominions."

And by the 23rd section it is enacted that—

"All copies of any book having copyright, and entered in the registry book, which have been unlawfully printed or imported, without the previous written consent of the registered proprietor of the copyright, shall be deemed the property of such registered proprietor."

Previous to the statute in question, and the Dramatic Copyright Act of the last reign, the protection which the law afforded to dramatic and musical productions scarcely deserved the name. A play, or a song, were within the benefits of the statutes of copyright, only when printed; but the former might be represented, and the latter sung, without the author's consent, and he had no remedy against the parties, who might be realizing large profits by this daring system of piracy. The act of the last reign went far to remedy this egregious defect in the law with respect to the drama; but the late copyright act goes still further, and extends all its benefits, not only to dramatic, but to musical compositions, the authors of which now enjoy the same rights and protections as the authors of any other works of genius. Mr. Burke is of opinion, that there may be some difficulty in settling the joint operation of the acts of William and Victoria, in questions of musical or dramatic copyright; but he thus states his own view of what the law now is upon this subject:—

"1. The author or assignee of a dramatic piece or musical composition, unprinted and unpublished, has

Digitized by Google

a sole and perpetual right to its performance. 2. The author or assignee of a dramatic piece or musical composition printed and published within ten years before the passing of the 3 & 4 *W.* 4. *c.* 15. (10 June, 1833), or printed and published after the passing of that act, has the sole right of performance for the author's life and seven years after his death, and if that term expire before forty-two years from the time of first performance, then for such forty-two years: in case of the author's death before publication, the right will endure for forty-two years from the time of first performance."

The useful little book before us also contains a clear analysis of the law relating to copyright in engraving, sculpture, and designs for ornamenting articles of manufacture.

Dramatic Lyrics. By Robert Browning.
The Return of the Druses. By the Same.
Moxon.

THAT it is Mr. Browning's pleasure to be enigmatical, may now, we suppose, be considered as an accepted condition of his literary dealings with the public; and any further attempt on the critic's part to obtain better terms, would seem to be a waste of time and argument. The subject of his mannerisms we shall, therefore, abandon, as one on which we have no motive to dwell further—taking leave of it, however, with this final hint:—that what Mr. Browning may, perhaps, consider as an evidence of strength is a sign of weakness—what he may regard as a portion of his wealth, is a witness of its limitation. The inaptitude for giving intelligible expression to his meanings, whether unconscious or artificial, whether its cause be affectation or incapacity, is a defect, lessening the value, in any available sense, of the meanings themselves; and the riches which can be turned to no account lose their character of riches. Golden thoughts affect simple forms; and where the precious metal is most abundant, men have least time and temptation to work it into strange and fantastic characters. Mr. Browning's style is, therefore, *primâ facie* evidence against his muse; and, for his own sake—and something for the public's—we wish it were not so; because they who will take the trouble to question further, will find that its implied testimony does not report quite truly.

The titles that head this article are those of small volumes forming Nos. III. and IV. of the series whose general designation, 'Bells and Pomegranates,' as yet remains a mystery. Which of these poems are Bells, and which Pomegranates—or why any one of them is either—is one of those secrets which we may suppose "shall be unriddled by and bye." In the meantime, it is equally difficult to understand how the *disjecta membra* which compose No. III. should have found their way into a professed collection of 'Dramatical Pieces.' Mr. Browning, who has a regal way of disposing of all such trifling difficulties, and considers his author's "*stet pro ratione voluntas!*" binding on the reader, summarily observes that he "supposes they come properly enough under that head,—being, though for the most part lyric in expression, always dramatic in principle, and so many utterances of so many imaginary persons, not his." For ourselves, in considerably more than one half of them, we have not been able to discover any dramatic quality whatever. In any case, however, they are mere fragments, varying in length from half a dozen lines upwards—apparently thoughts jotted down for after use—or rejected from their places in longer pieces, and denoting foregone conclusions—but scarcely important enough to have formed the materials of an independent publication. Out of the collection, such as it is, we would gladly have selected the ballad of Count Gismond; but its length compels us to a shorter and less interesting specimen of the author's ballad-style—spirited and characteristic, notwithstanding:—

CAMP AND CLOISTER.

I.—CAMP. (*French.*)

You know we French stormed Ratisbon:
A mile or so away
On a little mound Napoléon
Stood on our storming day;
With neck out-thrust, you fancy how,
Legs wide, arms locked behind,
As if to balance the prone brow
Oppressive with its mind.

Just as perhaps he mused "My plans
That soar, to earth may fall
Let once my army-leader Lannes
Waver at yonder wall,"
Out 'twixt the battery-smokes there flew
A rider, bound on bound
Full-galloping; nor bridle drew
Until he reached the mound.

Then off there flung in smiling joy,
And held himself erect
By just his horse's mane, a boy:
You hardly could suspect—
(So tight he kept his lips compressed
Scarce any blood came thro')
You looked twice ere you saw his breast
Was all but shot in two.

"Well," cried he, "Emperor, by God's grace
We've got you Ratisbon!
The Marshal's in the market-place,
And you'll be there anon
To see your flag-bird flap his vans
Where I, to heart's desire,
Perched him!" The Chief's eye flashed; his plans
Soared up again like fire.

The Chief's eye flashed; but presently
Softened itself, as sheathes
A film the mother eagle's eye
When her bruised eaglet breathes:
"You're wounded!" "Nay," his soldier's pride
Touched to the quick, he said:
"I'm killed, sire!" And, his Chief beside,
Smiling the boy fell dead.

The *Cloister*-poem which follows, under the above double-heading, may deserve the title of dramatic, claimed by the author for them all;—being a quaint, amusing, and graphic expression of that concentrated spite which is both fed and fettered by the pressure of conventional arrangements.

II.—CLOISTER. (*Spanish.*)

Gr-r-r—there go, my heart's abhorrence!
Water your damned flower-pots, do!
If hate killed men, Brother Lawrence,
God's blood, would not mine kill you!
What? your myrtle-bush wants trimming?
Oh, that rose has prior claims—
Needs its leaden vase filled brimming?
Hell dry you up with its flames!

At the meal we sit together:
Salve tibi! I must hear
Wise talk of the kind of weather,
Sort of season, time of year:
Not a plenteous cork-crop: scarcely
Dare we hope oak-gall, I doubt:
What's the Latin name for "parsley"?
What's the Greek name for Swine's Snout?

Phew! We'll have our platter burnished,
Laid with care on our own shelf!
With a fire-new spoon we're furnished,
And a goblet for ourself,
Rinsed like something sacrificial
Ere 'tis fit to touch our chaps—
Marked with L. for our initial!
(He, he! There his lily snaps!)

Saint, forsooth! While brown Dolores
Squats outside the Convent bank,
With Sanchicha, telling stories
Steeping tresses in the tank,
Blue-black, lustrous, thick like horsehairs,
—Can't I see his dead eye grow
Bright, as 'twere a Barbary corsair's!
That is, if he'd let it show.

When he finishes refection
Knife and fork across he lays
Never to my recollection,
As do I, in Jesu's praise.
I the Trinity illustrate,
Drinking watered orange pulp;
In three sips the Arian frustrate;
While he drains his at one gulp!

Oh, those melons! If he's able
We're to have a feast; so nice!
One goes to the Abbot's table,
All of us get each a slice.
How go on your flowers? None double?
Not one fruit-sort can you spy?
Strange!—And I, too, at such trouble,
Keep 'em close-nipped on the sly!

There's a great text in Galatians,
Once you trip on it, entails
Twenty-nine distinct damnations,
One sure, if another fails.
If I trip him just a-dying,
Sure of Heaven as sure can be,
Spin him round and send him flying
Off to Hell a Manichee!

Or, my scrofulous French novel,
On grey paper with blunt type!
Simply glance at it, you grovel
Hand and foot in Belial's gripe.
If I double down its pages
At the woeful sixteenth print,
When he gathers his greengages,
Ope a sieve and slip it in't!

Or, the Devil!—one might venture
Pledge one's soul, yet slily leave
Such a flaw in the indenture
As he'd miss till, past retrieve,
Blasted lay that rose-acacia
We're so proud of! *Hy, Zy, Hine....*
St, there's Vespers! *Plena gratiâ*
Ave, Virgo! Gr-r-r—you swine!

The volume includes, too, some Cavalier Songs—of which our readers may take the following specimen:—

Marching Along.

Kentish Sir Byng stood for his King,
Bidding the crop-headed Parliament swing
And pressing a troop unable to stoop
And see the rogues flourish and honest-folk droop,
Marched them along, fifty-score strong,
Great-hearted gentlemen, singing this song.

God for King Charles! Pym and such carles
To the Devil that prompts 'em their treasonous parles!
Cavaliers up! Lips from the cup,
Hands from the pasty, nor bite take nor sup
Till you're (*Chorus*) *marching along, fifty-score strong,*
Great-hearted gentlemen, singing this song.

Hampden to Hell, and his obsequies' knell,
Serve Rudyard, and Fiennes, and young Harry as well!
England, good cheer! Rupert is near!
Kentish and loyalists, keep we not here
(*Cho.*) *Marching along, fifty-score strong,*
Great-hearted gentlemen, singing this song!

Then, God for King Charles! Pym and his snarls
To the Devil that pricks on such pestilent carles!
Hold by the right, you double your might;
So, onward to Nottingham, fresh for the fight,
(*Cho.*) *Marching along, fifty-score strong,*
Great-hearted gentlemen, singing this song!

The above extracts compel us, from want of space, to defer, for the present, our notice of the second work whose title heads this article.

Chemical Coloration, &c.—[*Sur une Coloration particulière que présentent les Corps relativement aux Rayons Chimiques, &c.*] Par M. Melloni. Bibliothèque Universelle de Genève.

WE are induced to call attention to this important memoir, from the great interest which all matters connected with the phenomena of chemical change, effected by the agency of light, has at the present time.

Since the 14th of June, 1839, when the bill for rewarding the inventors of the Daguerreotype received the signature of the King of the French, or, rather, since Mr. Fox Talbot, on the 21st of January, 1839, announced to the Royal Society the discovery of a process for copying, by the agency of light, the images of the camera obscura, or any body permeable by solar radiations, which he named *photogenic* drawing, the progress of the inquiry into the character of those elementary rays, which were found to be most active in producing chemical change, has been unceasing. Whether we regard the improvement made in the Daguerreotype, or the discovery of many new compounds, which, spread on paper, yield in a few seconds, by exposure to light, pictures superior in every respect to those which formerly required nearly an hour's subjection to luminous influence, we must admit that the *photographic art*, as it is now generally called, has made astonishing strides. The discovery of these sensitive preparations has, moreover, furnished the philosopher with the power of analyzing the chemical rays of light, more completely than had previously been done, and led to the discovery of facts, which, although at present involved in much complexity, will, in all probability, lead to the elucidation of the very problematical con-

Digitized by Google

stitution of the solar *influences*, and possibly explain those remarkable molecular changes noticed by Moser and others, as produced by some agent which has not the power of exciting vision.

Sir Isaac Newton, by passing a beam of light through a prism of glass, found that the *spectrum* resulting from the different refrangibilities of the elementary rays, consisted of seven colours. The space occupied by the most refrangible rays, was found to possess the power of darkening some of the salts of silver, and these were distinguished as the chemical rays; the middle portions of the spectrum, yielding the most light, were particularized as the luminous rays; whilst the lower zones, which were found by Sir William Herschel to produce the greatest effect on the thermometer, were considered as the purely calorific rays. These points were studied by Scheele, Ritter, Wollaston, Seebeck, and Herschel, yet but little progress was made in the inquiry. It was generally admitted, that the property of elevating the temperature, and of developing chemical reactions, was due to two homogeneous agents more or less active in different points of the prismatic spectrum; consequently, all the efforts of science were directed towards the exact determination of those limits within which the phenomena of chemical and calorific action were evident. The researches of Sir John Herschel published in the Philosophical Transactions for 1840, proved that the chemical action of the spectral rays varied with almost every variety of preparation; the maximum effect being produced in one case by Ritter's invisible rays beyond the violet, in another within the limits of these rays, and in a third far in upon the blue. In some instances the chemical change appeared limited to the violet rays, whereas in others it extended over a large portion of the space occupied by the visible solar spectrum, and in a few even beyond it. Malaguti has proved that the chemical rays of diffused light are not transmitted with the same freedom by all fluids, though equally colourless and transparent; this being measured by the length of time required to produce the same degree of blackness on photographic papers similarly prepared. This philosopher also found, that by employing different chemical reagents, and interposing between them and the light the same transparent liquid, he could in certain cases not only change the relation of the action exercised by the light upon the preparations, but reverse it altogether; the same compound which in the free air was the first to blacken, becoming, on the contrary, the longest in changing its tint when they were exposed to the action of light transmitted by a clear and colourless medium.

Upon these results, Melloni has founded the theory of a particular *chemical coloration*, and attempted to show the exact accordance of all the observed phenomena, with the theory of etherial undulations. He, in the first place explains the diversity of action discovered by Herschel, Malaguti, and others, by supposing the existence of a coloration quite distinct from the visible colours of light, and also from the calorific coloration (thermochrôse), but which influences all bodies in a manner analogous to the rays of heat and of light. If we receive the solar spectrum upon pieces of coloured cloth, the rays, which are homogeneous with the colour, are elevated, and those which are heterogeneous are depressed. Hence it follows, that the maximum of brightness will appear, sometimes in the red, sometimes in the yellow, and sometimes in the violet, accordingly as the cloth is red, yellow, or violet; the extent of the spectrum being more or less according to the degree of analogy which exists between the last zones of the red and of the violet rays and the colour of the cloth, which is never so pure as the prismatic rays, but always more or less mixed, and consequently possessing unequal absorption and reflection. By the same reasoning, the phenomena observed by Malaguti are explained. The liquids being supposed, although white and transparent, to possess a *special coloration* coinciding with the chemical radiations, which consequently admits of the free permeation of one system of rays whilst it checks the passage of another. The results of calculation and experiment, which have been brought forward in support of the undulatory theory of light, are examined by Melloni, and the different lengths of the vibrations of the etherial medium between the sun and the earth shown to produce the Newtonian spectrum; the shortest vibrations being found upon the extremity of greatest refraction, the region of the violet rays; whilst the longest are placed at the extremity of least refraction, the region of the red rays. The obscure undulations, shorter than the violet, produce only chemical effects, although it appears that they are endowed with a very weak calorific power. If we descend by degrees towards the visible colours, the etherial vibrations progressively augment, until arriving at the violet, the luminous and calorific undulations begin, still, however, possessing some, but a gradually diminishing, chemical action, which at last ceases, and the lengthening vibrations produce a more powerful luminous influence, which diminishes as we approach the inferior limits of the spectrum, and the longest vibrations afford a purely calorific power, which also ceases at a certain distance below the extreme red rays. This mode of considering the phenomena of solar radiations conducts, evidently, to the consequence of regarding a luminous element—the green ray, for instance,—as producing in virtue of the same action, the colour, the heat, and the property of effecting chemical change, which is observed in the green zone of the spectrum. Light, far from being considered a fundamental property of the solar rays, is regarded as a simple secondary manifestation, due to a certain number of elementary radiations. The identity of solar and terrestrial radiations is contended for. The molecules of bodies slightly warmed vibrate slowly, and excite in the ether obscure calorific undulations longer than the least refrangible solar radiations which reach the surface of the earth. As the temperature increases, the vibrations are accelerated. With the first incandescence the luminous rays appear—and lively combustion furnishes at last the most refrangible elementary rays, or those which are gifted with chemical power. This influence is found to be much weaker than with solar light, but this depends only on the circumstance that terrestrial bodies excite in the ether a less quantity of chemical undulations, relatively to the proportion of the same undulations, brought by the solar rays to the surface of the earth. The chemical action, wanting in the rays of dark and cold bodies, begins to appear at a certain period of incandescence, and gradually increases with the temperature of its source. It appears then natural to conclude that the sun, or its first envelope, is gifted with a degree of heat of extraordinary elevation.

The variable effects of diffusion, of transmission, and of absorption, observed in white bodies and colourless media, result from the *true coloration* of the bodies, relatively to the obscure calorific or chemical rays; a *coloration* as invisible as the rays to which they belong, because the diffuse etherial undulations transmitted or absorbed, are precisely those which, by their oscillations being too rapid or too slow, are without the limits of the *molecular elasticity* of the optic nerve, and cannot consequently excite any kind of luminous vibration.

These views certainly explain a very extensive class of phenomena; but it appears to us that the recent discovery, by Sir John Herschel, of a class of rays belonging to a refrangibility ranging from the mean yellow to a little if anything beyond the extreme red, and which he proposes to call "thermocratic rays" capable of producing extraordinary molecular changes, and in all probability the same to which the phenomena described by Moser, Draper, and Hunt, are to be ascribed, tends materially to controvert the opinions of the Italian philosopher. Melloni, himself, seeing the difficulty which the *negative rays* of Herschel, and the *rayons continuateurs* of E. Becquerel, offer to his hypothesis, reserves the consideration of these for a second memoir.

Life of Sir David Wilkie, &c. &c. By Allan Cunningham.

[Second Notice.]

A few words in continuation of our last week's notice, will complete the sketch of Sir David Wilkie's career. We need but advert to the continuance of his professional success, which, however, was honourable, rather than lucrative, compared with what it might have been had he exclusively addicted himself to portraiture—to commissions from the Kings of Bavaria and our own royalties, George IV., William IV., and Her Majesty—to his selection by *the* Duke, as the painter of the picture in which his Grace's crowning victory was to be perpetuated—to the continental journeys with which the artist's professional toils were interspersed—to the trials which overtook him in the form of impaired health, loss of fortune, and domestic bereavements—and to the last fatal pilgrimage, from which he never returned. This done, we shall henceforth content ourselves with extracting such passages from Sir David's journals and letters as may appear interesting, without reference to the orderly detail of the events of his life. One thing, however, has struck us in an unexpected degree, while going over these journals and this correspondence—which is the gradual developement of the mind of their writer. Wilkie had not the pen of a practised scribe: as we have said, he was minute, methodical, and deliberate in forming conclusions, and in delivering them: but his mind manifested a disposition to widen the sphere of its observations, and to rise to elevated contemplations, sufficient to prove that truth and beauty in Art were dearer to it than the painter's own maxims and self-conceits: and that one success was by him considered only as a stepping-stone towards another. Mr. Cunningham intimates, that the changes in Wilkie's manner, which so perplexed the public, the slight execution, especially, which distinguished his later pictures, originated in a desire for larger profits than could be amassed, so long as he chose to touch and retouch every old wife's cap, and every young girl's ringlet, with Flemish patience. But we are satisfied, after perusing the pages before us, that larger and higher considerations had a share in Wilkie's experiments: and while we regret their failure as to result, cannot but respect the spirit which actuated them, far more highly than if occasioned by anxiety as to the state of his banker's book.

It is one of the pleasantest anecdotes of English pictures, that two kings contended for the possession of the picture of 'Reading the Will,' now at Schleissheim, near Munich. The work was originally bespoken by the King of Bavaria, but George IV., who had seen the sketches, and was already the possessor of the 'Penny Wedding,' took a monarch's fancy to add it to his collection: and a diplomatic correspondence was necessary before the foreign sovereign was allowed to enjoy his purchase in peace. Wilkie was anxious that, in place of commanding a duplicate, his King should give him a commission for the 'Knox Preaching:' but Mr. Cun-

Digitized by Google

ningham tells us that his Majesty had little taste for grave or decorous subjects, and the royal choice accordingly fell upon the 'Entry into Holyrood,' one of those painted pieces of laureatship which from time immemorial have been unsatisfactory, the Luxembourg series, painted by Rubens, in honour of Mary of Medicis, not forgotten!

Another of the painter's works, 'The Reading of the Waterloo Gazette,' gives occasion to some sentimental reminiscences, pleasantly communicated by Mrs. Thomson, the authoress:—

"'At the time,' says Mrs. Thomson, 'that Mr. Wilkie was employed on his picture of the 'Chelsea Pensioners,' we lived on his road from Kensington to Chelsea College, and remember his frequent and toilsome walks to that low region called Jew's Row, to sketch an old projecting house, under the shadow of which some of his groups were placed. It was a fine summer, I remember, and as he returned from his almost daily visit he used generally to call and drink tea with us; and, taking out of his small portfolio some bits of tinted paper, would show us his progress—a very slow progress it was. Such a small portion of the scene was visible on the paper, that I used to say to him, 'Mr. Wilkie, I fear you will never finish your picture!' His customary answer was, 'Indeed I am awkward and slow at anything like landscape, but when that is settled I have all the rest here!' pointing to his forehead. * * I remember how he rejoiced over the picturesque attributes of Jew's Row, and loved to enumerate its peculiarities. I do not know whether you know it: it is a low Teniers-like row of extremely mean public-houses, lodging-houses, rag-shops, and huckster-shops, on the right hand as you approach Chelsea College. It is the Pall Mall of the Pensioners; and its projecting gables, breaks, and other irregularities, were admirably suited, in the artist's opinions, for the localities of the picture which was then formed in his mind. There is, you know, a young child in the picture, half springing out of its mother's arms: the attitude of the child, which is nature itself, was suggested by a momentary motion which he observed in one of my children; and he asked again and again to see the child, in order to confirm that impression, and fix the same effect. He worked slowly—so slowly that he used to say he would never become, through the rapidity of his work, a rich man. I think he regretted this the more, as certainly he had at that time a decided partiality—to call it by no warmer name—for a young and beautiful friend of mine: her character was of the same quiet turn as his own. She never suspected his strong interest in her; and as at that time the difference in station was great, he thought it insurmountable. One evening, after dining with us, he accompanied us to a little dancing party, where he and I chose to look on. On a sudden, he said to me, as the young lady moved before us, 'I think her head and throat the most perfect I ever saw: they are matchless!' As we had not been speaking for some time, I said, 'You don't mean her: yet I guess whom you mean—why not try your fortune?' 'Oh!' he answered, 'she would never think of an artist—I would not—I would not presume.' I thought he was right, and made no reply. Some years afterwards I met Sir David Wilkie in a crowded assembly in Portland Place, on his return from Spain, where he reminded me of what had passed, and inquired for the lady.'"

Mr. Cunningham somewhat drily disdains "the soft impeachment" conveyed in this anecdote: but we give it as affording, whether fancied or real, the solitary glimpse, which his memoirs present, of Cupid haunting the artist's premises.

It was in 1825 that the precarious state of Wilkie's health compelled him to cease from painting for awhile, and drove him abroad for cure and relaxation. The former came slowly, though the latter was varied by many social pleasures. At Paris we find the painter living with Talma, Gerard, Humboldt, Pasta, and such celebrities: nor was the southward journey undiversified by adventures, some of which were worthy of the painter as well as the "penciller." The tragedy of the following event is not lessened by the formal language in which the matter-of-fact painter communicates it to his brother:—

"We supped at Avallon with a party of four Frenchmen, travellers on their way to Paris. They were very polite to us, but in the course of the supper got into an animated dispute about a horse, when, to our surprise, one of the disputants, who sat by me, got up and threw a tumbler of wine at the head of his antagonist, who had just applied to him in argument the term *bête*. They would instantly have grappled had the rest of the party not interfered, when they both agreed to go on with the supper, during which they talked with us and with their own party about indifferent subjects, though still under much suppressed agitation. After supper we left them. On our entering our *voiture* the next morning, two of them passed us and spoke to us. They had two swords with them, and from a significant nod one of them gave, he was evidently going down the yard of the hotel to meet his antagonist at that early hour. We started on our journey, and about midday our conductor spoke in at the window to tell us he had just learnt from a postillion that the two gentlemen had fought, that the one who had thrown the glass was wounded, but that the other who had called him *bête* was killed!! This shocked us much, and made us regret that we could not have tried to prevent it."

The scenery of Switzerland, and yet more the substantial comfort of the farm-houses, enchanted Wilkie, who describes them as well as many a professed tourist, though with less pretension. Here, too, is a picture of a monk, taken shortly after entering the Land of Promise, which need not be disdained by the Old Man of the Brunnen himself:—

"At Novi we were taken to see a small convent; the outer gate was somewhat primitive and solitary. We pulled at the bell several successive times; but no one answering, one of our party gave a continued ring for some seconds, which was soon followed by a howl from within, like that of a lion roused from his den. The door was quickly opened, when a figure very unsuitable to the sacredness of the place made his appearance. He was a great stout fellow, very much like one of our London coal-heavers: he began by scolding the whole of us for our unmannerly intrusion; but, on being asked to show us an esteemed picture in the chapel, his rebuke relaxed into a most jocular and roguish smile, and we were conducted through passages and cloisters that were made to resound with his merriment and with the laughter which his jokes occasioned among our companions. In this manner he led us into the chapel, and, except in taking off a dirty skull cap, and making a sudden obeisance as we passed the shrine of the saint, the founder of his order, his manner was altogether of the most irreverent kind. The entrance of the superior of the convent—a respectable and even gentlemanlike person, in the complete habit of a monk—seemed to be some check upon his ribaldry, and we were shown the picture in question (it is a copy) by the reverend father, who spoke French, with great decorum and civility."

The painter's version of Florence is NOT a painter's version, but one in which the Arno dwindles into a Fleet Ditch, and the grape and the olive hardly rise higher in the scale of the picturesque than so much "garden-stuff." But the pictures examined by our hero and his brother Academicians, Phillips and Hilton, whom he chanced to encounter in Italy, sank deep into Wilkie's mind; and his remarks, though thoroughly unpretending, raise him in our estimation. To turn from the Ancients to the Moderns—here are a few words concerning fresco and young German art, from a letter to Collins, going very near the kernel of the matter:—

"The wonders accomplished here in fresco suggest the question whether it should not be tried in England? Damp climate is objected, but Italy is damp too; and the difficulty of the work is stated, but this vanishes when we see the artists here doing it with perfect facility. Several Germans, namely, Overbeck, Fight, (*Veit*) Schadow, and Schnorr, have painted two palazzos, in the early German manner, imitating not Raphael, but Raphael's masters, and with great cleverness and research. But they have not hit the mark: their style, wanting so much of modern embellishment, cannot now be popular, and can neither be admired nor followed, as Pietro Perugino and Ghirlandajo were in that early day. This has given occasion to the wags to say, that Overbeck had overreached himself, that Fight is shy and timid, that Schadow has neither depth nor softness, and that Schnorr is without repose! With all this, however, in our country of novelty and experiment, why do those whose aim in the higher walks is so cramped and confined by a measured canvas and a limited commission, not try at once to revive the art of fresco?"

On another occasion he observes, in reference to this subject,—

"One object of interest in Rome is the school of art it presents to the whole of Europe. Sculpture has of late years been in the ascendant; but Canova is gone, and Thorwaldsen is now a sort of Roman dictator in his stead. Sculpture is believed to have gained by the severity these have introduced, having suffered ever since the fifteenth century by imitating painting, which, since the revival of art, has of the two stood the highest. In our day we have seen this partly reversed; the painting of the French being an imitation of the qualities of sculpture—a homage the one art can only pay to the other at a severe cost. Our own countrymen here have, by their studies, done us credit; and though some arrived unprepared for study, and ignorant of what to study, others have acquired what may hereafter be useful at home, if they can resist the prevailing taste and tendency of our exhibition. But the German artists appear to form a class both new and distinct—are more of a sect than a school. They have abjured all the blandishments of modern art, and have gone back to the apostolic age of painting; have begun where Raphael began, by studying Raphael's master, in hopes the same schooling may a second time produce an equally successful scholar. They affect the dress of that early period, and in their pictures imitate the dry simplicity of its improved taste; and such is their devotedness, that two of them have changed their religion from Lutheran to Catholic, to feel with more intensity the subjects of the Italian master, making their art a religious profession rather than a worldly occupation."

We cannot resist the following passage, in which there is so much enthusiasm, quiet though the expression be:—

"From my leaving Paris, not one landscape has presented itself, either good, bad, or indifferent, of the Italian school. The art of Italy, therefore, except by analogy, can be of no use to you; but even in this way it would enlarge your views, and in respect to the country, as a new material to work from, the country of Claude and the Poussins, what might it not furnish to you? for in spite of the scanty verdure, the stunted trees, and the muddy streams, still this is Italy; and until you see this and the mountains of Switzerland, you can have no perfect idea of what Nature is like. Here everything is seen clearer than in England; the sky is bluer, the light is brighter, the shadows stronger, and colours more vivid, than with you. Besides, in the course of a long professional career, which I hope you still have before you, may not a change in the effect of your pictures be a thing of consequence to you?"

Here we may string together a few other comments on art:—

"I have visited the Vatican and Sistine Chapel with intense interest, and much as my expectations had been raised, with no other disappointment than at the decay to which they seem fast hastening. Brilliant as they doubtless were at first, time has so obscured them, that to the common eye much is lost: but Raphael, with his elegance and expression, all can admire. His School of Athens, his Miracle of Bolsena, and his Heliodorus, beautiful as the colouring is, though obscured, are, from their composition and telling of the story, the most adapted to general taste of any works in existence. But with Michael Angelo it seems quite different. His great works, the Creation, Progression, History, and Last Judgment of Man, though arranged in a highly ornamental style, are necessarily so abstract in their qualities of excellence, that of the few who visit the Sistine Chapel, a small proportion only appear to take much interest about them. This indifference appears to have extended itself to artists also; for of all the various modes of study practised here, there is not one that

Digitized by Google

ventures to imitate Michael Angelo. When his works are studied, however, and with due allowance for damage and time, none have ever come nearer what may be called inspiration. His Prophets and Sibyls have that sort of dignity which makes all other styles look little. They are of the true epic; and, like the Apollo and Jupiter in sculpture, have served as models for all since done of the superhuman kind. The lower compartments, also, in the Last Judgment, are most striking for the magical power, though it looks like the power of a demon, by which bodily and mental agony are expressed. These have had the homage of being imitated by Raphael: they seem also to furnish an essential part in the vigorous style of Rubens; and from our own Reynolds not only have they drawn forth his memorable eulogium, but in his happiest efforts appear to have suggested to him that power of expressing the deep thoughts of the inward man that now gives to his works their greatest value: when I add to this, what one least expects to find in M. Angelo, his feeling for colour, which, in parts the least affected by the mouldering plaster, is often such as Titian or Rembrandt might have chosen, it may be truly said that these works, as a whole, are the most dignified and impressive that the art of painting has yet produced. With the high powers of mind it is impossible not to think also of the material—fresco—in which they are embodied; without which Italian art could not have had a fifth of its occupation, and might never have had its pre-eminence. Fresco, which is clearer, less heavy, and more easily lighted than oil colour, can exist only with the higher qualities of painting, and cannot, like oil, with its beauties of execution, supply their place. It also admits from its greater space, of combinations, to which oil, in a limited form, is a stranger. * * Seeing what is effected here, one cannot help fancying that fresco might be used with advantage by our own artists in England. It is true that neither West nor Barry, nor any of the most zealous, have thought of it, the frost, damp, and smoke being objections; but in Chelsea College Chapel, I believe, there is a fresco, by Marco Ricci, that has stood unchanged for one hundred years. * * The talent that has been devoted to the Romish church, whether rightly or wrongly applied, has been immense. Here is a moral effect; here is that, the employment of intellect, which distinguishes Christianity from all other religions. If the church of Rome has condemned the art of Talma, it has created that of Raphael: it has been the nurse of the arts, but painting has been its favourite child. The Pagans have been better sculptors than the Christians: theirs was a corporeal system; but it was left for painting, with all its undefinable powers over colour and form, over light and darkness, to represent the mysteries of spiritual revelation. The art of painting seems made for the service of Christianity; would that the Catholics were not the only sect who have seen its advantages. * * It is a question that naturally occurs here (and, considering our national greatness in other respects, a mortifying one), what is the advance we are making in those arts which have made Italy so renowned? If contemporary rank is all that we aim at, no deficiency need be acknowledged. Our friend Sir Thomas Lawrence is, in taste, mental intelligence, and in command of his material, quite unapproached by any continental artist in his line; our landscape pictures are unrivalled; and in sculpture, both here and at home, we sustain our character; Chantrey, for working the marble with Greek delicacy; and Flaxman for imbuing it with Greek purity of design. Yet when here we reflect on the well-considered and philosophic labours of Titian, the profusion of intellectual intelligence of Correggio, and all that has been aimed at and accomplished by the master spirits of Raphael and Michael Angelo, what have we, or what can we hope to have, as a set-off against so exalted a combination? It has frequently occurred to me that the restoration and introduction of fresco-painting into England would yet give a chance for the cultivation of the higher styles of art. We that possess so much, and think we know so much, know nothing of fresco; know nothing of that, the only mode known to the ancients, with which modern art grew from its revival to its greatest perfection, and with which the finest works are found identified, and must ultimately perish. Its qualities are essentially different from oil painting. It is more abstract, less deceptive, can be seen farther, in any light and in less light; though equally ornamental, it has not the palliatives of oil; though advantageous for the display of beauty, grandeur, and style, it cannot, like oil, give interest by softening or concealment to the mean form or to the low subject. An oil picture is a piece of furniture to be changed or removed at pleasure, while the fresco is a part of the fabric itself, combining sculpture and architecture, historic truth, and poetic fiction, in one wide range to illustrate the purpose of the building, which, be it the gorgeous palace or the solemn temple, derives from fresco a most impressive splendour and dignity."

We are again interested by the workings of an original mind among the creations of Canova:—

"In wandering over the deserted studio of Canova, filled chiefly with plaster-casts of his larger figures, and marble copies now making by his *élèves* upon speculation, one could see at a view the bias and compass of his genius, and this seems confined to the grace and elegance of the female form. As specimens of manly or heroic dignity, I saw only Washington and a cast of the colossal statue of Napoleon. The former, both in dress and attitude, seemed a failure; the other, though full of commanding style, also failed in its purpose, giving no likeness or resemblance to the personal appearance of Napoleon. But this involves a question whether a diminutive form is compatible in sculpture with the representation of a gigantic mind: whether the apostle Paul, who was of mean stature, should be represented so, or dignified by enlarged form at the expense of historical truth. In other words, should a lion, to convey a power of nerve and strength, be represented larger than the elephant."

To "Helen" and "Thomas," Wilkie discusses matters more transitory than the divine creations of Genius—remarks drily, that with all its gaiety and dissipation, the Eternal City does not seem to be the place for either "marrying or giving in marriage:" adverts to carnival gaieties—concerts at Catalani's, and a masquerade at Torlonia's, with "Don Quixote and Sancho Panza" by Rennie and Severn—records, with considerable pride, certain doings of his own, and sighs for "George Young's Dutch damask coat," in which he "could have done wonders." But we must quit Rome for Naples, and extract a passage from our author's journals, by way of companion to the scene of the French duellists:—

"Uwins tells me there is in Naples a prevailing superstition like what we have in Scotland, but carried to a far greater extent—of the influence of an evil eye. This belief is so universal, that, as a charm against it, the horn, either in shape or in material, is worn by almost all persons of rank; that wanting this, the putting up two fingers, the fore-finger and little-finger, is resorted to, in presence of one known from appearance or reputation to possess this baneful aspect. To be accused of such a power, however, by having presented to you the mystic horn, is considered the greatest insult, for which no revenge can be too great; for as the family of such a being share with him the dread and obloquy, the relations join in repelling by violence such an insinuation. This was shown lately by the fate of a dramatic writer who made the ridicule of this direful prepossession the subject of a comedy. He was indiscreet enough to introduce a lawyer or judge suspected of this power, almost by name, as a leading character in his piece, and marked it by circumstance so strongly that all could trace the likeness. The day after the first representation the author being in a café, was respectfully called into the street as if on business, when in an instant he was assailed by half a dozen persons with bludgeons, and had his skull fractured so severely that he died a day or two after. The play, if played a second time, was never played a third, and even the police allowed the outrage to pass unpunished and unnoticed."

The Correggio frescoes at Parma excited Wilkie's rapturous admiration. We find many other notices of that much-talked-of manner of painting scattered through his letters; which prove that his mind was anticipating the recent movement. But the following fragments of a letter addressed to his brother, after that crisis which so severely shook his fortunes, as well as Scott's, are of more personal interest, and as such to be preferred:—

"So Hurst and Robinson have at last failed. This I had almost expected from the first. Their state was a nondescript, and in these times could not well be passed lightly over. I sometimes wonder if our troubles have yet come to a height, or if affairs are ever to take a turn. But it is of no use reflecting or moralising upon it; I have still to hope that such a dividend may in time be got, with what I have already received, as will cover the outlay; failing this, so far as money is concerned, there is still Mrs. Coutts, the Bank of England, and the King's Household for Scotland before me: while these exist I shall still try to hold up my head. * * General Phipps has written to me, with many expressions of kindness and good will, requesting me not to make myself uneasy about the affair with the Ordnance. This is, however, a thing I still have to meet, after all the difficulties I have gone through; and when I see the Rialto, and the Doge's Palace, I am more apt to picture to myself the lively scenes that Shakspeare has drawn of Antonio, with the pound of flesh and *the forfeited bond*, than to think of what these should alone suggest—the pictures of Canaletti and of Titian."

The tenour of Wilkie's notes on Munich, Dresden, Carlsbad, Vienna, &c., may be gathered from the foregoing passages. From these places we return to Rome with the painter: this second visit was illustrated by a public dinner got up in his honour, and shadowed by dark news from home, in the tidings of Sir George Beaumont's death. A private dinner is also pleasantly described, and speaks well for artistic society at Rome:—

"On Christmas day we had a grand dinner given by young Severn, at his studio, to a party, all artists, eleven in number. He wanted a Scotch dish for me, and Lady Compton offered to send him one; but our cook said he could make three, and was, therefore, ordered to make the one he thought the best. Accordingly a most superb dinner was produced, and, for the Scotch dish, the veritable *Haggis!*—a true chieftain in Imperial Rome!! He was soon operated upon to his demolition, and was left in a state that, to an Italian eye, must have looked very like as if we had dined off the bagpipe of a pifferara. The evening went by with great good humour, and what was wanting in wit was amply made up in laughter. The jokes of Charles Mathews, of John Bull, and Joe Miller, were bandied about, and kept the table in a roar. Never did merry Christmas have a more happy celebration. All the party were artists, and, although apparently a private dinner, it has been hinted that it was somewhat joint, that they might pay me a compliment."

Towards the close of the second volume we enter Spain. From this part of the record we shall glean one letter, not merely because of its subject-matter, but from its nationality. Thus, too, did Scott, while on his Italian journey, murmur Border ballads in the Forum and the Vatican; and talk of Burns and Chevy Chace in answer to lectures on the Cæsars, delivered by "classic Gell"—

"Seville, 23d April, 1828.

"It is impossible to describe to you the impression Velasquez, here in the ascendant, makes upon the eye of the artist by the boldness and dexterity of his pencil. To the British artist he is more captivating than to any other; for it is he we must try to follow. From Reynolds to the present time the principles of Velasquez have, unconsciously perhaps, been the leading star of our school. My friends in London have ever been proud of the sympathy which exists between their works and those of this truly philosophic Spanish painter. I have also remarked that our departed friend Raeburn is strongly possessed with this spirit, which, considering how rare the works of Velasquez are, looks like inspiration. There are some heads of his in Madrid, which, were they in Edinburgh, would be thought to be by Raeburn; and I have seen a portrait of Lord Glenlee I think, by Raeburn, which would in Madrid be thought a near approach to Velasquez. Velasquez is the only

Digitized by Google

Spanish painter who seems to have made an attempt in landscape: I have seen some of his most original and daring. Titian seems his model; and, although he lived before the time of Claude and Salvator Rosa, he appears to have combined the breadth and picturesque effect for which those two great painters are remarkable. But Spain, much as we have heard of its wild heaths and savage mountains, does not seem the country for a landscape painter. From Bayonne to Seville the scenes of beauty, or even of grandeur, are very few; the Sierra Morena I passed a few days ago is the only exception. It resembles much the Trossachs, and has been celebrated by the fictions of Cervantes, as the entrance of Loch Katrine has been by the fictions of Scott. To you whose taste has drawn so much from Italy, and whose genius has made Scotland the theme as well as the school of landscape painting, all that nature presents here would be uninteresting. The elegance and the beauty with which you have so often illustrated our Highlands and our Lowlands would be thrown away upon the arid wastes of Spain. Still the people are a noble race, and their costume, particularly of the men, for variety and beauty, is, as heretofore, the finest in Europe."

But here we must again pause, possibly to return to this work once again, since the last volume still remains untouched.

The Lot of Mortality, and other Poems, by the Rev. A. Nelson, M.A.—"The greater part of the pieces in this small volume," says the author, "were written very many years ago; and bearing as they do the internal marks of their boyishness, it would be superfluous in me to enumerate them." This passage from the writer's preface relieves us from the necessity of remarks, which could but be a repetition of what we have so often had occasion to say on the subject of these juvenile productions. In the case of the author before us, however, we may observe, in addition, that he is especially committed to stand or fall by the intrinsic merit of his poetry: because, whatever may be the date of his compositions, their publication is the deliberate act of his graver years and matured judgment: and that, though the poems are of excellent intention, and unexceptionable as exponents of a heart earnestly engaged in apostolic teaching, yet that the prospect of their circulation beyond the sphere of those who may take an interest in the author's ministrations, is even more than ordinarily hopeless, from the fact of their carrying the additional drag of blank verse.

THE PROPOSED ALTERATION IN THE MONETARY AND METRICAL SYSTEMS.

It was made known some time since, that the commission appointed to "consider the steps to be taken for the restoration of the standards of weights and measures," destroyed by the fire which consumed the Houses of Parliament, had presented its Report, and an abstract of that Report, drawn up by the Dean of Ely, appeared at the time in the *Athenæum* (No. 769). Attention, however, has been very little drawn towards the subject, although one of considerable importance; but the article which has recently appeared in the *Edinburgh Review* will do something towards familiarizing the minds of the public with the object of the commission, and with the alterations proposed to be made in our Monetary and Metrical Systems.

The Commissioners repudiate the idea of making any extensive changes either in the coinage or in the system of weights and measures; and the author of the article in the *Edinburgh Review* is of a similar opinion, and lays down the principle, that it is very rarely expedient to disturb the primary units of any existing metrical or monetary system.

It is without doubt disadvantageous, especially in a commercial country, that the standards by which the value of production is estimated, should be frequently, or unnecessarily altered, since every change must occasion much confusion in the ordinary transactions of life: yet it may fairly be deemed a question whether the advantages to be derived from increased facilities of mercantile intercourse with foreign nations, would not render it desirable that the systems of the great European states should, as much as possible, be assimilated.

Until the recent discovery that the French system of measures is defective in its relation to a natural standard derived from the measurement of the quadrant of the earth's meridian, that system recommended itself to the adoption of other nations, by its simplicity and scientific nature; but since it has been proved that the mètre is not a pure division of a natural measure, it is equally defective as a standard with those of other countries. Should the peace of Europe continue for many years longer, it is not too much to anticipate, that a general conference of scientific men, appointed by all the great states, may be employed in a series of observations, and with the aid of constantly improved instruments, may construct such a system of measures and of weights in relation to them, as will at length establish both on a sure basis; but until such observations and experiments are made, the temptation of assimilating ourselves to France and Belgium (and in regard to the coinage, to the Sardinian states also) appears to have been wisely rejected by the government Commissioners. As respects our monetary system we have the less reason to regret our not adopting that of France, as an easy method of reduction from English to French value, offers itself in the fact, that the English pound sterling is *almost exactly*, and is generally reckoned by merchants and bankers *exactly*, ONE-FOURTH greater in value than the corresponding piece of 20 francs in France.

The Commissioners propose to retain the sovereign as the primary unit of the British coinage, but to effect an alteration in the value and denomination of the smaller coinage, with a view of rendering it decimal instead of duodecimal. The alterations proposed are as follows:—

1. A silver coin of the value of 2*s.* to be called a *Victorine*, *Florin*, or *Rupee*.

2. A silver, copper, or mixed coin, of 2½*d.* to be called a *Cent*.

3. A copper coin of the value of $\frac{960}{1000}$ or $\frac{24}{25}$ of a farthing, to be called a *Millet*.

The half-sovereign, the crown, and the shilling to be allowed still to circulate under their respective names. It is suggested by the Edinburgh Reviewer, that a coin of the value of 2 cents, under the name of a *Royal*, might be issued, and also that some coin, named a *Demicent* might be advantageously substituted for the penny.

But this scheme of coinage, though apparently simple in its arrangement, is liable to several objections, especially on the part of the poor, who would be the principal sufferers by it, from the increased dearness of all the objects of their consumption, consequent on an increased value in the small coins they principally use. Labourers and artizans of every description are generally paid in shillings, while all articles of provision, and many other things essential to the comfort of the working classes, are calculated and paid for in pence. For example, say that a labourer receives 12*s.* a week, would not his wages remain unaltered under a new system of coinage, while the price of his meat, his bread, his small quantities of tea, sugar, and tobacco, would be augmented, on account of there not being any coins which would exactly represent the pennies and half-pennies he had been accustomed to pay, while the additional measure or weight that the shopkeeper could afford to give for the augmented coin would be so trifling, that in all probability the poor would be in almost all cases defrauded of it. Many articles are sold to the poor which are neither weighed nor measured, but two, three, or four for a penny. Many things, also, have a fixed value, and their price would, consequently, be increased, when bought in small quantities. Take, for instance, the postage stamps, which now cost 1*d.* each, whether purchased singly or in large quantities, but under the arrangement would cost nearly 1¼*d.*, unless the coin called a *millet* were most extensively circulated, so that it could always be given in change for the "demicent." But still we have no representative for the half-penny, which is of great use to the poor. The commissioners were probably not aware, when they proposed the new coin they term a *Cent*, that amongst the very poor the lowest description of coin at present used is constantly offered by them in payment for necessaries, or luxuries (?), and that in the small retail shops a *farthing's worth* of many articles is frequently sold. The rich do not use so small a coin, neither do they buy in such small quantities: but with the coins they use it is not proposed to interfere, while those of the poor are to be altered.

In regard to the piece of "2 cents" which the Edinburgh Reviewer proposes to call a *royal*, it would be both useless and inconvenient, being not the half of a shilling, but two-fifths of that coin. The name of *royal* might be much more eligibly used to denote a piece of the value of *sixpence*, but divisible into decimal parts. It is, however, of still greater importance that the coinage below that sum should be placed on a satisfactory basis; and though a piece of the value of one-fifth of a shilling might be partially useful, its place would be much better supplied by a coin of lower value. The name of *cent* also is objectionable, as referring merely to the primary unit, and not to that immediately preceding it. We might, therefore, advantageously adopt the French scheme (although it is not much used in France) and divide the shilling into ten parts, under the name of "decimes," the "decime" being further reducible into ten "centimes." The coinage would therefore stand thus:—

		Shillings.	Decimes.	Centimes.
Gold	Sovereign, value	20	—	—
Ditto	Half Sovereign	10	—	—
Silver	Crown	5	—	—
Ditto	Victorine, or two shilling piece	2	—	—
Ditto	Shilling	1 or	10	—
Ditto	Royal	—	5	—
Silver or mixed,	Piece of 2 decimes (not essential)	—	2	—
Copper or mixed,	Decime	—	1	10
Copper	Piece of 5 centimes	—	—	5
Ditto	Piece of 2 centimes	—	—	2
				Nearly equal to one farthing.

The Edinburgh Reviewer suggests that a great saving of time and labour, in book-keeping, would be effected by keeping accounts in pounds and *cents*—*i.e.* the piece value 2½*d.* recommended for use by the Commissioners; but few accounts are so extensive as to warrant the disuse of any unit of less value than 2½*d.* The Commissioners, however, appear to have forgotten the old proverb, "take care of the pence, and the pounds will take care of themselves," for the whole of their recommendations, so far as the monetary system is concerned, are based on the opposite principle—that the pounds, and not the pence, ought to be the chief objects of consideration.*

I will now offer a few observations on the system of weights and measures: and first with regard to measures.

The Report of the Commissioners has not recommended a single *useful* alteration in our existing measures of length, though it advocates the adoption of a new measure of 1,000 yards, to be called

* See a paper on this subject, *Athen.* No. 556.—ED.

Digitized by Google

a milyard, in all bills relating to railways, canals, &c. —the use of which would appear not only to offer no advantage, but to be positively inconvenient, as it is neither a multiple nor a division of any of our larger measures of length, such as the pole, the furlong, the mile. The Edinburgh Reviewer, while offering an objection to "encumbering the scheme of metrical reform with this new measure of estimation," at the same time seems to think that all our existing measures of length, "the mile, the furlong, the chain, the yard, the foot, being all more or less used as primary units, and being connected likewise with some of the most important records of our knowledge and experience, there is hardly one of them which could be suppressed, even if the powers of government were equal to the task, without the most serious disturbance of our national habits." The Reviewer, however, in this defence of our old and irregular measures, has left out of consideration, that if we retain one of them, and especially if we retain that one most generally employed for scientific purposes, viz. the *foot*, we retain a standard of estimation which may be decimally multiplied, or divided *ad infinitum*, without causing either error or confusion. In estimating small distances, and even those which extend to several miles, such as the height of mountains, the depth of the sea, &c., the calculation is almost invariably made in feet; and our minds being accustomed to this mode of reckoning, we find less difficulty in forming a notion of a height of 30,000 feet, than we should if it were stated to be 10,000 yards. In calculating greater distances, which could scarcely be computed in feet—those of astronomy for example,—it would certainly appear a much more simple method to calculate them by tens, hundreds, or thousands of feet, than by the irregular measures of yards and miles; besides, the adoption of the foot as the primary unit of the measure of length, would not interfere with any recorded observations; for those which have been made in miles, or other large measures, could easily be reduced into feet. Again, the foot would be an equally eligible measure for all purposes of trade; for if from long association it would be difficult to substitute a new measure for the yard, the foot offers a ready solution for the difficulty; and it would be soon found as easy to make purchases by one measure as by the other. There is, moreover, another strong reason in favour of the general adoption of the foot as the primary unit of our measures of length, in the fact (which the Edinburgh Reviewer quotes without perceiving that it makes against his argument,) that "in philosophical instruments, and in the record of philosophical experiments, the duodecimal has been very generally replaced by the decimal division of the inch. In foot rules and scales, the decimal also generally accompanies the duodecimal divisions; the 10 feet measuring staves which are used by railway engineers, are invariably subdivided according to the decimal scale." This fact obviates the only difficulty that could have been raised against dividing the foot into decimal parts, which would be necessary to render the system complete; but that difficulty being overcome, a scale decimally divided would seem to be of most easy accomplishment, and the following nomenclature might perhaps be advantageously adopted. Taking the foot as the primary unit, it is proposed to apply the term *dime* (suggested by the Edinburgh Reviewer) to the decimal part of the foot, and to proceed by multiplying the measure and name of foot, on the same principles as the multiples of the French mètre. The scheme proposed would stand as follows:

10 Dimes .....1 Foot.
10 Feet.....1 Decempede, or 10 foot stave.
10 Decempedes ..1 Centipede.
10 Centipedes....1 Millepede.
10 Millepedes....1 Myriapede, nearly two miles.

A mile contains 5,280 feet, a myriapede would contain 10,000.

In the measurement of superficies and of solids (square and cubic measures), the same names and proportions would of course be adopted. The only inconvenience that would be felt, would be in the disuse of the *acre*, which is so extensively used in the measurement of land as primary unit; but, as was before suggested in regard to distances calculated in miles, it would be very easy to reduce an acre into square feet, when exact measurement was required.

With respect to a system of weights, the Commissioners judiciously recommend the substitution of a stone of 10 lb. for the present one weighing 14 lb.; and a weight of 100 lb., to be called a centner, it is suggested, may advantageously replace the present hundred-weight. To this plan, nothing can be objected, excepting that the *ounce* ought to be abolished, and a new weight of the $\frac{1}{10}$ of a lb. substituted, which might be termed a *Decet*. It would, however, be necessary to have smaller weights than one *decet*, and therefore the term of *Cent*, for $\frac{1}{100}$ lb., and *Millet*, for $\frac{1}{1000}$ lb. might be used.

It would be very desirable that every sort of produce, excepting liquids, should be sold by weight, but as some articles will, from long custom, continue to be sold by measure, it appears indispensably necessary that some alterations should be made in the system of measures, both for dry and liquid commodities. The present divisions of the measure for dry goods are, as a binary scale, nearly perfect, each measure (with a single exception) dividing itself into two, four, or eight parts. These measures, besides, are so connected with all mercantile transactions, both large and small, that their alteration would cause great inconvenience, and would perhaps be altogether needless, until some general system, based on scientific principles, shall be adopted. But, if we retain the present division of the scale of measure for dry commodities, we ought to render it as simple as possible, by rejecting several unimportant subdivisions. The most important alteration, however, which could be made in the measure of capacity, would be to assimilate the measures both for dry goods and liquids,—and this might the more easily be effected, inasmuch as the names and capacities for both kinds of produce are the same up to a gallon. The irregularities in the scale of liquid measures are now very great, and, moreover, different kinds of liquids are sold by measures of various capacities, which are called by the same name, as for example, the anker or firkin of ale only contains eight gallons, while the same measure of beer contains nine gallons. The pipes, hogsheads, and butts of different descriptions of wine vary very considerably. It is therefore proposed that the following scale should be used both for dry goods and liquids:

	Dry.		Liquid.
8 Pints.....	1 Gallon	=	Gallon.
8 Gallons.....	1 Bushel	=	Anker.
8 Bushels or Ankers..	1 Quarter	=	Cask.
8 Quarters or Casks ..	1 Load	=	Tun.

It will be seen that the Load corresponds with the measure termed a *Wey*, which weighs five quarters, being the only number belonging to the decimal scale which has been used in dry measures. The proposed *Tun* would contain 2,048 pints. The wine tun is now calculated to contain 2,016.

It is seldom that any measure of liquid (except for medicines) is required of less capacity than half-a-pint, but perhaps it might not be useless to calculate one as low as the one-eighth of a pint, which might properly be termed a *Minim*.

It is stated by the *Edinburgh Reviewer*, that very great loss to the mercantile community would be occasioned by any extensive alteration in the present weights and measures. This is true, but the loss would not fall heavily on any *individual*; for the most expensive of the weights and measures, being made of metal, would sell for part of their value, or might be re-cast, and used again for the same purposes as before.

In making any changes, either in the metrical or monetary systems, it is evidently desirable that the state of transition should be rendered as short as possible; and as the contemplated alteration in the coinage ought doubtless to precede those intended to be made in the weights and measures, it is to be hoped that Government will make use of the instruments in its hands to effect the change as speedily as possible. Suppose, for instance, that in each town one or more persons already in the public service as officers of customs, excise, taxes, &c. were to be appointed to receive the old coinage, and to distribute the new, the exchange would be made in an incredibly short time, especially if only a limited period were allowed during which the old money would be received as a legal tender.

It may not be out of place to suggest that every new coin, weight, and measure should have its name and value distinctly marked upon it. The want of distinctive marks, in the coinage particularly, is an evil that has long been complained of. B.

SOCIETY FOR THE FORMATION OF A PUBLIC GALLERY OF THE WORKS OF LIVING BRITISH ARTISTS.

[The support which has been extended to the Art-Unions is, by many persons, received as evidence of an increasing disposition on the part of the public to patronize and support Art itself. This, in our opinion, is a pleasant delusion, and seems to assume that a love of art and a love of gambling are the same thing. Still we are unwilling to say anything that might tend to discourage persons who, acting in this faith, have set on foot a project which assuredly, if it can be brought to bear, must aid that movement in favour of Art which even, in our opinion, the Art-Unions can only impede, not altogether stop. We have, therefore, much pleasure in submitting it to the public, and will reserve our own comments and speculations to another occasion.]

NOTWITHSTANDING the evident progress which the arts of Painting and Sculpture are now making in this country, and the not less evident increase in the number of those who derive enjoyment from works of art, no country of Europe has done so little for their National encouragement, or for the honourable distinction and reward of those who successfully pursue them.

To the artist, England proffers no National commissions; to the people she presents no National collection of the works of her artists. As far as the State is concerned, the former is unhonoured, and the latter uninformed.

Of late, indeed, something beyond merely private patronage has been afforded by means of those associations, whose object it is to purchase works of art from the public exhibitions, by means of an annual subscription fund; but the works so purchased are of precisely those classes which are already liberally encouraged by individual purchasers, and are invariably destined to private appropriation.

Other countries, meanwhile, have shown us, by repeated examples, how nobly the arts of Painting and Sculpture may be applied to purposes of National instruction, and of National enjoyment; and have added to the numerous proofs which history had already furnished, that without such National application, those arts can never attain their highest excellence.

France can point to her Gallery of native art in the Luxembourg, and to her great historical Museum at Versailles; Bavaria to her Pinacotheca, her Glyptotheca, her Valhalla; each can show the best works of her best artists applied to public uses, and rewarded by public honours; while England leaves both the fortunes and the honours of her artists to the caprices of fashion, or the chances of trade.

A century ago the greatest history-painter (we use this term advisedly) the world has seen since the days of the Roman and Florentine schools, William Hogarth, might have starved in the country which his genius adorned, but for the happy foresight which led him to become the engraver and publisher of his own pictures, and to place them, by the method and cheapness of their publication, within the reach of a large portion of the people, thus opening to the artist a vast field of patronage theretofore unknown. At that time, as at the present, there was much encouragement for the painter of portraits, little for the painter of history; then, as too often happens still, the copyist of fashion was caressed and enriched,—the creative artist neglected and forgotten; and from the new source—the modern print trade—thus opened by Hogarth, has flowed, more or less directly, a large portion of such patronage as the higher branches of the plastic arts have since received in this country.

But encouragement of this kind, valuable as it is, will not suffice either to create a great National School of Art, or to maintain such a school when created. It is far too dependent on the common impulses of trade; ever tending to regard rather the transient than the permanent. And without doubt, had not a great improvement taken place during the last half century in the character of the patronage afforded by individuals, the arts of Painting and Sculpture would never have reached their present position in this country.

But private patronage, also, whatever the taste which may have directed, or the wealth which may have supported it, has always shown itself an inadequate basis for the cultivation of the plastic arts. England has lovers of art as refined and as munificent as those of any other country, but their number is limited, and their example little heeded. At present, as in past times, the artist of genius is under constant temptation to abandon the higher efforts of his art,

Digitized by Google

which too often present to him no prospect save that of remote, if not posthumous, fame, for those humbler labours, which, being more generally appreciated, and better rewarded, afford him a fair promise of both distinction and wealth.

If, then, the nation, through its government, does nothing to counteract this tendency—nothing to foster and encourage the higher aspirations of the rising artist, what hope can there be that, in this department of intellectual effort, Britain will ever rival the Greece and Rome of antiquity, the Italian States of the middle ages, or the German States of our own day?

In all respects, save in the absence of this direct national employment for the painter and the sculptor, upon national subjects, and for purposes of public enjoyment, there is the fullest warrant for lofty anticipations; and why should this be wanting? Surely, the very pressure of the times, with all its painful manifestations, affords additional and urgent reasons —were any needed—to use every possible means for diminishing, at least in respect to the appliances of intellectual enjoyment, that awful disparity in the condition of the higher and the lower classes of our countrymen, from which, if unchecked, modern civilization has so much to dread. The sacred facts of our religion, and the proud recollections of our history, afford ground upon which all classes may well meet in common; and surely there are worse instructors, in the too much neglected truth, that the fortunes of one class, whether prosperous or adverse, must eventually become the prosperity or adversity of all, than the long-enduring memorials of a common religion, and a common history, as recorded upon pictured canvas or sculptured marble, by a nation's artists for a nation's heritage.

Among recent indications of an awakened attention to considerations such as these, there is none more gratifying than the appointment of a public commission to consider in what way advantage may best be taken of the erection of the New Houses of Parliament for the encouragement of Painting and Sculpture; and this appointment is the more promising, inasmuch as the commission is headed by a prince not less qualified for it by his personal qualities and accomplishments than by his illustrious position.

But still the great want remains: there is as yet no prospect of a *National Gallery of the Works of British Artists*—that best stimulus to the full developement of British genius in the arts of design.

It is felt, that to an object like this, nothing short of national resources can be really adequate. The originators of the present project, however, have thought, that in the meantime some progress may perhaps be made in the right direction, by that great lever of modern times, associative exertion; and that, at least, a nucleus may be formed, around which, at a more favourable period, larger resources and wider aims may accumulate.

It is proposed, then, to constitute an Association to aid in the encouragement of these higher branches of the arts, by the formation of a *permanent public gallery of the works of living British artists*, to be obtained both by direct commission, and by selection from the periodical exhibitions. While it is not deemed expedient to propose any express limitation of the classes of art to which this encouragement is to be extended, other than the primary one, that no works shall be chosen save those of native and living artists, it seems obviously desirable that at the outset preference should be given to works illustrative of the religion, history, or poetry of the united empire.

With a view to connect the pursuit of this great public object with such personal advantage to the members of the association as shall be not only thoroughly compatible with the former, but also in itself contributive to the diffusion of good taste in art, it is further proposed, that a certain proportion of the funds shall be set apart, for engraving, from time to time, some picture (from amongst those which shall have been obtained by the association) exclusively for its members: and to this end the copyright of pictures will be invariably acquired by the society along with the pictures themselves.

As it is the purpose of this mere outline of the proposed association, not so much to define and describe any plan for its constitution, as to call the attention of the lovers of art to the project, and to ascertain who among them may be willing to assist in carrying it out, its originators are of opinion, that, at the present stage, they may content themselves with submitting two additional suggestions; the one relating to the manner of selecting the works of which the gallery is to consist, the other to the annual rate of subscription by which it is to be supported.

In the constitution of those societies that have been recently formed for the purchase of works of art, which are to become the private property of individual members, it has naturally been found advisable to take the surest means of satisfying individual tastes, by absolutely committing the selection to those on whom chance may have devolved the ultimate right of possession. But where the destination of the works to be obtained is wholly public, experience would seem to indicate that the selection is preferably to be intrusted to a responsible committee, chosen from amongst the whole body of subscribers, and renewable at fixed periods. It would also seem desirable, in order to preclude even the possibility of the mischievous operation of professional jealousies, that no artists, or dealers in works of art of any description, should be eligible to serve on such committee. And secondly, as it is evidently to be wished that the base of an association having so extensive and national an object should be as comprehensive as possible, it appears to its projectors that the annual subscription should not exceed three guineas.

But these, and all other details, are properly matters for the consideration of a Provisional Committee. Enough, it is hoped, has been said to show that such an association might powerfully aid in the diffusion of good taste;—in the removal of obstructions to the honourable career of many an artist whose aspirations are above his resources;—in the employment of the arts of design to promote public civilization, morality, and religion;—and, thereby, in the ultimate addition to the many claims which Britain already possesses to the first rank amongst nations, of that best-grounded of all claims, intellectual pre-eminence employed to add to the stock of human happiness. In all departments of mental effort, save in this, our country has little to fear from comparison with any other; and it may well be hoped, that any attempt, however humble, to add yet another jewel to her crown, will be received in the spirit in which it is made; and meet, at least, with candid and friendly consideration.

It is hoped, too, that this attempt, besides its immediate results, may contribute in no small degree to strengthen that growing public opinion of the importance of the task herein contemplated, which must eventually bring the powers and influences of the British government to aid directly in its accomplishment.

PICTURE COLLECTIONS.

Brevity is the soul of wisdom as well as wit. A pregnant and pungent little speech, made in the House of Commons by Lord Francis Egerton, seems to bear upon the Fine Arts, and on what Bentham would call the *Humanization-principle*. "Lord F. Egerton," says the *Times*, "thought that not only public institutions, but that private collections, might be opened with perfect security. If danger was to be apprehended in consequence of throwing them open, it was more from that undefinable class who had been termed half-gentlemen; and he might go farther, and say, from the whole gentlemen too, rather than from the mass of the community. (Hear.) He believed that the labouring classes, when admitted into collections, acted as a sort of police upon each other; but he knew, by experience, that the other classes, to which he had just referred, when permitted to visit private collections, went prying about, reading the books in one's library, opening doors, and going wherever they ought not to go. (Hear, hear.)" Let us hope that this broad hint will have its due weight with "half and whole gentlemen," British and foreign. We trust that the other hint, too, will have equal influence with those *more than* gentlemen, the aristocratic proprietors of collections; and that he by whom so liberal a principle is recommended, will set an example himself. No danger could accrue, it appears from his lordship's argument, were the doors of private galleries only opened *wide enough*: for if the labouring classes act as a sort of police upon each other, they would, of course, when admitted in sufficient numbers along with idle and inquisitive gentlemen, keep these dreaded personages to their good behaviour likewise. Doubtless, therefore, we shall see the future portal of Bridgewater House expand its magnificent valves proportionably to the possessor's enlarged ideas. We do not mean any invidious comparison, but it is certain the Bridgewater Collection has hitherto had almost as narrow a door as the Grosvenor. Respectable applicants, to our own knowledge, have been refused an order for admission, when, at the very same time, others have obtained the capricious favour, who had no higher pretensions than their living somewhat nearer a fashionable square. If this was the case with Bridgewater House, what must it be with still more exclusive mansions? There are the Sutherland, Ashburton, Peel, Hope, Lansdowne, Wellington, Buckingham-Palace, and various collections—pretermitting the Grosvenor, which we may call rather a *hoard* than a collection of pictures—all shut up as close as so many *harems* filled with beautiful invisibles. We can assure the possessors that it is their interest, no less than their duty, to accord their humble countrymen whatever modicum of rational amusement a limited sacrifice of their own luxurious comforts would contribute: nothing would tend more to soften the fierce prepossession against "privileged orders," and "vested rights," which increases day by day throughout the democratic classes. But we advocate the measure on a broader principle still: there are no readier, easier, surer means to *humanize* a rugged and incult people than the Fine Arts afford. Painting, Sculpture, and Music, have an immediate effect upon the popular mind, because receivable at once by the senses, and a most impressive effect, because bound up with enjoyment: their beauty comes home, in its brightness or dimness, to every comprehension the least observant, and Beauty (under its several forms) is the great refiner of manners. We can well recollect when the English people was proverbial for boorish behaviour, and wanton mischievousness, with which even their good-humoured pranks were tainted; we, as well as Lord F. Egerton, can attest its present high and honourable state of civilitude, wherever in Museums, Galleries, and Saloons full of precious and fragile objects, we have met its countless masses. It is our conviction that this has been much accelerated, if not altogether brought about, by the opening of divers Public Institutions, more or less educational; seminaries, so to call them, for self-instruction, like the British Museum, Hampton Court Palace, &c., whose treasures have enriched and improved the mental condition of the visitor, without themselves suffering diminution or deterioration. Let the good work go on; let the Patricians and Magnates of the land open their private collections to promote it: let them do so from policy, if not from philanthropy!

AËRONAUTICS.

"Goosey Goosey Gander,
Where will you wander?"

On looking into an old book, by John Wilkins, Bishop of Chester, 'That the Moon may be a World,' published in 1638, I find some remarks upon the probability of human beings finding their way to this lunar world, by means of wings. The author supposes that swallows, cuckoos, wild swans in India, and other birds of passage—to say nothing of locusts, and other epidemic insects—come from the moon, and return thither again; and as these frequently fly in flocks, "like wild geese," he thinks that, if enough of them to carry a man were harnessed together, the man might go up to the moon at the beginning of winter, and return in the spring.

Now is the time to revive the notion of worthy Bishop Wilkins; catch geese, and tie them together —wild geese. Do not let the Aerial Company take alarm, or imagine themselves harnessed (the doves!) to the car of Venus in the shape of a courier carrying despatches to India. I do not want the geese who think they can *make* wings, but those whom Nature has actually furnished. Nor do I think we should go to the moon, for want of an atmosphere. But when I say we might ride to India or to the Cape of Good Hope by wild geese, I do aver that I say that which is much more probable than that we shall do any such thing by means of the "Ariel," as they call their contrivance.

A wild goose can fly and can carry some weight —say only three ounces: well, then, 11,947 wild geese would carry a ton, with an ounce to spare, if

Digitized by Google

they could only be made to pull together. But let us begin with only a quarter of a ton, and try to train, say 3,000 wild geese. We have no doubt that means are here provided for supporting the weight, which is not the case in the Ariel. Now what is the way of training wild geese to pull together, and what is the proper mode of harnessing them? I hope some clever speculator will take up the idea, and give me five per cent. from the gross receipts for the hint. I cannot tell how to make the birds behave as they should do, but others can, perhaps: and my proposal is, at least, *possible*, which that of the Aerial Company is not; for the gravity of the carriage is overcome in my system, but no gravity at all is overcome by the aerial machine, except that of the countenances of those who understand mechanics.

Besides, the cruel system of plucking geese will be abandoned, for we shall want every one of our birds to put his best feather foremost. We must all use steel pens, (nasty things!), and our quills, instead of writing *Athenæums*, will carry them about.

The American proverb must be altered in meaning; it will be "gone goose" with a man, not when he is ruined, but when he sets off on a journey.

An enlightened public, which encourages pictures of Ariels with broad backs and finny rudders flying over the pyramids with steam fans, carrying a sentry box hanging obliquely, will not surely refuse to countenance the more probable, and, at least, equally poetical, representation of a man in a basket, to which are attached a thousand wild geese, with a handful of newspapers, which he drops on the roofs of his customers' houses. Yours, &c., V. W.

OUR WEEKLY GOSSIP.

THE Exhibition of Ancient Masters at the British Institution takes place next month, and promises a feast for the eyes more varied, if not more exquisite, than usual. We are enabled to furnish a programme, brief and sketchy indeed, but authentic, the general character of the exhibition being alone determined, while the particular selection is as yet somewhat dubious. Our readers must know that the Committee has always rather a difficult game of *finesse* to play between two opposite parties who contribute their painted treasures—the illiberal and the ultra-liberal—*those* churlish about lending desirable works, and *these* over-bounteous of mediocre pieces. Three grand divisions will form the total array, viz. one saloon will be assigned to Ancient Masters, properly so called; a second to Sir Joshua Reynolds, himself a host, whose works, though modern by their date, are antique by their merit; a third to divers other British Painters deceased, who, we hope and trust, will vindicate their right to take, at all events, rear rank with the Mighty Men of Old just mentioned. Rumour, like Wordsworth's kettle, talks much, "in a sweet deep under-tone," about the resurrection of certain native works, long buried amidst the dust of private cabinets and lumber-rooms; but we cannot guarantee their public re-appearance, nor the prudence of digging them up with such an object. Let us observe, however, apropos of this tendency shown by the British Institution towards a deviation from the spirit of their original system, that if Modern are to be substituted, in a great measure, for Ancient Masters, strict circumspection will become very needful, lest the Exhibition should lose caste; and that it will tax the Committee's judgment to select such works alone of the former kind as shall warrant their excluding those of the latter. Old pictures, even if poor ones, have generally some interest and value, because they illustrate bygone manners and the progress of Art; while modern paintings, unless good in themselves, have seldom any claims whatever upon attention. *Gainsboroughs*, *Wilsons*, and *Wilkies* (of the genuine style) can rarely come amiss; *Hogarths*, our truliest English pictures, are always most acceptable: but productions of subordinate defunct limners do not, like relics of obscure monks, become all at once precious, when exposed, after a few years of forgottenness, to the public.

Mr. Burford has much to answer for in the way of temptation, for a temptation of no common order is his panorama of "Baden Baden," in spite of the burst of spring green in the Parks, and the sunshine without cloud or furnace-heat, which are making our London look more festive than usual. As we stood in the closet in Leicester Square, where this inviting picture is exhibited, the seductions of the Heads, and the Trollopes, and the Granvilles, who have dealt with the German Spas, and especially this their Queen, waxed faint before the painter's colouring and perspective. The work is capitally executed; and it comprises—as all who know the scene must recollect—a background of *bergs*, picturesquely varied with foliage, a middle distance of effective architecture, and a foreground of wood—amidst which are seen rather too many pic-nic parties. Not all the care and spirit with which they are painted can hinder the figures from resembling far too closely the fashions for the month to deserve their present prominence in so clever a work.

A correspondent at Oxford thus writes to us—"We are full of restorations and rumours of restorations. A total repair and almost rebuilding of Baliol College is in contemplation, and Mr. Pugin was invited to execute it, but it has been thought inexpedient to employ a Roman Catholic, and especially a violent partizan, and the Master of Baliol has withdrawn his consent. The Puseyites were exulting in the prospect of Pugin's employment, as a 'great theological step.' St. John's College Chapel is to be fully restored this summer, and the Fellows have selected Mr. Blore as the architect. A very ugly plaster roof is to be removed, and one of oak, which has been plastered over, restored to sight. The altar screen and window are also to be removed and replaced by stained glass, and the whole of the wood-work to be altered more in conformity with the style of the building. The chapel is much older than the time of the foundation of the college, having belonged to a Bernardine convent, on the site of which the college was built. The old and by no means ornamental library has given way to a very elegant new one, and the hall and the front of the college will in their turns be restored and beautified. The martyrs' memorial is completed with the exception of the inscription, and is very elegant. It is universally admired. Mr. Cockerell's building of the Taylor College is near its completion, and the models, &c., of Sir F. Chantrey, presented by his widow, are already deposited. All Souls' College is also being restored by degrees; and a pretty little building has just been added to University College, and forms an additional ornament to the High Street. I thought these details might form a scrap in your 'weekly gossip.'"

In Germany Art seems still in the ascendant. The artists of Munich, especially, appear full of activity. Every account brings news of some fresh work, completed or commenced. Peter Hess, who has just finished a picture for the Emperor of Russia, is commencing another for the same sovereign, the subject being the Battle of Borodino. Kaulbach is working hard at his large picture, 'The Destruction of Jerusalem.' Schnorr is painting a series of pictures from the celebrated romance of the 'Nibelungen.' Zimmermann and Henry Hess are also occupied with large pictures for the Basilica at Munich. Schwanthaler's attelier is filled with new works,—and the public buildings are daily increased in number and improved in appearance by new works of art placed in and about them. Fresco seems going out of fashion for a time, and the painters are returning to oil-painting. Engraving, sculpture, painting, architecture, all seem to find a congenial soil in Munich. "The town itself," to quote the *Leipsic Gazette*, in an article entitled 'Sketches from Munich,' "resembles a handsome and powerful youth, whose growth has been so sudden and rapid that his clothes have become too small for him,—scarcely conscious of his own beauty and strength, yet a wonder to all around, he leads a gay and ever-rejoicing life of pleasure—knows little or nothing of French, abhors reflection, hates tea, and does not pride himself on his piety. Munich is, in fine, the stirring source and centre of German art. Let Berlin, Frankfort, and Vienna say what they please, all the light they have proceeds from rays shot from this central source of art. Remove Munich, and you leave many individual artists, but no school of German art. Great artists, indeed, as for instance Cornelius, have deserted Munich, but the works of their manhood and vigour remain to decorate the temples and buildings of the mother and fosterer of their genius. Thirty years ago, and German art was a nonentity; a few poor painters dragged out a weary life of poverty and wretchedness at Rome, unknown and uncared for in the land of their birth. But a German prince was then growing up, who, uniting ample means to an intense love of art, was preparing to make his capital the centre for German genius to collect round. Lewis of Bavaria, as a youth, and when Crown Prince, devoted the savings of a limited income to improve the buildings of his country, and when his father's death placed greater means at his disposal, and put the crown of Bavaria on his head, he did not fail to redeem the promise of his youth. Munich is not only the most stirring, but also one of the most flourishing towns in Europe, for the large sums spent on its buildings give employment to thousands of labourers, as well as encourage talent and genius of every description."

The resolution of the Academy of Städel to purchase Lessing's great picture of 'Huss before the Council of Constance,' has caused the withdrawal from that society of its director, Herr Philip Veit. The consequence of this has been the foundation of a rival school of artists in Frankfort, headed by Veit, whose Roman Catholic pupils, Retchel, Ballenberger, Jung, &c. accompany him, and Steinle, whose name has already occurred in the *Athenæum*, in connexion with the Cathedral of Cologne. The Romanists of Frankfort have already commissioned the new institution to paint them an altar-screen, for which they have subscribed 10,000 florins. The vacant directorship of the original Academy has been offered to Lessing, who however has declined it. Steinle, it is said, has already completed several cartoons for the Cathedral of Cologne; and common report declares them worthy of the magnificent building which is to receive them.—V. Laumitz, to whom the "Gutenberg and Fust Memorial" has been intrusted, has completed the model.

A new church is now in process of erection in Vienna, the interior of which is to be decorated with fresco paintings, representing scenes from the Crusades.

A Paris correspondent thus writes:—"A good deal of interest has been excited here by the announcement of a tragedy by a young, and as yet unknown author, which is expected to raise him at once to a very exalted position among the poets and dramatists. This young man, M. Ponsard, is said to have arrived from the provinces, with no better recommendation to the notice of the critics of the metropolis than a long tragedy, on the classic model of the French drama, founded upon the somewhat alarming subject of the 'Rape of Lucrece.' The work was sent to Mdlle. Rachel and the Committee of the Théâtre Français, but 'Les Burgraves' was in rehearsal, and no one would even read a scene of this foundling manuscript. Fortunately for M. Ponsard, he found a better reception from the second Théâtre Français, where Bocage, Madame Dorval, and the veteran Mdlle. Georges, maintain their ground against the exclusives of the Rue Richelieu. 'Lucrece' was accepted; and such was the curiosity excited by this story, and by the passages which had here and there been cited from the play, that every place in the Odéon has been taken and paid for before even the day for the first representation has been named. In the meantime, however, the mystery has been in part removed by a reading of the play in one of the most distinguished literary salons; and the expectations of the public are heightened by the applause of a circle which was composed of the most distinguished literary characters of the day."

The study of English literature, and, consequently, the reprint of English works, on the continent, seems to be daily increasing. The German newspapers are full of reviews of English books, quotations from English writers, and advertisements of the republication, in a cheaper form, of English writings, many of which must operate to the prejudice of the sale of the original works on the continent. Among the rest we find, by an advertisement in the *Allgemeine Zeitung* of March 14th, an announcement of a new work to be published with the London magazines, containing extracts from all the reviews and most of the monthly magazines, "together with a *complete* republication of the new periodicals by Mr. Dickens, Mr. Lever, Mrs. Trollope, Mr. Ainsworth, Mr. Lover," &c. The work is edited, as we should conjecture from the name, by an Englishman—F. A. Catty, Esq., F.R.C.S.—and is to cost about 4*s.* a number. The reason alleged for this piece of wholesale piracy

Digitized by Google

by the publisher—Jügel, of Frankfort—is the great expense of the English periodicals, which almost prevents their circulation on the continent. A more probable reason may be found in the expected profits to the editor and publisher.

The journals of St. Petersburgh announce the death, at the early age of thirty-six, of the Baron de Stieglitz, who applied the immense resources of a fortune, said to amount to between two and three millions sterling, to the promotion of the arts, the sciences and literature, in all their branches. More than three thousand persons, including most of the distinguished names in the Russian capital, followed the body to its place of temporary deposit, in the vaults of the Lutheran Church of St. Peter—whence it is to be transferred to Hamburgh, the native town of the deceased, and the burial-place of his family. A place, too, may be given in our obituary records to the name of M. Maguin, the parish-priest of Saint-Germain l'Auxerrois,—the same who, defying what is emphatically called *The Terror*, "found means," says the *Presse*, "in 1793, to penetrate into the dungeon of Marie Antoinette, and administered to the illustrious prisoner the consolations of religion."

An interesting work has been published at Rome, by the learned Pietro Ungarelli, on a collection of antiquities left there by the Swedish diplomatist Patin. The collection is especially rich in Egyptian antiquities, and contains a valuable assortment of coins,—nearly 8,000 Grecian, 804 Consular, and 4,409 Imperial coins. Among the other antiquities is a 'Venus with the Slipper,' supposed to be of Egyptian origin, though brought from Greece.

The family of Cherubini are, it is understood, preparing for publication the autograph MSS. of the deceased composer,—giving particular notice of all the artist's own works, and forming the entire history of his professional life.

The Seventh Concert of the *Conservatoire* at Paris was made up of a selection from Handel's 'Judas Maccabæus,' 'The Creation' of Haydn, an oboe *solo* by M. Verroust, and Beethoven's Symphony in F. There is something too much of the "*toujours perdrix*" in all this, as the audiences seem to find—the enthusiasm of the public having cooled a little, we fear, with respect to these entertainments. But these are not good days for orchestral concerts. We perceive that our own *Societa Armonica* does not intend to resume its meetings. Happily, however, the stores of concert music are receiving accessions abroad, of which, in time, we hope to partake, slow though we be in the adoption of novelty.—At the Heidelberg Musical Festival, which is to be given on the 17th of May, besides Handel's 'Alexander's Feast,' (provokingly withheld from us Londoners,) a new composition by Mendelssohn, on a ballad by Zimmermann, is to be given. There is matter among this master's recent works for many evenings' pleasure. Let us hope that he will not prove the last of the German composers! We are waiting anxiously for some new operatic impulse in that quarter of Music's domain; but the promise is not great. An opera by M. Roeckel, son to our German chorus-master, (and the original *Florestan*, in Beethoven's 'Fidelio,') about to be given at Dresden, has been favourably mentioned to us. The composer, we believe, on the strength of its merit, has succeeded to the chapel-mastership held by M. Rastrelli, recently deceased.—Meanwhile, the adage, "it never rains but it pours," is curiously verified at home. Besides the performances at Her Majesty's Theatre, now in its full splendour, we have translated Italian operas at both our national theatres, (at one the sole and staple entertainment,) while the new theatre in Oxford Street takes eager part in the competition, and gives us its versions of favourite foreign works. We hope soon to be able to speak of the performances at this theatre more in detail, especially of the version of the 'Tancredi,' in which Miss S. Flower has taken Pasta's part—according to our contemporaries, with good success.—Those curious in the pianoforte will learn with pleasure, that M. Drey-Shock has arrived, to the astonishment of the members of the profession, before whom he performed at the dinner of the Royal Society of Musicians, on Thursday.

The pressure of temporary matter at this moment, compels us to defer, till next week, the report of Mr. Howard's Fifth Lecture.

BRITISH INSTITUTION, PALL-MALL.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS IS OPEN DAILY, from Ten in the Morning till Five in the Evening, and WILL BE CLOSED on SATURDAY, May the 6th. Admission, 1s.: Catalogue, 1s.
WILLIAM BARNARD, Keeper.

The THIRTY-NINTH ANNUAL EXHIBITION of the SOCIETY of PAINTERS in WATER COLOURS at their GALLERY, PALL MALL, East, WILL OPEN on MONDAY, May 1. Open each day from Nine till Dusk. Admittance, 1s.; Catalogue, 6d.
R. HILLS, Secretary.

The NEW SOCIETY of PAINTERS in WATER COLOURS WILL OPEN their NINTH ANNUAL EXHIBITION, on FRIDAY NEXT, the 28th inst., at their GALLERY, 53, PALL MALL, next the British Institution. JAMES FAHEY, Secretary.

DIORAMA, REGENT'S PARK.

This Establishment will be opened for the Season on MONDAY NEXT, April 24, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, painted by M. BOUTOX. Both Pictures exhibit various effects of light and shade.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 323 feet in length, and is crowded with rare and interesting specimens of virth. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant: also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2s. 6d. Children under 12 years, 1s.

THEATRE ROYAL ADELPHI.

Every Evening during the Week you will find the GREAT WIZARD of the NORTH "at home," Performing his SEEMING IMPOSSIBILITIES and MIGHTY WONDERS of SCIENTIFIC and NATURAL MAGIC, having no Parallel in Europe or the World, and which were during last Week honoured by most Brilliant, Fashionable, and Crowded Audiences,—the Elite of London.

Can there be a Stronger Proof of the Wizard's Mighty Powers: while other Theatres show a "*beggarly account of empty Boxes*," the Wizard's Magic Temple is *crowded in Boxes, Pit, and Gallery!*—the Astonished Hundreds exclaim, can our "eyes be made the fools o' the other senses!" or "*he is not mortal.*"

The Wizard's Entertainment will be varied by the Delightful Performances of the CAMPANOLOGIAN BAND, the Greatest Musical Wonder in London—they are Nightly Received with Plaudits long and loud. The Crowds who nightly honour the Wizard, declare one and all, "the Wizard is quite right, his Entertainment '*requires no Puffery!!!*'"

Boxes, 3s. Pit, 1s. 6d. Gallery, 6d. Second Price at Nine o'Clock, Boxes, 1s. 6d. Pit, 1s.—Private Boxes (containing six), 1l. 11s. 6d.—Doors open at Seven, the Entertainments commencing at Half-past.

SCIENTIFIC AND LITERARY

ASIATIC SOCIETY.

April 8.—Professor Wilson in the chair.—Before proceeding to the business of the day, Sir George Staunton read an extract from a letter which he had the preceding day from Sir Henry Pottinger, and which he thought would be of interest at this time. Sir Henry Pottinger stated his conviction that there was no reason to doubt the sincerity of the Emperor of China as to their intentions to fulfil the stipulations of the treaty with this country. He thought he might assert that Elepoo and his colleagues saw clearly that it was to the interest of China to further the views entertained by our government: and that they, as well as himself, were clearly of opinion that the government of China would, at no distant period, be convinced of the benefit to themselves, as well as to the nation, of the resolutions to which they had now irrecoverably committed themselves.

Captain Postans read a paper on the rivers Nile and Indus, the writing of which had been suggested by his having recently journied for some hundreds of miles along the banks of these two great rivers, which had so many features in common, although in some respects they were the opposites of each other. The Nile has its source in the equator, and the Indus in the regions of perpetual snow; but the latitudes traversed being the same in both, there are many curious coincidences in the climates and productions of the regions watered by them. The current and volume of the two are very different: the Nile proceeding uniformly and quietly at the rate of 2½ to 3 miles per hour, always deep enough for navigation, and generally confined by rocky banks which prevent any very extensive inundation. The Indus, of greater volume, and double or triple the velocity, is navigable only in its highest flood, and even then liable to sudden torrents of irresistible force; so that Capt. Postans has seen it increase from a moderate volume to such a height and force, as to throw a steamer of sixty horse power helpless on its banks; and in a few minutes space, resume its former character. The colour of the two rivers is very dissimilar: the water of the Nile is usually blue; but becomes of a deep brick red during its inundation: that of the Indus is at all times of a muddy stone-colour; and though readily purified by filtration, is not so wholesome to drink as Nile water, which merits all the encomiums that have been passed upon it. The boats employed on these rivers are of totally opposite construction; and Capt. Postans was surprised to observe that on the Nile, where the navigation was without danger, the boats were large and strongly built, with keels fitting them for rough sea-work; while those used on the Indus are small, flat-bottomed, and frail; liable to go to pieces on the least violence, and are destroyed in a few minutes by being exposed to a strong wind on a sand bank. This, we think, may be accounted for by the necessity of employing very shallow craft on a stream which is often not above three or four feet in depth. Some remarks are made on the capabilities of the regions watered by these rivers, as to the amount of population that might be maintained upon their shores. The writer observes, that with a narrow strip of tillable land on its banks, Egypt even now maintains two millions and a half of people; and might, under a better government, support triple that number; while in Sinde on the shores of the Indus, where the extent of soil is unlimited, and nothing wanted but industry, the population does not exceed a million. In the former country, not an inch of the soil is uncultivated; in the latter, cultivation is almost unknown; and the miserable inhabitant finds his almost sole diet in the fish which the river supplies. The productions of the rivers are nearly similar, the staple crops in both being wheat, and the *holcus sorghum*, which, in Egypt, is called dhurra, and in India, jurwaree; and almost all other produce being the same in both. The cotton, indigo, sesasum, and tobacco of both are of the same species; and the date is the principal tree visible. The shores of the Nile and Indus also abound with buffaloes, camels, mules, and asses; and poultry abounds in the huts of the inhabitants of both. These are all of the same rude and temporary construction, the materials being mud or reeds. The same squalor and misery exist in both; the Egyptian peasant toiling only that his master may benefit; and the Sindian neglecting cultivation almost entirely. The disposition of the inhabitants is very opposite: the strong and hardy Sindian is either sullen or melancholy, and his work is almost always performed in silence; the slim Egyptian, on the other hand, is always singing or laughing; and the sounds of drollery and mirth are heard from one end of the country to the other. This part of the paper is followed by some observations upon the splendid manufactories seen everywhere on the Nile, which Capt. Postans is of opinion prove only the harsh, monopolizing system of Mohammed Ali, and the real short-sightedness of his views of political economy, but do not take away from the misery of the Egyptian fellah; but on the contrary, saddle him with forced and ill-paid labour, and help to render the bulk of the population of one of the most productive countries of the world the most miserable. The writer sums up the comparative state of the inhabitants of the two countries, with the remark that the lamentable effects of the two opposite systems are visible in Egypt and Sinde: the former suffers from misplaced and unsuitable improvements; and the latter from the fact that there is no improvement at all.

HORTICULTURAL SOCIETY.—*April* 4, 18.—The Right Hon. Lady Dover, the Rev. G. C. Bethune, G. F. Girdwood, J. H. H. Atkinson, and J. F. Buller, Esqrs., were elected Fellows.—The display of plants, flowers, and fruits, was at both meetings unusually splendid. At the former a communication from Captain Dwyer, Commandant of the Island of Ascension, was read, containing an account of the success or failure of various kinds of European vegetables, seeds of which had been transmitted to the island. From this it appears that the island is subjected to what are there called "black winds," which prove destructive to haricots, several kinds of lettuces, and all the taller sorts of peas; of the latter, two dwarf kinds, viz. Pois nain dé Hollande, and Nain vert petit, stood the climate well, with the Versailles sugar, and Alphange cos lettuce, Batavian endive, Portuguese cabbage, and vegetable marrow. Amongst annual flowering plants, it is remarkable, that those which succeed best, are such as have been introduced from the N.W. parts of America, or from other comparatively cool climates. A paper, accompanied by a model, was also read from Mr. Torbron, relative to a new method of arranging sashes in forcing houses, so that when air is given, the light may not be intercepted by one sash overlaying the other. To effect

Digitized by Google

this, it is proposed (allowing the roof to be 15 feet wide) that the two lower sashes should each be 6 feet long, and the upper sash 3 feet; and that the rafters should be continued for a short space at the same angle over the back-wall; in giving air, the lowermost sash will slide downwards, the middle one will either remain stationary or move up or down as may be required, and the upper one will, by means of a pulley attached to the back wall, be drawn upwards along the projecting rafters—or, by having the sash secured at the back by hinges, it may be raised vertically by iron rods.

ENTOMOLOGICAL SOCIETY.*—*March.*—G. Newport, Esq., President, in the chair.—A large quantity of the singular acrial processes, from the roots of *Sonneratia acida* from Ceylon, was presented by R. Templeton, Esq. R.A., and which has been found very serviceable for lining insect cabinets. Professor Milne Edwards, of Paris, and M. Kollar, of Vienna, were elected Honorary Foreign Members, in the stead of Major Gyllenhal and Professor Andouin, deceased. Mr. Doubleday exhibited a volume of drawings of the larvæ of Lepidoptera, by Mr. Standish, jun., and Mr. F. Bond fine specimens of *Polyommatus arion* from Barnewall Wold; and Mr. Hope a fine series of Goliath beetles, of the genera *Rhomborhina* and *Trigonophorus*, including several new species recently received by him from India. Mr. Westwood exhibited a drawing of a small larva very destructive to housed beans. A letter was read from W. Spence, Esq., relative to the action of the pulvilli of flies and other insects, enabling them to walk upon upright or inverted surfaces; also descriptions of some new exotic Curculionidæ, from the Philippine Islands, by Mr. Waterhouse.

April.—The President in the chair.—Amongst the donations were a series of volumes presented by the Royal Society, and a large and singular ant's nest, found between the floor and ceiling of a cottage near Cobham Park, presented by Miss Combe. Mr. Saunders exhibited a large box of insects from New Holland: some of great rarity, including a fine large undescribed species of Rhipicera. Mr. Bond exhibited some specimens of Mr. Cuming's Manilla Curculionidæ; from which he had entirely removed the grease, and restored the brilliancy of the metallic scales, by plunging them into pure naphtha and then covering them with powdered chalk. Mr. Waterhouse read descriptions of some new exotic Curculionidæ, and Mr. Westwood the continuation of a memoir on the Geotrupidæ and Trogidæ.

ROYAL INSTITUTION.—*April* 7.—Prof. Faraday on Light and Ventilation.—The theatre was so crowded that many persons could not gain admission. The subject was interesting, not from any novel theory, but for the application of known facts to useful purposes, especially lighting and ventilating,—ventilation being here used in its common acceptation, as meaning only the mode of withdrawing, from places where human beings are to live, the bad air consequent on combustion, and so leaving the atmosphere in its natural condition, in which alone it can be beneficial to man. After some general remarks on the nature of combustion, the consequent formation of water and carbonic acid, Mr. Faraday described the new process for which his brother has taken out a patent, and exhibited a chandelier to which it had been applied. The ordinary glass chimney is first placed on the lamp, which is fed with external air, as usual: a second chimney, somewhat larger and taller, is then put on, and covered with a thin sheet of mica. In the space between the glasses there is no communication with the external air, except through what Mr. Faraday called an aërial sewer, which sewer is intended to carry off the heated and decomposed air, and is continued till the air is discharged outside the house, or into the flue of a chimney. In brief, the invention consists in the application of the down-drawing stove principle to a lamp burner. This arrangement, in the chandelier exhibited, formed a part of the central support, and was ornamental as well as useful.

SOCIETY OF ARTS.—*April* 12.—W. Tooke, Esq. V.P. in the chair.—Mr. Davis described his patent Stereoprism combination, as applicable to wood pavements, and for other purposes. This combination has already been applied in paving part of the carriage-way in Lombard Street. The mode of forming the paving blocks is by cutting a piece of timber 6 inches thick and 5½ inches wide, into lengths of 9 inches, the angle at which the blocks are cut being 36°. In each side, and in the sloped ends, a rectangular groove is cut three-fourths of an inch in width, and of similar depth, the bottom of the groove being 2 inches from the bottom of the block: into these grooves are inserted wooden keys 3½ inches in length, three-fourths of an inch thick, and 1½ inch in width, the use of which is to tie the blocks together, both longitudinally and laterally. A triangular groove, three-fourths of an inch wide, and five-sixteenths of an inch deep, is cut in the upper surface, in the direction of its length—and each row is put together so as to break joint throughout the work.

Mr. Whishaw read a paper on Mr. Jeffery's Marine Glue, the peculiar properties of which are, its being *insoluble* in and *impervious* to water, *elastic*, so as to expand or contract, according to the strain on the timber or the changes of temperature, sufficiently solid to fill up the joints and add *strength* to the timber construction, and *adhesive*, so as to connect the timbers firmly together. Several practical experiments have been made in Woolwich and Chatham Dockyards; among these may be mentioned the following:—Two pieces of African oak, 18 inches long by 9 inches wide, and 4½ inches thick, were joined together longitudinally by the marine glue, with a bolt of 1¼ inch in diameter, passed through each of them from end to end. The day after the marine glue had been applied, the blocks were tested by means of a hydraulic machine. A strain was applied to the extent of 19 tons, at which point one of the bolts broke, but the junction of the wood by the glue remained perfect. Two bolts of 1¼ inch in diameter were inserted on the following day, and the strain was again applied until it reached 21 tons, when one of the bolts was broken, the junction of the wood still remaining perfect, and apparently not affected. Another experiment was tried with two blocks of African oak of similar dimensions, but bolted in a different manner, so as to apply the strain at right angles to the junction made with the glue at the centre. The wood split at a strain of 5 tons, but the joint remained perfect. The glue in one case was applied to elm; it resisted a strain equal to 368 lb. on the square inch. This trial was made while the block was in a wet state, which state is considered most favourable for the effect of the glue. Several large pieces of timber were glued together and suspended to the top of the shears at the dockyard at Woolwich, at a height of about 70 feet above the ground. From that elevation they were precipitated on to the granite pavement, in order to test the effect of concussion; this wood was shattered and split, but the glue yielded only in one instance, in which the joint was badly made, and after the third fall. An experiment was made with reference to the composition being used as a substitute for copper sheathing. This composition was applied without poison to four sides of wooden blocks, and on two other sides it was applied in combination with poison equally destructive to animal and vegetable life. After the lapse of twenty-three months, these blocks were taken up, and were found to be covered with small shell-fish on the four unpoisoned sides, while the two sides charged with the poison were clean. The whole of the composition was slightly changed in colour, but was not deteriorated or affected in respect to its useful qualities. Another use consists in its application to the construction of masts. Its powers of adhesion and elasticity fit it for the purpose of joining the spars of which masts are composed. A great reduction of expense is likely to follow its adoption for this purpose, as shorter and smaller timbers may be rendered available, and most, if not all, the internal fastenings may be dispensed with. The mainmasts of the *Eagle*, a 50-gun ship, and of the *Trafalgar*, 120-gun ship, have been put together with this glue, and the mainmast of the *Curaçoa*, now reducing from a 32 to a 24-gun ship, are in progress of being joined. This invention may also be applied in the construction of dock-gates, sluices, piers, wooden bridges, &c.

Mr. Whishaw read a short account of the Great Pyramid of Gizeh, a model of which, made from the surveys and observations of Mr. Perring, C.E., was placed on the table. The Great Pyramid originally occupied an area equal to 588,939.595 superficial feet, or almost 13½ English acres, the side of the square being 767.424 feet. The original perpendicular height of this structure was 479.640 feet, and the total contents of solid masonry equal to 89,418,806 cubic feet, weighing 6,878,369 tons. Taking the masonry at only 1*s.* a cubic foot, including carriage, materials, and workmanship, the cost of such a structure would be 4,470,940*l.* Again, the masonry of the Great Pyramid would be sufficient for the erection of 1,120 columns, each 20 feet square, and of the height of the Monument of London, which is 202 feet; or, if cut into paving stones, 4 inches in thickness, would cover a space equal to 6,158 acres. The blocks of which this great work is composed are roughly squared, but built in regular courses, varying from 2 feet 2 inches to 4 feet 10 inches in thickness, the joints being properly broken throughout. The stone used for the casing of the exterior, and for the lining of the chambers and passages, was obtained from the Gebel Mokattam, on the Arabian side of the Valley of the Nile; it is a compact limestone, called by geologists "swine-stone," or "stink-stone," from emitting, when struck, a fetid odour, whereas the rocks on the Lybian side of the valley, where the Pyramids stand, are of a loose granulated texture, abounding with marine fossils, and consequently unfit for fine work, and liable to decay. The mortar used for the casing and for lining of the passages was composed entirely of lime, but that in the body of the Pyramid was compounded of ground red brick, gravel, Nile earth, and crushed granite, or of calcareous stone and lime, and in some places a grout or liquid mortar of Desert sand and gravel only has been used. It is worthy of especial notice that the joints of the casing stones, which were discovered at the base of the northern front, as also in the passages, are so fine as to be scarcely perceptible. The casing stones, roughly cut to the required angle, were built in horizontal layers, corresponding with the courses of the Pyramid itself, and afterwards finished as to their outer surface, according to the usual practice of the ancients. In order to ensure the stability of the superstructure, the rock was levelled to a flat bed, and part of the rock was stopped up in horizontal beds, agreeing in thickness with the courses of the artificial work. The passages leading to the chambers are not in a central line through the Pyramid, but 24 feet 6 inches to the east thereof: the principal passages are considerably inclined. In the King's Chamber is placed the sarcophagus, which is of granite, but the cover has altogether disappeared. The entrance to the King's Chamber was closed by three portcullises in the passage leading into it: the grooves in which they were worked were not in the first instance carried lower than the top of the passage; the blocks forming the portcullis were then inserted, and when required to be lowered the lower part of the grooves were cut out. Above the King's Chamber are the "Chambers of Construction," formed to take off the superincumbent weight from the roof of the apartment. The floor of each of these chambers is formed of granite blocks, composing the roof of that immediately below, and each block extends quite across the chamber, from north to south; the inclined stones forming the roof of the upper chamber are of limestone, from the Mokattam quarries. Besides the King's Chamber, there is another chamber, called the Queen's Chamber, at a lower level, and entered by a horizontal passage, leading out of the large inclined passage to the former. There is also a subterraneous apartment nearly under the central vertical line of the Pyramid, and which was discovered by Mr. Caviglia, in March, 1817: this is entered by an inclined passage, being a continuation and in the same direction as that which leads from the exterior of the Pyramid on the north side of the great passage. It appears that the whole of these passages had been closed up with blocks of stone, but which have been removed by the indefatigable exertions of those who have penetrated this vast mass of building. Two air channels are formed in inclined directions, and run from the bottom of

* The third volume of the Transactions of the Entomological Society contains descriptions and figures of the singular parasitic plants, growing on different species of larvæ, some of which were noticed in the *Athenæum* of the 1st of April, as having been sent by Prince Albert to the University of Bonn. A still more extraordinary species has since been figured by Sir W. Hooker.

the King's apartment—the one to the north, the other to the south face of the Pyramid.

April 19.—G. Moore, Esq. V.P. in the chair.—Mr. Potter, jun. described the process of silver plating, as practised at Sheffield. Plating on copper was first introduced in the year 1742, by Mr. T. Bolsover, a member of the corporation of Cutlers at Sheffield, who, when repairing a knife handle composed partly of silver and partly of copper, thought that it might be possible so to unite the two metals as to form a cheap substance, presenting an exterior of silver, which might be used for the manufacture of several articles which had hitherto been made entirely of silver. It was not till about forty years after the introduction of Mr. Bolsover's plan that the ornamented parts of plated articles, called mountings, were constructed of silver. This great improvement caused the manufacture of plated wares to become one of the staple trades of Sheffield. There are two important features in the process:—the one being a perfect adhesion of the two metals; the other a protection from wear of the prominent edges by friction. The process of manufacturing plated articles may be described as follows:—An ingot of copper being cast, and the surfaces carefully prepared by filing, so as to remove all blemishes, and a piece of silver, also having one surface perfectly cleansed, are tied together by means of an iron wire. A mixture of borax in water is then passed round the edges with a quill; the mass is then placed in a common air furnace, heated to a proper temperature, with a small aperture in the door for an inspection of this part of the process. As soon as the union of the two bodies is effected, which is known by the oozing of the metal, when the fusion of the two metals has taken place, the bar is removed. The quality of the silver used in this process is what is termed standard, containing about 18 dwts. of copper to the lb. troy. The effect of this amalgamation is to render the articles harder, and, consequently, more durable. The ingot being thus prepared, the next operation is to form it into sheets, which is effected by passing the bar several times through large cylindrical rollers, generally moved by steam power; the lamination which the silver undergoes during the operation of rolling, shows the perfect unity of the two bodies. From the sheet of metal the article required is manufactured by hammering chiefly, but also by stamping when the shape is very irregular; the article, if hollow, being filled with pitch, the receding parts are forced inwards, so that the projecting parts remain of the thickness of the sheet before being wrought, while the sunken parts are somewhat reduced in thickness. The dies for forming the ornamental part of plated articles consist of blocks of steel, on the face of which the pattern of the ornament is accurately drawn, after which the dies are moderately heated in an open fire, and then placed upon a leathern sand-bag; the die-sinker then proceeds to cut out the ornaments with hammer and chisel; when sunk to the proper depth, the surface of the sinking is dressed off, and prepared for the ornaments to be stamped in. The stamp consists of a vertical frame of iron, the uprights of which are formed with grooves, in which the hammer or drop slides; the foundation of this machine consists of a square stone, on the upper surface of which is fixed an iron anvil, to which the uprights are firmly attached. The hammer is raised by a rope passing over a pulley fixed in the head-piece of the frame. The die is placed on the anvil immediately under the hammer, and is kept in its proper position by screws. A luting of oil and clay is then placed round the edge of the sink of the die, and melted lead is poured into the cavity; when cool, the hammer is allowed to fall upon the lead, to which it firmly adheres by means of a plate of iron, roughed as a rasp, and which is called the lick-up. The silver used for the purpose and the mountings is also of the standard quality, and is rolled to the required thickness; several pieces of the requisite size are then placed between pieces of copper of the same substance, and put upon the face of the die; the hammer is then raised, and allowed to fall gently upon them; this operation is continued for some time, gradually increasing the fall of the hammer, and diminishing the number of pieces struck until they are forced to the bottom of the die; it is necessary occasionally to anneal the mountings; the mounts being struck as described, are now filled with solder, consisting of tin and lead, and afterwards secured by wires to the article to be ornamented, the body being covered with a mixture of glue and whiting, to prevent the solder from staining the surface; they are then soldered on by means of a hydro-oxygen blow-pipe; the article is next boiled in a solution of pearl-ash or soda, and scoured with fine Calais sand; the mounts are polished by a lathe, as silver articles, with rotten-stone and oil, then cleansed with whiting, and finished with rouge; a scratch brush, of brass wire, is used for deadening the parts required, and the plain surfaces are burnished with tools of bloodstone or steel, soap and water being used in this operation, which is performed by women.

Election of officers for the ensuing year.—*President*, H.R.H. the Duke of Sussex. *Vice-Presidents*, H.R.H. Prince Albert, Duke of Northumberland, Duke of Sutherland, Duke of Buccleuch, Marquis of Northampton, Earl of Romney, Earl of Radnor, Earl Stanhope, Earl of Shrewsbury, Earl of Harrowby, Earl of Dartmouth, Lord Western, Viscount Lowther, Rt. Hon. Sir R. Peel, W. Tooke, T. Hoblyn, G. Moore, A. W. Tooke, R. Twining, B. Rotch, J. Hume, B. B. Cabbell, W. H. Hughes, W. Pole, P. M. Roget, M.D., D. Pollock, W. H. Bodkin, Esqs. *Secretary*, F. Whishaw, Esq.

MEETINGS FOR THE ENSUING WEEK.

Sat.	Asiatic Society, 2, P.M.
—	Botanic Society, 4.
Mon.	Geographical Society, half-past 8.
—	Statistical Society, 8.
—	Society of British Architects, 8.
Tues.	Institution of Civil Engineers, 8.—'An account of the Brick-making at Blechingly Tunnel during the Winter of 1840 and Summer of 1841,' by F. W. Simms.—'Description of a Cast Iron Bridge, completed in 1840, for carrying the Birmingham and Gloucester Railway over the River Avon,' by Capt. Moorsom.
—	Zoological Society, 8.—Scientific Business.
Wed.	Geological Society, half-past 8.
—	Society of Arts, 8.—Mr. Cooke's Electrical Telegraph will be described.
—	Medico-Botanical Society, 8.
Thur.	Royal Society, half-past 8.
—	Royal Society of Literature, 3.—Anniversary.
—	Numismatic Society, 7.
Fri.	Royal Institution, half-past 8.—Dr. Miller's 'Illustrations of the Theory of Bleaching.'

FINE ARTS

Le Keux's Memorials of Cambridge. 2 vols. Tilt & Bogue.

This work is now brought to a close, and forms two handsome volumes. The price, considering the number of the illustrations and the manner of their execution, constitutes its claim to public support; but neither the plates, for the most part, nor the literary portion of the work, rise beyond the character of respectability. The latter, indeed, can scarcely be said to have even this distinctive character, for it is little more than a skeleton of facts collected from Fuller and other writers on the University: not sufficiently ample to supersede reference to the authorities, and wanting in such peculiar characteristics of treatment as might give it an interest of its own. It has much the air of a compilation written to order, without sympathy with the subject. The same formula answers for the account of every college. First comes its history, then a notice of its buildings, written, seemingly, with but little knowledge of architecture: then lists of its more eminent members and benefactors, with brief details of the patronage attached. This sort of skeleton work may be advisable in a book of reference, but is sadly wearisome for continuous reading. Now Cambridge is, and ever must be, a subject of interest; and any writer who should take up any one of the many branches here glanced at—the history of the colleges, the biography of the members, or the architecture of the buildings—and treat it as a labour of love, might produce, not merely a useful work but one of permanent interest. We have spoken of the lack of architectural knowledge, inexcusable in treating on one of the richest architectural cities in the country: thus the church of St. Botolph is described as "a *good* building, consisting of a nave and a chancel, with *side* aisles" (could the aisle, or wing, be anywhere but at the side?): we are told that the New, or Gisborne Court, of St. Peter's College, "was built in the *Gothic style*:" the buildings of Clare Hall are named with nice precision, as a good specimen of the architectural style of the beginning of the seventeenth century. The "Combination room" of Clare Hall is, without any grounds being stated, called "one of the best in the University." These specimens are enough to show, that the architectural inquirer must not look to the 'Memorials' for specific information as to its buildings.

The engravings, though unequal and often formal, are faithful, and some of the drawings, by Mr. Mackenzie, exquisite for their extreme delicacy of expression of form, though sometimes wanting in picturesqueness of effect. This objection holds throughout against the wood-cuts.

MUSIC AND THE DRAMA

Her Majesty's Theatre.—It was a good calculation on the part of the management, to introduce Madame Grisi, after a two years' absence, in the operas which have recently been so successful in London—thanks to our own *prima donna*. But we must add, that never did Miss Kemble's 'Norma' stand so high in our good graces as on Tuesday evening. It will not do, however, to compare voices. Madame Grisi's is still the richest, most flexible, most powerful *soprano* within our knowledge; though some of its tones be produced with greater effort and anxiety of countenance than formerly: her figure and face have grown matronly since she last appeared: her acting has not lost in passion, neither has it gained in intelligence. The reception given to her was very warm. Due honour, too, was paid to the *Adalgisa* of Mdlle. Molteni, which was excellent both as to singing and action. The *Oroveso* of Lablache is as ever, noble, and imposing. Rumours of tricks played by Time with this incomparable artist have come by dozens from France; they seemed to us on Tuesday only so many fictions devised for the excuse of Parisian inconstancy. On Thursday Sig. Fornasari's great trial and Signora Brambilla's reappearance "came off," in 'Semiramide,' which was given with great care and splendour. We are sorry, however, to say, that the new *Assur* failed to satisfy our hopes and expectations; and this not so much in the general conception of the part, as in the execution of its details, by which the vocalist takes rank, and in which he is unquestionably far inferior to Tamburini; since, while not flinching from a single roulade or division however arduous, scarcely one was finished, and, in more than one, the intonation of the singer was false. All this, however, may be amended, and is in a fair way of being so, by the companionship in which the new *basso* is now exhibited. Six years have passed over Sig^a. Brambilla since our poet sung her praises; nor passed harmlessly over her voice: on the other hand, she is six years richer in taste and executive power. Madame Grisi was magnificent as the Assyrian Queen: her voice has never been in finer order, her execution never more brilliant; while the maturity of her face and figure add truth to the personation. One word more: the current cast of 'Semiramide' has been extravagantly vaunted; it seems to us neither so strong as when it was given with Madame Albertazzi and Tamburini, nor as on its last production, with Madame Viardot for *Arsace*. We have only a line to add, that an entire series of novelties and revivals makes the *ballet* more than ever attractive. There is one step in 'The Gipsy,' by Mdlle. Fanny Elssler, worth "a wilderness" of aimless posture-dances.

Drury Lane.—The adventures of 'Fortunio and his Seven Gifted Servants' are the subject of the Easter entertainment; but the fairy tale, instead of being decked out with the choicest flowers of poesy that the dramatist's fancy could furnish, and its wondrous incidents represented in good faith with the mightiest magic that the stage Prospero could command, is travestied in doggrel rhyme—its romance turned into ridicule, its moral exchanged for political allusions, and its fanciful conceits for parodies of popular ditties and slang phrases. Alas for the romantic associations of fairy legends! That fabulous lore is not deemed "meat for babes" in these days of grim realities, literal facts, and unimaginative feelings: the very urchins of the nursery, fresh from the juvenile scientific library, would regard it as too puerile. We must confess to a sneaking kindness towards the old romantic fairy spectacles, such as 'Cherry and Fair-Star,' that used at Easter-tide to revive the recollections of childhood so pleasantly: they were as welcome as the absurdities of pantomime, before burlesque introductions robbed the harlequinade of its fun, and left the motley crew but the limbs and mask of

Digitized by Google

drollery. But such things would be despised in this day, and we can only get a glimpse of the marvels of Mother Bunch through a quizzing-glass: the very fairies who emerge from flowers, must be dressed in court costume, with wings sprouting from their velvet coats; and even dragons must be droll. The success of these elegant extravaganzas, which are set off with the utmost splendour of scenery and costume, is, however, so complete, owing not only to the magnificence of the spectacle, but to the witty pleasantries of the dialogue, that their popularity, which dates from the time of "Olympic Revels," is likely to continue unimpaired: and most amusing are the whimsical incongruities and grotesque fancies of this comic version of 'Fortunio,' by the author of 'The Sleeping Beauty,' and other kindred productions. The achievements of Strongback, Tippler, Gormand, Lightfoot, Fine-ear, Marksman, and Boisterer, are exhibited in so effective a way, as to satisfy the demands of the most exacting: the fountain is emptied of water and filled with wine in a twinkling, and the dragon not only swills it dry, but performs such antics in his drunkenness as to throw the house into convulsions of laughter—Mr. Stilt is the name of his inner man. Mr. Selby, as the *Emperor Matapa the Merciless*, is frantically fierce and tyrannical, the very impersonation of northern despotism; Mr. Hudson, as the jovial *King Alfourite*, and Mrs. C. Jones, as his cruel sister, the *Princess Vindicta*, are a happy pair of opposites; while Miss P. Horton, as *Fortunio*, is as gay and dashing a young spark as ever wore cloak and doublet, to say nothing of her singing, and the arch playfulness with which she pointed the jokes of the dialogue. Nor should the clever dancing of Miss Webster be forgotten, nor the ingenious manner in which the race-course, and the feats of swallowing a stack of loaves and carrying impossible burdens are represented. A new *Othello*, Mr. G. V. Brooke, and a new play by Sheridan Knowles, called 'The Secretary,' were announced for this week, but have been postponed—the play till Monday next only, the tragedian *sine die*.

COVENT GARDEN, alone, closed its doors against the crowd of fun-seekers; but they open on Monday with Madame Eugenia Garcia in 'La Sonnambula;' and on Wednesday Madame Ronzi di Begnis and Herr Staudigl will appear in 'Norma.'

The HAYMARKET re-opened on Monday with an embellished interior, lighted with gas for the first time, and the excellent comedy company of last season; which includes Madame Vestris, Mrs. Glover, Mr. Farren, and Mr. C. Mathews, in addition to the usual corps. The proscenium has been reformed, and the appearance both of the stage and audience part is much improved by this change alone; the busts and portraits have also been removed, and tasteful groups of figures in colour are the only ornaments save the gilt mouldings on the fronts of the boxes: the new chandelier gives to the house a lively aspect; and the fawn colour of the panelling mellows the light, which is abundant without being glaring. The pit benches are fitted with backs; and two rows of stalls invite those who like to see the paint on stage faces, and do not object to the din of the orchestra. The 'School for Scandal' was selected for the opening night, as showing off the company to advantage; and on Tuesday a *débutante*, Miss Bennett, appeared as the *Widow Cheerly* in that intolerably insipid comedy, 'The Soldier's Daughter.' The young lady possesses an agreeable person, and natural gaiety of manner: she seems accustomed to the stage, and won the suffrages of the audience. We shall be glad to see her confirm the favourable impression in some part that affords better opportunities of testing her intelligence in reading and embodying a character.

The PRINCESS'S THEATRE, too, catered for the amusement of the holiday folks, in the modern style, 'The Three Graces' being the theme of burlesque, and Messrs. Wright, Bedford, and Oxberry, the efficient agents of the practical jokes, aided by the antics of Wieland, as Pan.

The Minor Theatres, whose proceedings are not food for critical digestion, have contributed the usual variety of Easter entertainments; and "Astley's" is itself again, under the auspices of Mr. Batty, who has taken the reins of equestrian management that Ducrow let drop, and reared not only a stud of horses, but an amphitheatre to exhibit them, which is described as being more spacious for the steeds and commodious for the visitors than before—at least, as regards seeing. The campaign in Affghanistan was the subject of the piece, and Lady Sale and Lord Ellenborough were duly represented in military pageant.

ST. JAMES'S THEATRE.—*French Plays.*—The pieces selected for performance on Easter Monday were more than usually amusing. The first was one of the most popular and wholesome of the recent Parisian novelties, 'Les Mémoires du Diable'; the second one of the richest farces ever presented on any stage—none other than 'Le Père de la Débutante,' with M. Vernet in the principal character. 'Les Mémoires' is a tale of intrigue, vicissitude, folly kept in order by successful audacity, and injured innocence defended—with a dash of legendary superstition, to remove the drama from the list of common-place romances, in which a lawyer's clerk is the *Deus ex machinâ*, and a bundle of forgotten parchments the conjuror's book of gramarye. The Gentleman in Black is fairly acted by M. Rhozevil. It is a part, the effect of which is secured by *nonchalance*; and what can be more easy to the actor? Madame Doche (whose beauty, we must whisper, does not bear out the reputation which crossed the channel before her) seems, at all events, to be of our opinion. Her pathos is weak, her coquetry pointless, and her dialogue wants emphasis. M. Cartigny's personification of a faithful servant of the decayed family, who restricts himself, by vow, to two words, for fear of betraying a secret, and hence is considered an idiot, is clever—the best piece of acting in this intricate and amusing drama. But we grudge every line taken from the space due to the Father of the Actress. A grave essay might be written upon M. Vernet as an artist; a comic library furnished from his looks, gestures, and exclamations. Never was anything so eager, so shabby, so enthusiastic, so redolent of "lamp-oil and orange-peel": never were the real father and the stage father, professional and parental pride, mingled in such a delicious and probable confusion!—never was audience kept in such a *roar* of animation: whether *Gaspard* be seen in the ragged glory of his home-anticipations—or in the skill of stage diplomacy, cajoling the manager, replacing the missing functionary of the drum, and finally planting the Prodigy in the arena of triumph—or encouraging his treasure to declaim the dramatist's bad language in the dramatist's presence—or on the momentous occasion when the damsel comes to trial, and is accepted by the public of Paris amongst its sworn favourites! Not a detail is neglected, nor yet a comicality exaggerated; the amount of humour and high spirits brought to the task being little less than that which Bouffé exhibits in the incomparable 'Gamin de Paris.' The farce, too, of its broad kind, is a capital one. The Parisians have a strange pleasure in mocking at themselves, and laying bare to common day knaveries and pretensions, the destruction of which, one would think, must destroy one good half of their comfort in life. Thus M. de Balzac, a literary man, is never so happy as when he can bring French literature and criticism into disrepute in his novels;—and thus we are indebted to the showing of MM. Théaulon and Bayard how Pretension gets the prize, and trumpery is made to pass for true metal, and dramatic genius and success are alike a *humbug*, for one of the most amusing *vaudevilles* of the French comic stage.

MISCELLANEA

Paris Academy of Sciences, April 10.—Letters relating to the comet were first read. According to the conclusions of MM. Laugier and Mauvais the curve described is a parabola. The comet of 1843 is, of all the comets known, the nearest to the sun. On the 5th ult., when it was at its nearest point to the earth, it was still distant from us 32 millions of leagues. The nebulosity, which formed the head of the comet, had a diameter of 38,000 leagues, and was therefore 1,700 times larger than the earth.—A paper was read from M. Ebelmen, respecting the production and use of gas in the preparation of iron. By means of a gas generator of a new construction, M. Ebelmen has arrived at the following results. In producing gas by means of coal and cold air, the oxygen of the air changes completely into oxyde of carbon. The temperature of the gas which escapes from the generator is superior to that of the fusion of antimony. As soon as steam and air are introduced the proportion of combustible gas augments in the gaseous mixture but the temperature at the time of leaving the generator is lowered. The quantity of steam which can be introduced into the generator is necessarily limited, and depends on the quantity of heat furnished by the apparatus. The quantity of carbon used in employing steam is a little less for each litre of gas produced than if air was used. The only inconvenience of steam is the lowering of the heat in the pipes of the generator, which in some cases would be serious. The heat required for fusing is 300 degrees. By the new generator of M. Ebelmen it is easy to obtain this heat, but it must not be exceeded, for in that case the pipes would become red hot, and produce oxyde. The waste heat may be again used for the production of steam for the generator, or heating the air, which is to serve for the fusion of the metal.—M. Arago announced the receipt of a letter from M. de Lamarche, from Manilla, informing him that he had succeeded in penetrating into the interior of the island of Luçon, and inclosing a description of the volcano of Baal.—A new instrument, by M. Aimé, for extracting sea water at enormous depths for philosophical experiment was laid before the Academy. This instrument contains a reservoir filled with mercury. On being thrown to the depth required by a line and other apparatus, the mercury is displaced by a spring, and the reservoir is filled with water. In one of the experiments performed by M. Aimé, he drew some water from the sea at the depth of 2,000 mètres, or half a league. He was desirous of ascertaining whether the quantity of air contained in the water of the sea increased with the depth. It results from the trials made, that the quantity does augment down to a certain depth, and then decreases gradually, until the quantity of air is no greater than that at the surface.—A paper was received from M. Bisson, on a modification which he had made in the apparatus of the Daguerréotype, and which consists in the suppression of the mercurial box. He puts upon a plate of zinc, well cleaned of the proto-iodine of mercury, two drops of nitric acid, applied with a wadded-ball (tampon), which forms a brilliant amalgam, and gives to the plates of zinc the appearance of silver. The plate thus prepared is placed before the frame which contains the impression obtained in the camera-obscura, and occupies the place of the violet obscurator, the plate of amalgamated zinc facing the impression at a distance of 5 or 6 millimètres. A temperature of 12 to 15 deg. Centigrade suffices to mercurialize the impression.—A very long paper on the precious metals of Mexico by M. Saint-Clair Dupont was read, but it adds little to the information already obtained on this subject.

American Periodical Literature.—By extracts in your journal you have given currency—some value even—to the 'Remarks and Figures' with which Messrs. Wiley & Putnam defend American literature against alleged mis-statements of "Mr. Alison, Mr. Dickens, and the *Foreign Quarterly Review*." "Remarks," when they happen to be silly, answer themselves well enough, but "Figures," when false, do not. This is my excuse for asking your insertion of these few lines in reply to a statement which I copy from the *Athenæum* of the 1st instant. "The *Foreign Quarterly* article on the Newspaper Press of the United States (endorsed by Mr. Dickens), has at its head as text, the names of *eleven* newspapers (out of about 1,600 in the country), while at least nine-tenths of the censurable extracts, to prove the writer's views, are from *one* paper, the *New York Herald*: and from *eight* out of the eleven, not a *single line* is quoted, either for praise or censure!" The "censurable extracts" in the article consist of about 318 lines. Of these, 85 lines are from the *New York Herald*, and 233 from other journals. Of the 11 newspapers given as the text of the article, 6 are quoted, and the remaining 5, though unquoted, are not undescribed. In the course of the article, 15 other newspapers are referred to (four by name), and passages given. As many hundreds might have been quoted, no doubt, could anything have seemed to justify the production, beyond what was strictly called for, of matter offensive to decency and good taste.

Yours, &c., THE EDITOR OF THE 'FOREIGN
London, April 20. QUARTERLY REVIEW.'

Dover.—Another blast took place on the 18th. It proved proportionately successful in its effects with the great one, the particulars of which were kindly communicated to us by Sir John Herschel (*ante*, p. 111). The present blast consumed upwards of 10,000 lb. of gunpowder.

TO CORRESPONDENTS.—We have received a long letter from Prof. Taylor, which we do not publish, because it does not disprove a single statement in our last week's paper. The opinions of his musical correspondents, as to the value of the passage extracted from Luca Marenzio, do not seem to us to touch the question. It was one to be decided by the Madrigal Society, and has been decided against Prof. Taylor.

Now ready at all the Libraries, in 3 vols.

THE KING'S SON;
A ROMANCE.
Edited by Mrs. HOFLAND.
Henry Colburn, Publisher, 13, Great Marlborough-street.

On Monday, in one volume, post 8vo. price 10s. 6d.

PAST AND PRESENT.
By THOMAS CARLYLE.
Chapman & Hall, 186, Strand.

TITMARSH IN IRELAND.—NEARLY READY,

THE IRISH SKETCH-BOOK.
By Mr. M. A. TITMARSH.
With numerous Engravings on Wood, from the Author's Designs.
2 volumes, post 8vo.
Chapman & Hall. 186, Strand.

Just published, a new edition of

ADAM BLAIR and MATTHEW WALD.
In one volume, price 6s. cloth.
By the Author of 'Valerius,' and 'Reginald Dalton.'
Forming a Volume of Blackwood's Standard Novels.
Wm. Blackwood & Son, 45, George-street, Edinburgh; and 22, Pall Mall, London.

This day is published, a new edition, complete in one volume, small 8vo. price 7s. 6d. cloth, of

MEN AND MANNERS IN AMERICA.
By the Author of 'Cyril Thornton.'
With a Portrait of the Author, and Letters written by him during his Journey through the United States.
Wm. Blackwood & Son, 45, George-street, Edinburgh; and 22, Pall Mall, London.

This day is published, in fcap. 8vo. price 6s. cloth,

THE MAN O' WAR'S MAN.
By BILL TRUCK,
Senior Boatswain of the Royal College of Greenwich.
Originally published in 'Blackwood's Magazine.'
Wm. Blackwood & Sons, 45, George-street, Edinburgh; and 22, Pall Mall, London.

This day, in 8vo. price 3s.

JOHN of HAPSBURG. A Tragedy.
By RICHARD LEWIS, Esq.
John Murray, Albemarle-street.

SYSTEMATIC COLONIZATION.
This day is published, fcap. 8vo. price 6d.

THE SPEECH of CHARLES BULLER, Esq. M.P., in the HOUSE of COMMONS, on Thursday, 6th April, 1843, on SYSTEMATIC COLONIZATION.
John Murray, Albemarle-street.

Nearly ready,

NATIONAL GALLERY.—An Edition of Felix Summerly's CATALOGUE of the NATIONAL GALLERY, with Reminiscences of the Pictures, drawn expressly from the Originals by Messrs. J. J. and W. Linnell.
G. Bell, 186, Fleet-street.

Just published in post 8vo. handsomely bound in cloth, price 7s. 6d.

THE BOTANICAL LOOKER-OUT among the WILD FLOWERS of the Fields, Woods, and Mountains, of England and Wales: forming a familiar Monthly Guide for the Collecting Botanist.
By EDWIN LEES, F.L.S.
London: Tilt & Bogue, Fleet-street; H. Davies, Montpellier Library, Cheltenham: and sold by all other Booksellers.

RAILWAYS.
Price 9s. illustrated with Woodcuts and Engravings,

A PRACTICAL TREATISE on RAILWAYS, being the article under that head in the Seventh Edition of the Encyclopædia Britannica, with additional details.
By Lieutenant LECOUNT, R.N. F.R.A.S. C.E.
Of the London and Birmingham Railway.
Adam & Charles Black, Edinburgh; Simpkin, Marshall & Co.; Whittaker & Co.; and Hamilton, Adams & Co. London.

Nearly ready, in demy 8vo.

MODERN PAINTERS: their superiority in the Art of Landscape Painting to all the Ancient Masters proved by examples of the True, the Beautiful, and the Intellectual, from the Works of Modern Artists, especially from those of J. M. W. TURNER, Esq. R.A.
By a GRADUATE OF OXFORD.
London: Smith, Elder & Co. 65, Cornhill.

LADY CHATTERTON'S NEW WORK,
In 2 vols. 8vo. with Illustrations,

THE PYRENEES, with EXCURSIONS in SPAIN, WILL BE PUBLISHED ON WEDNESDAY, the 26th.
Saunders & Otley, Publishers, Conduit-street.

THE NEW WORK, 'MAGIC and MESMERISM,' in 3 vols. post 8vo., WILL BE PUBLISHED ON MONDAY NEXT.
Saunders & Otley, Publishers, Conduit-street.

THE THIRD VOLUME OF MR. JAMES'S

LIFE of RICHARD CŒUR DE LION.
Is nearly ready for delivery.
Also, lately published, the First and Second Volumes, and Mr. James's New Romance, FOREST DAYS, and MORLEY ERNSTEIN, or the Tenants of the Heart.
Saunders & Otley, Publishers, Conduit-street.

On the 1st of May, demy 8vo., price 12s. cloth.

VOL. VIII. of COLLIER'S SHAKESPEARE.
The Text formed from an entirely New Collation of the Old Editions, with their various readings, Notes, a Life of the Poet, and a History of the Early English Drama.
Contents of Vol. VIII.—Antony and Cleopatra—Cymbeline—Pericles—and the Poems.
The First Volume, containing the Life, and the History of the Stage, and the remaining three plays, will be ready in the course of the summer.
The type is the largest and handsomest used for twenty years for any edition of the Works.
Whittaker & Co. Ave Maria-lane.

FAMILIAR ASTRONOMY.
By GEORGE DARLEY, A.B., Author of a System of Popular Geometry, &c. 12mo. with Engravings, 5s. cl. lettered.
"There is a vast deal of astronomical information conveyed in a most winning and unassuming manner in this delightful little volume, which, not less for the novelty of its plan, than the extent of its intelligence, reflects infinite credit on the taste and talents of its projector and editor, Mr. Darley."—*Sun*, April 5, 1839.
Taylor & Walton, Booksellers and Publishers to University College, 28, Upper Gower-street.

MR. SHERIDAN KNOWLES'S NEW PLAY.
Price 2s.

THE SECRETARY: A PLAY in FIVE ACTS.
By JAMES SHERIDAN KNOWLES.
Also, in 3 vols. price 31s. 6d. cloth,
KNOWLES'S DRAMATIC WORKS.
Edward Moxon, 44, Dover-street.

SIR E. L. BULWER'S POEMS.
Now ready, Third Edition, small 8vo. price 5s.

EVA—THE ILL-OMENED MARRIAGE, AND OTHER TALES AND POEMS,
By Sir E. L. BULWER, Bart.
Author of 'Eugene Aram,' 'Rienzi,' &c.
Also, in 3 vols. post 8vo.
ZANONI.
"An eloquent and thoughtful book."—*Examiner*.

Just published, in 1 vol. 8vo. 15s. cloth.

A LEXICON to ÆSCHYLUS, containing a CRITICAL EXPLANATION of the MORE DIFFICULT PASSAGES in the SEVEN TRAGEDIES. By the Rev. W. LINWOOD, M.A., Student of Christ Church, Oxford.
Printed for Taylor & Walton, 28, Upper Gower-street.

DARLEY'S SCIENTIFIC LIBRARY, for the Use of Schools, Private Students, Artists, and Mechanics.
It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics, these little works will be found particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind, and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

1. A System of Popular Geometry. Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading Truths and general Principles. By George Darley, A.B. Fourth Edition. 4s. 6d. cloth.

2. Companion to the Popular Geometry. In which the Elements of Abstract Science are familiarised, illustrated, and rendered practically useful to the various purposes of Life, with numerous Cuts. Second Edition. 4s. 6d. cloth.

3. A System of Popular Algebra, with a Section on Proportions and Progressions. Third Edition. 4s. 6d. cloth.

4. A System of Popular Trigonometry, both Plane and Spherical; with Popular Treatises on Logarithms, and the Application of Algebra to Geometry. Second Edition. 3s. 6d. cloth.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, Article 'Mechanics.'*
Taylor & Walton, Booksellers and Publishers to University College, 28, Upper Gower-street.

Fourteenth edition,

HINTS for the IMPROVEMENT of EARLY EDUCATION and NURSERY DISCIPLINE. 1 vol. fcap. price 3s. 6d. cloth.
"I think I may say, that of all men we meet with, nine parts out of ten are what they are, good or evil, useful or not, by their education."—LOCKE.
London: J. Hatchard & Son, 187, Piccadilly.

PYPER'S GRADUS.
Now ready, demy 12mo., price 7s., cloth lettered.

GRADUS AD PARNASSUM, sive Novus Synonymorum, Epithetorum, Versuum, ac Phrasium Poeticarum, Thesaurus. Editio Nova, curante GULIELMO PYPER, A.M. in Scholâ Regiâ Edinensi Magistro.

It will be issued in FOUR QUARTERLY PARTS, price 10s. 6d. each, the first of which will be ready for delivery with the Magazines on the 1st of May. Orders received by all Booksellers.

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

UNPUBLISHED LETTERS OF HORACE WALPOLE.

In the press, 3 vols. 8vo. with Portraits from Original Paintings, &c.

LETTERS OF HORACE WALPOLE,
EARL OF ORFORD,
TO SIR HORACE MANN,

H.B.M. RESIDENT AT THE COURT OF FLORENCE,
From the Year 1760 to 1785.
NOW FIRST PUBLISHED FROM THE ORIGINAL MSS.

Concluding Series.

In the year 1833 the late Lord Holland confided the care of editing these Letters to the late Lord Dover. At that time it was thought advisable to terminate the publication at the period of the death of George the Second, on the ground, that some of the immediate descendants of the persons of whom anecdotes are given might be then alive. A period of ten years has elapsed since that publication; and we are now enabled, by the decision of the surviving executor of the late Earl of Waldegrave, with the concurrence of the present Earl, to lay before the public the remainder of this celebrated Collection, which extends over a period of thirty years, embracing the most striking events in modern English History.

RICHARD BENTLEY, New Burlington-street,
(Publisher in Ordinary to Her Majesty.)

Just ready, 2 vols. 8vo. with Portraits and other Illustrations,

GEORGE SELWYN AND HIS CONTEMPORARIES,

COMPRISING

HORACE WALPOLE.	ANTHONY MORRIS STORER.	LADY EMILY HERVEY.
THE DUKE OF QUEENSBERRY.	EARL OF FIFE.	LADY DIANA BEAUCLERK, &c.

WITH NOTES AND ILLUSTRATIONS.

By J. HENEAGE JESSE, Esq.
Author of 'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover.'

This body of Letters, illustrative of the Court Life, Town Life, and the fashionable Card and Jockey Clubs of St. James's during the latter half of the last century, is now nearly ready for publication. These letters, like those of Horace Walpole's, (for they are of a congenial spirit,) are full of anecdotes, *bon-mots*, *persiflage*, and the more *recherchée* gossip of the times. At the head of the writers stands Walpole's friend, inimitable George Selwyn, the idol of the then existing fashionable Clubs. With his Letters are included Epistles (hitherto unpublished) of that remarkable knot of personages, male and female, whose peculiar character, humour, and wit, gave so distinctive and so thoroughly English an aspect to the court and fashionable circles during part of George the Third's reign.

Prospectuses, and every other information, may be obtained by applying at the Offices, No. 24, Lombard-street, City.

STANDARD LIFE ASSURANCE COMPANY. Established 1825, and constituted by Act of Parliament.
LONDON—39, Lombard-street.
EDINBURGH—3, George-street.

Particular attention is directed to the mode in which this Company divide profits, as most advantageous to the best class of lives. A new pamphlet has been published, illustrating the principle of division, which can be had at the Company's Office, No. 22, Lombard-street, London; or from any of the Agents.

Non-participation rates upon a reduced scale.

PETER EWART, Resident Secretary.

N.B. Assurances can be effected in the most private and confidential manner.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heyrate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 36, Old Jewry, London.

Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.	Arthur Helps, Esq.
James Mackillop, Esq.	Thomas E. Headlam, Esq.
J. Phillimore, Esq. D.C.L.	Robert J. Grigg, Esq.
W. Wilkinson, Esq.	G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.
Solicitors—Messrs. Ogle & Younghusband.

The peculiar advantages offered by this Company are:—

1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.

2nd. A Table peculiarly fitted for policies for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.

Every information may be obtained at the Offices, at Whitehall, and 36, Old Jewry.

The usual Commission to Solicitors and Agents.

GEO. BICKNELL, Resident Director.

LEFT-OFF WEARING APPAREL, NAVAL and MILITARY UNIFORMS, &c., WANTED TO PURCHASE, either in large or small quantities, for exportation, for which a liberal price in cash will be given. Gentlemen waited upon at any part of London and its environs, by addressing a line (post free) to L. M., No. 8, Brydges-street, Covent-garden.

FOUNTAINS, VASES, TAZZAS, FIGURES, &c. in Marble, Artificial Stone, and Parker's Cement, to be seen at WYATT, PARKER & CO.'S WHARF, Holland-street, Surrey foot of Blackfriars-bridge. Also, a large Collection of Chimney Shafts, Pedestals, Capitals, Consoles, Trusses, &c.

WALTERS' HYDRO-PNEUMATIC ENEMA SYRINGE.—This newly-invented Instrument is admitted by the first surgeons of the day to be superior to all others. It is syringe and reservoir in itself, less than half the size of any others that hold the same quantity, and gives a continuous jet of any force required, and free from air. Price 1*l.* 11*s.* 6*d.*—J. Walters, 16, Moorgate-street, Bank, London.

H. PAPE, Pianoforte-maker to his Majesty the King of the French, 106, New Bond-street.—PATENT GRAND, SQUARE, CONSOLE, and TABLE PIANOFORTES.—H. PAPE, in opening the above establishment, trusts that his instruments will command in this country the same preference they have enjoyed on the Continent for the last 25 years. The sale of nearly 4,000 of them is the best proof of the superiority of his new system of construction, in which the hammer, contrary to the usual mode, strikes the string downwards. The excellence of these instruments for keeping well in tune, for obedience and elasticity of touch, and for their great solidity, is now well known, and a FAIR examination will prove that they are also far superior to all pianofortes of the ordinary construction in power and sweetness of tone. Amongst those at present in the ware-rooms may be seen a Grand Piano of eight octaves, as well as a very remarkable Square, covered with one single sheet of ivory. This was the most remarkable pianoforte present at the Grand National Exhibition at Paris; and for it H. Pape obtained the Gold Medal, and was created, by His Majesty, Chevalier of the Legion of Honour.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

DR. GREEN'S SULPHUR, FUME, MEDICATED, and VAPOUR BATHS, 40, Great Marlborough-street.—For more than twenty years Dr. Green's attention has been directed to the remedial agency of baths of different kinds upon the human body; and for the same length of time he has superintended an Establishment for their due and proper administration.

Judiciously employed, Fume and Vapour Baths are beyond all question, invaluable as principal or auxiliary means in the treatment of many kinds of chronic disease, particularly Rheumatism and Rheumatic Gout, Affections of the Skin, and impaired functions of the great Abdominal Viscera.

These Baths are accessible at all hours of the day to the public at large, and to members of the medical profession, with their patients, in cases where it is desirable that the medical attendant should witness and direct the administration of the bath.

H. WALKER'S NEEDLES (by authority the Queen's Own), in the illustrated Chinese Boxes, are now in course of delivery to the trade. The needles have large eyes, are easily threaded (even by blind persons), and have improved points, temper, and finish. Each paper is labelled with a likeness of Her Majesty or H.R.H. Prince Albert, in relief, on coloured grounds. Every quality of needles, fish-hooks, hooks and eyes, steel pens, &c. for shipping. These needles or pens for the home trade are sent free by post, by any respectable dealer, on receipt of thirteen penny stamps for every shilling value. H. Walker, Manufacturer to the Queen, 20, Maiden-lane, Wood-street, London.

ELECTRO-PLATED and GILT ARTICLES.—ELKINGTON & Co., patentees, beg to announce, that to meet the increasing demand for this manufacture, they have OPENED an ESTABLISHMENT at No. 22, REGENT-STREET (CORNER OF JERMYN-STREET), where every variety of articles for the Sideboard, Dinner, Dessert, and Breakfast tables may be inspected. They have also a similar assortment at their City Establishment,

No. 45, MOORGATE-STREET, CITY,

where they have a MANUFACTORY for PLATING and GILDING, RE-PLATING and RE-GILDING, ARTICLES of every description, and of ALL METALS.

With reference to articles of their manufacture, the patentees beg to state, that they differ from all goods hitherto offered as "plated goods," or "substitutes for silver," being made in the same manner as SOLID SILVER, from which they cannot be known, and being also composed of a hard white metal, strongly coated with silver, by the Electro process.

Silver articles of every kind or pattern exactly copied.

Every article made by the patentees or under their licence bears their stamp. (E. & Co. below a crown.)

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 138 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

CHARLES F. BIELEFELD respectfully informs ARCHITECTS, BUILDERS, DECORATORS, &c. that he has re-published his Quarto Volume, with a Tariff, at a very reduced price, viz. 20*s.* (formerly 2*l.* 2*s.*) containing nearly 1000 patterns of ARCHITECTURAL ORNAMENTS in every style, principally from designs by eminent architects. The ornaments may be had manufactured in the improved PAPIER MACHÉ, at the Works, 15, Wellington-street North, Strand. The book will be forwarded to the country on receipt of a Post Order for 20*s.*

"This is unquestionably a most valuable invention."—*Literary Gazette.*

"We deem it a duty to make as widely known as possible one of the most admirable inventions of the present day; we allude to the Papier Mâché of Mr. Bielefeld," &c. &c.—*Court Journal.*

"A large Quarto Volume on the use of the improved Papier Mâché in Furniture, the interior Decoration of Buildings, &c., has been placed in our hands; and certainly until we had perused its preface, and glanced over its pictured contents, we had no conception of the number of purposes for which paper was available. Every possible description of Ornaments for ceilings, cornices, panelling, mouldings, &c., which, from the lightness and durability of the material, and susceptibility of high finish, are more than twice the value of any composition."—*Observer.*

"Mr. Bielefeld has shown not only the use of Papier Mâché, but its beauty, so clearly, as to make his volume a sad temptation to persons of more taste than fortune."—*Athenæum.*

"Its lightness, sharpness of outline, and flexible tension of substance, render it, at all events, of incalculable value as a substitute for plaster and wood-carving, or rather as a *vast improvement* on either."—*Polytechnic Journal.*

Papier Mâché Works, 15, Wellington-street North, Strand.

BUTLER'S COMPOUND CONCENTRATED DECOCTION, or FLUID EXTRACT of SARSAPARILLA, is the original of the now numerous concentrated preparations of the kind. A dessert spoonful of it, diluted with water, makes half a pint of the compound decoction, of the same strength and composition as that ordered by the British Pharmacopœias. It is prescribed as an alterative in scrofula, scurvy, eruptions of the skin, and all cutaneous diseases; also has been found extremely useful in chronic rheumatism, in secondary symptoms, and after an improper use of mercury.

Prepared and sold in pint bottles 10*s.*, half-pints 10*s.*, and quarter-pints 5*s.* 6*d.*, by Thomas Butler, Chemist, 4, Cheapside, (corner of St. Paul's Churchyard.) London; and may be obtained of J. Sanger, 150, Oxford-street; Davenport & Co. Waterloo-place, Edinburgh; or, by order, through any respectable Druggist.

*** No. 4, Cheapside, the corner of St. Paul's Churchyard, No connexion with any other establishment of the same name.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—Robt. Shaw, London." is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.*, 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

ROWLAND'S MACASSAR OIL, under the Special Patronage of Her Most Gracious Majesty, the Royal Family, and the several Courts of Europe.—This Oil has acquired celebrity for its truly extraordinary efficacy and fecundity in nourishing, preserving, and beautifying the Human Hair. It imparts an additional vigour to the roots, together with a glossy brightness, and a beautiful tendency to curl. For inducing an accelerated growth of Whiskers or Moustaches, the MACASSAR is unfailing in its stimulative operation. In reference even to the Hair of early childhood, the use of the Oil is found attended with the happiest effects.—Mild, invigorating, stimulative, and purifying, it materially assists in dispelling scurf or dandriff, and renders supererogatory the use of the fine-comb. Price 3*s.* 6*d.*, 7*s.*, Family (equal to four small) 10*s.* 6*d.*, and double that size 21*s.* per Bottle.

CAUTION.—Ask for 'ROWLAND'S MACASSAR OIL,' and see that those words are on the Wrapper, as much pernicious trash is now offered to the Public as 'MACASSAR OIL' by Perfumers of apparent respectability.

Sold by the Proprietors, A. ROWLAND & SON, 20, Hatton-garden, and by Chemists and Perfumers.

A CATALOGUE OF BOOKS,

Published by CHARLES KNIGHT & Co.

FOR 1843,

May be had at 22, LUDGATE-STREET, and of respectable Booksellers.

SEVERAL of the more important of the Serial Publications in the Catalogue are rapidly approaching to their completion. The limits of these Works, namely, the PENNY CYCLOPÆDIA, the PICTORIAL EDITION of SHAKSPERE, the PICTORIAL HISTORY of the REIGN of GEORGE the THIRD, and the LONDON, have now been strictly defined, and will be rigidly adhered to by the Editors and the Publishers. The number of volumes, therefore, and the price of each completed Work, are given in the Catalogue, and the exact period is stated at which each will terminate.—It is requested by the Publishers that the order for any selection from their Catalogue may be given through a Bookseller.

THE PENNY CYCLOPÆDIA

OF

The Society for the Diffusion of Useful Knowledge.

THIS important work, which has been in course of publication during eleven years, under the direction of one editor, will be completed in twenty-seven volumes, in December, 1843. Twenty-five volumes are already published, at 7*s.* 6*d.* each volume, bound in cloth. The price of the complete work so bound, will be TEN POUNDS; and half-bound in russia, in fourteen volumes, Twelve Guineas.

The name of the Penny Cyclopædia was derived from its original issue in a weekly sheet, when a work of much less magnitude was contemplated. A work of 14,000 pages was not in the first instance proposed. From its commencement it has been supported by a great body of contributors, eminent in their respective departments, and its articles, in many of the great branches of knowledge, are regarded as authorities, and have acquired celebrity wherever the English language is read. The character of the work has gradually, therefore, surmounted the prejudices which were excited in some quarters by its title; and the word "Penny" is now received as indicative only of its extreme cheapness. Every article in the work is an original contribution, paid for at a rate to secure, as far as payment is concerned, the highest talent and knowledge, not only of this country, but of foreign states. The literary expenditure alone upon each volume has exceeded 1200*l.*, making a total of 33,000*l.* In addition, the work is fully illustrated with Woodcuts, the cost of which has amounted to more than 8,000*l.*, making a total cost for literature and art of more than FORTY THOUSAND POUNDS. The Penny Cyclopædia may therefore, as a standard work, enter into competition in the great essentials of fulness and accuracy with any existing Cyclopædia, whatever may be its cost. It is especially valuable as a work of reference, as all the arts and sciences are to be found according to their subdivisions in the alphabetical arrangement, and yet the subjects are so treated that the general principles and facts involved in each article may be traced in connexion with other cognate articles. The following are the names of the gentlemen by whose labours this undertaking has been carried on:—

Editor—GEORGE LONG, A.M.,

Late Fellow of Trinity College, Cambridge, and Professor of Latin in University College, London.

Contributors.

G. B. Airy, F.R.S., late Fellow of Trinity College, Cambridge, Astronomer Royal—Gravitation, &c.
Rev. W. Aitken—General Literature.
Dr. A. Allen (late)—Classical Literature.
C. C. Atkinson, Sec. to Univ. Coll. London—University College, London, and University of London.
W. Ayrton—Music and Musical Biography.
C. Baker, Doncaster—Deaf and Dumb, Topography, &c.
Rev. F. Baker—Topography, &c.
W. Baley, M.D.—Medicine.
Dr. Barnes, Carlisle—Topography.
Rev. J. Beard, LL.D., Manchester—Topography, &c.
Capt. Beaufort, R.N., Hydrographer to the Admiralty—North Sea.
Dr. Becker (late), Berlin—Ancient Medical Biography.
E. W. Benson—Arts and Manufactures.
Rev. Dr. Biallobłotzky, German Examiner at the University of London—Biblical Literature.
Rev. D. G. Bishop, Master of Buntingford Grammar School—Classical Literature.
A. Bisset, Barrister-at-Law—Biography, English Law.
P. Von Bohlen (late), Professor of Oriental Languages and Literature in the University of Königsberg—Oriental Literature.
S. V. Bone, Barrister-at-Law—English Law, Fine Arts.
J. Bowman—General Literature.
T. Bradley—Arts and Manufactures.
J. Breeze—Arts and Manufactures.
J. Britton, F.A.S.—English Antiquities.
W. J. Broderip, B.A. F.R.S. F.L.S. &c.—Zoology, Mammalia, Birds, Reptiles, Crustacea, Mollusca, &c.
G. Budd, M.D.—Medicine.
F. Burr—Mining.
Rev. C. J. Burton, M.A., Vicar of Lydd, Kent—Biography.
W. D. Christie, Trin. Coll. Cambridge, M.P.—Morals, Philosophy, Biography.
W. B. Clarke, Architect—Architecture.
T. Coates, Sec. of Society for the Diffusion of Useful Knowledge—English Law, Biography, &c.
H. Cole—Statistics.
W. D. Cooper, F.A.S.—Topography.
Edward Cowper, of King's College—Arts and Manufactures.
W. Coulson, Surgeon—Surgery and Anatomy.
G. L. Craik, A.M.—History, Bibliography, Biography, General Literature.
R. Cull, Stammering, &c.
Dr. Curtis, L.L.D.—Ecclesiastical Law.
Professor Davies, Woolwich—Compass, &c.
J. F. Davis, F.R.S., late His Majesty's Chief Superintendent in China—China.
J. P. Davis—Fine Arts.
H. Davison, Barrister-at-Law—English Law.
Sir H. De la Beche, F.R.S., For. Sec. G.S.—Geology.
A. De Morgan, Trin. Coll. Camb., and Prof. of Mathematics in University College, London—Mathematics and Astronomy.
George Dennis—Spanish Topography.
S. Desprat—Spanish and Portuguese Literature, &c.
W. R. Deverell—Topography, &c.
Hon. Capt. Devereux, R.N.—Naval Biography, &c.
J. Devlin—Manufactures.
R. Dickson, M.D.—Materia Medica.
G. Dodd—Arts and Manufactures.
Dr. Domeier, Trin. Coll. Cambridge—Modern Medical Biography, &c.
Rev. J. W. Donaldson, late Fellow of Trin. Coll. Cambridge, Master of the Grammar School at Bury St. Edmund's—Classical Literature.
B. F. Duppa (the late Barrister-at-Law)—Legal Biography.
C. L. Eastlake, R.A.—Basso Relievo; Bologna, School of.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 809. LONDON, SATURDAY, APRIL 29, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 11. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

KING'S COLLEGE, London.—SCHOOL.—The SECOND TERM will begin on MONDAY, the 1st May, when new Pupils will be admitted.
25th April, 1843. J. LONSDALE, Principal.

UNIVERSITY COLLEGE, London. — The PROFESSORSHIP of NATURAL PHILOSOPHY and ASTRONOMY in this College will become VACANT at the end of the present Session (30th June, 1843,) in consequence of the resignation of Professor Potter, who has accepted the Professorship of Mathematics at King's College, Toronto.

Candidates for the appointment are requested to send in applications and testimonials to the Council on or before the 16th May next. CHAS. C. ATKINSON,
Jan. 14, 1843. Secretary to the Council.

SOUTH LONDON UPPER SCHOOL for SINGING, conducted by Mr. MAY, in connexion with the Upper School at Exeter Hall.—The Members meet for practice every Friday Evening, from 8 to ½ to 10 o'clock, at the spacious School Room adjoining Surrey Chapel.

Terms 4s. 6d. per quarter; the Members providing themselves with such Numbers of Mr. Hullah's Part Music as may be required.

STUDIO, or COMMITTEE-ROOM, 13, Bruton-street, Berkeley-square.—TO BE LET (at 120l. per annum), on the Ground Floor, a large and lofty ROOM, and a Room adjoining, suitable for an Artist or a Committee Room, with an Office for a Secretary. It has a distinct entrance from the vestibule, and is inclosed by mahogany folding-doors.—Particulars and cards to be had of Mr. Cox, Surveyor, No. 106, New Bond-street.

ROYAL MANCHESTER INSTITUTION.—The ANNUAL EXHIBITION of PICTURES in Oil and Water Colours, Specimens of Sculpture, and Casts, Architectural Designs, and Proof Impressions of Modern Engravings, will OPEN on the 1st June next (instead of in the Autumn). Works of Art intended for exhibition must arrive at the Institution not later than the 10th to the 20th May. No carriage expenses will be paid by the Institution, except on works from those Artists to whom the exhibition circular has previously been forwarded.

Artists in London are referred to Mr. GREEN, 14, Charles-street, Middlesex Hospital.

The following Prizes are offered:—

The Heywood Medal in gold, to the Artist of the best Oil Painting, size not less than 4 feet, by 3 feet 10 inches.

The Heywood Medal in silver, and 10l. in money, to the Artist of the best Water Colour or Ornamental Drawing, size not less than 30 inches by 20 inches.

T. W. WINSTANLEY, Hon. Sec.

AND OTHER COLLECTED TALES.
By G. P. R. JAMES, Esq.
2 vols. post 8vo. 21*s.* boards.

4.
THE HOME;
Or, FAMILY CARES AND FAMILY JOYS.
By FREDERIKA BREMER,
Authoress of 'The Neighbours.' Translated by MARY HOWITT. 2 vols. post 8vo. 21*s.* boards.
*** The Second Edition of 'The Neighbours' is just ready.

5.
ON THE LAYING-OUT, PLANTING, AND MANAGING OF CEMETERIES,
And on the IMPROVEMENT of CHURCHYARDS.
By J. C. LOUDON, F.L.S. &c.
Author of 'The Encyclopædia of Gardening.' &c.
8vo. with 60 Engravings, 12*s.* cloth.

6.
THE LIFE OF A TRAVELLING PHYSICIAN,
From his first Introduction to Practice.
3 vols. post 8vo. 31*s.* 6*d.* cloth.
"A very amusing book. The Physician is worthy of his calling, being a highly-accomplished, good-natured, and agreeable companion. He paints a portrait with touches of lively truth, is fond of homely and minute details, and never mounts on stilts to get out of the reach of things he looks at. Above all, he does not intrude anything but the graces of his profession upon you. There is as little of physic in the *Travelling Physician* as there was of the Bible in the *Bible in Spain.* He has that love of letters, and of all liberal and humane pursuits, which is identified with the name of physician. He has an undoubted talent for the quiet side of humour, and great shrewdness of observation."
Examiner.

7.
AN INTRODUCTION TO ENTOMOLOGY;
Or, ELEMENTS of the NATURAL HISTORY of INSECTS.
Comprising an Account of Noxious and Useful Insects, of their Metamorphoses, Food, Stratagems, Habitations, Societies, Motions, Noises, Hybernation, Instinct, &c. By W. KIRBY, M.A. F.R.S. and L.S., Rector of Barham; and W. SPENCE, Esq. F.R.S. and L.S. Sixth edition, corrected and considerably enlarged. 2 vols. 8vo. with five coloured Plates, 31*s.* 6*d.* cloth.
*** The first two (or popular) volumes of the 'Introduction to Entomology' are now published as a separate work, distinct from the third and fourth volumes; and, though much enlarged, at a considerable reduction in price, in order that the numerous class of readers who confine their study of insects to that of their manners and economy, need not be burthened with the cost of the technical portion of the work, relating to their anatomy, physiology, &c.
"Let no man think he knows how to enjoy the country who has not studied the volumes of Kirby and Spence's delightful 'Introduction.'"—*Quarterly Review.*
"This work, the delight of our youth, and the admiration of our mature age, is well known as the most entertaining account of insects ever put into a popular form."
Dr. Lindley in the *Gardeners' Chronicle.*

8.
AN INTRODUCTION TO THE MODERN CLASSIFICATION OF INSECTS.
By J. O. WESTWOOD, F.L.S. &c.
Intended as a Sequel to Kirby and Spence. 2 vols. 8vo. with about 2500 Figures, 2*l.* 7*s.* cloth.

NEW BOOKS AND NEW EDITIONS

REVIEWS

History of the House of Commons. Vol. I. By C. Townsend, Esq. Colburn.

'The History of the House of Commons' was a promising mould to cast a book in; and considering the variety of matter and anecdote connected with the subject, no very great proficiency in the craft of book-making was necessary to produce a readable work. Accordingly, the volume before us contains a great deal of entertaining gossip about senates and senators, without having very decided claims to the title of a *history* of the House of Commons. Had the author entitled it 'Anecdotes of the Speakers of the House of Commons from the Convention Parliament,' he would have somewhat more accurately described the subject-matter of his first volume. Under such a title, he might unquestionably have given a series of valuable illustrations of the growth, progress, and changes of the popular branch of the legislature; but instead of making the anecdotical method strictly auxiliary to an historical purpose, he often strings together a multiplicity of biographical details, with little or no reference to the illustrious assembly whose annals he professes to record. By way of specimen, take the sixth chapter, chiefly devoted to a rambling sketch of Sir Thomas Hanmer, elected Speaker of the House of Commons which assembled in February, 1714. We find nearly twelve pages of this chapter taken up with the particulars of Sir Thomas's edition of Shakspeare, and the squabbles between him and Bishop Warburton! By what association of ideas can this have any relevancy to the history of the House of Commons? nor do we see any stronger reason for dedicating a couple of pages to Isabella, Duchess of Grafton, whom Hanmer married at twenty-one. An octavo, however, must be filled; and an extract from Evelyn's Diary, followed by another from Swift's, in which the Duchess is described as "wearing a great high head-dress and looking like a mad woman in it," answers the purpose to admiration. It would have been a little more germane to the proposed subject, had Mr. Townsend told us what sort of stuff Mr. Speaker's robe was made of, for robes of state are state-matters, and have their political bearings and importance.

The first chapter glances over the Speakers before the Revolution, from Sir Thomas Hungerford, in the reign of Henry III., who is the first named as Speaker in the rolls of parliament, and termed *parlour*, or the mouth of the House. To go no farther back than the age of Elizabeth, how far remote from the taste and style of the present day, is the following address of Sir Edward Coke, upon his nomination to the chair:—

"'Although, as in the heavens,' said the lawyer to Queen Elizabeth, 'a star is but *opacum corpus* until it have received light from the sun, so stand I *corpus opacum* until your highness' bright, shining wisdom hath looked upon me and allowed me. In this House are many grave, many learned, many deep, wise men, and those of ripe judgments; but I am untimely fruit, not yet ripe, but a bud scarcely blossomed, so as I fear me your majesty will say, amongst so many fair fruit ye have plucked a shaken leaf.'"

The manners of the House at this period appear to have been on a par with its taste in rhetoric. The little indecorums of the senators of Washington at the present day appear to be only the manners of the parent state at the close of the sixteenth century:—

"The following scene, some years later, most graphic in its description of the homely members and their modest head, is painted to the life. Meeting to go through the form of choosing a speaker with all proper solemnity, the comptroller of the household, 39 Elizabeth, Sir William Knolls, said, 'I will deliver my opinion unto you who is most fit for this place, being a member of this House, and those good abilities which I know to be in him' (here he made a little pause, *and the House hawked and spat*, and, after silence made, he proceeded). 'Unto this place of dignity and calling, in my opinion' (here he stayed a little) 'Mr. Seargeant Yelverton' (looking upon him) 'is the fittest man to be preferred' (after which words Mr. Yelverton blushed, and put off his hat, and after sat bareheaded), 'for I know him to be a man wise and learned, secret and circumspect, religious and faithful, no way disable, but every way able to supply this place.' He then sat down, hoping for a general consent."

We cannot forbear to quote the speech of Mr. Sergeant Yelverton upon this occasion, particularly for its quaint delineation of the *personnel* of a Speaker:—

"The whole House cried, 'Aye, aye, aye, let him be,' and the master comptroller made a low reverence and sat down; and, after a little pause and silence, Mr. Sergeant Yelverton rose, and, after a very humble reverence, said: 'Whence your unexpected choice of me to be your mouth, or speaker, should proceed, I am utterly ignorant. If from my merits, strange it were that so few deserts should purchase suddenly so great an honour. Nor from my ability doth this your choice proceed, for well known it is to a great number in this place now assembled, that my estate is nothing correspondent for the maintenance of this dignity; for my father dying left me a younger brother, and nothing to me but my bare annuity. Then growing to man's estate, and some small practice of the law, I took a wife, by whom I have had many children, the keeping of us all being a great impoverishment to my estate, and the daily living of us all nothing but my daily industry. Neither from my person nor nature doth this choice arise, for he that supplied this place ought to be a man big and comely, stately and well spoken, his voice great, his courage majestical, his nature haughty, and his purse plentiful and heavy; but, contrarily, the stature of my body is small, myself not so well spoken, my voice low, my carriage lawyer-like and of the common fashion, my nature soft and bashful, my purse thin, light, and never yet plentiful.'"

In the courtly reign of Charles II., we find the following piquant dialogue between a Speaker and a member of the House:—

"'Some time after the speaker told Colonel Birch that it was indecent for him to brush his beard without a looking-glass;' to which Birch replied, 'You would not think it so if you had a beard to brush!'"

Here is a sample of the absurd pedantry which survived the Restoration:—

"The crabbed old Presbyterian knight, Sir Harbottle Grimstone, just absolved from the guilt of rebellion, harangued the king on 'the monsters, who had been guilty of blood, precious blood, precious, royal blood,' and declared 'we must needs be a happy Parliament, a healing Parliament, a reconciling and peace-making Parliament, a Parliament *propter excellentiam* that may truly be called *Parliamentissimum Parliamentum*.'"

Sir Harbottle's grammatical blundering reminds one of the *Parliamentaria brevia*, which Major Cartwright in our own times translated "short parliaments."

Roger North's account of the origin of Sir John Trevor, Speaker of James II.'s solitary House of Commons, is amusing:—

"He was bred a sort of clerk in old Arthur Trevor's chambers, an eminent and worthy professor of the law in the Inner Temple. A gentleman that visited Mr. Arthur Trevor, at his going out, observed a strange-looking boy in his clerk's seat (for no person ever had a worse sort of squint than he had), and asked who that youth was: 'A kinsman of mine,' said Arthur Trevor, 'that I have allowed to sit here to learn the knavish part of the law!' This John Trevor grew up, and took in with the gamesters, among whom he was a great proficient, and, being well grounded in the law, proved a critic in resolving gaming cases and doubts, and had the authority of a judge amongst them, and his sentence for the most part carried the cause."

It is little surprising to find this same Trevor, when a private member of the house, speaking as follows upon a proposition to disfranchise the borough of Stockbridge for bribery, and transfer its two members to a neighbouring constituency:—

"I never heard of boroughs dissolved before. I am afraid, if this question pass, you, Mr. Speaker, and I, shall sit no more in that chair. I have the honour to serve for a borough in Devonshire (Beeralston), for which I am obliged to a member of the House (Maynard), and to the gentlemen of that county. If you break the ancient constitution of elections, I know not the consequence. The security of the nation was ever thought to lie in the mixture of this House. What shall then become of merchants to inform you of trade? The House stands upon ancient constitutions, and I hope you will not remove old land-marks."

Avowals little less barefaced were made in the same House only a few years ago; but we have long outlived the depravity of which the following is a flagrant instance. Trevor took a bribe of 1,000 guineas from the city of London for his services in procuring the passing of an act of parliament. The House came to the following resolution, which Trevor must himself have read from the chair! His letter to the House, the next day, is a curiosity:—

"The House, after a careful perusal of these and other documents, establishing the guilt of the accused beyond cavil, came to a unanimous resolution, upon reading which even the countenance of Trevor must have worn a hue of shame: 'That Sir John Trevor, speaker of this House, receiving a gratuity of 1000 guineas from the city of London, after passing of the Orphans Bill, is guilty of a high crime and misdemeanor.' The next day, an incensed and curious House found their meeting for business impeded by the following letter, inclosed in one to the clerk:—

'Gentlemen, I did intend to have waited upon you this morning; but, after I was up, I was taken suddenly ill with a violent cholic. I hope to be in a condition of attending you to-morrow morning; in the mean time I desire you will be pleased to excuse my attendance. I am, with all duty, gentlemen, your most obedient, humble servant, J. Trevor, speaker. March 13, 1694–5.'"

Abortive attempts were made at still later periods to corrupt the Speakers of the House of Commons; one so late as the Speakership of Mr. Addington. The first case alluded to in the following extract was an attack on the purity of Sir Thomas Hanmer:—

"This correspondence was no sooner closed than the speaker had to communicate to the House a letter from some Irish adventurer, of a less honourable character. He stated that the day before he had received a letter, signed by one John Quin, with a petition inclosed, drawn in a form to be presented to the House, in which letter was contained a scandalous offer of a sum of money to be paid to him upon passing such an act of parliament as was desired in the said petition. The letter being read, John Quin was ordered to be sent for immediately in the custody of the serjeant-at-arms, and was afterwards examined. Next day, the luckless intriguer presented a petition to the House, acknowledging his offence, as committed by him through inadvertency and ignorance, being a stranger, and unacquainted with the method of obtaining acts of parliament, begging pardon of Mr. Speaker and the House for his offence, and praying to be discharged out of custody. It was ordered, that he be brought up on Monday morning next to the bar of the House, where, having upon his knees received a reprimand from the speaker, he was ordered out of custody, paying his fees. The corrupt notions of ignorant individuals linger through many a generation. About a century later, a similar communication was addressed to Mr. Addington by a scheming tinman of Plymouth, who offered the speaker 2000*l.* down for some office in the dock-yard, and was justly requited for his impudence by an ex-officio prosecution, and six months' imprisonment in Newgate."

Digitized by Google

The author might have retrenched with propriety two-thirds of his memoir of Harley, Earl of Oxford, as having little more connexion with the history of the House of Commons than Hanmer's edition of Shakspeare. We should, indeed, have suggested quite another method to a parliamentary historian, namely, to have made some division of the subject under the several heads of manners, morality, privileges, eloquence, political importance, progress of intelligence, or the like, and under each compartment to have traced from the earliest records the changes of character produced by the lapse of time, and the growth and gradual developement of the institution.

But taking the book as it is, let us extract one or two more passages of interest, before we lay it down. It appears from the following that the wages formerly paid to the representatives of the people, were sometimes not even paid in money. There was a kind of truck-system at Dunwich, for example!

"Thrifty boroughs and economical corporations appear to have been in the habit of driving hard bargains with their would-be members. There has been preserved a curious indenture of agreement between John Strange, member for Dunwich, and his constituents, so far back as A.D. 1463, by which it is witnessed that 'John Strange granteth by these presents to be one of the burgesses for Dunwich, at the parliament to be holden at Westminster, for which, whether it hold for longer time or short, or whether it fortune to be prorogued, the said John Strange granteth no more to be taken for his wages than a cade full of herrings, and a half-barrel full of herrings, to be delivered on Christmas next coming.' Still better terms were insisted on, with the progress of refinement, by the cunning corporation of Westbury. 'One Thomas Long, a very simple man, and unfit to serve, had crept into queen Elizabeth's parliament of 1571. When questioned how he came to be elected, he confessed "that he gave the mayor of Westbury and another, 4*l.* for his place."' The House was greatly shocked, in those primitive days, at the notion of their member paying, instead of being paid, for a seat, and immediately ordered the mayor and town council to disgorge the money, to appear to answer such things as should be objected against them, and to suffer a penalty of 20*l.* for their scandalous attempt."

In the reign of Edward II., and long afterwards the wages of a knight of the shire was four shillings a day, and of a burgess two shillings. To this was added a charge for going and returning, which appeared the more reasonable, when parliaments were held capriciously at Westminster, Carlisle, or York. The smaller boroughs and poorer counties grumbled loudly at these burthens, and often would fain have renounced the honours of representation to keep their shillings in their purses. Upon the more opulent constituencies various statutes (one of the 35th Henry VIII.,) confirmed this imposition. The members of the Rump received four pounds a week each. The custom continued after the Restoration; but in 1617, Sir Harbottle Grimston brought in a bill to repeal the statute of wages: there was a strong opposition to it, but it obtained a second reading in a singular manner:—

"'The loss of wages,' Sir John Birkenhead argued, 'is the only punishment the law has made for the absence of parliament-men from their attendance.' 'Sir Richard Temple would have the bill go without a day for a second reading. 'Tis a reflection on the House to discharge the wages by law; it should be a free-will offering. Wages have been scarce received these eighty or one hundred years.' 'Some in the House,' said Waller, and the amiable poet might glance at his own condition, 'some are so poor, and some of the boroughs so rich, that to force men not to take wages would not be equal justice.' The manner in which the bill came to be read a second time forms a striking proof of members' sensibility to shame. 'It endured a long argument,' writes Marvel to his constituents, 'insomuch, that when the question was put for a second reading, a gentleman who had disapproved of the bill, deceiving himself by the noise of the negative vote, required the division of the House, but so considerable a number of the affirmatives went out for it, that all the rest in a manner followed after them, notwithstanding their own votes, and there were scarce either tellers, or men to be told, left behind, so that it will have a second reading.'"

The bill was dropped, but the usage had received its death-blow. Andrew Marvel was the last who exacted the stipend and the annual barrel of ale from the citizens of Hull, upon which Mr. Townsend justly observes:—

"It is no reproach to the memory of Andrew Marvel, that he should have been the last who exacted the provisions of the old statute, for he preferred honest poverty to a courtier's corrupt wealth, and the cold meat of yesterday to luxurious viands at the expense of his country's freedom. The patriot who spurned Danby's bribe of a note for 1000*l.*, when that corrupt minister scaled his garret, might well demand his shillings from a body of constituents to whose interests he devoted his time, and whose public rights he would not sell or barter."

We shall take one more extract—an account of the origin of the privilege of franking:—

"The privilege of franking letters was one of the very few honorary distinctions which members of the House of Commons retained at the passing of the Reform Bill. The sending and receiving letters free had become a mark of consideration, and, whilst the loss to the revenue was not considerable, the gratification this boon afforded to the privileged class of conferring little favours should not be lightly esteemed. It seemed the *quiddam honorarium*—the distinguishing sign—the graceful apanage of an M.P. The history of its introduction is curious, for, in company with many prized distinctions, it had ignoble origin in the Pensioner Parliament of Charles II., in a settlement of the revenues of the post-office. When Colonel Titus reported the bill, Sir Walter Erle delivered a proviso for the letters of all members of parliament to go free during their sitting. Sir Heneage Finch said it was a poor, mendicant proviso. The question being called for, the speaker, Sir Harbottle Grimstone, was unwilling to put it, saying he was ashamed of it, nevertheless the proviso was carried. The restriction of this privilege to the period of parliament's sitting was speedily overlooked in practice, and for half a century members enjoyed a licence of writing free over any number of post-office letters, and of enclosing franks in parcels to be used by their friends and constituents for any period of time, and of any weight."

The style of Mr. Townsend's book has the merit of being unambitious; he avoids the common folly of labouring by dint of pompous style to give an air of originality to a work of compilation. Our quarrel is confined to the want of a clear method and to the inordinate space devoted to personal anecdotes, not directly bearing upon the subject. He will, however, find many readers less severe upon this point, and who will perhaps think his book only the more pleasant reading for the disarray in which the materials are presented. The few quotations we have made have been given more for their intrinsic curiosity, than as specimens of Mr. Townsend's performance. The best chapters in the volume are those upon the freedom of debate, and on the lawyers of the House of Commons.

The Baronetage for 1843: *being a Genealogical Account of the Families forming the Sixth Degree of Dignity Hereditary or High Nobility in the British Empire.* By Sir Richard Broun, Eq. Aur., K.J.J., Hon. Secretary of the Committee of the Baronetage for Privileges. Cunningham & Mortimer.

IT may be in the recollection of our readers, as it undoubtedly is in that of Mr., *alias Sir* Richard Broun, that, some time since (Nos. 655, 657), we exposed the absurdity of the claims made by a few Baronets, in conclave assembled, under the direction of that learned gentleman, to a variety of titles, honours, and distinctions, on the pretence that the objects sought were incidental to their Order, in the threefold characters of nobility, baronets, and knights!

Mr. Broun's present lucubrations demand our attention on several grounds. First, because they record the sequence of those proceedings of the Baronets which we have noticed; secondly, because his book is a new "Baronetage;" and, thirdly, because the public has rarely witnessed so audacious or so illegal an attempt to obtain honours, as has been made by "the Committee for Privileges" of the Baronetage, and its Honorary Secretary.

A literary journal has little concern with the duty which would seem to be imposed upon the Government to resent the insult thus offered to its authority; but it may observe that if these gentlemen are permitted to assume distinctions to which they have no more right than to be called dukes, or to sit in the House of Peers, and if every vain and silly person may take a title which had been properly refused him, the royal prerogative in these matters may as well be transferred from St. James's to the Clarendon Hotel; and the sooner people really entitled to honours lay them down the better.

Mr. Broun's 'Baronetage' is dedicated to the Prince of Wales; and his reasons for the dedication are all, in one way or another, referred to the "rights" of the "Baronets." The author, having taken offence at the Queen's refusal to sanction the pretensions of the Baronets and his own, is pleased to attribute His Royal Highness's creation, and other honours, not to his royal mother, but to "the grace of God,"—"by the Grace of God Knight and Baron of Renfrew;"—a formulary hitherto reserved for sovereigns and independent princes.

The Introduction contains Mr. Broun's version of the history of the dignity of Baronets which is followed by a 'Baronetage,' and an Appendix, consisting of a list of the 110 Baronets who form the "Committee of the Baronetage for Privileges, founded 15th July, 1840," and the names of the functionaries of the Association, viz., the Treasurer, the Secretary and Registrar, *Bankers!* Herald Painter, Badge Maker, Riband Maker, and Uniform Maker. A long "exposition" then occurs, attempting to show that "Baronets are privileged to augment their arms with such exterior heraldic ornaments as indicate baronial and equestrian dignity," together with the proceedings of the Committee after this "exposition" had been inflicted upon them by the "Hon. Secretary." The subsequent proceedings of that body, and of a general meeting of the Order follow, and a note is added on the right of Baronets to the style of "The Honourable." Some woodcuts are introduced, showing the *coronet* which the conclave have assumed (which differs in nothing from a baron's except in having fewer balls), and the arms of a Baronet of England, Ireland, and Nova Scotia," each "*given as exemplifying the mode of charging the arms of the Baronets, as regulated by the Committee of the Order for Privileges*"! These engravings represent the arms *without* the special and only distinction assigned in the patent of the founder for Baronets, but with two Equites Aurati as *supporters*, a mantle, a *coronet*, a collar of S.S., and a riband and badge. All these "extra scutal additamenta," to use Mr. Broun's jargon, have been solemnly approved of by his Committee, *notwithstanding the Crown had positively refused to admit the claim to any one of them.*

The grounds for this impudent assumption were so fully discussed in our former articles on the subject, that it is only necessary to refer to

Digitized by Google

them. Our present extracts and remarks will, therefore, be confined to the new matter in Mr. Broun's work. His account of the rights and distinctions belonging to Baronets is thus given:

"Nobility in the British Monarchy may justly be divided into four sorts—1st, PEERAGE NOBILITY, which is now limited to Dukes, Marquesses, Earls, Viscounts, and Lords; 2nd, BARONETAGE NOBILITY, under which may be ranked Baronets, Barons, Lords of Manors, Chiefs of Clans, and such other tenants of the crown *in capite* as originally enjoyed place in parliament INTER MAGNATES; 3rd, KNIGHTAGE NOBILITY, which includes Knights of the ancient state orders, and the modern royal orders; and 4th, ESQUIRAGE NOBILITY, which embraces all the other branches of the aristocracy.

The honorary style of Baronets and Baronetesses is 'The Honourable;' that of Lords, Viscounts, and Earls, and their wives, being 'Right Honourable;' and that of Marquesses, and Dukes, and their wives, being 'Most Honourable.' The additional style of 'Most Noble' is also common to each of the six degrees of dignity hereditary.

In assemblies of every description, a Baronet, when publicly addressed or spoken of, should be styled 'the noble Baronet,' it being a popular error to suppose that this epithet is peculiar to peerage nobility alone.

The same usual rules and customs by which Lords, Viscounts, and other higher degrees, are governed in all questions relative to their dignity, place, precedence, immunities, armories, insignia, &c., are appointed by King James I., for himself, his heirs, and successors, as fixed and certain laws to Baronets, their wives, and children, to adjust and determine all similar matters concerning their order.

The coronet of a Baronet, adopted in 1841, is distinguished from the coronets of the other degrees of dignity hereditary by four balls, two of which are displayed in front.

The Ulster badge is the royal cognizance conferred by the founder of the order, to commemorate the original objects of the institution, encircled with the motto, 'PRO REGE ET PATRIA.' It is worn with a sanguine riband.

Baronets, as incidents of their baronial and chivalrous dignities, carry supporters, an open helmet, with two bars on either side, the collar of S.S., a mantle gules, doubled ermine, having one bar, a wreath, &c.

Baronetesses have, like Peeresses of the several degrees, the right to wear the heraldic and other ornaments worn by their husbands.

The children of Peers are the only persons who, by their nobility of blood, have precedence over the children of Baronets."

But what are the eldest sons of *Dukes* and *Marquises* to the elder sons of *Baronets?*

"The eldest sons of Baronets having, however, the hereditary privilege secured to them by charter of being inaugurated Knights after coming of age on application for it, enjoy in this respect, not only a distinction peculiar to themselves, but one in some respect superior even to what the law allows to the eldest sons of Marquesses and Dukes, inasmuch as they are only Esquires, although by courtesy they have ascribed to them the second title borne by their fathers."

The said eldest sons are elsewhere called "knights *de jure*, who may become knights *de facto*," on attaining their majority, by application for that honour, which brings us to perhaps the most barefaced act in the whole farce.

We before pointed out that, under the patents of James the First to English Baronets, a promise was made, that the King and his successors would knight the eldest son of every baronet after he attained his majority, on his application; but no promise of the sort was made to the Scottish or Nova Scotia baronets. Mr. Broun's father claims to be a Scottish, not an English baronet, yet his eldest son, the "Hon. Secretary," asserted his right to knighthood under James's engagement to the eldest sons of English baronets. His request met, as might be expected, with a prompt refusal; but the Committee for Privileges, and afterwards a General Meeting of the Order, held in June last, presumed to insult their Sovereign, not only by "*requiring*" Mr. Broun to "*use, take, and enjoy*," *the dignity of knighthood*, but by venturing to designate the conduct of the Crown towards Mr. Broun as a violation of "the Statute Law of Scotland," the "articles of the Union," and of "*the Coronation Oath!!!*" in the following rhapsody:—

"SIR RICHARD BROUN, eldest son of the Baronet of Colstoun, and Hon. Secretary of the Committee of the Baronetage for Privileges, who—having applied for Knighthood in 1836, under the letters-patent of the 14th Jac. I., and the Lord Chamberlain, after a series of references, having declined to present him to the Sovereign for inauguration—asserted his right to the dignity in consequence of the following resolution, which was passed unanimously at the General Anniversary Meeting of the Order, on the 4th of June 1842—viz.: 'That, the Prime Minister having approved of the course pursued by the Lord Chamberlain in the case of Mr. Broun's application for Knighthood, which course the Committee for Privileges, after mature deliberation, have found and declared to be in direct contravention of the constitution of the Baronetage, a statute law of the realm of Scotland, the articles of Union, the obligations of the coronation oath, and the unbroken precedents of two hundred and thirty years, this General Meeting do require of Mr. Broun, in whose person the natitial rights of the Eldest Sons of the whole Baronets in the United Kingdom have been violated, that he will, in virtue of his being a Knight *de jure*, as the Eldest Son of a member of the Order of ancient creation, vindicate this fundamental and inalienable privilege of the Eldest Sons of Baronets, by henceforth using, taking, and enjoying the ancient chivalrous dignity of a Knight (Eques Auratus), with the immunities and precedencies thereunto belonging; and that the Committee for Privileges do record the same in the journals of the Order, that the precedent may rule, in future, the cases of all such Eldest Sons of Baronets as may hereafter apply for Knighthood under the Letters Patent of the 10th and 14th Jac. I., and experience a similar arbitrary and illegal course of procedure on the part of the responsible officers of the Crown."

In this extraordinary manner Mr. Broun has become *Sir* Richard. The names of the Baronets who were present when their Sovereign was thus publicly charged with perjury ought to be made known; and the sane part of the Order are imperatively called upon to repudiate all knowledge or approbation of so indecent an outrage on the loyalty and common-sense of the community.

Mr. Broun's 'Exposition' on the right of the Baronets to supporters, a coronet, &c., or what he calls "exterior heraldic ornaments," affords the most amusing specimens of false reasoning, misconstruction of legal documents, and *non sequiturs*, it is possible to imagine. Because King James did not expressly grant these things, the Baronets are, he says, entitled to assume them; and because, in a few early illuminations, knights, and even esquires, as well as peers, are represented with coronets or gilt circles on their heads, a right is created in Baronets of the present day to similar ornaments, as "incidental to baronetage dignity, it being a class of the high hereditary nobility of the realm"!!! In what manner Baronets became part of the "hereditary nobility" of England, in the sense in which the term "nobility" is, and has long been used in this country, it is impossible to guess. Lawyers would, probably, seek for their title to that rank in the instruments by which the Order was founded; and most certainly there is not one word therein to justify such a pretension. But it would be an offence to the intellects of our readers were we to follow Mr. Broun in his ravings, or to enter into a grave refutation of his absurdities.

There are, however, one or two assertions that cannot be allowed to pass without exposure. When the Baronets brought their claims before the Secretary of State, he referred their statements for the opinion of the Heralds, whose report was, of course, against every one of their demands. Part of that report alluded to "a badge," towards the institution of which, for Baronets, the late King seems to have been favourably disposed; and because the Heralds said, what is perfectly true, that an *hereditary* personal distinction of the kind would be an *anomaly* in this country, and observed, that a similar request had been unsuccessfully preferred in 1784, Mr. Broun indulges in such rant as this:—

"There is not, perhaps, in the past records of the monarchy, to be found a more unparalleled act of insult and degradation to the Sovereign than that which is involved in this finding of the Heralds, inasmuch as it had the effect of causing his Majesty to commit a breach of promise towards the Baronets."

And he then, *more suo*, proceeds to point out what he calls the "full turpitude of this affair." Such language from a person who has presumed to talk of the Queen having acted in "direct contravention of the laws and of her coronation oath," because his request to be knighted was not complied with, is, to say the least, rather cool.

Another of Mr. Broun's statements, which must not be passed over, is the following:—

"Referring next to the right of Baronets to take and use a Coronet, the Heralds consider that the constitution of the Order contains no words which can warrant such an act. Now, after what has just been submitted in regard to Supporters, it will not, I should hope, be deemed presumptuous for me to hold that the Heralds have sufficiently stultified themselves by their opinion on that subject, to render their notions upon any of the other disputed points undeserving of consideration, whilst the circumstance that the proceedings of the Order during the last five years have not been controverted by a single opponent who has ventured to append his name to his lucubrations, is a fact that speaks volumes as to the apprehension of the learned portion of the community in general on the claims that have been mooted during that period."

This distinction between anonymous articles and those bearing the writer's name, may be Mr. Broun's excuse for not mentioning the reception which his preposterous speculations have met with in this Journal. Does he think that any person less monomaniacal than himself, will incur the expense of printing a volume or even a pamphlet, purposely to refute opinions which every rational man, woman, and child knows to be as unfounded as the objects sought are improper? Nor would his puerilities have been noticed in the *Athenæum*, had not he and his unfortunate disciples printed their dreams in books, and thus rendered it our duty to bring their contents before the public. It gives us pain to be obliged to inform an "*eques auratus*" (albeit he be of the spurious creation of a "Baronets' Committee for Privileges") that when he made the assertion that "the proceedings of the Order have not been controverted by a single opponent who has ventured to append his name to his lucubrations," his memory must have failed him. Thus, in p. 273, he says; "Neither are there any *rights, privileges*, or *distinctions* assumed by us which are *unjustified by precedent, by analogy, by public convenience, or by the design and intention* of the royal founder of our honours implied or declared;"—which passage obviously seems to have been suggested by, and intended as an answer to, the following observation in Sir Harris Nicolas's 'History of the Orders of Knighthood,' to which the name of the author is unquestionably appended. Speaking of Baronets in the Introduction, Sir Harris observes,—"These, with some other privileges, were carefully and specially assigned to them by three distinct instruments, viz. the patents of their creation, in May 1611, a decree under the great seal, in May 1612, and another decree in the year 1616; so that the *rights, privileges*, and

Digitized by Google

distinctions of Baronets have been settled in the most complete and unambiguous manner by their royal founder himself, after repeated disputes and learned arguments. Yet even under such conclusive circumstances, attempts have recently been made to establish a claim to various '*rights, privileges*, and *distinctions*,' of which some are absurd, others extravagant, and all (except, perhaps, the knighthood of the heirs apparent of each existing Baronet of an old creation) *unjustified by precedent, by analogy, by public convenience, or by the declared design and intention of the creator of the Order.*"—p. xlviii.

As a 'Baronetage,' this book is, perhaps, the most worthless of its class, because, in addition to the usual full crop of errors, some persons are called Baronets whose right to the honour is not one tittle better than Mr. Broun's right to Knighthood. Of unintentional blunders, the editor's ignorance that the Baronetcy of St. Aubyn is extinct,—that Sir Jacob Astley became Lord Hastings two years since,—that his own arms, "*Gules*, three fleurs de lis, or," are *not* the "arms of the Royal House of France" (p. 80),—and that the gallant general, Sir William Houston, died a year ago, are ample specimens. But we shall waste no more space on the book, author, or subject; and we really feel that we owe our readers some apology for occupying our columns with the lucubrations of a gentleman whose ignorance is so "*crass*," (as Lord Brougham would say,) as to speak of "the collection of the celebrated *Sir Robert Walpole* at Strawberry Hill"!

A Journal of the Disasters in Affghanistan, 1841-2. By Lady Sale.

[Second Notice.]

WE resume our melancholy narrative. Generals Elphinstone and Shelton, having again put their trust in Akbar and consented to become hostages for the evacuation of Jellalabad, on condition that the slaughter should cease and the troops be supplied with food, had now joined the prisoners. They were all forthwith removed to the valley of Lughman. The road lay through mountain defiles and along the beds of torrents; occasionally traversing the ground over which the troops had lately passed; and more than once the party came upon wounded stragglers, who had escaped into the mountains, and were dying from starvation and the severity of the weather. On one occasion Lady Sale observes:

"At the commencement of the defile, and for some considerable distance, we passed 200 or 300 of our miserable Hindostanees, who had escaped up the unfrequented road from the massacre of the 12th. They were all naked, and more or less frostbitten: wounded, and starving, they had set fire to the bushes and grass, and huddled all together to impart warmth to each other. Subsequently we heard that scarcely any of these poor wretches escaped from the defile: and that driven to the extreme of hunger they had sustained life by feeding on their dead comrades."

Arrived at their destination, Lady Sale describes the accommodation it offered:—

"Our parties were divided into the different rooms. Lady Macnaghten, Capt. and Mrs. Anderson and two children, Capt. and Mrs. Boyd and two children, Mrs. Mainwaring and one child, with Lieut. and Mrs. Eyre, and one child, and a European girl, Hester Macdonald, were in one room; that adjoining was appropriated for their servants and baggage. Capt. Mackenzie and his Madras Christian servant Jacob, Mr. and Mrs. Ryley and two children, and Mr. Fallon, a writer in Capt. Johnson's office, occupied another. Mrs. Trevor and her seven children and European servant, Mrs. Smith, Lieut. and Mrs. Waller and child, Mrs. Sturt, Mr. Mein, and I, had another. In two others all the rest of the gentlemen were crammed. It did not take us much time to arrange our property; consisting of one mattress and rasai between us, and no clothes except those we had on, and in which we left Cabul. Mahommed Akbar Khan, Sultan Jan, and Ghoolam Moyen-oo-deen visited us. The Sirdar assured me we were none of us prisoners; requested that we would make ourselves as comfortable as circumstances would admit of; and told us that as soon as the roads were safe we should be safely escorted to Jellalabad. He further informed me that I might write to Sale; and that any letters I sent to him he would forward. Of this permission I gladly took advantage to write a few guarded lines to say that we were well and safe. 19th.—We luxuriated in dressing, although we had no clothes but those on our backs; but we enjoyed washing our faces very much, having had but one opportunity of doing so before, since we left Cabul. It was rather a painful process, as the cold and glare of sun on the snow had three times peeled my face, from which the skin came off in strips."

Akbar appears throughout to have behaved kindly to the prisoners. On their march he gave them what little assistance was in his power, and he now sent some chintz and cloth for the ladies and clothes for the gentlemen. Lady Sale having availed herself of the permission to write to her husband, received some trunks from him, which were delivered to her unopened. She further records—

"To-day all arms have been taken from the officers, on a promise that they shall be restored when we go away. I took poor Sturt's sword myself and begged that the Sirdar would keep it himself; that we might be sure of its restoration, as being invaluable to his widow. Dost Mahommed Khan, Abdool Guffoor Khan, &c., desired me to keep it myself; acting in the handsomest manner, and evincing much feeling on the occasion."

On the 19th of February an earthquake added to their misery:—

"At noon I was on the top of the house; when an awful earthquake took place. I had gone up stairs to see after my clothes; for, servants being scarce, we get a sweeper, who also acts as saces, to wash for us; and I hang them up to dry on the flat roof: we dispense with starch and ironing; and in our present situation we must learn to do everything that is useful. But to return to the earthquake. For some time I balanced myself as well as I could; till I felt the roof was giving way. I fortunately succeeded in removing from my position before the roof of our room fell in with a dreadful crash. The roof of the stairs fell in as I descended them; but did me no injury. All my anxiety was for Mrs. Sturt; but I could only see a heap of rubbish. I was nearly bewildered, when I heard the joyful sound, 'Lady Sale, come here, all are safe;' and I found the whole party uninjured in the court-yard. When the earthquake first commenced in the hills in the upper part of the valley, its progress was clearly defined, coming down the valley, and throwing up dust, like the action of exploding a mine. Our walls, and gateways, and corner towers, are all much shaken, or actually thrown down. We had at least twenty-five shocks before dark; and about fifteen more during the night, which we spent in the court-yard. * * Dost Mahommed Khan brought workmen to clear away the *débris*. He tells us our fort is the best of forty that have suffered in this valley; and that many are entirely thrown down. In one, a tower fell, and crushed five women and a man: others have not a wall remaining. * * Not even an animal's life was lost in our earthquake (I mean at our fort). Lady M.'s cat was buried in the ruins, and dug out again. 22d.—My wounds are quite healed. We had earthquakes day and night; less severe, but equally frequent. A prop was put up in our room to support the broken roof. * * 23d.—This has been a very close and gloomy day; earthquakes frequent, and some very sharp ones. * * 24th.—Very few shocks, and those gentle ones: but all last night, and great part of to-day, particularly late in the evening, there was a tremulous motion as of a ship that has been heavily struck by a sea, generally feeling as if on the larboard quarter, and accompanied by a sound of water breaking against a vessel. At other times we have just the undulatory motion of a snake in the water: but the most uncommon sensation we have experienced has been that of a heavy ball rolling over our heads, as if on the roof of our individual room, accompanied by the sound of distant thunder."

Are we to infer from this mention of Lady Macnaghten's cat, that this animal had been carried through all the horrors of the retreat? But even this is less strange than what we read afterwards (12th March); when we learn that though other ladies had only the clothes on their backs—

"Mahommed Shah Khan has taken away all Lady Macnaghten's jewels, to the value of above a lakh of rupees; and her shawls, valued at between 30,000 and 40,000 rupees."

Reports from time to time reached the prisoners of the proceedings at Jellalabad. At length orders arrived for their further removal:

"We did not start till past noon, and then did not take the road we expected, leading to Tighree; but an upper one to the right, and were told we were going to Tagow. We had a great number of detentions from the camels that carried the kujavas; the General's broke down; so did Mrs. Sturt's; the General was laid on the ground until another could be brought for him; and Mr. Melville gave his horse to my daughter. Here the Mirza professed to be very kind and attentive: he took a chogah lined with valuable fur, which was particularly prized by Mrs. Sturt, as being her husband's; also his sword; and said he would carry them for her when she was obliged to ride; but he quite forgot to return them, which caused much annoyance to us; and proved that the Mirza, despite his fair speeches, took care not to lose an opportunity of enriching himself at our expence. We had not proceeded far when we met some horsemen shouting *Kalus shud*, and we were ordered to turn round: then we heard that our troops had been beat in the Khyber, and had lost ten guns. The next report was, that our troops had penetrated into the Lughman valley; another that Jellalabad was taken. We went back; and found that the mat houses, and other little comforts we had put up, were mostly demolished; our scraps of setringees taken away, as also our mats, &c.: but the soldiers were very civil to us: one brought back my charpoy, and busied himself in stringing it for me; another brought me a chirah; and a soldier's wife brought Mrs. Sturt and me each a stool to sit on. These little kindnesses make a deep impression at such times. We were told not to unpack; and to be ready to start, if requisite, in the night."

Next morning the party started again. On arriving at Tézeen, Lady Sale observes—

"We stretched ourselves on the numdas (coarse felt carpets) in our still wet clothes. In the night I began shivering again; and Capt. Anderson, my nearest bed mate, covered me with a bed cloak, which, strange to say, soon imparted warmth to me. We slept, large and small, thirty-four in a room, 15 feet by 12; and we lay on the floor, literally packed together, with a wood fire in the centre, and using pine torches for candles."

Under circumstances, what misery is shadowed in the following brief paragraph:—

"Mrs. Waller increased the community, giving birth to a daughter: she, Mrs. Waller, and Mr. and Mrs. Eyre got a room to themselves and their children, diminishing our number to twenty-nine. A slight earthquake, and a fine night."

Subsequently, on the 24th July—

"At two P.M. Mrs. Sturt presented me with a grand-daughter;—another female captive."

The party were now again ordered to remove. Lady Sale was at this time ill, and scarcely able to mount a horse. On the 23rd poor General Elphinstone died:—

"24th.—The General died last night, and his remains are to be sent to Jellalabad. The General's death was hastened by a rumour of a Chuapo from Cabul the very day we left Tézeen. At mid-day all were put on horseback, and sent off to a fort near at hand. In the general hurry to save themselves, Mrs. Waller, with her two children, seemed to be quite forgotten. * * Mr. Waller, who cannot speak Persian, applied to Capt. Mackenzie; who went to Akbar Khan, and represented to him how shocking a thing it was to leave a lady and two children to have their throats cut. An old kujava was found, and strung; and some Affghans carried it on a pole."

Reports now reached the prisoners of the advance of Pollock: and we read of the arrival of

Digitized by Google

the Indian mail, and observe other characteristics of being at least within sound of civilization :—

"21st.—The late newspapers have not a little amused me. They show that the editors catch at every expression, used in any letters they have read; or on any comments they hear on news from Affghanistan. A regular controversy has arisen between one, who asserts that Lady Sale in her letters evinces a strong prepossession in favour of Mahommed Akbar Khan, and another, who thinks Lady Sale wrote, as she did, because she was a prisoner: to which the first rejoins, that he does not think Lady S. would, under any circumstances, write that which was false. *There* he is right: but I would not have written on the subject at all, unless I wrote as I thought: if people misunderstand, it is their fault and not mine. Again, they say it were better I had never written at all. Perhaps so: but it seems that details were wanting; my letters to Sale gave those; and he thought them of sufficient consequence to send them to the Governor-General and the Commander-in-Chief. They were afterwards sent to England by the former; and if the papers tell truth, excited some attention in the highest circles. As to my 'great prepossession' in favour of Akbar, my greatest wish is, that Gen. Nott's force should march up to Ghuznee; release the prisoners there; and then that a simultaneous movement should take place of Nott's and Pollock's forces upon Cabul. Once again in power, here, I would place Akbar, Mahommed Shah, and Sultan Jan *hors de combat;* befriend those who befriended us, and let the Affghans have the Ameer Dost Mahommed Khan back, if they like. He and his family are only an expense to us in India; we can restore them, and make friends with him. Let us first show the Affghans that we can both conquer them, and revenge the foul murder of our troops; but do not let us dishonour the British name by sneaking out of the country, like whipped Pariah dogs. Affghanistan will become a byword amongst the nations. Had we retreated, as poor Sturt proposed, without baggage, with celerity (forced marches to get through the snow), and had the men stood by us (a doubtful point,—they were so worn out and dispirited), we might have figured in history; and have cut out Xenophon's account of the retreat of the 10,000. As to the justice of dethroning the Ameer Dost Mahommed, and setting up Shah Shoojah, I have nothing to say regarding it: nor regarding our policy in attempting to keep possession of a country of uncivilised people, so far from our own; whence all supplies of ammunition, money, must be obtained. Let our Governors-General and Commanders-in-chief look to that; whilst I knit socks for my grandchildren: but I have been a soldier's wife too long to sit down tamely, whilst our honour is tarnished in the sight and opinion of savages. Had our army been cut to pieces by an avowed enemy, whether in the field or the passes—let them have used what stratagems they pleased,—all had been fair. Akbar had shone as another William Tell; he had been the deliverer of his country from a hateful yoke imposed on them by Kaffirs: but here he stands, by his own avowal freely made, the assassin of the Envoy; —not by proxy, but by his own hand. I do believe, he only meant to make him prisoner; for the purpose of obtaining better terms and more money: but he is a man of ungovernable passions; and his temper when thwarted is ferocious. He afterwards professed to be our friend;—we treated with him;—great was the credulity of those who placed confidence in him: still they blindly did so;—even after the letter was received from Conolly, at Bhoodkhak, confirming the previous warnings of his intentions towards us. He followed us with his blood-thirsty Ghilzyes. Mahommed Shah Khan, his principal adviser, I might almost say his master, is the most inveterate of our enemies. Akbar is a jovial smooth-tongued man; full of compliments and good fellowship; and has the knack of talking over both Kaffirs and true believers. To our cost, he did talk our chiefs over; and persuaded them of his friendship. * * A woman's vengeance is said to be fearful: but nothing can satisfy mine against Akbar, Sultan Jan, and Mahommed Shah Khan. Still I say that Akbar, having, for his own political purposes, done as he said he would do—that is, destroyed our army,—letting only one man escape to tell the tale, as Dr. Brydon did,—and having got the families into his possession;—I say, having done this, he has ever since we have been in his hands, treated us well:—that is, honour has been respected. It is true that we have not common comforts; but what we denominate such are unknown to Affghan females: they always sleep on the floor, sit on the floor, &c.—hardships to us. * * It is true we have been taken about the country; exposed to heat, cold, rain, &c.; but so were their own women. It was, and is very disagreeable: but still we are, *de facto*, prisoners; notwithstanding Akbar still persists in calling us—honoured guests: and, as captives, I say we are well treated. He has given us common coarse chintz, and coarse long cloth, too, wherewith to clothe ourselves;—I must not use the word dress: and making up these articles has given us occupation; increased by having to work with raw cotton, which we have to twist into thread for ourselves. * * Nothing can exceed the folly I have seen in the papers regarding my wonderful self; —how I headed the troops, &c. &c. It puts me in mind of Goldsmith's verses on Mrs. Blaze; in which he remarks, that 'the king himself has followed her, when she has gone before:' and certainly I have thus headed the troops; for the chiefs told me to come on with them for safety sake: and thus I certainly did go far in advance of the column; but it was no proof of valour, though one of prudence."

Nott and Pollock were now fast advancing towards Cabul. It was asserted—but there is no proof that it was true—that Akbar sent orders for the immediate removal of the prisoners, and that all should be put to death who could not march. A treaty, however, was entered into and concluded with Mohammed Khan, to whose care they had been intrusted, and who consented for 20,000 rupees and 1000 rupees a month for life, to aid their escape. The standard of defiance was forthwith hoisted on the walls of the fort:—

"The only persons who are against the measure are General Shelton and Col. Palmer. As the latter has already been tortured at Ghuznee, he possibly fears a repetition of barbarity, should we not succeed. The former says, we are precipitating matters with Akbar; whom he considers as our friend. I believe both have at length signed the paper. They could scarcely do less; as our signatures were to exonerate the five officers whose names were superscribed as answerable for the whole account, which we were of course to pay our shares of. I wrote to Sale to-day; informing him of our resolution to hold out till we received assistance, even should we be reduced to eating the rats and mice; of which we have a grand stock. * * At night we were roused by the sounding of the cracked trumpet, and the drums beating to arms; which, in our *yaghi* (rebellious) position, was a little astounding. It seems that a body of horsemen were hovering about the ruins near the images; and were suspected to be some of Akbar's troops. * * 16th.—We marched to Killa Topchee on a fine sunshiny morning; which we hailed as a presage of the future. We were not, however, without considerable anxiety; for our present state was replete with danger. We had every reason to believe that the Meer Akhor, on leaving us, had gone to Akbar, and revealed our plans; and consequently every man we saw was suspected to be the *avant courier* of troops sent to reclaim us: and the cheering hope of an escape was considerably clouded before we had been an hour on the road. Those who travelled in kujavas, of course, could not keep pace with those who rode: our equestrian party, of which I formed one, had halted; and, to screen themselves from the sun, had taken shelter under some huge masses of rock. Here Saleh Mahommed Khan came up to us; and speaking in Persian to Capt. Lawrence, told him that he had succeeded in getting a few muskets; which, together with ammunition, he had brought with him on a camel: and requested that he would ask the men which of them would take them; it being his wish to form a small advance guard of Europeans, as a *show*. Capt. Lawrence then said, 'Now, my lads, here's Saleh Mahommed Khan has brought arms and ammunition for some of you: who volunteers to take muskets?' I blush to record, that a dead silence ensued. Thinking the men might be shamed into doing their duty, I said to Lawrence, 'You had better give *me* one, and I will lead the party;' but there was still no offer: and he told our general that it was useless, and he had better take them on. It is sad to think the men were so lost to all right feeling."

When the party arrived at Gundendewar—

"Gen. Nott was near Urghundee, and consequently close to us; and Gen. Pollock requested he would send a brigade to our assistance. This he refused, much to the disgust of his officers, alleging that his troops were fatigued. On this Gen. Pollock sent Sale with a brigade, at a few hours' notice. He left Siah Sung two miles east of Cabul; and made a forced march on the 19th (his sixteenth birthday) to Urghundee: he halted there that night; and on the following morning left his camp standing, and marched to meet us. At the pass near Kote Ashruffee he left his infantry to hold the position, and proceeded at the head of the 3rd Dragoons. A party of Sultan Jan's men were in this neighbourhood; and some Kockhes in the immediate vicinity were driven off by the Juzailchees. Had we not received assistance, our recapture was certain: but as it was, they dared not attack the force they saw. It is impossible to express our feelings on Sale's approach. To my daughter and myself happiness so long delayed, as to be almost unexpected, was actually painful, and accompanied by a choking sensation, which could not obtain the relief of tears. When we arrived where the infantry were posted, they cheered all the captives as they passed them; and the men of the 13th pressed forward to welcome us individually. Most of the men had a little word of hearty congratulation to offer, each in his own style, on the restoration of his colonel's wife and daughter: and then my highly-wrought feelings found the desired relief; and I could scarcely speak to thank the soldiers for their sympathy, whilst the long withheld tears now found their course. On arriving at the camp, Capt. Backhouse fired a royal salute from his mountain train guns: and not only our old friends, but all the officers in the party, came to offer congratulations, and welcome our return from captivity."

Here the narrative closes; and the history of the world hardly comprises within a twelvemonth events more important or scenes of more fearful interest.

The Nursery Rhymes of England, obtained principally from Oral Tradition. Collected and Edited by J. O. Halliwell, Esq. 2nd edition. Smith.

This work contains nearly four hundred nursery rhymes; but many are duplicate and triplicate versions of the same subject. 'Gammer Gurton's Garland,' edited in 1810 by Ritson, contains about 130 rhymes; whilst the 'Songs of the Nursery,' the only edition now in print, according to our inquiries, gives not more than about 108 genuine old rhymes, mixed up with modern interpolations. So that this edition may be received as perhaps the most ample collection which has hitherto been made; but for any other merit, we cannot bestow much praise on it. Mr. Halliwell deserves all the credit that may be due for printing whatever he could meet with, in any shape, oral or written (the latter without acknowledgment), and his materials may perhaps save some future editor, who has more feeling and judgment for the task, a certain amount of labour; but this will, we suspect, be all the benefit he will derive from this collection.

These Nursery rhymes have certainly preserved a perennial freshness from time immemorial—*à tempore quo memoria non extat*, as the lawyers phrase it; a fact in itself sufficient to redeem them from scorn—have instilled the first germs of poetic feeling, taught the ear to notice rhyme and metre, excited the fancy, provoked the mirth, and soothed to sleep millions of little hearers. There must be something worthy of investigation in things which have had these effects; yet Mr. Halliwell has not found it out. If his labours be labours of love, they are also labours of haste, inexperience, and plagiarism. The only features we can discover in his plan, seem to have been the recording all

Digitized by Google

rhymes whatever, and an attempt at classification, which we are puzzled to comprehend, and which leads to no result. We have great doubts if Mr. Halliwell sees anything in these rhymes beyond the "harmonious and euphonious nonsense" mentioned in his preface; we are sure that he has never sung them, or many rhythmical errors could not have passed without correction or comment. We claim for many of them a higher aim and purpose; although nonsense, in its way, is sometimes good for a child; and we think Miss Edgeworth right in her opinions on this point. It must have been this narrow view of the subject which induced Mr. Halliwell to insert indiscriminately anything told to him, irrespective of rhyme, rhythm, or reason. Sung as these rhymes have been by all classes, they were subjected to great and unmeaning corruption. It was obviously, therefore, the duty of a judicious editor to have winnowed the chaff from the corn. The book will not suit any class of readers—either children, adults, philosophers, poets, or antiquaries. Its diffuse extent would seem to point it out for the latter; but then, Mr. Halliwell has favoured us with little more antiquarian investigation than he found provided for him by Ritson, and he does not even correct Ritson's inaccuracies. Thus, Ritson said that the "nursery rhyme of 'Sing a Song of Sixpence' is quoted in Beaumont and Fletcher's 'Bonduca,' act 5, scene 2." Mr. Halliwell says the same thing in the same words; whereas only the *first line* is quoted, not the whole rhyme itself, as Ritson's words would lead the reader to suppose. Mr. Halliwell, indeed, appears to us to have reprinted Ritson's Gammer Gurton nearly verbatim, omitting only four rhymes, which we have not been able to identify in the present edition, and he has adopted, as we have said, Ritson's notes as his own without acknowledgment. Thus—

"It was probably the custom, on repeating these lines, to hold the snail to a candle, in order to make it quit the shell. In Normandy it was the practice at Christmas for boys to run round fruit trees, with lighted torches, singing these lines:—

Taupes et mulots,
Sortez de vos clos,
Sinon vous bruleral et la barbe et les os."

The actual words occur on page 32 of the 'Garland.'

Again:—

[A Scottish ditty, sung on whirling round a piece of lighted paper to a child.]

Dingle, dingle, dosey,
The cat's in the well;
The dog's away to Bellingen,
To buy the bairn a bell.

These lines also are to be found at page 37 of the 'Garland.'

Then the work is not philosophical, because many rhymes have been "Bowdlerized," as too "indelicate to be printed," a proceeding very proper if the book were intended for children. Where the same *motive* possessed any substantial variation, arising from provincial treatment, the varieties might have been given; but there are many specimens of worse than useless repetitions as of—

I'll sing you a song,
The days are long,
The woodcock and the sparrow,
The little dog has burnt his tail,
And he must be hanged to-morrow.

This is from Ritson; and there is no sufficient variety to authorize the insertion of two other versions.

Mr. Halliwell rarely discovers the signification which most of these rhymes seem to have. Thus he turns 'The Lion and the Unicorn' into nonsense; whereas, printed correctly, we read in it a moral tale of universal anxiety to get rid of two quarrelsome fellows even by bribery.

The lion and the unicorn,
Were fighting for a crown;
The lion beat the unicorn,
All round about the town.
Some gave them white bread,
And some gave them brown;
Some gave them plum cake,
And sent them out of town.

The descriptive scene of hourly occurrence in an old farm house—hickory, dickory, dock, representing the cranky, jerking sounds which precede the striking as audibly as the Τιτιτιτιμπρό in the Ὀρνιθες of Aristophanes, is classed by Mr. Halliwell with some variations, under "Games."

Hickory, dickory, dock,
The mouse run up the clock;
The clock struck one,
The mouse run down;
Hickory, dickory, dock.

Under "Jingles" he gives the following "nonsense" version, without referring to the first: hence we conclude that he is quite unconscious it is a corruption of it.

Zickety, dickety, dock,
The mouse ran up the nock;
The nock struck one,
Down the mouse run,
Zickety, dickety, dock.

The old pantomime of the Confessional, which we always remember as acted by the two hands, one dressed up in a black or coloured handkerchief representing the priest, the other in a white handkerchief signifying the nun, Mr. Halliwell states, is "shown by shadows on the wall." He gives, what he terms, the "Oxfordshire" and the "Kentish" versions, both of which seem to us to have little point in them, whilst he appears to have been ignorant of what, we believe, is the genuine version.

We have already alluded to Mr. Halliwell's attempts at classification: this he hopes to render less open to criticism hereafter. We suggest that he should abandon it altogether as a thing without aim or profit. The Classification is arranged as follows:—1. Historical, 2. Tales, 3. Jingles, 4. Riddles, 5. Proverbs, 6. Lullabies, 7. Charms, 8. Games, 9. Paradoxes, 10. Literal, 11. Scholastic, 12. Customs, 13. Songs, 14. Fragments, 15. Translations.

Under 'Historical' we have

Pussy cat, pussy cat, where have you been?
I've been up to London to look at the Queen, &c.

in the remote "uncertainty" whether it may not "allude to glorious Queen Bess." Then another, of which we have two versions, and which we reprint, is called "historical" because "Jack" occurs in the chorus; "Jack" being considered to refer to the rebellious times of Richard the Second: but 'Jack and Jill,' which has equally good claims, is classed under 'Tales.'

My father he died, but I can't tell you how,
He left me six horses to drive in my plough;
With my wing wang waddle oh,
Jack sing saddle oh,
Blowsey boys bubble oh,
Under the broom.

I sold my six horses and I bought me a cow,
I'd fain have made a fortune, but did not know how:
With my, &c.

I sold my cow, and I bought me a calf;
I'd fain have made a fortune, but lost the best half:
With my, &c,

I sold my calf, and I bought me a cat;
A pretty thing she was, in my chimney corner sat:
With my, &c.

I sold my cat, and bought me a mouse;
He carried fire in his tail and burnt down my house.
With my, &c.

My daddy is dead, but I can't tell you how;
But he left me six horses to follow the plough:
With my whim wham waddle ho!
Strim stram straddle ho!
Bubble ho! pretty boy,
Over the brow.

I sold my six horses to buy me a cow,
And wasn't that (what?) a pretty thing to follow the plough?
With my, &c.

I sold my cow to buy me a calf,
For I never made a bargain, but I lost the best half,
With my, &c.

I sold my calf to buy me a cat,
To sit down before the fire, to warm her little *back*:
With my, &c.

I sold my cat to buy me a mouse,
But she took fire in her tail, and so burnt up my house:
With my, &c.

Mr. Halliwell considers the second the far better version, whereas the first, taken from Ritson, appears to us a good and generally applicable type of a spendthrift's career, leading to ruin and poverty at last—coherent and consequential in its parts. The second is often senseless and illogical.

It puzzles us to discover upon what principles some rhymes are classed as tales—others as jingles, others as riddles—let the reader guess where a fragment of 'Goosey, goosey, gander' is classed—as a tale? no, a riddle. The doleful ditty of

Ding dong bell,
Pussy's in the well,

is a "jingle," whilst 'Jack and Jill went up the Hill' is a "tale." As a "Lullaby"—

a nurse's song
Of lullabi, to bring her babe to sleep

is placed the *taunt!*

Cry, baby, cry,
Put your finger in your eye,
And tell your mother it was I.

Then the verse of the old alliterations 'Peter Piper picked a peck of pickled pepper' belonging to letter P, like Sammy Smaller smelt a smell of small coal—belonging to S, alliterations which also extend to every letter in the alphabet, is called a *charm*.

Here am I jumping Joan,
When nobody's with me
I'm always alone,

the very antithesis to a paradox, and called a "Paradox!" And so paradoxical seems the whole classification that we are fain to be quit of the subject.

Yet for all the prolixity of this edition, it is not so complete as common diligence should have made it. We might mention several rhymes, but it will suffice to point to a large oversight. We incline to think that Mr. Halliwell cannot be acquainted with the modern edition of 'Songs for the Nursery,' not merely because we are unable to find several of those songs in Mr. Halliwell's book, but because the variations which exist in both works are not noticed by him. We cannot find in Mr. Halliwell's index, (and we know not where else to look for it, his classification is so puzzling,) the little rhyme which we remember in our youth as the first song in a little square volume no longer to be met with—

The north wind doth blow
And we shall have snow,
And what will poor Robin do then?
Poor thing!
He'll sit in a barn
And keep himself warm,
And hide his head under his wing,
Poor thing!

If we had leisure, we should like to point out the various analogies and allegories which abound in these old nursery rhymes. 'Humptie Dumptie sat on a Wall' is called, by Mr. Halliwell, as by others, a riddle, signifying an egg. We think it has a much larger application. Is it not a type of vaulting ambition? Is not every one able to point to Humptie Dumpties, who, having perched up high, have lost their balance, "had a great fall," and never been able to remount to "where they sat before"? How many authors, dramatists, popular preachers, "lions," politicians, doctors, there are who are "Humptie Dumpties." Then, again, is not the following tale of universal application?—

There was a lady lov'd a swine,
Honey, quoth she,
Pig, Hog, wilt thou be mine?
Hoogh, quoth he.

I'll build thee a silver sty,
Honey, quoth she;
And in it thou shalt lie:
Hoogh, quoth he.

Pinn'd with a silver pin,
Honey, quoth she;
That you may go out and in:
Hoogh, quoth he.

Wilt thou have me now,
Honey! quoth she;
Hoogh, hoogh, hoogh, quoth he,
And went his way.

Digitized by Google

Is it not common to all to have their best endeavours of love and kindness thus treated with a "hoogh"? The parallel of this ingratitude is also treated by Spenser, where Sir Gyon rescues the metamorphosed in the 'Bowre of Bliss:"—

But one above the rest in speciall
That had an hog beene of late, hight Gryll by name,
Repyned greatly and him did miscall
That had from hoggish form him brought to naturall.
Said Gyon, see the mind of beastly man,
That hath so soone forgot the excellence
Of his creation, when he life began,
That now he chooseth, with vile difference,
To be a beast, and lacke intelligence:
Let Gryll be Gryll, and have his hoggish mind:
But let us hence depart whilst weather serves and winde.

We might pursue this theme further, but have, perhaps, said enough to redeem these rhymes from the charge of being nothing better than "Euphonious nonsense."

The Life of Sir David Wilkie. By Allan Cunningham.

[Concluding Notice.]

We continue our extracts from Sir David Wilkie's notes on art and artists, as registered in his journals and correspondence. Our first "taking" from the third volume shall be a pithy paragraph touching Turner, whose "new style" seems to be the point in debate. It will be recollected, that Wilkie found it difficult to understand, even the earlier and more temperate manner:—

"I have no other means of knowing what is doing in Rome, and to have such as you to write to one is indeed a treat. The reception of Turner's works is extraordinary, but, I contend, is precisely in accordance, if not with the British artist, at least with the British public. Such, however, is the violence and intolerance of Turner's friends, that I dare not even acknowledge myself to be in possession of the information which your letter conveys to me. The applause of the exquisite few is better than that of the ignorant many, but I like to reverse received maxims; give me the many who have admired in different ages Raphael and Claude, and I will give up the exquisite few who can admit of no deterioration of a system that has not yet the trial of time to recommend it: take simplicity from art, and away goes all its influence."

In another letter, the acute and indefatigable experimentalist passes judgment on himself:—

"In our rounds [over Windsor Castle] we stumbled upon two pictures high up, which Seguier said had once been true Correggios, but long since rubbed out and lost. They belonged to Charles I. I have not yet shown our Correggio to any new person, but I look at it day after day, and think it must be above common, to bear the scrutiny even of my eye, who look at pictures as much to learn from as to judge of them. It is my school, and I study it as a guide in my own manner of painting. In this pursuit some new discovery is always arising. You remember a globe that the woman and child are leaning upon: it appears simply blotted in, but much in the style of Correggio. Vitali mentions this globe, and calls it *un globo terrestro*. This is remarkable. A few days ago I discovered what he has not observed, and which you may also have probably overlooked; it is a *celestial globe*, upon which the signs of the zodiac and the constellations are most delicately yet distinctly marked out, yet not obtrusive, as they are done with a master's hand. I can shew distinctly a bear, a crab, what appears a serpent, a dog, a fish, a bird, and other shapes, with indications of stars, which are less distinctly seen; but, observe this, the claws of the crab and various of the shapes, are made by incisions of the pencil-stick through to the ground, and all of them so drawn upon the globe, fore-shortened and otherwise, as to express its rotundity: these indicate the master's hand at work. Now could you ascertain, from any friend at Rome, whether any similar shapes to these are to be found upon the globe in the Doria picture: if they are wanting in that, and if they are wanting in the finished Cartoon at Paris, then it would establish for the oil-picture a new claim to superiority. This Spring I have made another venture at the Exhibition of the Royal Academy,—three pictures; one The King's Entrance to Holyrood: in this, there are some female heads, painted on the principle of Correggio, and have been much liked; the next is The King, a whole-length, in a Highland dress, size of life; and, having tried it in The Lord Kellie, of last year, I have made this the most glazed, and deepest-toned picture I have ever tried, or seen tried, in these times. It is at once a trial of Rembrandt all over,—the dresses, the accoutrements, and throne gold, a dark back-ground,—no white except on the hose and the flesh,—telling as principal lights. The half-length Sebastian del Piombo at Genoa, gave me a hint for the style and air of the figure. The colour and effect, when in my room, was satisfactory; and I hope it will keep its ground in Somerset House. The third picture is the Guerilla's Return to his Family on his jaded Mule. This, in the Spanish style, as last year."

Further remarks upon the new school of painting in Germany cannot but be welcome. The artist addresses Mr. James Hall, at Rome. We are pleased to cite opinions coinciding with those so often and earnestly inculcated in these columns:—

"Indeed, in your visit to Italy you will be frequently struck, as you will be in every quarter reminded of it, by the works of the period of the early growth of the art. These, with the greatness afterwards attained, have somewhat the connection of cause and effect. The German students, with the labours of one of whom you have interested me, have founded their process of study upon this,—that by the study of the same materials with Raphael, they might arrive at the same excellence. This, though in their hands carried to excess, with a kind of heraldic minuteness and detail, bordering too much upon Albert Durer, is yet a more reasonable system than that of Mengs and David, who, with an aim the converse of Bernini in reducing marble to the picturesque, have imposed upon painting the feeling and restraints of ancient sculpture. Still, in the works of these Germans, which I admired extremely, there is too much left out and dispensed with, for qualities long left behind in the march of invention. The world that has once seen the grandeur of Michael Angelo and the breadth of Rembrandt is incapable of being excited by early simplicity; it is only as a part of a study, and not as a whole, it is valuable; and could their system serve us, which I think it may, as the Border Minstrelsy did Sir Walter Scott, it would be to any student a most admirable groundwork for a new style of art. The account you give me of Overbeck's subject as a companion to the School of Athens, an Assemblage of the Painters not living, for Frankfort, I was gratified with. It is a bold idea, which all must wish successful; but is not the subject a little too *professional* for a great work,—too much of the shop, and not enough of the business of life, for the apprehensions of people at large!"

The Meeting of the British Association in Dublin lured Wilkie over to Ireland; not that he hoped to find a subject among the broadcloth of the Sections A, B, &c., or the lace and ribbons that fluttered at the *conversazioni*. The time of the artist was better employed, as his own words will show:—

"The meeting of the British Association at Dublin did not present much for a painter. During the time, therefore, I was occupied in visiting convents, chapels, and the haunts of the lower classes, and, when it was over, started with two friends per mail, directly westward, till we met the Atlantic, and Lord Sligo's domain called Westport. We then proceeded southward through the wild mountainous district of Connamara to Galway, a region of which the inhabitants are said to be descended from a colony of Spaniards, to whom they still bear a marked resemblance. Here the impression the aspect of these people and their cabins made is not to be described. In a state of primeval simplicity, honest, polite, and virtuous, with so few wants that even the children run about the cabins unclad, realising to a fervid imagination an age of poetry, yet which the poetry of our own time has not described, and to painting is perfectly new and untouched. Indeed, I would say that a future painter, after he has seen and studied all that has been done by the Greeks and Italians, should see such a state of life as a basis for his imagination to work upon, and I would venture to recommend that Mr. Knighton should, in the course of his studies, see Ireland with such a view. The costume of the district we have travelled through, he would find a perfect model. Dublin has the disadvantage, that the lower classes wear only the cast-off clothes, in rags, of their fashionable superiors; but in Connaught and Connamara the clothes, particularly of the women, are the work of their own hands, and the colour they are most fond of is a red they dye with madder. A petticoat, jacket, and mantle brighten up the cabin or landscape like a Titian or Giorgione. Indeed, the whole economy of the people furnishes the elements of the picturesque. They build their own cabins, fabricate their own clothes, dig their own turf, catch their own salmon, and plough their own fields, bringing into their confined dwelling a confused variety of implements not to be described. So remarkable are the scenes I have witnessed, that I am wondering they have not been long before the object of research among painters."

Yet, in spite of this keen feeling for the picturesque of Irish life, Wilkie, it is admitted, fell short of the nationality of his subject, in his 'Peep of Day Boy's Cabin,' which was the child of this excursion. It was reserved for Maclise to give us, in all their pathetic raggedness and genial drollery, the boys of the fair, and the girls of the pattern. Indeed, we suspect that before Wilkie set forth on this pilgrimage, he had parted company with some of his old love of the literal and the familiar. But one slight picture, 'Grace before Meat,' painted subsequently to this period, retains traces of his early predilections as to subject. He was about this time busy upon his picture of 'Sir David Baird,' and his scene from the youth of the Creole Empress of the French. Touching the former, the following anecdote is narrated in a letter to Sir David Baird:—

"While engaged in collecting studies for the picture, I was told that there were three Hindoo cavalry soldiers every day at the India House, who had come overland to complain of some grievance. I obtained their consent to sit to me, and they came, a Jemidar and two inferior officers, in their native dress. I explained to them, by the interpreter, what I wanted, and put them on a platform in a group, the Jemidar, as Tippoo, reclining with his head supported by one of his lieutenants, and his hand held by the other, with his finger on his pulse, to know if he were alive or dead. The group was magnificent, and I was all ecstasy to realize such a vision of character and colour. It was, indeed, a vision, and a vision only; for, all of a sudden, the youngest of them said, 'Mo no Tippoo!' and sprung from his position, while the others repeated, 'No Tippoo I!' 'No Tippoo I!' and, to my surprise, left their places also; and no persuasion I could use could induce them to resume them. Thus thwarted, I asked if the Jemidar would be drawn as one of the Company's officers; to this he consented, if allowed to stand like a soldier: in this way I made a drawing of him. One of the lieutenants came for two days, evidently pleased with his new position; for I had put a sword in his hand, and placed him in the attitude of an assailant."

A few words of inquiry, when a portrait of O'Connell was in question, display the weakness of the man too curiously to be passed over. The Rev. Horace Cholmondeley called upon him with the commission: but before the painter could answer a final "yes," he thought it politic to consult Sir William Knighton:—

"Now what is your idea, dear Sir, of this, provided a good picture can be made? The question of Catholic and Protestant I have considered a theme for art. May not this come within these classes, if a historic portrait can be made of it? This is, of course, a confidential inquiry, which you will have the extreme kindness to consider?"

A large part of the third volume is occupied by remarks on Art, thrown into the form of an Essay by Wilkie; but the public will prefer to read of his last court-service. What a change, from the 'Entry into Holyrood,' to the subject of the picture described in the following, which is dated 1837:—

Digitized by Google

"In October last I received a message from the Lord Chamberlain, to attend the Queen at Brighton, with the view of beginning the Embassy Picture, but was told the Queen had heard of a sketch I had made of her First Council. Accordingly, on seeing her Majesty, and finding her strongly set upon seeing this, I sent for a canvas from London, and began the figure of the Queen at once. She is placed nearly in profile at the end of a long table, covered with a red cloth. She sits in a large chair, or throne, a little elevated, to make her the presiding person. This will be a picture of considerable plague in adjusting the persons; but as every one seems keen about the subject, I shall proceed, though I am putting other things at a stand. Having been accustomed to see the Queen from a child, my reception had a little the air of that of an early acquaintance. She is eminently beautiful, her features nicely formed, her skin smooth, her hair worn close to her face, in a most simple way; glossy and clean-looking. Her manner, though trained to act the Sovereign, is yet simple and natural. She has all the decision, thought, and self-possession, of a queen of older years; has all the buoyancy of youth, and from the smile to the unrestrained laugh, is a perfect child. While I was there she was sitting to Pistrucci, for her coin, and to Hayter for a picture for King Leopold."

The last look given by Wilkie towards the "north countrie," will be found in the letters, wherein he claims, from a lady correspondent, assistance in the grand picture he was meditating, of 'Knox administering the Sacrament at Calder House.' We are now rapidly approaching the period when peculiar views as to the modern direction of Religious Art so fully took possession of Wilkie's mind, as to send him forth on his pilgrimage to the Holy Land. He believed, it will be recollected, that a fresh impulse might be given to religious painting in England, by attention to details of costume and manners, which have changed surprisingly little in the land of the East since the days of Scripture. And here we find a curious compromise between his early and his later principles. He must now seek higher subjects than Penny Weddings or Rent-Days, but his eye and his hand tempted him to literal delineation, even when the spiritualities of Holy Writ were his subject. The following fragments from his journals and letters are characteristic. The first is dated on board a Danube steamer:—

"The Turks on board are civil and silent, and remain on deck: their character and dresses are the most splendid to be imagined. This, of course, is felt as new ground—as new life, and as subject-matter every hour of the day for the pen and the pencil. The first night we anchored at the Turkish town of Widdin, and, when sitting at tea and coffee in our cabin, were told to listen to a voice of a man on the minaret of a mosque hard by, who was busy calling the faithful to prayers. It was a sort of chant, sometimes fine, but not very musical,—it continued—then ceased; and, in the interval, we heard a more distant voice on a further minaret, repeating the same religious call to the surrounding moslems. As the night was dark, the weather fine and still, and the mosque lighted, it was a novel and impressive scene. I can remember my first impression when, landing at Dieppe, I first saw France; and when, in passing the Bidassoa, I first saw Spain: but at Rustchuk, where we landed on the 1st of October, the wonder of the first sight of the first town, city, or village, I have seen of the Moslem empire, has far exceeded either."

"In leaving Vienna, we seemed to have left all art and pictures behind us; but in lieu thereof we have passed through districts and now have reached a capital where all is full of objects adapted for art. We have before us an Eastern and Asiatic people,—a people who possess neither art nor the feeling for art; and who eschew all idea of picturesque representation, but who in every respect, and at every turn, in every combination of raiment or dwelling, present that appearance the most suited of all to the painter's art. As a proof of this, the painter Mr. Woodburn and myself are the most frequent in referring to as the one who has most truly given such an eastern people, is Rembrandt. The Scripture subjects of Rembrandt are recalled to us at every turn by what we see before us; and this anticipating power of rendering what he never could have seen, raises the great painter of Amsterdam even higher than we had thought him. Everything that meets the eye is imposing; the colours light up the picture, and while they illuminate, as it were, even the darkness, they are prevented being tinsellly and gaudy by the deep greasy richness of tone which use and wont never fail to convey to the most discordant materials. One however looks here for what is somewhat wanting,—the interest of subject and event such as our feelings at home can sympathize with; but this, as we got farther on in our journey, if war and rumours of war do not impede us, we hope will be amply supplied by those districts of the east where all bear the stamp of those characters and events the most interesting in the history of man."

We must make room for one more extract, in which Wilkie's peculiar views and objects are yet more clearly stated by himself. To do this, we must omit a livelier passage or two, for the sake of the painter's last confession of faith:—

"Observed about the bureau of the steamer a number of persons of remarkable appearance. These were grave and elderly individuals in robes and long beards, belonging to the scattered remnant of Israel, come from the distant parts of Germany and Poland on their way to the land of their forefathers, and who we were told were to be our fellow-passengers. This is the first symptom that our journey is more than a mere travelling excursion; but though made with a different aim, is yet made with those who, from age, pursuit, and family descent, give to this wayfaring progress the most sacred character. They have but a part of the interest that we have, but have reason to feel it more intensely; they return from a land of strangers to their ancient home, and, like their ancestors, from bondage and captivity, return to the same land of promise which, in happier times, was the possession and portion of the chosen race. We again, who make the same pilgrimage, do not attach so much importance to time and place, except in their power of fixing the attention upon higher objects, yet we cannot help being struck with the feeling of attachment, which, under many circumstances of privation, makes so distant a country, and a glory departed, so eager an object of contemplation. The question, then, is, whether an interest, both with Jew and Gentile, so deep-rooted and so universal, may not be helped by the faculties of art being pressed into the service; and while the pursuits of learning and of war have, in former times, been so familiar with the sacred land, it seems but reasonable that the powers of art should try, from the localities now existing, to revive indeed the impression of those events that have, in so lively a manner, been handed down to us from former ages. In such a study and aim as may be thus presented to art, one thing the visitors to these regions will observe, that hill and dale, and sky, sea and atmosphere, are even more similar to that of our northern climes than we expect; and for the purpose of removing the mind from the quaint familiarity of our every-day appearances, an art must be resorted to, that whatever difference is to be seen in these objects must be seized and even forced into stronger effect, to serve the purpose of removal from what is common, that distance in place and antiquity in regard to the time of these events may be attained. But while so many of the localities disappoint, from their similarity to our recollections of home, there are multitudes of habits and appearances these Asiatic countries afford, that with the same taste and discretion must be subdued. It would require a good deal of reasoning to reconcile this sort of contradiction; but that all works of art, as of poetry, however universal the language may be in which they are embodied, are yet only understood by people of previously-conceived notions making use of that language; a disregard, therefore, of this might render the whole matter to be represented quite unintelligible. In Scripture we read often of a party when they sat at meat; now, as it is not explained how they sat at meat, we of the western countries naturally suppose they sat at meat as we do, at a table, and upon chairs. In seeing the customs, however, of these districts, we find this, to our disappointment, entirely different. When the Asiatics sit at meat, it is either upon the ground, or upon very low seats, and the table is a board placed upon a low stool. To introduce this at once in sacred subjects would scarcely be possible, perhaps better not introduce it at all, if the imposing character of the picture should be diminished by it. This is, however, one of those examples, of which there may be hundreds, to show that it is not the actual custom we now see that will help us, but that a change must be made, not only to suit our previous ideas, but to remove a sacred or historical subject to a former time; and it is, by witnessing the present appearance, to consider what will serve, and what will not serve, that this journey has been undertaken, and that professors of art are thus recommended to direct their attention to the important objects of information a visit to this Holy Land may present."

Of the sittings given to Sir David Wilkie by the Sultan, and by the Lion of Alexandria, we have full details: his journals, indeed, are written up almost to the day when his career closed for ever. What a picture could he not have made of such a subject as his own burial presented! We must, however, take leave of our greatest modern artist; and shall look eagerly for such supplementary matter as future memorials and biographies may furnish, by way of completing the picture of one who was as strong in individual character, and as great a painter, as the records of the nineteenth century present.

ROYAL ACADEMY.

Professor Howard's Lectures on Painting.

LECTURE V.—COMPOSITION.

When the student has gained some facility in the making out of forms, and understands the general principles of chiaroscuro and colour, his next endeavour should be to obtain a knowledge of Composition, or the power of applying those original elements of the art in the construction of a picture. The composition is hardly separable from the poetical conception or invention, of which it is the technical exponent. In its largest meaning it includes the arrangement of the whole work with all its parts—the contrivance and disposition of whatever is introduced upon the canvas; but in the more usual and limited acceptation of the term, it implies the distribution, or ordonnance of the figures, to which view of it I shall at present chiefly confine myself.

In my first Lecture I pointed out what generally appear to me the natural boundaries of invention in Painting. With regard to the choice of subject, I think the artist's fancy should be wholly unshackled; I will merely observe, that in adopting a theme from poetry, history, or whatever source, it should be always calculated to give an agreeable stimulus to the imagination, or the affections, and afford opportunity for displaying to advantage the peculiar powers and resources of the art. It should also admit of being translated into the language of Painting without losing any of its original interest, otherwise the artist, while paying homage to the genius of the poet or the historian, may expose his own inferiority and help to discredit his muse; and if not of that elevated character usually selected by our great predecessors, its moral tendency should at least be unimpeachable.

The representation of any event in Painting being necessarily confined to an instantaneous view of it, the particular moment at which the action may be brought before us, is obviously of the first importance, and indeed may almost be said to constitute the subject, for on this the success of its elucidation mainly depends. A few preliminary remarks on this head may therefore be desirable.

This strict and narrow limitation of time presents such difficulties in the way of telling a story that it would seem impossible to overcome them, had not experience shown that when the true moment has been happily chosen, the subject may be made sufficiently intelligible to the cultivated spectator, and the picture so managed as even to recall the traces of what has just happened, and give a hint of what is about to follow. I say sufficiently intelligible, for though it is certainly desirable that the spectator should be able to make out the meaning of a picture as fully as possible, without further information, yet that advantage must not be obtained at the expense of unity, decorum, or any of the higher aims of the work. Poussin, who excelled in this explanatory power, and always made great efforts to tell his story clearly, has sometimes by accumulating too many circumstances for that purpose, clogged or debased the character of his composition, and weakened its impressions.

In his design of 'Christ before Pilate,' (engraved by Stella), he has contrived an opening in the wall, through which you see a female, sending a messenger to Pilate on his tribunal; intending, no doubt, to express the recommendation of his wife, "have thou nothing to do with that just man." This, though ingenious, is not very effective, because, after all, the purport of the message does not appear; and though it serve to bring that point of the history to our recollection, it disturbs the solemnity of the scene, and diverts the attention from what is of more interest and importance, to a circumstance which might be omitted without disadvantage: it makes the picture narrative rather than poetical. The proper aim of the subject is much better attained by Rembrandt, in his treatment of the same event, (commented on by Fuseli): Pilate washing his hands shows at once that he yields up the accused to the fury of the Jews, while he is convinced of his innocence. This is much more affecting, and worthy of the art; the point of time is here admirably chosen, and the story very effectually conveyed to the mind. No one has been more habitually successful in this respect than Raffaelle. The 'Sacrifice of Lystra' has been remarked as an instance of his skill in selecting the true moment when his subject teemed with the greatest interest, and in bringing before us all that was essential, without disturbing the unity of the work. Nothing can be more felicitous than the mode in which he has expressed the cure of the cripple, from which all the circumstances of the scene have arisen. The 'Death of Ananias' is another fine instance of the same expressive power, though the unity of this work is rather more questionable. The episodes materially contribute to explain the cause of the sudden vengeance of Heaven, which (called down by the Apostles) has so evidently struck its victim to the ground, and if not sufficient in themselves to tell the story completely, their connexion with the event is apparent, and they at once suggest it to those who are acquainted with the scripture (which is in general all that the art can or need accomplish); but they are still, perhaps, rather overpowering, and occupy the eye somewhat more than is desirable. From these instances it will be obvious how closely the invention of the picture is connected with the composition, and how important it is that the point of time selected should be that in which the event is so poised between the past and the future as to afford the greatest number of circumstances favourable to its effective developement. When the artist has carefully weighed the capabilities of his theme, and settled his general plan of treatment, he may begin to dispose of his dramatis personæ in the most convenient manner for the performance of their respective parts, which is the essence of expressive composition; and here it is indispensable that he thoroughly identify himself with his subject, that he may be able to impart to others the feelings which it has excited in himself; he must endeavour to see the whole in his mind's eye before he begins to transfer it to his canvas, and imagine the positions and movements of all the figures, by which he is to make them appear to act and think with propriety, according to their several characters, age, sex, or condition.

For the groundwork of the science of arrangement, we should have recourse, as often as possible, to Nature herself, who is ever presenting us with an inexhaustible variety of characteristic actions and picturesque groups, from the most simple and tranquil, to the most intricate and energetic. This is the only source of true expression, for here every actor is perfect in his part, and unconsciously forwarding the drama without effort or affectation; accordingly, it has been the school from which all the great original artists have derived their excellence. But though composition is founded on the natural modes in which figures congregate and arrange themselves under the various circumstances of life, yet, as in all the other divisions of the art, taste and feeling must guide the artist in seizing upon what is most emphatic or effective in the materials afforded by the subject, which must be combined and arranged with all the simplicity and nature consistent with the demands of art. Every part must be considered with relation to the rest, and to the unity of the whole, and should co-operate in giving intelligibility to the story, in developing its most striking and particular features, and all the interest, poetical and technical, that can with propriety be brought together in that single moment of time which he has selected. Usually it is desirable to treat a subject with few figures: in proportion as they fill the canvas and exclude what is unimportant, the design will be the more grand and impressive. This was always the aim of the great masters.

Annibal Carracci thought that when more than twelve were admitted into a composition, there must be some "to be let." As a general principle, this suggestion deserves attention (particularly in dramatic painting); but no precepts are to be too literally construed, and even in that class of art it may sometimes be desirable to employ a greater number, and introduce personages who are little more than spectators, or concerned in some by-play. Episodes may occasionally be permitted in all pictures, for the sake of variety or explanation; but they must never be so prominent or attractive as to interfere with the main action; on the contrary, there should always be some apparent necessity for them; for if they do not promote the interest, they will be sure to weaken it. In epic works, the dictum of Carracci will scarcely apply. A great number of figures impress us with a feeling of grandeur, on an opposite principle to that which arises from simplicity; they excite and fill the mind. We cannot but perceive that a part of the appalling grandeur of the 'Last Judgment,' arises from the vast assembly congregated before us. We think we see the whole human race brought before its Judge. And the 'School of Athens' derives a very imposing effect from the number and dignity of its characters. Complex pictures, however, are generally less impressive than those with few figures. The first are apt to divide the attention and sink the details of character in generalities. To return to Composition:—the first practical point to be determined, is the general form of the canvas or panel, which may be most suitable to the treatment of the story, whether vertical, or horizontal, round or square, &c. This is far from unimportant, as the composition may be said to grow out of it. In places where a particular compartment is to be filled, and both the shape and size of his work are prescribed, the artist has to compose his design within certain limits and restrictions, which is always a test of skill; but as "all impediments in fancy's course are motives to more fancy," men of taste and ingenuity have not unfrequently taken a happy advantage of these accidents, and produced very original and beautiful inventions, in consequence of such restraints. Such are many of the designs of Michael Angelo, in the Sistine Chapel, of Raffaelle in the Farnesina, and of Paul Veronese in the Ducal Palace at Venice, which have been suggested or influenced by the spaces they were to occupy. A necessity for carrying upwards a composition, to fill a lofty compartment, led the Venetians to introduce columns, going out of the picture above, the heavens opening and angels looking down upon the martyr or personages assembled below. This necessity, too, may partly account for the number of Crucifixions, Assumptions, Resurrections, and other vertical works, which decorate the lofty walls of churches on the continent. Raffaelle's 'Battle of Constantine' is spread longitudinally to fill one side of a vast hall. In smaller works, the shape of the canvas is usually adapted to the subject, and the number and nature of the figures it requires; in many of these, character is often gained by a judicious preference of the vertical or the horizontal form.

Another preliminary consideration is the ground plan on which the figures are to be disposed. This admits of great diversity. In the 'Last Supper' and in the 'Draught of Fishes' the figures are almost on the same plane, as in basso-relievo. In the 'St. Paul preaching at Athens' and the 'Elymas,' the plan is semi-circular, which is a very usual arrangement with Raffaelle: in the 'Ananias,' and many others of his works, it is completely circular. The choice in this respect will chiefly depend on the best mode in which the due importance of the principal figures can be preserved. In a 'Last Supper,' by Raffaelle, in the Loggie of the Vatican, the circular arrangement has not a happy effect, the figures in front becoming more important, from their superior size and strong action, than the Saviour himself. The perspective is too violent, and the calm and pathetic dignity of the subject injured in consequence. In general, as many planes have been thought desirable as may well be introduced; they add richness and intricacy without destroying simplicity. Another desideratum is, that the general form of a composition assume somewhat of a regular or geometrical figure, as the square, the triangle, the circle. M. Angelo is said to have preferred a triangular or pyramidal form, with a serpentine line running through the midst, from the base to the apex: this, of course, will not always be applicable. It is sufficient that the general shape have some distinctness of character, which will be best suggested by the subject and the situation it is to fill. The immediate agents or appliances, in technical composition, are *Lines*, *Quantities*, and *Grouping*. By Lines are to be understood the direction or sweep of the more conspicuous forms, or human figures of the design. Of these, the 'Taking down from the Cross,' by Rubens, will supply us with an excellent illustration. The value of lines has always been strongly felt in the best times of Art, as we find in the bassi-relievi and gems of the ancients, and in all the works of the great painters and sculptors of the Cinque-Cento. Their use is to link the parts together, and lead the eye agreeably through the picture. They form the melody of the work, and in

Digitized by Google

all compositions should arise out of the particular occasion, and be flowing and graceful, or more direct and abrupt, as may suit the character of the work. In general, the main lines of the composition should either correspond with the external shape, like the tall columns of Paul Veronese, or oppose it, like the diagonal lines of Rubens, in the 'Taking down from the Cross,' and in its companion at Antwerp, the 'Raising of the Cross.' They have not unfrequently been carried to excess and mannerism, particularly in the Florentine school, and in the postures of Pellegrino Tibaldi. Those of M. Angelo, John di Bologna, and Parmeggiano, are not always exempt from this fault; and I cannot help mentioning an instance, in which it appears to me that even Raffaelle has courted them somewhat too obviously. His cartoon of the 'Murder of the Innocents,' (bequeathed by Mr. Prince Hoare to the Foundling Hospital, but lately transferred from thence to the National Gallery,) is full of fine action and expression, and of all his usual excellencies, in spite of the injuries it has undergone and its miserable present condition; but the lines are wound about so artificially through the composition, as to resemble a "true lovers' knot"; and the eye is invited to admire and dwell upon their elegance and harmony, when the heart should be roused to emotions of pity, terror, and indignation.

In the relievo of the Niobe Family, so lately presented to your notice (which is a parallel subject), there is no such attempt at a melodious flow of lines; they are highly studied and exciting, full of contrast, not deficient in harmony, but pathos, energy, and simplicity prevail throughout. I shall have occasion, in the course of my Lecture, to return frequently to the notice of lines and their value.

What are technically called the Quantities in painting, are the greater divisions and subdivisions of the design—the masses. Composition implies the putting together of parts, so as to constitute a whole; the parts, or divisions, must be distinct, or there will be no apparent composition; they must combine in one scheme, and to one end, or they will not be a whole. To produce an agreeable effect, every part must bear a varied and proportionate relation to all the rest. If the masses, or divisions, are too equal, the effect will be monotonous and insipid; if too much subdivided, unity will be destroyed; and without proportion, there will be neither harmony nor appearance of intention. Every subject that we may select will probably suggest some appropriate division of the figures. For instance, in the 'Delivery of the Keys to Peter,' the propriety of dividing the composition, as Raffaelle has done, into two distinct portions, making a separation between the Master and his disciples, strikes us at once. Had he placed Christ in the centre, surrounded by the Apostles, besides that it would have been less decorous, and perhaps at variance with the feelings of awe which must have possessed them while receiving the solemn charge, the composition would have lost that grand simplicity and distinctness which stamps such character upon this justly admired work. The general shape of the group of the Apostles is a square, which is contrasted with the columnar figure of the Saviour in an agreeable proportion. Within this the subdivisions and planes are varied, and the kneeling figure of Peter, advancing a little, connects the whole together. This division of a subject into two chief masses, is the most simple and striking principle of effect in composition. We have another fine instance of it in M. Angelo's 'Creation of Adam.' Here, without the addition of the angels, the masses of Adam and his Maker would have been too equal, but by representing his cherubim as children, he has given a further variety in the quantities, as well as majesty and sublimity to the Creator. In the 'Draught of Fishes' a different mode of arrangement was necessary, and unity is preserved by linking the figures together in an harmonious chain, which undulates across the picture, each having its own requisite action and character. The Christ, whose quiet dignity opposes so finely the exertions of the other figures, forms a separate mass; Peter another of a different quantity and shape, but near enough to connect with that of the two stooping sons of Zebedee; and the smaller quantity of the father terminates the whole. This sort of rhythm, or modulation, adds much to the beauty of all composition. The intended sacrifice to Paul and Barnabas at Lystra, is perhaps less agreeable than either of those works I have just adverted to. The story required a crowd, and in consequence precluded that simplicity which renders those so impressive; another principle of effect was, therefore, resorted to—that of *intricacy*. Character is obtained in the two first by a quiet solemnity, and in this by bustle and energy.

In 'Paul preaching at Athens,' an imposing effect is produced by the distinctness, dignity, and striking collocation of the principal figure, and the union which arises from the happy perspective arrangement and subordination of his audience. All these works are well studied in their quantities.

I proceed to speak of Grouping. The group is that close kind of arrangement, which combines two or more figures in a single mass, and when finely treated, has always been considered the most perfect mode of composition; indeed, it comprises all its principles, and is an epitome of beautiful and effective combination; for the group should be subdivided by harmonious lines and well-balanced quantities, and should contain such a portion of variety, and contrast, intricacy, or simplicity, as may best agree with the character of the subject. A composition, according to its extent, may consist of several groups, or be limited to one; but, however numerous, they must be conducted on the same principle, and still be proportionate parts of one whole. We see the impressive effect of a single group in the 'Taking down from the Cross' of Rubens, while in the 'School of Athens' we are struck with the grandeur arising from the symmetrical arrangement of a multitude of figures, thrown into detached groups, balancing each other, and so connected as to form an entire composition. Grouping, though liable to become artificial, unless organized by feeling and taste, is strictly founded on nature, as we may convince ourselves by looking at any time into the highways and streets, from whence the best artists have drawn some of their happiest inventions. It is to be regretted that we do not possess any extensive specimens of the excellence of the ancients in this department of our art, but their sculptors having been thoroughly skilled in the principles of composition, we cannot reasonably doubt that their painters were equally so. That they were not a little critical on this point, appears from Pliny's remark, that Apelles was considered inferior to Amphion in disposition; meaning, as I conceive, the ordonnance of the figures. The great simplicity with which the Greeks were satisfied, and the perfection they aimed at in the details of their works, may have prevented them from engaging in any very extensive compositions; at least, the subjects they are recorded to have painted seldom consist of many figures.

As we cannot refer to any ancient pictures of importance to illustrate this part of my subject, I must, at the risk of trenching in a slight degree upon the province of the Professor of Sculpture, have recourse to his art for some specimens of the admirable skill of the Greeks in this element of design.

When Sir J. Reynolds expressed an opinion that the ancients were probably deficient in composition as compared with the moderns, it is clear that he adverted to that more extensive sense of the term, which includes the whole contrivance of a picture; but in its more usual limitation, or, at least, in that view of it which I am at present taking (the ordonnance of the figures), they have shown the most consummate taste and judgment, and have carried it to the same high degree of excellence which they had achieved in style. I consider this sufficiently proved by the relievo of the Niobe Family (before referred to), which, though coarse in execution, and evidently a copy made by some ordinary hand, is not inferior in composition (as well as in sentiment and expression) to any thing extant. The figures are so admirably contrasted in their lines and quantities, so well divided, and yet linked together, the attitudes so skilfully varied, animated, and true, that the original could only have been the production of one of the greatest sculptors of antiquity, and I cannot refer the student to any better illustration of the principles I am endeavouring to explain. It is to the high opinion which our excellent Flaxman entertained of this work, that the Academy is indebted for possessing a fine cast of it—the only one, I believe, in England: it was moulded in Rome by his direction, and sent over to Romney the painter.

Having mentioned the name of Flaxman, I cannot but refer the student to the beautiful designs of this great master in composition, as deserving their utmost attention. The shield of Achilles, his most consummate work, is the glory of modern sculpture. Nor can I omit to point out that highly poetical invention of his rival, Banks, 'Thetis rising to console Achilles,' in which the exquisite harmony of lines and graceful motions in the females, is so finely contrasted with the rigid, energetic action and noble style of the Achilles. In any era of art this would have been considered a composition of singular felicity.

To return to the ancients—the groups of the Laocoon, the Boxers, Menelaus with the Body of Patroclus, the female figures from the pediment of the Parthenon, and the frieze from the same temple, now in the British Museum, evince abundantly their admirable power of combination: and among their gems a great number of exquisite examples of taste and science in lines and grouping are to be found, which will repay the painter's most careful study. It was from the specimens of ancient sculpture which had happily outlived its ruin, that the revivers of Painting in Modern Italy acquired their first notions of composition, as well as of style, in which they gradually advanced, as the bassi-relievi, groups and statues of better days, were again brought to light. Of Raffaelle's arabesque ornaments in the Loggie of the Vatican, which are filled with graceful inventions, many of the most beautiful groups and figures are copied from antique gems and from paintings discovered in the sepulchres of the ancients.

I do not propose to follow the progressive steps of composition through this period, but shall content myself with remarking on the works of some of those great men, who, towards the middle of the fifteenth century, seem to have fully penetrated into its arcana, to have discovered the value of lines, proportionate quantities, concatenation or grouping, contrast, and harmony, and to have carried this branch of the art to its height. Some of the productions of Luca Signorelle, in the Duomo at Orvieto, had no doubt suggested to Michael Angelo much of that grandeur and energy which he imparted to his own groups and single figures, and he must also have derived many fine inspirations from the works of Donatello, at Florence, which have in them the very soul of expression. But he carried much farther than either the power of grouping and the science of arrangement and combination. The 'Sistine Chapel' is an inexhaustible mine of study for the artist in this respect. The 'Temptation of Adam and Eve' is combined with their expulsion from Eden in a vigorous and masterly style of composition, which had never been seen before his time. In this, the concatenation of lines formed by the arms of the different figures is beautiful, and the crime linked with the punishment in a manner no less striking than harmonious. This mode of bringing together in one design different parts of the same story, was perhaps suggested to him by some ancient bassi-relievi, where we find the histories of Jason, Meleager, and others, thus treated: it is a fine principle, from its concentration and unity, and especially adapted to the monumental style, wherein Art is most abstract and spiritual. The 'Elevation of the Brazen Serpent' is another striking example of concentrated and effective arrangement. But every mode and variety of composition is to be found in that prodigy of skill and power, the 'Last Judgment.' It may be doubted whether, in the whole compass of ancient art, so vast an assemblage of figures as this was ever to be found, where the greatest science is brought in aid of the richest invention and the most terrific expression. The struggling groups of fiends and mortals, in particular, have never been equalled for energetic action and ingenious combination. The prints in the library, and the lectures of Fuseli, will sufficiently prepare those students who wish to become acquainted (and all should be acquainted) with this highest effort of art in its highest class. Of his early and celebrated composition, the Cartoon of Pisa, we are enabled, I conceive, to form a very tolerable judgment from the small copy of it by Sangallo, at Holkham (which probably contains all the foreground figures). Schiavonetti's engraving from this interesting relic, though finely wrought, is less faithful in style than might be wished. The elo-

Digitized by Google

quent commentary of Fuseli on this work must be known to you all.

With respect to the invention and expression, chiaroscuro and colour, of the great work of Leonardo above me, I have already spoken; but as among its surprising merits composition is not the least, I would now call your attention to the ordonnance or arrangement of the figures. Painted for the refectory of a convent, and confined to a particular space, occupying the whole width of the room over a door, Leonardo adopted the plan of extending his table entirely across it, making the white cloth a bond of union to the whole; and this gives great value, also, to the bright colours and richly varied details above. I may here observe, that in all compositions of a grand or extensive character, some portion of symmetry and softened formality is desirable. The subject in this instance required that the Apostles should be placed six on each side, and the Saviour in the midst. At each extremity of the table are three figures more separated than those next to them, which are combined in two close and varied groups. One of these is more connected than the other with the principal figure, which gives due predominance to the central mass, and prevents the composition from appearing too positively divided into triads. The heads are at unequal distances, and form in themselves an agreeable waving line. There is an ingenious modulation in the arms, and in the conduct of all the hands; every figure presents a different quantity; and the principal line being horizontal, the forms above it are contrived to pass from one end to the other, in a sort of zig-zag, or undulating chain. It would be difficult to point out a more perfect specimen of intricate grouping than that of Peter, Judas, and John. Peter, stretching over Judas, with the impetuosity belonging to his character, addresses himself to the affectionate John, who (his hands clasped in grief) inclines towards him; Judas leans back to support himself, and assumes the firmness and surprise of innocence. Here all the principles of effect are combined, the strongest contrast of position and expression with the most complete union, while the whole seems momentary and accidental. This, with another group as energetic, and almost as fine, on the other side, are happily opposed to the calm resignation of the Saviour, producing great richness and effect in the centre, and a fine alternation of action and repose throughout. Nothing is neglected in this profound work, which, from the variety of its excellencies, may be esteemed a school in itself.

The compositions of Raffaelle have often so artless an appearance that they look as if he had found them in nature and sketched them on the spot; some of these I have already noticed. His Scripture Histories in the Loggie of the Vatican (engravings of which are in the Library) afford numerous and beautiful examples of composition, uniting (with energy, grace, and expression in the individual figures) all the principles of scientific arrangement, and the most ingenious contrivances for telling the story.

Among these designs I will point out a few of the more striking. There is, perhaps, none finer than that of 'Joseph relating his Dreams'—Joseph stands in the midst, with one hand on his breast, and the other pointing to his brethren who are collected about him. The two circular representations, the sheaves of corn, and the sun, moon, and stars, introduced above, are hieroglyphics, before noticed, which explain the subject. The plan is circular. The figures are particularly graceful and natural, divided into unequal masses, beautifully grouped and rounded, and connected by a recumbent figure on one side, and the seemingly trifling circumstance of an extended staff on the other. The 'Deluge' in the same series is finely conceived and treated. The main line of figures crosses the canvas in a sort of chain, as in the cartoon of 'Christ calling the Sons of Zebedee.' A family consisting of an aged man on horseback, another in the prime of life supporting his wife—a father carrying one child and drawing along another by the hair, are wading a stream with difficulty and exertion. At some distance a number of persons are sheltering themselves under a tent from the torrents of rain descending, while the ark is dimly seen floating in the distance. The story could not be more successfully told, on the same scale, nor the arrangement be more expressive. To enumerate all the fine compositions of Raffaelle would be to give a complete catalogue of his works, which would be useless here, were it possible. But I am tempted to advert to a series of designs from the fable of Cupid and Psyche, which go by the name of this great artist. That they are compositions in all respects worthy of him, however their beauty is impaired or disguised by the engravers, cannot be disputed: nay, they present some groups, which surpass anything he has done from the same subject in the Farnesina. They are not, however, mentioned by Vasari, nor, I believe, any other writer, as among his works, and hence a doubt has been entertained whether they are rightly ascribed to him. It has been suggested, but from mere conjecture, that they are the inventions of Balthazar Peruggi—at any rate they well deserve the attentive consideration of the student: he will find them abound in expressive figures, and the happiest groups—conceived and arranged in the true spirit of the great painter whose name they bear—and they afford a useful example of the treatment of one story in an extensive series of designs, which affords an artist the best or only opportunity to develope all the resources of composition.

Correggio generally composed his works with reference rather to their picturesque effect and harmony than to those principles of arrangement which I have been endeavouring to explain. His cupolas at Parma, however, are splendid proofs of his great skill in the ordonnance of a number of figures, though the foreshortenings (*di sotto in su*) are too often less agreeable than daring. His picture of a 'Holy Family,' in which the Madonna and child are seated on the ground, and Joseph is gathering dates from a palm-tree with angels hovering above, is a beautiful combination of figures, and a fine illustration of the melody of lines.

But I proceed to Rubens, whose powers of composition were of the first order. His fine work of the 'Taking down from the Cross,' (a copy from which was in the room,) may be cited as a very splendid example of the powerful effect of a single group. The lines flow diagonally through the picture from top to bottom, that of the principal figure being the longest, which is still further extended by the linen in which it is wrapped, carried out by the half figure at top, and combined with the kneeling Magdalen below. This main serpentine line, which illustrates M. Angelo's axiom, is supported on one side by the large masses of St. John and the figure descending the ladder; on the other side, smaller portions of figures, finely varied, oppose the central stream of form—presenting altogether a beautiful example of concatenation, full of intricacy, but simple and one. The student will do well to compare this composition with the 'Taking down from the Cross' of Daniel da Volterra, which Rubens had no doubt well considered when he undertook his picture. The elements of the subject are not entirely new in either, for independently of the deep importance of the event represented, it affords so fine an occasion for displaying a variety of action, expression and character, with a contrast of life and death, as to have given rise to several ingenious compositions (though not of equal power with these two) by earlier masters. Volterra's has always been considered one of the great works of modern Painting, and possesses some higher qualities than that of Rubens—it is preferable at least in style and expression, though chargeable with a want of unity, from the introduction of the pathetic group of females at the foot of the cross, which divides the interest. Rubens has avoided this, and supplied what the other wants—a fine and appropriate chiaroscuro—which adds exceedingly to the solemnity of the effect. In this comparison the student will trace the different operations of mind and feeling, in two great artists in their treatment of the same subject, which is always an invaluable opportunity; and he will find the same technical elements of arrangement attended to by both.

The scriptural pictures of Rubens, in general, want the deep sentiment which that class of art, above all others, imperatively demands. He has, sometimes, however, been eminently successful in expression, action, and disposition. Reynolds thought his 'Christ taken down from the Cross,' in the picture just mentioned, to be the finest figure that ever was composed; and, considered merely as a dead figure, it is certainly admirable, but it wants a nobler and more definite character. The head is very mean, and might suit better one of the thieves. The 'Christ' of Daniel da Volterra is more dignified, but somewhat vague also. In Rubens's 'Conversion of Saul' (now, I believe, in the collection of Mr. Miles, near Bristol), Saul struck with blindness, and falling from his horse, is a very perfect piece of expression from head to foot, and more happily conceived than even those which were produced by Michael Angelo and Raffaelle in their representations of the same event: the action is at once noble, instantaneous, helpless, and breathes entire submission and resignation to the divine vision. His great knowledge of the human figure enabled him to throw it into any conceivable position, and his powerful and comprehensive genius led him to appreciate and study Michael Angelo for composition, as he has done all his other great predecessors, for their respective excellencies. His 'Hippolitus' at Woburn is borrowed from the basso-relievo of Tityus, in the Villa Borghese, by Michael Angelo, and he has entered the lists with him in the more tremendous subjects of the 'Battle of the Angels,' the 'Fall of the Damned,' and others of the same character, which have been eulogized by Reynolds. These are now at Munich (drawings of them may have been seen by many of my audience in the collection of Sir Thomas Lawrence). But a comparison of these surprising works with the 'Last Judgment' of Michael Angelo, will infallibly show the great superiority of the latter. The disgusting circumstances Rubens has introduced in some of these, and the grossness and vulgarity of the style (rendered still more offensive by his florid colouring), entirely prevent those feelings of terror and sublimity, which should accompany such subjects, and which the tremendous energy displayed in these compositions tends to excite.

In the hunting groups, of which I have before spoken, as founded on Leonardo's 'Battle of the Standard,' he seems to have been more in his true element. The qualities in which he most excelled are there in place, and appear to the greatest advantage; accordingly, these groups are among the most vigorous, skilful, and effective compositions in painting. We are fortunate in possessing in our National Gallery two very perfect specimens of composition by Rubens, of quite different characters—I mean the allegorical picture presented to the collection by the late Marquis of Stafford, and the 'St. Bavon,' formerly belonging to Mr. Holwell Carr. In the first, we find a scientific and even elegant treatment of lines, and quantities in the forms, accompanied with a rich picturesque effect and colour, which are entirely appropriate; the grouping of the children is particularly beautiful and on the principles of the finest composers. He has in this work blended the great style with the ornamental, in very suitable degrees. The 'St. Bavon' is on a more extensive scale, and still more admirable. The principal masses are distinct, and finely varied and proportioned: the females on a platform on the left, form one of these, the group of mendicants in front another, and the remainder of the panel is filled by a surprising concatenation of figures, which beginning with the retinue of the hero on horseback and on foot, in the court before the church, extends up the stairs: and, by means of the lamps within, the mind is ingeniously led on to the end of the nave. This numerous assemblage of persons is so artfully distributed, that all have sufficient room, and are placed so exactly where they might be expected to place themselves, according to their various conditions, offices, and motives, that they seem to have been sketched from a real scene rather than arranged by art. The actions of all are skilfully, but unaffectedly, contrasted; the finest grouping is everywhere to be found (particularly on the stairs); the characters are dignified and more expressive than is usual with Rubens, and though he has introduced a good deal of singular German costume, which is rather uncouth, there is so much of nature combined with consummate science, so much of grandeur and effect in the arrangement of the whole, as well as of interest in the parts, that I know of no composition which can justly be preferred to it in the same class of subjects.

I might refer the student, with propriety, to many of the designs of Poussin, as fine instances of scientific ordonnance, some of which may be seen in the National Gallery, and are well worthy of his attention; but after the examples I have adduced, I think it may be more useful to him to make a few practical ob-

Digitized by Google

servations. Generally, the main lines of a composition should either correspond with its external boundary, like the columns of Paolo Veronese, or contrast it, agreeably with the precept of M. Angelo, as in the diagonal wave of Rubens's 'Taking down from the Cross.' In the works of the great composers we often find the expression of the subject much strengthened by a reduplication of lines in nearly the same direction, all slightly varied in length, inclination, and curvature, and suddenly contrasted by a decided line in the opposite direction, as is remarkable in the 'Brazen Serpent' of M. Angelo. A fine instance may also be seen in the 'Joshua staying the Sun,' of Raffaelle, where a number of soldiers on their knees are thus arranged: and this accords with a general maxim in all composition, that the greater part of it should be in agreement, or consentaneous, the smaller part in opposition. This applies not only to lines, but to warm and cold colours and tones; they must be repeated and spread for the sake of continuity and breadth, and contrasted for the sake of effect. It is important that the arrangement of the heads should form an agreeable line, and that they should be more or less varied and inclined, as is perfectly managed in the 'Last Supper;' particular care should be taken in the placing of these, or any other ostensible points of the composition. The aspects of the figures should be as different, also, as the character of the work will properly allow; in some cases it is surprising how little variation will be sufficient. Back figures will often be found invaluable; Raffaelle employed them profusely in his pictures in the Loggie, which was a necessary consequence of his fondness for a circular plan: and when well managed they give a great artlessness to the arrangement. We see this constantly out of doors, where the actors do not think of the bystanders; while, on the stage, they are often too obviously marshalled for effect, the group being necessarily left as open as possible, that all may see what is going on within; this, when it occurs in painting, has generally a theatrical and artificial air. Mr. West's fine composition of the 'Death of General Wolfe,' somewhat approaches to this, but it arose naturally out of the subject, propriety requiring that the dying hero should not be too much closed in by the attendants. In his 'Battle of La Hogue,' a boat in shadow darting into the picture in front of the admiral, detracts nothing from the importance of the chief, while it is in the highest degree picturesque, and well suited to the bustle and confusion of the scene. Many other instances of excellent composition might be cited from the hand of the same able artist; among others, his 'Regulus returning to Carthage,' 'Telemachus and Calypso,' &c. Composition appears to have been the leading object to which the great Italian masters of the Cinque-Cento period devoted their powerful energies. Their numerous sketches and studies for the same work show that they never left untried any adaptation of the materials of their subject, which promised a more successful developement of its particular intellectual aim, or a happier arrangement; and these labours seem to have preceded any attempt at the introduction of colour. Rubens, confident in his resources, and never fastidious, usually made out his design at once in outline, washing in a slight chiaroscuro in oil colour; and on this he seems to have found no difficulty in engrafting the most picturesque effects; indeed, it is generally one of the tests of a finely disposed group, that it will afford, from its roundness and subordination, a favourable light and shadow. This masterly union, perhaps, no one ever carried so far as himself, while the grand style of composition, which he had imbibed from M. Angelo, Raffaelle, and Leonardo, often preserves a sort of dignity and even taste in his pictures, which the boisterous vulgarity of his figures cannot altogether destroy. In cultivating composition, the judicious artist will therefore bear in mind the value of those important accompaniments and their high estimation in the present day, and give some thought to chiaroscuro and colour while studying the ordonnance of his design; for the same general rules are more or less applicable to all the technical divisions of painting. Agreeable proportions and varied quantities, grouping, contrast, harmony, are regulating principles in the treatment of chiaroscuro, colour, and form, and are all comprehended in the widest sense of the term Composition.

MONETARY AND METRICAL SYSTEMS.

IN your Number of April 22, there appears a paper by your correspondent "B," on the proposed alteration in the Monetary and Metrical Systems. I beg leave, for one, to offer my thanks to your correspondent for his attention to a subject which so deeply affects the convenience of every class and every person: and if, in what follows, I shall express opinions in some degree different from his, I beg to assure him, that though these opinions have been formed after long consideration of the subject, I offer them for no other purpose than to call public attention, by amicable discussion, to the consideration of a matter which, perhaps, has not excited in the community the interest which it deserves.

Before alluding to recommendations of specific changes, I will advert to a subject which has commonly been put out of sight altogether (and is so by your correspondent "B"), namely, the limitations on the power of a Government to effect changes.

A Government, so far as I can see, possesses (practically) no absolute power in altering those arrangements between man and man, whose form is strongly fixed (by long continued and far extended custom) in the minds of all, and in which the Government very rarely interferes (by legal process or otherwise). If, however, there is a conflict between two forms, a Government can interfere in favour of one, and can, perhaps, entirely suppress the other. If the Government has, practically, the complete superintendence of any transactions, it can introduce into them any system of measures which it pleases; but even in these, it is necessary, for making any new measure familiar to the country and establishing it as a veritable part of the system of the country, that material representations of the new measure be presented in great number to the notice of the people, and that its name be used extensively in official documents, and especially in contracts.

Applying these considerations to the subject before us, I conclude, that the Government can alter the coinage and the form of money accounts as it pleases; the former, because it issues the coin, the latter because (through the courts of law) it can compel the parties in actions at law to exhibit their money accounts in a stated form. The Government can alter the larger measures of length, because it is able to exhibit material representations of new measures (by erection of distance posts, of which the number would not be so great as to introduce any difficulty); and by its influence in turnpike acts, railway acts, &c. it can introduce the names extensively. The Government possesses no power to alter the shorter measures of length. The systems of measure by the yard and measure by the foot do not fall into the category of conflicting forms mentioned above, for they are totally independent. The carpenter never uses the yard and nail, and the draper never uses the foot and inch; and no power of the Government could compel one of these parties to use the measure of the other. The decimal division of the foot is not used at all by carpenters; it does not conflict, therefore, with the inch, and cannot be introduced to the expulsion of the inch. The Government can, perhaps, expel the stone and hundred weight, because there actually is a conflict of customs in the expression of a number of pounds, on the one hand, by multiples of fourteen, and on the other hand, by the expressions of ordinary decimal numeration. But even here the Government cannot interfere effectually, except by suppressing all the material representatives of one system and introducing a sufficient number of the other. The Government has no power over the smaller weights. There appears to be a tendency among the dealers in the precious metals to adopt a decimal scale, and the Government can in some degree aid, and perhaps in some degree direct this tendency. There is no such inclination among tradesmen in general. In the liquid measures, &c. the Government can interfere to give singleness of meaning to a single name (the anker for instance). The great step taken some years since with regard to the gallon and all its derivatives, was nothing more.

Having laid down this basis of limitation, I shall proceed to notice the remarks of your correspondent: 1. In regard to coinage the field is perfectly open, and the selection of a system of decimal coins is to be guided only by general convenience. However much your correspondent may object to the suppression of the penny, I take leave to remark, that no decimal scheme, which I have seen, has proposed to retain it. Some schemes have proposed to consider the pound sterling as the standard unit (this is the system adopted by the Standard Commission); others, too, consider the shilling as the standard. I am certainly inclined to the former, for the following reasons: first, and principally, that the pound sterling has been for centuries the real standard money in which large sums have been estimated: secondly, that a coin representing almost exactly the one-tenth part of the pound sterling (the rupee) is current to an immense extent in our Indian possessions; thirdly, that a coin, representing almost exactly the one thousandth part of the pound sterling (the farthing), is current in this country. I apprehend that few new decimal systems have been proposed which, like this, have found the three principal members of the series ready to hand.

I cannot at all understand your correspondent's remark, "The Commissioners were probably not aware, when they proposed the new coin they term a *Cent*, that amongst the very poor the lowest description of coin at present used is constantly offered by them in payment." On referring to the Report of the Commissioners, I do not find the name *Cent* at all (indeed, no names are there proposed for the members of a decimal coinage); and, moreover, the Commissioners *do* recognize the use of this smallest coin (the farthing), and expressly recommend it as one of the series in the decimal scale. But your correspondent conceives that the poor would certainly be sufferers by a change of system, in all cases where the price which was expressed by a round sum in the old system, is not expressed by a round sum in the new one. I have no belief in this. The prices which are affixed to articles sold to the poor are governed by the laws of commercial competition as certainly, though perhaps not so regularly, as the prices of articles sold to the rich, and not by the power which the individual shopkeeper possesses over the individual purchaser, as your correspondent appears to imagine. When I say "not so regularly," I mean that the estimate of the remuneration for making up small parcels, for doubtful credit, &c. may be uncertain. And, taking into account the competition to which I have alluded, a tradesman is by no means necessarily a gainer by raising his price, and will lower it if his accounts, &c. are thereby rendered more simple. Thus, if a tradesman had sold coarse sugar at *5d.* per lb. to the time of changing the coinage, he finds, then, that the equivalent in the new system is £0.021; he will probably without hesitation, sell at £0.02 per lb., in the confidence that the increase of custom will make up for the small diminution of price: and here the buyer is a gainer. In other cases he would be a loser; and on the whole he would neither gain nor lose by the change. 2. In regard to measures of length, your correspondent says, "the Report has not recommended a single *useful* alteration, &c.," he then objects to the proposed measure of 1000 yards, because it is "positively inconvenient, as it is neither a multiple nor a division of any of our larger measures of length, such as the pole, the furlong, the mile;" and then, by way of a corrective substitute, proposes measures of 1000 feet and 10,000 feet. I am altogether unable to comprehend the advantage of this substitution, for neither 1000 feet nor 10,000 feet is a multiple or a division of the pole, the furlong, or the mile.

I know no meaning of the words "*useful* alteration," except "*convenient* alteration:" and the question of long measure may therefore be expressed thus: is it more convenient to retain the present mile than to risk a change? and if a change is determined on, (decimal, as appears to be agreed,) what shall be the basis of the decimal scale?

To save space, I will assume that the relation of the mile to the yard or foot is inconvenient (remarking here, that I have known a person, of strongly practical, as well as literary education, who could not remember the number of yards in a mile without referring to the year of the accession of George III., and that I believe very few persons know the number of feet in a mile without a mental calculation), and I will confine myself to the second question, and at once avow, that its answer is not free from difficulty. Conceiving, however, (for the reasons given above) that neither the yard nor the

Digitized by Google

foot can be suppressed, the choice is to be made between them; and in the choice, we must be guided, in a great measure, by the use which has hitherto been made of them in the expression of long distances. I am inclined to think, that the yard has had the preference. Thus, in military matters, it is directed that "the distance between the angles of two neighbouring bastions is to be about 360 yards." The distance 1000 feet would have been equally good, and would have been easier to remember, but no one thought of giving the measure in feet. The length of a railway tunnel or embankment, in public statements, is commonly given in yards, never in feet. In scientific measures different expressions have been used. The distances, in the earlier part of the Trigonometrical Survey, were given in fathoms; they are now given in feet. In favour of the foot as a basis I may state, that the use of hundred-feet tapes, instead of 66 feet, is increasing. On the whole, I must express my adhesion to the yard scale, in preference to the foot scale. It may be advisable to remark, that a distance not very different from a mile, has been commonly found convenient for the interval of road-posts. Thus, in France, while the league of 2¾ English miles was the legal road measure, the road-posts were fixed at every half-league. In Germany, where the miles are about four English miles, the posts are fixed at every ¼ German mile. And thus, if a myriapede of 10,000 feet were adopted, it would be necessary to fix posts at every half-myriapede, which would be inconvenient for the introduction of the new measure, inasmuch as the half measure would attract public attention rather than the whole one. No such inconvenience holds with the 1000 yard measure. On the impossibility of suppressing the inch I have already spoken.

I will not occupy your space with further remarks than the following: that I conceive the suppression of the acre, in square measures, and the ounce in common weights, to be impossible; though I think it possible that a decimal subdivision of the pound might be introduced for weighing gold and silver, &c. And that I assent to the proposals of your correspondent, for the rapid change of coin, and for the marking of every coin with its distinctive name.

A. B. G.

NEW HOUSES OF PARLIAMENT.

In compliance with the Instructions of the Commissioners of the Fine Arts, Mr. Barry has delivered a Report containing his views as to the internal decorations of the new Houses of Parliament, the completion of the exterior and local improvements, which are necessary to give full effect to the new building, and, by way of illustration of the remarks, a plan of the principal floor of the new building, a general plan of part of Westminster, in which the new building is shown in connexion with various improvements proposed to be made in its locality, and two drawings relating to Westminster Bridge.

Mr. Barry observes,—"With reference to the interior of the new Houses of Parliament generally, I would suggest that the walls of the several halls, galleries, and corridors of approach, as well as the various public apartments throughout the building, should be decorated with paintings having reference to events in the history of the country; and that those paintings should be placed in compartments formed by such a suitable arrangement of the architectural design of the interior as will best promote their effective union with the arts of Sculpture and Architecture. With this view I should consider it to be of the utmost importance that the paintings should be entirely free from gloss on the surface, and that they may be perfectly seen and fully understood from all points of view. That all other portions of the plane surfaces of the walls should be covered with suitable architectonic decoration or diapered enrichment in colour, occasionally heightened with gold, and blended with armorial bearings, badges, cognizances, and other heraldic insignia, emblazoned in their proper colours. That such of the halls as are groined should have their vaults decorated in a similar manner, with the addition occasionally of subjects or works of art, so interwoven with the diapered ground, as not to disturb the harmony or the effect of the architectural composition. That such of the ceilings as are flat should be formed into compartments by moulded ribs, enriched with carved, heraldic, and Tudor decorations. That these ceilings should be relieved by positive colour and gilding, and occasionally by gold grounds, with diaper enrichments, legends, and heraldic devices, in colour. That the screens, pillars, corbels, niches, dressings of the windows, and other architectural decorations, should be painted to harmonize with the paintings and diapered decorations of the walls generally, and gilding. The door-jambs and fire-places should be constructed of British marbles, of suitable quality and colour, highly polished, and occasionally relieved by colour and gilding in their mouldings and sculptural enrichments.

"That the floors of the several halls, galleries, and corridors, should be formed of encaustic tiles, bearing heraldic decoration and other enrichments in colours, laid in margins and compartments, in combination with polished British marbles; and that the same description of marbles should also be employed for the steps of the several staircases.

"That the walls, to the height of from 8 to 10 feet, should be lined with oak framing, containing shields with armorial bearings, emblazoned in their proper colours, and an oak seat should in all cases be placed against such framing. That the windows of the several halls, galleries, and corridors, should be glazed doubly, for the purpose of tempering the light, and preventing the direct rays of the sun from interfering with the effect of the internal decorations generally. For this purpose the outer plating is proposed to be of ground glass, in single plates, and the inner glazing of an ornamental design in metal, filled with stained glass, bearing arms, and other heraldic insignia, in their proper colours; but so arranged as that the ground, which I should recommend to be of a warm yellowish tint, covered with a running foliage or diaper, and occasionally relieved by legends in black letter, should predominate, in order that so much light *only* may be excluded as may be thought desirable to do away with either a garish or cold effect upon the paintings and decorations generally. Practically I consider that the double glazing will be of essential service in carrying out the system of warming and ventilating proposed to be adopted in the building generally: which system renders it unnecessary that the windows in those portions of the building above referred to should be made to open, so that all prejudicial effects upon the paintings and other decorations, which might be caused by the dampness and impurity of the atmosphere, and much practical inconvenience, and probably unsightliness, in the means that would be necessary to adopt for opening and shutting casements, would be avoided.

"That, in order to promote the art of Sculpture, and its effective union with Painting and Architecture, I would propose that in the halls, galleries, and corridors, statues might be employed for the purpose of dividing the paintings on the walls. By this arrangement a rich effect of perspective, and a due subordination of the several arts to each other, would be obtained. The statues suggested should, in my opinion, be of marble of the colour of polished alabaster, and be raised upon lofty and suitable pedestals, placed close to the wall in niches, surmounted by enriched canopies; but the niches should be shallow, so that the statues may be as well seen laterally as in front.

"The architectural decorations of these niches might be painted of such colours as will give the best effect to the adjoining paintings, being relieved in parts by positive colour and gilding; and the backs of them might be painted in dark colours, such as chocolate, crimson, or blue, or they might be of gold, for the purpose of giving effect to the statues.

"Having thus described the views I entertain as to the character of the decorations of the interior generally, I now proceed to notice in detail the special decorations and arrangements which I would propose for the several halls, galleries, and principal apartments.

"Westminster-Hall.

"I would propose that Westminster-hall, which is 239 feet long, 68 feet wide, and 90 feet high, should be made the depository, as in former times, for all trophies obtained in wars with foreign nations. These trophies might be so arranged above the paintings on the walls and in the roof, as to have a very striking and interesting effect.

"I would further suggest that pedestals, 20 in number, answering to the position of the principal ribs of the roof, should be placed so as to form a central avenue 30 feet wide, from the north entrance-door to St. Stephen's porch, for statues of the most celebrated British statesmen, whose public services have been commemorated by monuments erected at the public expense, as well as for present and future statesmen, whose services may be considered by Parliament to merit a similar tribute to their memories.

"The statues (26 in number) which have already been proposed to be placed against the walls between the pictures, I would suggest should be those of naval and military commanders.

"The subjects of the paintings on the walls, 28 in number, 16 feet in length and 10 feet in height, might relate to the most splendid warlike achievements of English history, both by sea and land, which, as well as the statues that are proposed to divide them, might be arranged chronologically.

"To give due effect to those suggested decorations, it is proposed that the light should be considerably increased by an enlargement of the dormer windows in the roof, by which also that extraordinary and beautiful piece of decorative carpentry of the 14th century may be seen to much greater advantage than has ever yet been the case.

"This noble hall, certainly the most splendid in its style in the world, thus decorated by the union of Painting, Sculpture, and Architecture, and aided by the arts of decoration as suggested, it is presumed, would present a most striking appearance, and be an object of great national interest.

"St. Stephen's Hall.

"I would suggest that this hall, which will be 90 feet long, 30 feet wide, and 50 feet high, and have a stone groined ceiling, should be appropriated to the reception of paintings commemorative of great domestic events in British history, and statues of celebrated statesmen of past, present, and future times. The paintings may be 10 in number, 15 feet long, and 10 feet high, and 12 statues would be required as a frame to them. In the upper part of the hall, 30 niches will be provided for statues of eminent men of the naval, military, and civil services of the country.

"The Central Hall.

"This hall will be an octagon of 60 feet in diameter, and 50 feet high, covered with a groined ceiling in stone. As each side will be wholly occupied with windows and arched openings of access, paintings cannot form any part of its decoration. It may, however, with good effect, be extensively decorated with sculpture. In the centre of the pavement might be placed a statue of her present most gracious Majesty, upon a rich pedestal of British marble, highly polished, and relieved in parts by gold and colour. The niches in the walls and screens might be filled with statues of her Majesty's ancestors, in chronological order, even up to the period of the Heptarchy. In front of the eight clustered pillars in the angles of the hall, might be placed, with good effect, sedent statues of some of the great lawgivers of antiquity.

"The Victoria Gallery.

"This gallery will be 130 feet long, 45 feet wide, and 50 feet high, with a flat ceiling, and will admit of both paintings and sculpture. The subjects of the paintings on the walls, 16 in number, which may be 12 feet long and 10 feet high, might relate to some of the most remarkable royal pageants of British history, or other appropriate subjects. Statues of her present most gracious Majesty might fill the central niches at the ends of the hall; and the other niches, as well as the pedestals between the paintings, might be occupied by statues of her Majesty's ancestors. The statues might, with good effect, be of bronze, either partially or wholly gilt.

"Corridors of access throughout the Building.

"The principal corridors of access to the various apartments of the building will be 12 feet wide; their ceilings will be flat, and they will be generally lighted from windows near the ceiling. The walls may be decorated with portraits as well as paintings, illustrative of some of the most eminent personages. For this purpose about 2,600 feet in length of wall, by a height of about seven feet, may be appropriated on the principal floor; 900 feet in length, by a height of about seven feet, on the one-pair floor, and about

Digitized by Google

400 feet, by the same height, on the two-pair floor. These paintings may be divided into subjects at pleasure, by margins or borders of architectural decorations, in accordance with the style of the building.

"THE HOUSE OF LORDS

will be 93 feet long, 45 feet wide, and 50 feet high, and will have a flat ceiling in panels. The fittings for the accommodation required will leave little space for painting, but niches will be provided, which might be filled with statues. The architectural details of the ceiling may be enriched, and relieved with gold and colour, and the windows filled with stained glass. The whole of the fittings are proposed to be of oak, with appropriate carvings. The throne will be highly enriched and relieved by colour and gilding, and the back lined with cloth of gold, containing the royal arms emblazoned in colours.

"THE HOUSE OF COMMONS

will be 83 feet long, 46 feet wide, and 50 feet high, and will have a flat ceiling. It is proposed to be finished in the same style as the House of Lords, but with less enrichment, and less of colour and gold in its decorations. The nature of its design, and the extent of the fittings for the accommodation required, will not admit of either painting or sculpture.

The Queen's Robing Room. Compartments will be formed in the wall-framing which may be filled with paintings.—*The Guard Room.* The walls are proposed to be covered with representations of battle-scenes and pageants of English history, in which an opportunity will be afforded of displaying the warlike costumes of the several periods.—*The Conference Hall.* The walls are proposed to be lined with oak framing up to the height of six feet, above which they might be covered with paintings, representing celebrated state trials, and extraordinary sittings of Parliament, conferences, &c.—Of the various apartments appropriated to private and public uses, Mr. Barry observes—"In some of the rooms it is proposed that the wall-framing should be carried to the height of six or eight feet; in others, that it should be of the full height of the room, and with panels for paintings, portraits, &c. The plane surfaces of the walls might be covered with paintings of historical events, and the panels in the wainscotings might contain portraits of celebrated personages in British history;" and the *Speaker's Residence*, being designed, he observes, for state purposes, might also be adorned with paintings; and he suggests that equestrian statues in bronze might be placed with effect in the proposed quadrangle of New Palace Yard, the Speaker's Quadrangle, and the Royal Court.

The suggestions respecting the extension and improvement of the exterior and the locality, we shall reserve till next week. In conclusion, Mr. Barry observes:—"I have now described, in general terms, the whole of those portions of the building that might, I think, with propriety and effect, be adorned with works of art, and the art of decoration; but in making the several suggestions which have occurred to me, I should wish it to be understood that I have merely stated my own views on the subject, as far as I have hitherto been able to consider it in its general bearings, and with a view to show how the objects for which the commission has been established may, if desired, be carried out in the decorations of the new building to their greatest extent. I should not, however, wish to be strictly confined in all cases to the adoption even of my own suggestions, as, upon a more mature consideration of the subject in detail hereafter, when the shell of the building is completed, I may be induced to vary and modify some of the views which I entertain at present, and which, I fear, I have but imperfectly communicated in this paper."

OUR WEEKLY GOSSIP.

THE death of H.R.H. the Duke of Sussex, will, long ere this, have been made known throughout the country, so that it only remains for us, as a testimony of respect, to record the event. His Royal Highness was, throughout life, a consistent "liberal," the zealous advocate of all benevolent institutions, the patron of learning and of science, kind and attentive, without ostentation, to learned and scientific men, and courteous and affable to all. Considering the active duties of his life, his acquirements were more than respectable. In 1830 he was elected President of the Royal Society, which office he filled creditably for many years, and resigned in 1838. He was born on the 27th of January, 1773, died on the 21st inst.; he was, therefore, in the 71st year of his age.

The Anniversary Meeting of the members of the Shakspeare Society took place on Wednesday, the Marquis of Conyngham in the chair. The Report of the Auditors showed an expenditure, for the past year, of 754*l.* 18*s.*, out of a receipt of 1,126*l.* 14*s.* 9*d.*, leaving a balance in the hands of the treasurer of 371*l.* 16*s.* 9*d.*, besides outstanding subscriptions. The thanks of the Society were voted to his Grace the Duke of Devonshire, for the loan of a copy of the earliest edition (1612) of Shakspeare's 'Merry Wives of Windsor,' and for the use of his lordship's library of old plays; and to Lord Francis Egerton, M.P., for the loan of the first edition of Heywood's 'Edward IV.' (A.D. 1600), and of Nash's 'Pierce Penniless' (1592). The Marquis of Conyngham was elected President, in the place of the Marquis of Normanby, and the following gentlemen were elected members of the Council:—Mr. Charles Dickens, Major S. Clarke, Rev. L. Sharpe, Mr. B. Corney, and Mr. P. Cooper, Q.C.

The Annual Meeting of the Art-Union of London, took place on Tuesday last. It appeared from the Report, that the subscriptions amounted to 12,338*l.* 11*s.* The amount set apart for the purchase of works of art is 8,000*l.*, and thus allotted:—50 works of art, value 10*l.* each, 30 of 15*l.*, 40 of 20*l.*, 28 of 25*l.*, 23 of 30*l.*, 18 of 40*l.*, 12 of 50*l.*, 10 of 60*l.*, 8 of 70*l.*, 6 of 80*l.*, 5 of 100*l.*, 2 of 150*l.*, 2 of 200*l.*, 1 of 300*l.*, and 1 of 400*l.* To these are to be added 20 bronzes of Sir Richard Westmacott's 'Nymph and Child,' and 30 medals of Chantrey. The distribution of prizes then took place, when the prize of 400*l.* was drawn in favour of Mr. J. Harman; that of 300*l.*, Mr. Cyrus Lake; one of 200*l.* to Mr. T. Stone; one of 200*l.* to Mr. J. Newcombe; one of 150*l.* to the Rev. H. Russell; one of 150*l.* to Mr. A. Darley; one of 100*l.* to Mr. Hanling; one of 100*l.* to Mr. Marshall; one of 100*l.* to Mr. J. Bywater; one of 100*l.* to Dr. W. Price; one of 100*l.* to Mr. A. Weekes; one of 80*l.* to Mr. W. Horsley; one of 80*l.* to Mr. J. Kent; one of 80*l.* to Mr. C. Goodall; one of 80*l.* to Mr. N. Freeman; one of 80*l.* to Dr. E. Baines; and one of 80*l.* to Mr. Atkinson.

The New Diorama, provided as an "Easter offering," and one of the most welcome, is a view of Notre Dame de Paris. This is, in all probability, geometrically correct as to proportions, since the artists who produce these pictures must find their best security in accuracy. Owing, however, to the management of the perspective, the building looks smaller, and the Seine, with its *quais*, narrower than the reality. On the first rising of the curtain, the old cathedral is seen strongly relieved against the reddened sky of evening; and rarely, if ever, have the peculiar atmospheric effects of that hour been better rendered,—the aerial being much superior to the earthly portion of the picture. Gradually sunset melts into twilight, and the latter (somewhat too suddenly) into moonlight; a dim gleam of tapers is seen through the windows of the Ladye Chapel, and lights begin to twinkle in one or two *réverbères* down the *quai*, and along the river front of the Hôtel de Ville. Only stars are wanting to the perfect reality of the scene: some of the effects—especially those of half-shadow—being as delicate and truthful, on their larger scale, as if Vanderneer himself had painted them. The other picture exhibited, is the interior of the Basilica of St. Paul's, at Rome, with its magical changes from completeness to ruin.

Westminster Hall has already been prepared, as a place of exhibition, for the cartoons and designs that are to be sent in, by competitors, for the embellishment and illustration of the New Houses of Parliament; and the exhibition will shortly be opened to the public. The hall, with the exception of a narrow passage for the business of the law courts, has been enclosed by a lofty and substantial screen of boards, and the works are proceeding with great activity.

Mr. Hiram Beecher, with a perseverance in the cause of an absent friend that does him credit, insists that the question is not, as we stated it (*ante*, p. 369), "Whether, in publishing the letter respecting Dr. Southey, Mrs. Sigourney acted judiciously or considerately, but whether she interpolated this letter." Be it so; then surely Mr. Beecher will admit that the question must remain, where we left it, in abeyance, until we receive information from America. Mrs. Sigourney, says Mr. Beecher, distinctly refers to a continued correspondence between herself and Mrs. Southey, and professes to have selected the passage in question "from one of Mrs. Southey's recent letters;" and that Mrs. Sigourney is a lady of excellent character, deservedly respected, both in America and England. All this we admit. But, on the other side, this continued correspondence is denied, and it is asserted that there have been interpolations, even in the extract published. How can we decide between such contradictory assertions? Mr. Beecher says, by weight of character—Mrs. Sigourney against an "anonymous assertion, in a fictitious conversation." The literal facts here lead to wrong inferences. It is true that the assertion is made under the circumstances stated, but in a work edited by Mr. Robert Bell, whose name appears in the title-page, and who is morally responsible for it. With every wish, then, to do justice between the parties, we must suspend judgment until the facts can be known. In the meantime, however, we cannot waive *our* objections to the publication of the letter, under any circumstances whatever, or to other "pencillings" in Mrs. Sigourney's volume.

The King of Greece has just conferred on the Chevalier Adrian Balbi, the celebrated geographer, the Golden Cross of the Order of the Saviour: and the King of Prussia has presented to M. Meyerbeer, the composer, the gold medal awarded in Prussia to eminent men in the arts and sciences.

The following extract from a letter from Rome has been obligingly forwarded to us:—

April 10, 1843.

On the opposite side of the valley which bounds the city of Veii on the north, the hill has at different times been perforated for the purpose of discovering ancient vaults and sepulchres. There can be no doubt that this hill was the Necropolis of Veii; it is divided from the city precisely as that of Tarquinii is, by a deep valley, with a river running through it. We ascended by a steep path, and arrived at the entrance of a tomb, which has been opened within the last few months, at the expense of Sig. Campana, who is well known for his successful researches in the neighbourhood of Rome. A passage, open to the sky, and about six feet broad and fifty feet long, conducted us to the door of the sepulchre; on either side of the door-way was placed a rude monster, resembling a lion, but these we understood did not originally occupy their present position, but had been transported from the entrance of another tomb. A modern front of masonry has been built up against the entrance, in order that another door might be substituted for the original one of stone, which would be inconveniently ponderous. We observed that the original door-case had been arched, but the key-stone was not regular, nor were the sides of the arch by any means even, but still the principle of the arch was maintained. It is well known that the Etruscans sometimes burned their dead; occasionally they were dressed out in their arms, and laid upon solid biers, to use a modern expression, "in state;" but the want of space in ordinary sepulchres precluded the possibility of many being thus interred; therefore, the most influential members of families alone had that honour. The first chamber was sixteen feet square; on the right and left were two altar-tombs, on which were found the remains of two warriors who, "on these ashie tombs showed boldness vain;" their helmets, sword-blades, and spear-heads were in excellent preservation—one of the helmets had been pierced, apparently by a spear. The spaces at the corners of the biers were filled up with rude jars. There was not any painting on the walls of the outer chamber; the inner one, of similar size was furnished with a low shelf, on which were ranged vases of large dimensions, but with very rude designs. But the most remarkable objects were three chests, about two feet in length and one foot and a half high; their covers were rounded like a trunk, and from the top of each cover protruded a small head, of human form, which was evidently intended to serve as a handle. In this chamber there was also curious painting, in imitation of coarse mosaic.

The French papers announce the arrival, at Havre, of the *Expéditive*, Capt. de Guesnet, having on board the objects collected by M. Texier, in his scientific journey along the coast of Asia Minor. Amongst them an antique sarcophagus, of great beauty, is spoken of, and nearly the whole of the frieze of the Temple of Diana at Magnesia. This temple, which was considered finer than that at Ephesus, was overturned by an earthquake in the earliest ages of Christianity. The four sides fell outwards, and one of them, coming on hard ground, was broken to pieces; the other three sank in the ground to some depth, where the marble was perfectly preserved. It is these three sides, about 70 metres in length, which have been now recovered.

The long-talked-of opera, written by Mr. Balfe for the *Opéra Comique*, was produced there on Thursday week. The story (said to be taken from English history) is precisely one of those clever and unnatural compounds by MM. Scribe and Leuven, to which the Italian compliment, "*Si non è vero*," &c., so admirably applies. The music by Mr. Balfe has gained a fair success. We should hope the work will be given in England, as hitherto its composer has hardly had a chance, owing to the wretchedness of the *libretti*, on which he has expended his agreeable talent. *Apropos* of English opera, our contemporaries, we perceive, announce that Mr. Sheridan Knowles has completed a drama in the old style, with interspersed songs: we hope also choruses. That something of this mixed kind might be produced (with the aid of a good musician) as popular as the 'Rosinas' and 'Duennas' which delighted our fathers, and more worthy, we have never doubted; but these, we must insist, are not musical dramas in the legitimate acceptation of the term.

The monster elephant which has for thirty years guarded the Place de la Bastile, in memory of Napoleon's Egyptian exploits, is about to be cast in bronze, for the decoration of a grand fountain to be erected in the Place du Trône. The giant animal is already caged, for the purpose, within a system of boardings forming a vast workshop, and at once exciting and baffling the curiosity of the Parisian street hunters. The papers also state, that the commission for erecting the tomb of the Emperor Napoleon has come to a decision that the baldachin of the altar at the Invalides, with its gilded columns, shall be suppressed; that the equestrian statue of the Emperor shall be erected on the Esplanade, and not in the Cour Royale, as designed by the architect, and that the figure of the Emperor shall be in his historical dress, and not in the Roman costume. The Minister of the Interior has given commissions for twelve statues, to be placed in the niches of the principal façade of the new buildings at the Hôtel de Ville. The following are the subjects:—Frochot, Voyer d'Argenson, Etienne Robert, Vincent de Paule, L'Abbé de l'Épée, Robin, Jean Aubry, Hardouin-Mansard, Guillaume Budé, Mathieu Molé, Michel Lallier, and La Vacquerie.

A court for the decision of quarrels between literary men, publishers, &c., has been established at Stuttgart, and has succeeded so well, that the example is about to be followed in Leipsic.

The German papers give an account of an extraordinary extension of the cold-water system, in the person of a young woman of twenty-three years of age, who, for eleven years, has subsisted exclusively on cold spring water! A Committee of Physicians has been formed to investigate the case, which has attracted a great deal of attention in Munich, where the girl is residing.

It may be well, in justice to Prof. Taylor, to state that the 55th number of *The Dramatic and Musical Review* has been forwarded to us, in which the Professor has collected and arranged the substance of the explanatory statements published in the different journals, relating to the Prize Madrigal. With the exception of a formal disclaimer of all revision in 1841, when the MS. was given to the copyist, there is nothing in his letter, in our opinion, which contradicts on any point the brief abstract in the *Athenæum*; but we announce the publication, that all who have taken an interest in the subject may refer to it, if they please.

BRITISH INSTITUTION, PALL-MALL.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS IS OPEN DAILY, from Ten in the Morning till Five in the Evening, and WILL BE CLOSED on SATURDAY, May the 6th. Admission, 1s.: Catalogue, 1s.

WILLIAM BARNARD, Keeper.

The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1s. Catalogue, 6d.

JAMES FAHEY, Secretary.

ROYAL POLYTECHNIC INSTITUTION.

A complete arrangement of COTTON SPINNING MACHINERY, consisting of a CARDING, ROVING, and SPINNING FRAME. Cary's NEW MICROSCOPE, magnifying SEVENTY-FOUR MILLION TIMES. A NEW SERIES of DISSOLVING VIEWS. The SCIENCE of ELECTRICITY demonstrated by the COLOSSAL ELECTRICAL MACHINE at a Quarter to Three Daily, and at Eight in the Evenings. Models of STEAM ENGINES and various kinds of MACHINERY IN MOTION. Lectures Daily on CHEMISTRY and NATURAL PHILOSOPHY, including the Steam Engine, by Dr. Ryan and Professor Bachhoffner. The CLASS LECTURES are continued as usual. Admission, 1s. Schools, half-price.—Not open on Saturday Evenings.

SCIENTIFIC AND LITERARY

STATISTICAL SOCIETY.

April 24.—Thomas Tooke, Esq., V.P., in the chair.

A paper was read by Dr. Guy, entitled, 'An Attempt to determine the Influence of the Seasons and Weather on Sickness and Mortality.'—This inquiry was suggested, by a striking coincidence observed between the prevalence of sickness and the temperature in the several seasons of the year 1842. This led to an examination of the bills of mortality for the same year, in which a similar coincidence was observable. From the tables exhibited, it appears that there is no relation, either direct or inverse, between the mortality and any single condition of the air, but that the sickness follows the exact order of the temperature and dew point, varying directly as each of them. The clue thus obtained to a relation existing between the sickness on the one hand, and the temperature and hygrometric state of the air on the other, was then followed up in a series of tables. The first point to be ascertained was, what were the diseases, which, by following in the order of the temperature, might be said to *govern* the law of sickness. These were shown to be the febrile, catarrhal, and contagious diseases, the disorders of the digestive organs, and the mixed group comprising gout, scrofula, dropsy, &c. There was no relation found to exist between any other diseases, or classes of disease, and any one condition of the atmosphere, with the exception of the acute diseases of the organs of respiration, which followed the inverse order of those above named, and varied inversely as the temperature and dew point. The next point to be determined was, which of the two atmospheric conditions, the temperature or the moisture, was most influential in producing sickness. It resulted from the tables, that the temperature was the most influential, and that the hygrometric condition of the air, when calculated by the acknowledged formula, had no material effect on the sickness. The second part of the inquiry consisted of a comparison between the results obtained for 1842, and those of former years. The principal results to which the author arrives, may be briefly summed up as follows:—The amount of sickness in the central districts of London during the year 1842, varied directly as the temperature, being a maximum in August, the hottest month of the year, and a minimum in January, the coldest month. The diseases which determined the order of sickness, were febrile and catarrhal affections, the contagious exanthemata, and the disorders of the digestive organs. The diseases of the organs of respiration followed the inverse order of those already mentioned, and were inversely as the temperature, being most numerous in the colder, and fewest in the hotter months. The hygrometric state of the air appeared to have little effect on disease, and if it produced any effect, it was on the diseases of the organs of respiration, which were in excess during the months in which the quantity of moisture in the air was the greatest, but these were also the coldest months. The author concluded, by stating it to be his opinion, that the causes of sickness are two-fold, consisting of atmospheric changes which may be submitted to measurement, and of certain more subtle changes in the composition of the air which at present can neither be analyzed nor estimated. To the former class belong the temperature, moisture, and pressure of the air; to the latter, those emanations from the earth or from human beings, which give rise to the majority of epidemic, endemic, and contagious diseases. As the number of cases of sickness produced by these latter causes is generally considerable, the influence of the pressure, temperature, and hygrometric state of the air, will be observed in those years in which these causes are in operation; but in the absence of epidemics, the temperature will be found to be the most influential cause of sickness. A summer or winter of unusual length, will also cause an increase of sickness, but the nature of the sickness will be different, as the temperature is higher or lower than usual. The order of the seasons in respect of sickness, will also be mainly determined by the degree in which the temperature of these seasons exceeds or falls short of the average temperature. The mortality, in like manner, in non-epidemic years will be chiefly dependent upon the temperature, varying in the several seasons inversely as the temperature, except in those years in which the summer is unusually warm, when the mortality of the summer may even exceed that of the winter season. In other instances, the mortality of the summer months will rank next to that of the winter or autumn.

An abstract of a paper, by Mr. Mallet, 'On the Mortality of the Population of Geneva from 1549 to 1833,' was read.

A third paper was read, 'On the Accidents and Traffic upon the Railways in Great Britain during 1842, by C. R. Weld, Esq.—This paper gave an analysis of the various returns made to the Railway Department at the Board of Trade, but as the most remarkable and important have already been noticed in the *Athenæum*, it is unnecessary to give any detailed abstract. The following returns, as being new to our readers, may be noticed:—

Lines on which the Trains travel at the greatest speed.

Railways.	Average Speed, Exclusive of Stoppages.
Northern and Eastern	36 miles per hour.
Great Western	33
Newcastle and North Shields	30
North Midland	29
Birmingham and Derby	29
Midland Counties	28
Chester and Birkenhead	28
London and Birmingham	27
Manchester and Birmingham	25

The average speed (exclusive of stoppages), on all the lines, is 21½ miles per hour.

The number of trains amounted to 298,974, and the number of persons to each train was 61. The accidents of a public nature, unattended with personal injury, amounted to 21.

INSTITUTION OF CIVIL ENGINEERS.—*April* 25.—The President in the chair.—Mr. James Simpson, made some remarks upon the Glasgow water works, in which he stated, that when filtering medium was properly disposed, the impurities suspended in the water were arrested at or near the planes of ingress, and, that therefore filtering beds should be of extensive surface, in order to allow of the process being as slow as possible: and that, by following this system, he had not found it necessary to change the mass of the materials, composing the filter beds, during sixteen years, but only to change the surface.

The Secretary then read an account of 'The Brick-making at the Bletchingly Tunnel,' by Mr. F. W. Simms. This part of the Dover Railway was not let by contract; it was therefore necessary to make extensive preparations previously to commencing the work; and, of these, a good supply of bricks was the principal. The clay for making them abounded immediately above the line of the direction of the tunnel; the brick grounds were therefore established near the several shafts, which were used for the excavations. Drying houses and kilns were also erected for manufacturing during the winter. Observations were recorded of the cost of every separate process, with the time occupied: and the result was, that during the winter of 1840 and the following summer of 1841, upwards of fourteen million of bricks were made of superior quality, at a cost of forty-one shillings and sixpence per thousand, delivered at the shafts, which was little under the cost allowed for in the original estimate. The paper contained also a comparison of the modes of "slop moulding" and "sand stock moulding."

MICROSCOPICAL SOCIETY.—*April* 19*th*.—J. S. Bowerbank, Esq. in the chair.—A paper, by A. H. Hassall, Esq., entitled, 'Some Further Observations

Digitized by Google

on the Decay of Fruit,' was read. After referring to the opinion expressed by him [*Athen.* Nos. 788, 793], that the well known principle adopted by Liebig, that a body in the act of decomposition is capable of communicating the same to other bodies by a kind of induction, does not apply to the general form of decomposition occurring in fruit, principally from the circumstance of its attacking it in a highly vital condition, when it could not be supposed to be the subject of any spontaneous or chemical decomposition, and also to that of Dr. Lankester, expressed at a former meeting, that Liebig's views did not afford a sufficient explanation of every example of decay occurring in fruit, as he considered that an apple once removed from the tree was no longer in a vital state, but that it immediately became a prey to a species of fermentation. He proceeded to express his doubts as to the accuracy of the last supposition, inasmuch as it is possible to preserve fruit free from all visible deterioration for many months after its removal from the tree; still admitting both these and Liebig's views to be correct, they do not, in his opinion, explain the reason why decay commences in a spot, gradually extending itself over the surface of the fruit, and does not at once involve its entire substance and fabric. He therefore proceeded to show, that these phenomena were to be referred to the operation of entophytal fungi for a satisfactory solution; still admitting the existence of a second form of decomposition in fruit, this being comparatively of rare occurrence, and which appears to be the result of chemical affinities, in consequence of the fruit having ceased to exist, and to which the views of Liebig may, in some cases, perhaps with propriety be applied. He also stated, that since the former meeting of the society, he had repeated the experiment of inoculating fruit with the sporule of the fungi with the same success which attended the former trial, but that he had failed in inducing decay in sound fruit, by the introduction of decayed matters destitute of fungi in any state. Still, however, he considered this might ensue in some cases in which the vitality of the fruit was either totally destroyed, or, at all events, much enfeebled, and even if an invariable consequence, still it would not in any way affect the statement made relative to the independent power possessed by fungi in originating decay; and again, if these were proved not to do this, they would still be of as much importance, in a practical point of view, as ever, since, when inserted into fruit which is undergoing spontaneous decay, they produce marked and rapid effects, and speedily ensure its complete destruction. In conclusion, he stated, that the apples employed in the experiments were of an exceedingly firm description, and that an equal number of each were inoculated with the sporule and with decayed matter.—Dr. E. Jenner, having again forwarded some specimens of *Fragillaria pectinalis* and *Diatoma flocculosum*, and having had his attention directed to a report of the proceedings, in which it was said, that the specimens before sent were animalcules, forwarded a short paper in reply, in which he states, that the objects sent are considered by botanists to belong to Algæ. By Ehrenberg they are classed with his Infusoria, and thought to be animalcules, as he supposes they increase by self-division; but this last fact is not sufficient to remove them from the vegetable kingdom, as many plants, such as the lily, crocus, &c., also increase their species by self-division. Three other genera, Acanthus, Gomphonemæ, and Cocconemæ, which are at present classed by botanists as plants, he considers as doubtful, thinking they may possibly be found to be zoophytes. He also stated, that the stomic cells, mentioned by Ehrenberg, were the endochrome, or colouring matter of the botanist, which, when ripened into sporidiæ, escapes into an opening in the frustule, being one of the methods by which the species are increased. He also expressed his opinion, that in the present imperfect state of our knowledge of these objects, great caution ought to be used in advancing any opinion respecting them.

SOCIETY OF ARTS.—*April* 26.—W. Tooke, Esq. V.P. in the chair. The Secretary having announced the death of H.R.H. the Duke of Sussex, President of the Society for twenty-seven years, it was resolved, *inter alia*, that the Society do adjourn until after the funeral of his Royal Highness.

MEETINGS FOR THE ENSUING WEEK.

SAT. Geological Society, 1, P.M.—Anniversary.
MON. Horticultural Society, 1.—Anniversary.
— Institute of British Architects, 8.—Annual.
— Entomological Society, 8.
— Royal Institution.—Annual.
TUES. Institution of Civil Engineers, 8.—The Monthly Ballot.—'Description of a Cast Iron Bridge for carrying the Birmingham and Gloucester Railway over the River Avon, near Tewkesbury,' by Capt. Moorsom.—'Description of Cast and Wrought Iron Bridges, erected on the line of the Bishop Auckland and Weardale Railway,' by J. Storey.—'Description of a Roof erected at the Chartered Gas Company's Works, Westminster,' by F. J. Evans.
— Linnean Society, 8.
— Chemical Society, 8.
— Horticultural Society, 3.
THUR. Royal Society, half-past 8.
— Zoological Society, 8.—General Business.
— Society of Antiquaries, 8.
FRI. Royal Institution, half-past 8.—Mr. Holdsworth 'On a Method of Cooling Steam Ships, and rendering their Powder Magazines Fireproof.'
— Botanical Society, 8.

MUSIC AND THE DRAMA

ANCIENT CONCERTS.—The third was Earl Howe's Concert, and, as in melancholy duty bound, began with Handel's Dead March from 'Saul,' and Funeral Anthem, 'When the ear heard him.' We never hear one of this master's compositions after some interval without finding in it new matter for speculation. Thus it is, also, with Shakspeare's plays. On Wednesday we were especially impressed by the character of *lament* given to the chorus 'He delivered the poor that cried,' by the wailing solos of the treble voices at its commencement—an effect enhanced by the subsequent formality of the movement. We cannot listen to Handel's 'Lord, what is man?' or 'Lord, remember David,' given as sacred songs, if even they be as carefully delivered as by Miss Hawes and Mr. Pearsall, without a protest; from the purists of the Ancient Concerts, at least, we have a right to demand the original words and the original key. Nor can we endure a male counter-tenor voice, as on Wednesday, when imparting a disagreeable sickliness to music which the lower female tones would make pathetic and impressive, without longing for the days when such things shall be no longer countenanced. *Apropos* of *contralti*, we must speak of Mdlle. Brambilla, whose singing is more careful and delicately varied than it was formerly. The *Arsace* of the Haymarket, however, would do well not to attempt 'Ombra adorata,'—the song is beyond her voice; its passion one degree deeper than she can fathom. Next, according to the desultory fashion of these notes, we may express our gratitude for the three specimens of elder Italian music, disinterred on Wednesday,—a 'Confiteor,' by Righini (bass *solo* and chorus) is admirably rich and stately; a *duett* from Paisiello's 'Passione,' contains many passages charming in their pathos, though in its execution especially was felt Brambilla's want of power. The hymn and chorus, by Zanotti, *Maestro di Capella* at Bologna in the latter half of the last century, belongs to the epoch of Italian decadence—but it is still melodious, and as such not unpleasing. A chorus by Homilius, in the second act, was also an interesting revival; he was Cantor to the *Kreuz-Schule* at Dresden, somewhere about 1770,—a mighty organist in that city of organ-players. It is good service done to recall, from time to time, the names of such worthies, whom Time and Chance have thrust out of sight. A last remark is due to the credit of Mrs. Chatfield, whose singing of Handel's 'O, magnify the Lord' confirmed the good impression made by her *début*. Yet she had disadvantage to contend against; since Sir Henry Bishop took this song at a yet slower *tempo* than is his wont, to the terrible trial of the singer's breath.

PHILHARMONIC SOCIETY.—The present would deserve to be chronicled as a better season than the last, if it were only on account of such a performance of Beethoven's Choral Symphony as was given on Monday, when that noble, but difficult work, conducted by M. Moscheles and led by Mr. Loder, received better justice both from orchestra and audience than it has yet found in England. In truth, did the former do its duty, the appreciation of the latter would not be "to seek." Some few portions of its *finale* excepted, the Ninth Symphony is by no means the unfathomable mystery it was so long conceived to be. There is nothing in *allegro*, *scherzo*, or *andante*, more difficult to master than the last movement of the 'Sinfonia Eroica'; and who has found *that* hard to comprehend since the band began to read it properly, as an air with variations? A day's home study of the score of the Choral Symphony, on the part of each instrumentalist of the orchestra, would conduce to the clearing up of all difficulties, which do not, indeed, so much exist in the mind of the composer as in the intelligence of the executant. We fear our players are far from such artistic devotion as the above course implies: the next best thing to it, would be frequent rehearsal, under the presiding influence of one so thoroughly versed in the work as its conductor. But this, though attainable at Paris, Berlin, Leipsic, is in London impossible; and our players have to learn their separate parts in the great and complicated work, and its general meaning, too, by performance, not study. That they do learn at all, is matter for thankfulness. The improvement displayed on Monday evening was great,—especially to be noticed in the slow movement, which was played with more compliance and certainty than ever before: by their falling temperately into their places, the harassing and delicate accompaniments came out clearly and coherently: we must especially instance the *pizzicato* triplet accompaniment to the first return of the theme, in which the mixture of *tempo* used so to disturb the players, as to destroy the ease which is essential to expression. The last movement, too, went very well. What a treasury it is of original effects! if even it be considered in the light of a *fantasia*, or collection of fragments. How noble, for instance, is the enunciation of the theme, growing gradually to its *crescendo*; how brilliantly jubilant the tenor solo, when the triumphant and joyous character of the melody is enhanced by change of time, change of key, and change of accompaniment. It is true that a Donzelli or a Duprez could hardly "make head" against its drum and cymbal accompaniment, (would it be an unpardonable innovation to try the effect of a leash of tenor voices in unison?) but in spite of this drawback, there is nothing of its kind nobler in music than the entry of the male voices on the return of the theme. The curious fugued passage, too, which occurs shortly afterwards, was more intelligible than formerly; while the final close was wound up with great force and brilliancy,—the chorus of a hundred voices doing its duty, and seeming to enjoy the same. It will be long, we fear, ere the *solo* singers can say as much,—the *soprano* and *contralto*, in particular, being most ungraciously taxed. In this matter Beethoven was a sad despot, as the anecdotes of his biographers amusingly prove; but then the more vocal Handel, in his day, was yet more peremptory, for on one occasion, when the Cuzzoni refused to sing something set down for her, the giant opened the window, and taking the refractory lady in both arms, threatened her with an immediate downfall of her pride if she refused obedience.

Much more could be said concerning this interesting concert: how Mrs. Anderson played the Choral Fantasia of Beethoven in her best style,—how Mad. Caradori Allan and Miss Hawes and Mr. Phillips joined in a trio from Marschner's 'Vampyr,'—and how, at last, we had the pleasure of hearing Dr. Mendelssohn's overture to 'The Midsummer Night's Dream' properly played (one slip in the clarinet forgiven). The audience was throughout interested, even where not wholly assenting to what the elder portion are pleased to term Beethoven's vagaries. We should hear no more of decay, were such entertainments the order of the Philharmonic Society.

DRURY LANE.—Mr. Sheridan Knowles's new play of 'The Secretary' was brought out on Monday, and met with success, though we fear it is not destined to be of a lasting kind; for the drama is deficient both in action and interest. The novel of 'The King's Highway' furnished the plot, which is alone sufficient to account for these defects; the elements of fitness in a story suited to the narrative being entirely different from what are essential to the purpose of the drama. Neither is the subject a good one in itself; and it is one that Mr. Knowles has treated before, in 'The Hunchback' and in 'Love.' That a girl of ardent temperament should declare her passion for a man whose position forbids him addressing her, is not altogether incompatible with maiden purity; but it is one of those exceptional cases that should not be made too common. Mr. Knowles's strong sympathy with generous self-devotion, no less than his impatience of conventional restraints, makes him partial to such incidents; and it must be conceded, that he

Digitized by Google

almost justifies his choice by his treatment of them: still the questionable nature of the proceeding embarrasses the dramatist, and baulks the sympathy of the audience; and he has not in this case been so felicitous as usual in veiling the obvious violation of propriety; for the lady's passion is as sudden in its growth as it is impetuous in its manifestation. *Wilton Brown*, the 'Secretary' of *Lord Byerdale*, had rescued the *Lady Laura* and her father, the *Duke of Gaveston*, from an attack of robbers; and the lady and her champion conceived a mutual passion. Thus stands the matter at the opening of the play. The Secretary receives the first intimation of Lady Laura's feelings towards him from a stranger, one *Colonel Green*, who accosts him in the Park, and startles him by relating some particulars of his early life, and giving a mysterious intimation that Wilton Brown is not his real name:—

Wilton. You know my name
And family?
Green. I know my own.
Wil. Not mine!
Green. What then? Is't matter for despondency?
Wil. The man that toils along a weary road
Beneath a burthen, and miscounting, thinks
The time is come, at last, to lay it down,
With weight augmented takes it up again
To bear it forward still.
Green. You are not yet
Of age.
Wil. How know you that?
Green. What matter how,
So that I know? The knowledge on't is neither
Murder nor theft! It might be treason—but
It is not that. What friend have you beside
The Earl of Sunbury?
Wil. How know you he's
My friend?
Green. Why ply a bootless labour twice?
I know it. That content you!—Who besides
Rank in the list, more often fill than ought?
Wil. I count but one—Lord Sherbrooke.
Green. Son of him
You're secretary to—Lord Byerdale.
Wil. You seem to know me well!
Green. I seem?—I do.
Lord Byerdale is he your friend too?
Wil. No.
Green. Nor friend to any who deserve a friend!
Wil. Who are you, sir?
Green. You have been bred at college.
You have won honours there—and high ones, too.
A college is a place to sharpen wit,
Or ought to be.—A slight hint should suffice;
And yet it seems, you cannot take a broad one.
Wil. Sir, I love openness and honour.
Green. Right,
And so do I. I mean you not to know me!
So much for openness!—and, as to honour,
Judge me as you find me!
* * *
So trust you me!—Hast thought upon the maid?
Wil. I have!
Green. 'Twas fit!—'Twas fair!—'Twas paying back
What you received—for she has thought of you!
Mark!—At the moment that you stood her friend
She grew your love!—Youth's in a blaze, and sees
Not half what is about it!—When to flight
You put her enemies, you little thought
That, after all your pains, the maid was robb'd!
Wil. Robb'd!—
Green. Of her heart—I saw it on the arm
Where but her figure seem'd to hang, the while
You led her to the carriage.
Wil. Do you know
Who was the lady?
Green. Daughter to the Duke
Of Gaveston.
Wil. Yes; and I an humble man!
Green. You are not an humble man—that is—I am right!
And stand to what I say—a man that owns
A noble soul is not an humble man,
In the poor sense wherein the sapient world
Mouths out the trite and questionable phrase!
Wil. Who are you, sir?—Forgive me!—I'm content
To know you by your thoughts.
Green. Whereto I'll add
My deeds, in time, with every adjunct else!
Hie to the duke's! He owes thee benefit;
And welcome will he give thee as a friend,
Tho' dull to what's to come, as dawn to day
When the sun's up and glow is turn'd to fire!
His daughter pines for sight of him again,
Whom the first sight did so commend, all else
To vision is a blank! I say again
Thou art no humble man! Revolve my words
With boldest spirit.—Dare and you shall win!

Lord Sherbrooke, son of Lord Byerdale, next tells Wilton of his high fortune, and carries him to the Duke's house, when the following interview takes place between the lovers:—

Lady Lau. Sir, you will deem me bold to wish you stay;
Yet, sooth, the blame is yours. When creditors
Are modest, and hold off, the debtor's shamed
That comes not forth—if not to pay his debt,
At least to grace it with acknowledgment!
Wil. You owe me nothing, lady.
Lady Lau. Nothing!—No—
And weighs my life, sir, nothing in your eyes?
Although perhaps a trifle in my own!
Wil. Your life!—O, lady!—
Lady Lau. Well, sir?—Well?—Say on!
Is't nothing?—Yet my gratitude's a heap;
But that, perhaps, is nothing!
Wil. Were't deserved,
So much—save one thing—I could wish no more!
Lady Lau. I will believe you!
Yet let me ask why what you valued so
You took no pains to learn was rendered you?
Don't speak!—I know!—the true desert holds back!
Ere reach for its reward, would let it go!
Yet, in my own defence I must be frank,
And tell you I have wished to see you, sir;
Nor once, but oft; nor much, but earnestly,
To tell you all I feel I owe you, sir;
And still, tho' I defended you just now,
Charging your absence to the proper cause,
Yet must you bear some blame—for though you had
Your feelings, sir, we had our feelings too,
For which 'twere not unjust to credit us;
Which crediting, 'twere hardly generous
To grieve with needless pain;—our name—abode
My father gave you—so methinks did I.
They were not coldly given, but for a purpose;
They were not idly given, but heartily;
They meant an invitation.—It is true
'Twas not accepted by your lips, and yet
I thought your looks gave token of as much,
If I thought wrong, I grieve for my mistake—
I would not think you never meant to come!
Wil. 'Twas true.
Lady Lau. 'Twas strange! To risk your life for us,
Yet grudge a step to see—that we were well.
Wil. I heard that you were well—I knew you were.
Lady Lau. And that contented you. Sir, I have friends
I know are well, yet I would see them too.
But then, they are dear friends—you are very right.
'Twere almost bold to say we are acquaintance;
Yet, though you think me forward, I shall say
We were not losers did you rate us more.
Wil. More?—O much more!—More than I dare to name!
Lady Lau. (*Aside*) I could believe the heart that's in my breast
Did throb just now in his—I am beloved!
Sir, you say nothing, or you say too much—
I mean too much for faith.—More than acquaintance—
Would be a friend—much more were—more than that—
O lips, be mute, when looks can talk so well!
The more his tongue refrains, the more he speaks!
Wil. O, were I sure—
Lady Lau. Of what?
Wil. That I could claim
A *royal* stock!
Lady Lau. What then?—Be frank!—What then?
Wil. Why then I might to lady high as you
Proffer my heart.
Lady Lau. You then would condescend!
And, think you, none can condescend but you?
Would'st like me—for a friend?
Wil. No!
Lady Lau. No?
Wil. A friend
Lies near the heart; but then there is the core
That looks for something else.
Lady Lau. Which you have found!
No?
Wil. Yes!
Lady Lau. A mistress?
Wil. Yes!
Lady Lau. Where does she bide?
Wil. Where does she bide! O Honour, is it right
To take advantage of the love for us
That would undo itself—descend for us
From state—make partnership with nameleasness—
Convert high veneration into scorn—
Quit the bright pageant of emblazon'd life,
To play a poor part in the daily crowd?
Lady Lau. Nothing!—All nothing!
Wil. Cast itself away—
Give all—gain nought—unless abasement's gain—
Nought but a heart, which any one could give?
Lady Lau. No!—only one—worth all that ever beat—
Cheap purchased with her own!
Wil. (*Aside.*) O, generous maid!
And shall I take thy sterling gold for dross?
I must, or I must fly! Lady, farewell!
Lady Lau. Stay! You have stopp'd too long to go so soon!
Was there not something to be said? A word
About your friend! Well, sir; sit down and say it.
Wil. My friend is noble.
Lady Lau. Ay! He is noble, is he?
Has he a heart?
Wil. A brave, and warm one, too!
A man more modest than he loves to show.
Lady Lau. Sir, let him show the most he may, I'll find
The man will prove him very braggart there—
A man to love whom is to boast one's self,
So is he challenge of all nobleness!
A man who rescued once a lady's life;
Who, for the chance of such salvation only,
Would risk that life again 'gainst twice the odds!
Why do you hang your head? Desert for shame!
Assert yourself, erect your brow, and cast
A thousand round you down, that only tower
Because you please to droop! O doubtful pass
To come to!—for a maiden unenforced
To tell her love!—What can be urged for her?
What can she urge herself?—Why this, that Heaven
Inform'd her; so she knew its handiwork,
And worshipped heaven in it!—Almost, and more
Than once, you've said you loved me, but stopp'd short!
I hold a virtue higher than a grace,
So prefer honesty to bashfulness—
As, by this time, perhaps, you more than guess:
Then, where you halted, will I e'en go on,
And tell you—yet why need I?—all is said
But the plain downright word, which, if I speak,
I shall not make you wise a tittle more;
Yet *'tis the word*, and I will out with it—
You love me, Wilton, and 'tis love for love!
Why, Wilton, where's your heart?
Wil. Here at your feet!
Lady Lau. Then 'tis a contract.
Wil. Yes.
Lady Lau. How long to last?
Wil. For life.
Lady Lau. No less a term!—Were't but a jot
Shorter than that, I'd have the compact torn
And scatter'd to the winds! For life?
Wil. For life! [*The* Duke of Gaveston *enters.*
Lady Lau. Then, Wilton, I am yours. But mark me, yet;
My father cannot wed me 'gainst my will—
Against my father's will I'll never wed—
If I wed ever, Wilton, 'tis with you!

The Duke refuses his consent to their union; but Lord Byerdale, who wished his own son to marry the lady, finding both parties opposed, thinks to revenge himself for the slight, by bringing about the match between his Secretary and Lady Laura; he therefore makes it a condition of the Duke's liberation from the Tower, to which his connexion with the Jacobite party had sent him. On the eve of the nuptials, Lord Byerdale acquaints Wilton Brown with the secret of his illegitimate birth, and the following scene ensues:—

Duke of Gaz. So far we have done your pleasure passively,
Nor halt we yet the stipulation
Whereon our full enlargement was vouchsafed—
Your union with my daughter—though foregone
By your own choice, when by agreement due,
Lies at your option still. This hand is yours
When he, whose holy act of two makes one,
Shall minister the nuptial ceremony.
Wil. First let me bless this hand so proffer'd me!
Bless it for life that it would give to me,
Enrich'd by all that fondest heart of man
E'er fancied in its wildest coveting,
Of beauty, chastity, and goodness—all
Enrich'd by holiest, most surpassing love!
May plighting wait it from some happy palm
Of purer blood than his who holds it now,
Of clasp as honest—will as strong to cleave!—
Else!—ere the priest for ever makes it his,
May heaven in its sweet mercy wrest it thence,
And save the gift that else were cast away,
As now 'tis torn from mine.
Lady Lau. Wilton!
Duke of Gav. My child!
Hold up! If, sir, my scruples sway this act,
This act, that gives them way, has vanquish'd them,
The Earl has kept his word and his condition
Whereon 'twas pledg'd and which I had withheld
With all my heart, with all my heart I yield.
Wil. The earl has kept his word, but was forestall'd.
To wed your daughter I was doubly bound,
And am so still, so you will have us wed;
Whereof the choice now solely rests with you,
Now fully freed from all contingencies.
My birth was yet a secret to me, which
I knew the earl possessed, and which to win,
I pledged an oath ne'er to divulge to you
The knowledge on't, while yet the trench remained
'Twixt you and liberty. The knowledge came,
And with it such abasement of my blood,
As, well I knew, no drop of yours would brook!
What course was I to take?—Time pacing on!
The hour almost within a stride!—your life
In jeopardy, as I believed!—your shame
The ransom, without option to refuse
Or grant!—my will beleagured solemnly.
All that of endless din, and strife, and wrack
Is told of chaos, gather'd up and penned,
I felt within my soul!
Lady Lau. Is this man noble?
Is he not, father? If he be not, rend
All patents that make birth! Wilton, go on!
I see the end!—you sought for other means
To set my father free?
Wil. I did. A friend
Supplied me with them. 'Twas the king that oped
Your prison door. You are at liberty
Without the aid of barque or foreign land,
Without the gift of child or aught to me—
A man whose birth, whate'er his truth may be,
Bearing, or reach, refuses him a name,
Drawing the breath he could not help but draw,
Unsanction'd by the priest!
Lady Lau. Why start you, father?
Duke of Gav. No priest the union of your parents blem'd?
Wil. None, sir; what noble dame would wed with me?
Lady Lau. I—or I never wed!
Duke of Gav. Daughter!
Lady Lau. Where worth is,
Give honour, or nowhere! O, truth! lives shame
Where you abide? Manhood, go beg, if flaws
In your escutcheon point you out to scorn!
He who forgoes high fortune for a blur
That in his proper nature hath no germ,
She doubly should enforce her favours on!
Confess it, father, noble as thou art!
Thy blood it is that's speaking in thy child;
To generosity be generous!

Digitized by Google

Thy daughter's heart is wedded to its worth!
Give him the thing that's second to her heart—
The hand it nourishes!

Duke of Gav. Never!

Lady Lau. [*After a pause, throwing herself on* Wilton's *neck*]. O, Wilton.

The lovers, are, however, extricated from the dilemma by Colonel Green's announcement that he is Lord Byerdale's younger brother, and that Wilton Brown is the legitimate son of his elder brother, and heir to the family title and estates. There is an underplot, in which Colonel Green plays a prominent part, releasing the Duke of Gaveston from his connexion with *Sir George Barkley* and the Jacobite conspirators apprising William of Nassau of their treasonable designs, and recognizing in the King the man who had saved his life at the battle of the Boyne. Numerous as our extracts have been, we must find room for one soliloquy, which is the gem of the drama; it is in Mr. Knowles's best style, and is, indeed, worthy of the great dramatists of old:—

Wil. Hope! ready promiser, unsure performer,
Unequal architect, that builds the mole,
Which breaks the mountain billows into spray;
Or fabrics fragile, as the gossamers'
That come and vanish with the dews of morn;
Bitter betrayer, yet sweet counsellor,
Voucher believed, with thousand broken oaths!
Friend false, yet, for a fair face, trusted still—
Why do I listen to thee? Joyful dream,
That turns out oft, on waking, blank despair,
Why do I trust thy visions, and dream on,
Grasping the good I never may enjoy?
Yet art thou blest so far—The naked wretch
Goes clad by thee the while—the hungry feasts!
The woe-begone forget their tears and smile!
The better part of being is filled up
With solace by thee, and the load, that else
Would break the back, is borne with patience still!
Thou art the anodyne which lulls the pang,
That should not chide thee, tho' it wakes again!
The stimulant which breaks the lethargy,
Which, tho' it close on us again, thou robb'st
Of so much being, else were swallowed up!
Thou art a good, altho' a doubtful one,
And, wanting thee, this fitful course of life
Were never half run thro.

A writer of this stamp has in him that which is the life of the drama: pity he should not possess judgment in the choice of his themes, and skill in the construction of his plays, commensurate with his other powers. Miss Helen Faucit played the difficult part of the heroine, *Lady Laura*, in a way that proved her to have appreciated the author's idea, and comprehended the sentiment of the character completely, and to possess the art to express both with the simplicity and delicacy of nature. She carried the sympathies of the audience with her, and elicited repeated rounds of applause. Mr. Anderson, as the 'Secretary,' appeared unworthy of such a woman, because he failed in giving such impassioned utterance to the language as should convey to the audience an adequate idea of the state of the lover's feelings: his gloom was not lightened by love's fire, and his ardour had more of vehemence than tenderness. Macready gave to the secondary part of *Colonel Green* primary importance and value, by the dignified simplicity and massive force of his personation; the self-possession of the stern soldier was maintained throughout; but you read in his reserved manner and careworn look the man who had suffered, and the irrepressible burst of feeling that overturns his constancy, when he finds that his nephew who supposes him dead cherishes his memory, showed that beneath that cold exterior beat a warm heart. Phelps, as the malignant *Lord Byerdale*, and Mr. Hudson, as his rattle-brained son, *Lord Sherbrooke*, filled their respective parts with propriety, though the one was too flippant and noisy and the other not designing enough.

PRINCESS'S THEATRE.—That something is gained by our audiences becoming habituated to musical performances in the true operatic form is indisputable; but this is merely one step, leading to no satisfactory results, unless it be accompanied by such care in stage-production as implies scenic propriety, vocal and dramatic skill, and orchestral efficiency. In all these essentials, the English version of 'Tancredi' falls lamentably short. A slovenliness pervades the execution of the work, unworthy of a theatre which began its career so auspiciously as the Oxford Street Theatre. It would be excellent if such an establishment had its training-school attached; it is a grievous mistake—a grievous injustice moreover to our aspirants,—when that training-school is the stage. Owing to this want of foresight, we fear that our young singers, be they even as richly gifted as Miss Flower or Mr. Weiss, have a long career of difficulty and denied success before them—ere they can be rated among artists. The lady, as we have said, has a lovely and sonorous voice, and a choice in expression, which indicates the stuff of which a great dramatic singer is made: but what chance is there of her *roulades* being perfected, or her uncertain notes becoming true, or her articulation cleared of the indistinct thickness which, at times, renders it null, so long as she has to appear in grand opera every night of the week? Our question could be extended with yet greater emphasis to the young *basso* of the company, who has natural gifts of as rare quality. Yet it must be sounded again and again, in the ears of managers and masters, if we are ever to have that much-coveted thing—an English opera.

MISCELLANEA

Washing Linen.—The *Presse* has some curious speculations on this subject. All river or spring water holds in solution carbonate of lime, which is decomposed by alkaline soap, and the result is a soap having for its base insoluble lime. This calcareous soap attaches itself to the linen, and the heat of the ironing melts and drives it into the article washed with it. It is to the presence of this calcareous soap that the bad smell of the linen for which it is used is due. When cotton or linen cloth has undergone the process of washing with soap twenty times it becomes impermeable. It is, in fact, the secret means employed for rendering all cloths impermeable, not, indeed, by soap washing them twenty times, but by saturating them with a calcareous soap produced by the dissolving of an alkaline soap, which is afterwards decomposed on the stuff by the dissolving of a soluble calcareous salt. But though it may be useful to render a cloth coat impermeable, to save the wearer from being wet by rain, it is contrary to health to wear next to the body that which will not absorb the perspiration. There is, however, a very simple mode of avoiding this inconvenience; it is by putting into each litre of water used for washing one or two grammes of potasse or soda, before dissolving the soap in it. By this the calcareous salt will be precipitated, and the soap, meeting with no lime in the water, will not undergo any decomposition, and consequently no calcareous soap can remain in the linen. The use of soda or potasse will not be at all expensive, because the alkali remains in the water, and contributes with the soap to the cleansing of the linen.

Progress of Lotteries.—"Two grand original paintings of Adam and Eve in Paradise. These sublime works have been exhibited to the universal admiration of 947,000 persons, &c. They will be disposed of on the plan of the Art-Union of London; each share to be one guinea; one half to be paid at the time of subscribing," &c. The shares are limited to 20,000! Only 20,000*l.*! These pictures are being exhibited at Liverpool; and our Correspondent was informed that 13,000 tickets had been disposed of! To this point "Messrs. Robarts, Curtis & Co., Lombard-street, London," can speak positively, as the subscriptions, it is announced in the printed circular, are deposited in their hands.

Lotteries.—A placard, with the following striking announcement, may be seen pasted above a shop door, near the top of the High Street, south side—"Rafel for the Million of loaf and gingerbread; ½ for three thro's of the dise."!!—*Perth Courier.*

Common Road Steam Travelling.—The *Mining Journal* gives the following as an extract of a letter from Copenhagen. "Steam-carriages, upon a system newly invented by M. Norrgber, a locksmith and ingenious mechanician, have been established between this capital and Corsoer. They carry thirty passengers, and have spacious stowage above and below for luggage and merchandise. Their engines are of 8 or 9-horse power, and ascend with ease hills whose angles do not exceed 30 degrees. They travel at the rate of a Danish mile (a little less than two French leagues) in from thirty to forty-five minutes; so that they run to and from Copenhagen, a distance of 14 Danish miles, in about nine hours, while our ordinary diligences, drawn by four horses, take 16 hours to perform the same distance with only 12 passengers and their luggage."

TO CORRESPONDENTS.—The numbers for January have been reprinted, and may now be had, by order through the customary channels.

[Advertisement.]

To the Editor of the Athenæum.

SIR,—Will you permit a very brief reply to the note of the Editor of the Foreign Quarterly?

We did not count as "censurable extracts," 66 lines recording, as journalists are expected to do, the occurrences of the day, whether good or bad; and also 128 *lines* from other papers, specially descriptive of the *character and evil effects of 'The Herald.'* If these protests against the foreign adventurer, (whom, as the reviewer incidentally admits in his second article, "Scotland voided across the Atlantic,") and two or three very silly, but very harmless (anonymous) paragraphs, are to be classed in the same category of "infamous, degrading, and disgusting," then the proportion was wrongly stated in our allusion to the article.

In regard to papers named as text, and yet unquoted,—we said 8, the editor says 5. We counted as unquoted, The Journal of Commerce, The American, The Evening Post, and The Atlas (?) of New York; The Daily Advertiser and The Atlas of Boston; and The Intelligencer and The Globe of Washington. On a second reference to the article, it appears that mention is made of *reporter's letters from Washington* to 'The American' and 'Journal of Commerce.' We do not consider these as quoting those journals, or as having anything to do with their character. Is an editor or a paper responsible for *public occurrences* chronicled by his reporters? If so, he would have much to answer for, on either side of the Atlantic. Other than these we see no quotation from "eight out of the eleven papers."

In the second article, which is styled "The Answer of the American Press," (!) besides paragraphs about the Somers Mutiny and the Ashburton Treaty (neither relevant to the case in hand), the whole number of lines quoted is about 404;

Of which there are from the HERALD		321
.....	Courier and Inquirer.....	36
.....	American.....	18
.....	Journal of Commerce	10
.....	All others.....	19
		—404

A part only of these last 83 lines is at all applicable to the reviewer's article, except, as before, to disown and denounce, in suitable terms, the abominable nuisance inflicted upon the country by the self-styled "Socrates of New York" and "Napoleon of the Press in both hemispheres." "Silly remarks," says the editor of the Foreign Quarterly, "answer themselves." Can any one believe that the ridiculous and reckless bravado which he quotes from this person, would be the language of one really possessing such mighty influence and such immense patronage?

The New York Commercial Advertiser,—one of the best and most influential journals in the country,—is scarcely alluded to, in either article; and The Journal of Commerce, decidedly at the head of the daily commercial papers, is summarily dismissed as a "very dull—and very harmless journal."

No sensible person could object to judicious, fair, and candid strictures on the American newspapers. A thorough reform—a higher standard of character is much needed; and whoever could introduce an improvement would deserve the thanks rather than ill-will of Americans. These articles, had they been written in a fairer, kindlier spirit, might have done much good; but as they are, all good tendency is controverted by feelings of resentment, that a worthless and scurrilous print, raised by a variety of causes to a bad eminence of notoriety, should be thus prominently displayed in a grave critical review as "the leading journal of America!" There may be good and sufficient reasons why this print is more quoted in Europe than perhaps all other American journals together—though these reasons can hardly be understood at home. But what does this fact prove, except that European editors prefer it to those which give a more favourable notion of American journalism, and which are the really influential papers among "real Americans"?

The reviewer took pains to quote in full, from a Western paper, a disgraceful libel on Mr Webster. If he wishes to see "all justice" done, we would respectfully suggest another article from materials nearer home. Nearly every paper in London, if not in England, about three month since, gave currency to a gross libel on this same Mr. Webster; charging him, in no very courtly terms, with "dishonesty" and "swindling." This libel might, and did, have much more effect on Mr. Webster's reputation than the other, which "refuted itself;"—and all the *excuse* for it has long since been shown, in the highest quarters, to be groundless: but in not one of these papers have we yet seen a syllable of retractation or of apology for those abusive attacks. Nay, this same reviewer, in this same article of indignant reproof of the American press, forgets not to make a quiet sneer at "red-lined maps, and smart doings;" although the tables had been *completely reversed* by the *official* admission of a *much stronger* case on the other side! Will not the reviewer's respect for the purity of the press induce him to look to this?

Again: a recent paragraph, generally copied by the English press, amiably intimated that all New York would soon be bankrupt, for there were 700 names gazetted in one paper! This long list was, in fact, only equivalent to the sum total of all the London *gazettes* for *years*, instead of one day, *combined* in one paper, and *repeated daily*; and this was fully explained in a note to the *Chronicle*. The paragraph was calculated seriously to injure many individuals: but was the explanation copied where the slander had been repeated? Oh, no. And yet, are not such grave charges in *respectable* papers infinitely more injurious than the nonsensical ribaldry which this reviewer delights to quote?

This is an ungracious and a thankless task—perhaps it is impertinent for mere publishers to meddle with it. It cannot be supposed of particular interest to you or your readers, but we are sure you will at least permit the *explanation* of what we at first ventured to say. W. & P.

FIRST PART OF THE

HON. EMILY EDEN'S 'PRINCES and PEOPLE of INDIA' is now ready for delivery.
Dickinson & Son, 114, New Bond-street.
The Drawings are on View by cards.

WHITTAKER'S POPULAR LIBRARY.—
Copyright Editions, large 8vo.
Now ready.

Biographical Illustrations of St. Paul's Cathedral. With the Inscriptions, and translations of those in Latin, a History of the Cathedral, &c. Price 3s. 6d.
Also, just ready,

Biographical Illustrations of Westminster Abbey. With the Inscriptions, and translations of those in Latin, a History of the Abbey, &c.

One Hundred Romances of Real Life, comprising remarkable Historical and Domestic Facts illustrative of Human Nature. Selected and annotated by Leigh Hunt.

The Turkish and Spanish Empires in the Sixteenth Century, and the beginning of the Seventeenth Century. By Leopold Ranke. The contents of this volume, although forming the first part of 'Ranke's History of the Popes,' has never been placed within the reach of the English reader. The present translation being uniform with the latter work, with a double title, general and specific, the English reader will have the same option afforded by the author to the purchasers of his German book; and he may bind both divisions of the general subject together under a common title, or he may have either separately in the form of a distinct work.

8, New Burlington-street, April 29, 1843.

MR BENTLEY HAS THIS DAY PUBLISHED
THE FOLLOWING NEW WORKS:—

1. GEORGE SELWYN AND HIS CONTEMPORARIES; comprising MEMOIRS and LETTERS of—The Earl of Carlisle, Gilly Williams, Lord Holland, Duke of Richmond, Duke of Northumberland, Orator Henley, Bishop Lyttleton, Charles James Fox, Horace Walpole, the Duke of Queensberry, Earl and Countess of Coventry, Viscount Bolingbroke, Lady Sarah Bunbury, Earl of Hertford, Sir Charles Hanbury Williams, Viscount Sydney and the Townshend Family, Col. Charles Churchill, Anthony Morris Storer, Earl of Fife, Dr. Warner, James Hare, General Fitzpatrick, Right Hon. R. Rigby, Lord Grantham, Lord Macartney, Bishop Warburton, Lord Auckland, Lady Emily Hervey, Lady Diana Beauclerk, &c.
With Notes and Illustrations.
By J. HENEAGE JESSE, Esq., Author of 'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover. 2 vols. 8vo. with Portraits and other Illustrations.

MR. J. FENIMORE COOPER'S NEW ROMANCE.

2. THE FRENCH GOVERNESS; or, the EMBROIDERED HANDKERCHIEF. A Romance. By J. FENIMORE COOPER, Esq., Author of 'The Pilot,' 'The Prairie,' &c. In post 8vo.

3. HISTORY of the REVOLUTIONS, INSURRECTIONS, and CONSPIRACIES of EUROPE. By W. C. TAYLOR, L.L.D. Trinity College, Dublin, Author of 'Romantic Biography of the Age of Elizabeth,' &c. 2 vols. 8vo.

4. TRAVELS in the GREAT WESTERN PRAIRIES, the ANAHUAC and ROCKY MOUNTAINS, and in the OREGON TERRITORY. By THOMAS J. FARNHAM. 2 vols. post 8vo.

MR. WHITEHEAD'S NEW ROMANCE.

5. THE EARL of ESSEX. A Romance. By CHARLES WHITEHEAD, Author of 'Richard Savage,' 'The Solitary,' &c. In 3 vols. post 8vo.

COMPLETION OF THE POLAR VOYAGES.
By Authority of the Lords Commissioners of the Admiralty.

6. VOYAGE to the NORTH POLE, performed in His Majesty's Ships *DOROTHEA* and *TRENT*, under the Command of Capt. BUCHAN, R.N. By Capt. BEECHEY, R.N., one of the Officers of the Expedition. In 8vo. with Engravings.

MUNSTER TALES.

7. THE LAST of the O'MAHONYS, and other HISTORICAL TALES of the ENGLISH SETTLERS in MUNSTER. In 3 vols. post 8vo.

8. THE COURT of ENGLAND under the HOUSES of NASSAU and HANOVER. By J. HENEAGE JESSE, Esq., Author of 'Memoirs of the Court of England under the Stuarts.' In 3 vols. 8vo. with Portraits.

Physician to the Royal Free Hospital, &c.
By the same Author.

On the Cure of Syphilis without Mercury. Price 6s.
"This is a work of great and deep research, the object of which is to show the pernicious effects of mercury."—*Sunday Times.*

EUROPEAN LIFE INSURANCE and ANNUITY OFFICE, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.
President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Fitzroy-square.
With Twelve Directors.
FACILITIES are offered by this long-established Society to suit the views and means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. The insured for life participate septennially in the profits realized. A liberal commission is allowed to Solicitors and Agents.
DAVID FOGGO, Secretary.
N.B. Agents are wanted in towns where none have yet been appointed.

COMMERCIAL and GENERAL LIFE ASSURANCE, ANNUITY, FAMILY ENDOWMENT, and LOAN ASSOCIATION, 112, Cheapside, London.
Every description of Life Assurance entertained, premiums payable quarterly, half-yearly, or yearly; loans advanced from 25*l.* to 500*l.* for three or more years, on approved personal or other security, on the borrower assuring his or her life for a moderate amount.
Endowments for children to receive a stated sum of money on arriving at 14 or 21; in case of death the whole of the money returned to the parents. Annuities, immediate or deferred. Prospectuses and every information to be had of
FRED. LAWRANCE, Resident Sec. 112, Cheapside.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 36, Old Jewry, London.
Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.	Arthur Helps, Esq.
James Mackillop, Esq.	Thomas E. Headlam, Esq.
J. Phillimore, Esq. D.C.L.	Robert J. Grieg, Esq.
W. Wilkinson, Esq.	G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.
Solicitors—Messrs. Ogle & Youngbusband.
The peculiar advantages offered by this Company are:—
1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.
2nd. A Table peculiarly fitted for policies for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.
Every information may be obtained at the Offices, at Whitehall, and 36, Old Jewry.
The usual Commission to Solicitors and Agents.
GEO. BICKNELL, Resident Director.

H. WALKER'S NEEDLES (by authority the Queen's Own), in the illustrated Chinese Boxes, are now in course of delivery to the trade. The needles have large eyes, are easily threaded (even by blind persons), and have improved points, temper, and finish. Each paper is labelled with a likeness of Her Majesty or H.R.H. Prince Albert, in relief, on coloured grounds. Every quality of needles, fish-hooks, hooks and eyes, steel pens, &c. for shipping. These needles or pens for the home trade are sent free by post, by any respectable dealer, on receipt of thirteen penny stamps for every shilling value. H. Walker, Manufacturer to the Queen, 20, Maiden-lane, Wood-street, London.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 133 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.
Webster & Son, 3, Birchin-lane, Cornhill.

H. PAPE, Pianoforte-maker to his Majesty the King of the French, 106, New Bond-street.—PATENT GRAND SQUARE, CONSOLE, and TABLE PIANOFORTES.—H. PAPE, in opening the above establishment, trusts that his instruments will command in this country the same preference they have enjoyed on the Continent for the last 25 years. The sale of nearly 4,000 of them is the best proof of the superiority of his new system of construction, in which the hammer, contrary to the usual mode, strikes the string downwards. The excellence of these instruments for keeping well in tune, for obedience and elasticity of touch, and for their great solidity, is now well known, and a FAIR examination will prove that they are also far superior to all pianofortes of the ordinary construction in power and sweetness of tone. Amongst those at present in the ware-rooms may be seen a Grand Piano of eight octaves, as well as a very remarkable Square, covered with one single sheet of ivory. This was the most remarkable pianoforte present at the Grand National Exhibition at Paris; and for it H. Pape obtained the Gold Medal, and was created, by His Majesty, Chevalier of the Legion of Honour.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.
CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

COMPOSITION FOR WRITING WITH STEEL PENS.
STEPHENS' WRITING FLUID.
THESE COMPOSITIONS, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—An INSTANTANEOUS BLACK INK—A BLUE FLUID, changing to an intense Black colour—PATENT UNCHANGEABLE BLUE FLUIDS, remaining a deep Blue colour—A SUPERIOR BLACK INK, of the common character, but more fluid—A SUPERIOR CARMINE RED for Contrast Writing—A CARBONACEOUS RECORD INK, unchangeable by any Chemical Agent—Also, a new kind of MARKING INK for Linen; and Inkholders adapted for preserving Ink from Evaporation and Dust. Bottles at 3*d.* each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense. Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London; and sold by Stationers and Booksellers.—N.B. These unchangeable Blue Fluids are Patent Articles; the public are therefore cautioned against imitations, which are infringements; to sell or use which is illegal.
STEPHENS' SELECT STEEL PENS.—The utmost possible care having been bestowed upon the manufacture of these articles so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

FOUNTAINS, VASES, TAZZAS, FIGURES, &c. in Marble, Artificial Stone, and Parker's Cement, to be seen at WYATT, PARKER & CO.'S WHARF, Hollandstreet, Surrey foot of Blackfriars-bridge. Also, a large Collection of Chimney Shafts, Pedestals, Capitals, Consoles, Trusses, &c.

STONE-COLOURED CEMENT.
FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged goût, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietor's stamp over the cork of every bottle.

FRAMES FOR ART-UNION PRINTS.
C. F. BIELEFELD begs to call the attention of Artists, Printsellers, &c. to his numerous assortment of PICTURE-FRAMES, appropriate for the Art-Union and other Prints, &c., manufactured in his improved Papier Mâché. "The specimens of these frames which we have seen are certainly very handsome."—*Globe*, 17th Jan. 1843. "They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness we have seldom or never seen obtained in composition."—*Art-Union.*
C. F. B. has just published a New Tariff of the Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on receipt of six post-office stamps.—Works, 15, Wellington-street North, Strand.

Exposé of the folly of ascribing Nervousness to Stomach, Liver, and Bowel Complaints.—Just published, 3rd edition, by Dr. Moseley, price 5*s.* ("This is the best book on nervousness we have."—*Prof. S——, Surgeon.*)
ELEVEN CHAPTERS on NERVOUS or MENTAL COMPLAINTS. Simpkin & Marshall, and all Booksellers. A clergyman of Cambridge University, having cured himself of a nervous complaint of fourteen years' duration, and in eight years, out of 9,000 patients, knows not 20 uncured, offers, from benevolence rather than gain, to cure others. Low spirits, sleeplessness, mental debility, exhaustion, determination of blood to the head, vertigo, groundless fear, failure of memory, incapacity for study and business, restlessness, irresolution, wretchedness, indecision, delusion, melancholy, thoughts of self-destruction, insanity, &c., are curable by this discovery. Most recover in six weeks. Means of cure sent to all parts at the cost or half the cost prices, and no fee for advice demanded. Apply to, or address, post paid, Rev. Dr. Willis Moseley, 9, Charlotte-street, Bloomsbury. At home from 11 till 3

BUTLER'S COMPOUND CONCENTRATED DECOCTION, or FLUID EXTRACT of SARSAPARILLA, is the original of the now numerous concentrated preparations of the kind. A dessert spoonful of it, diluted with water, makes half a pint of the compound decoction, of the same strength and composition as that ordered by the British Pharmacopœias. It is prescribed as an alterative in scrofula, scurvy, eruptions of the skin, and all cutaneous diseases; also has been found extremely useful in chronic rheumatism, in secondary symptoms, and after an improper use of mercury.
Prepared and sold in pint bottles 20s., half-pints 10s., and quarter-pints 5s. 6d., by Thomas Butler, Chemist, 4, Cheapside, (corner of St. Paul's Churchyard.) London; and may be obtained of J. Sanger, 150, Oxford-street; Davenport & Co. Waterloo-place, Edinburgh; or, by order, through any respectable Druggist.
*** No. 4, Cheapside, the corner of St. Paul's Churchyard, No connexion with any other establishment of the same name.

TO LADIES.
ROWLAND'S KALYDOR, under the *special patronage of Her Most Gracious Majesty* and the *Royal Family.*—A creamy, odoriferous preparation from *Oriental Exotics*, is now universally known as the *only* safe and efficient *protector* and *beautifier* of the Skin and Complexion. Its virtues are commonly displayed in thoroughly eradicating all *pimples, spots, redness, tan, freckles*, and other unsightly *cutaneous defects*, in healing chilblains, chaps, and in rendering the most rough and uneven skin pleasantly soft and smooth. To the *complexion* it imparts a juvenile roseate hue, and to the *neck, hand, arm*, a delicacy and fairness unrivalled. To Gentlemen, it allays the irritation of the skin after shaving. Price 4*s.* 6*d.* and 8*s.* 6*d.* per bottle, duty included.
CAUTION.—Ask for 'ROWLAND'S KALYDOR,' and see that these words are on the envelope, as much *pernicious* trash is now offered to the public as 'KALYDOR' by Perfumers of *apparent* respectability.
*** To protect the public from fraud, the Hon. Commissioners of Stamps have authorized the Proprietors' signature to be engraven on the Government Stamp thus—A. ROWLAND & SON, 20, Hatton-garden; sold by them, and by Chemists and Perfumers.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years; he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.
Yours, &c. JOHN KILVINGTON.
To Messrs. Kennahy, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.
OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off; a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.* and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1*l.* 2*s.* the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

KING'S COLLEGE, London.—BOTANY.—Professor EDWARD FORBES, F.L.S., will give the INTRODUCTORY LECTURE to his COURSE of BOTANY, at Three o'clock precisely, on MONDAY NEXT, the 8th inst. Any Gentleman presenting his card will be admitted to this Lecture.
May 3, 1843. J. LONSDALE, Principal.

CHEMICAL MANIPULATION.—The SUMMER COURSE of DEMONSTRATIONS will commence in the Operating Laboratory, on MONDAY, May 8, at Eleven, A.M., and will be continued at the same hour on each succeeding Wednesday, Friday, and Monday, till the termination of the Course, which will consist of Thirty Lessons of two hours each.
Further information may be obtained on application at the Secretary's Office. J. LONSDALE, Principal.
King's College, London, May 1, 1843.

MR. NORTH will commence his COURSE of LECTURES on the most important DISEASES of CHILDREN, on TUESDAY, May 9, at 10 A.M., at the MIDDLESEX HOSPITAL SCHOOL OF MEDICINE.—Inquire of the Secretary, at the Hospital; or of Mr. North, 18, King-street, Portman-square.

LECTURES on ITALIAN LITERATURE.—Signor GONZALES, L.L.D. of the University of Pavia, will deliver, in ITALIAN, a series of TEN LECTURES on ITALIAN LITERATURE, at Mons. A. Roche's Lecture-room, 20 A, Lower Brook-street, Grosvenor-square. Admission will be confined to Ladies, for whose improvement in the Language and Literature of Italy the Lectures are specially intended. They will commence on MONDAY, the 8th of May, at Five o'clock, and be continued on every successive Monday, at the same hour. Tickets for the ten Lectures 1*l.* 10*s.* They may be obtained at Mons. A. Roche's; at Mons. Rolandi's, 20, Berners-street; and at Signor Gonzales's residence, 113, Albany-street, Regent's-park.

HORTICULTURAL SOCIETY of LONDON.—FOUR LECTURES on CHEMISTRY in its Applications to VEGETABLE PHYSIOLOGY and the ARTS of CULTIVATION, will be delivered in the Meeting Room of the Society by Mr. E. SOLLY, F.R.S. &c., Experimental Chemist to the Horticultural Society, on THURSDAY, May the 11th, 18th, 25th, and 1st of June, at 2 o'clock precisely. Fellows of the Society are admitted upon signing their names; all other persons by Tickets, which may be obtained at the Office of the Society, 21, Regent-street, price 10*s.* 6*d.* for the Four Lectures.
By Order of the Council.

HORTICULTURAL SOCIETY of LONDON EXHIBITIONS at the GARDEN.—The first Exhibition will take place on SATURDAY, the 13th of May; subjects for Exhibition must be at this Office, on Friday, the 12th of May, or at the Garden before half-past EIGHT o'clock, A.M., on the day of Exhibition.
The gates will be opened at One, P.M. Tickets are issued to Fellows at this Office, price 5*s.* each; or at the Garden in the afternoons of the days of Exhibition, at 7*s.* 6*d.* each; but only to Orders from Fellows of the Society.—N.B. No Tickets will be issued in Regent-street on the day of Exhibition.
21, Regent-street.

EXHIBITION-ROOM WANTED, in the WEST END of LONDON. A Room about 100 feet in length by about 40 feet in width, and 20 to 25 feet high; or premises posterior to some public street (from which access could be had), that might be converted into a room of these dimensions.—Address A. B., 2, Edwardes-place, Kensington.

ARTISTS' BENEVOLENT FUND.—POSTPONEMENT of the ANNIVERSARY DINNER.—The lamented decease of his Royal Highness the Duke of Sussex having led to the POSTPONEMENT of the Royal Academy Dinner until the 6th of May, that being the day appointed for the Anniversary Dinner of this Institution, would necessarily deprive the Fund of the attendance of many patrons of art and members of the Royal Academy; the Anniversary Dinner of the Artists' Benevolent Fund will, therefore, take place at Freemasons' Hall, on Saturday, the 20th of May;
The Right Hon. Lord JOHN RUSSELL, M.P., in the chair.
JOHN MARTIN, Secretary.
N.B. The tickets issued for the 6th will be received on the 20th of May.

LITERARY FUND SOCIETY, Instituted 1790, for the Protection and Relief of Authors of Genius and Learning and their Families who may be in Want or Distress, and Incorporated by Royal Charter 1818.
Patron—Her Majesty the Queen.
President—The Marquis of Lansdowne.
The FIFTY-FOURTH ANNIVERSARY FESTIVAL of this Corporation will take place in Freemasons' Hall, on WEDNESDAY NEXT, May 10.
His Grace the Duke of SUTHERLAND in the Chair.

Stewards.	
W. H. Ainsworth, Esq.	The Lord Leigh.
John Blackwood, Esq.	Charles Lever, Esq.
Benj. Bond Cabbell, Esq.	Hon. Wm. Leslie Melville.
Wm. George Carter, Esq.	Joseph Neeld, Esq. M.P.
Samuel Cartwright, Esq. F.R.S.	The Lord Viscount Palmerston, M.P.
Sir Wm. Chatterton, Bart.	
George Cruikshank, Esq.	Count Carlo Pepoli.
The Lord Bishop of Durham.	John Pepys, Esq.
William Ewart, Esq. M.P.	Claude Perring, Esq.
Matthew Forster, Esq. M.P.	G. R. Porter, Esq.
Robert Goff, Esq.	James Prior, Esq. R.N.
Sir Benjamin Heywood, Bart.	The Lord Bishop of Salisbury.
Frederick Wm. Irby, Esq.	The Lord Viscount Sydney.
Douglas Jerrold, Esq.	The Right Rev. Dr. Wiseman.
Sir Rich. Paul Jodrell, Bart.	

Tickets, 20*s.* each, may be had of the Stewards, and of the Secretary, at the Chambers of the Society, 73, Great Russell-street. The amount of Grants applied to the relief of distressed Authors, their Widows, and Children, during the past year, was 1,325*l.*; and the total amount applied by the Committee to these benevolent objects, from the foundation of the Society, is upwards of 29,000*l.* Donations and Subscriptions, in aid of the charitable purposes of the Institution, will be thankfully received and acknowledged by the Treasurers, John Griffin, Esq., 21, Bedford-place; Sir Henry Ellis, British Museum; William Tooke, Esq., 13, Russell-square; and by
OCTAVIAN BLEWITT, Sec.

THE QUARTERLY REVIEW.—ADVERTISEMENTS and BILLS for the forthcoming Number must be forwarded to the Publisher's by the 10th instant.
John Murray, Albemarle-street.

SCHOOL PARTNERSHIP.—A Gentleman, who studied under a Cambridge man of high standing, was afterwards for several years Second Classical Master in a large Public School of great celebrity, and is now temporarily engaged in editing Classical Works, would be happy to form a Connexion with the Proprietor of some respectable Establishment, where increased efficiency in the Classical and Mathematical Departments may be desired. Satisfactory references given and required.—Address (pre-paid) to E. S., 9, Rood-lane, Fenchurch-street.

TERMS of SUBSCRIPTION to CHURTON'S LIBRARY, 26, HOLLES-STREET,
FOR A SINGLE FAMILY, 4, 5, or 10 guineas per annum.
FOR A BOOK SOCIETY, 6, 8, 10, 13, or 16 guineas per annum.

SUMMERLY'S
HAND-BOOK FOR HAMPTON COURT.
INJUNCTION AGAINST HENRY GREEN CLARKE, PUBLISHER and PRINTER.
WHEREAS a Bill in Chancery having been filed against the said Henry Green Clarke, of No. 66, Old Bailey, London, for committing various acts of Piracy in respect of Felix Summerly's Hand-book for Hampton Court—the Vice-Chancellor of England, this day, May 3rd, 1843, issued the following Injunction:—
VICE CHANCELLOR OF ENGLAND.
Wednesday, the 3rd day of May, 1843.
COLE v. CLARKE. } *Cur'*. Let an Injunction be awarded to restrain the defendant, Henry Green Clarke, his agents, servants, and workmen, from printing, publishing, selling, delivering, or otherwise disposing of any copies or copy of a book called "The Royal Gallery, Hampton Court Palace, its Pictures, and their Painters: a Hand-Book Guide for Visitors," containing any articles or article, passages or passage, copied, taken, or colourably altered from a book called or entitled, "A Hand-Book for the Architecture, Tapestries, Paintings, Gardens, and Grounds of Hampton Court;" and from two articles in the periodical called the *Athenæum*, of the 4th day of June, 1842, No. 769, and of the 10th day of September, 1842, No. 778, respectively entitled "Alterations at Hampton Court, Ancient and Modern," and "Charles the First's Chapel at Hampton Court," or from any or either of them, until the Defendant shall fully answer the Plaintiff's Bill, or this Court make other order to the contrary.
The Public are hereby cautioned against purchasing the said Work on Hampton Court, published by the said Henry Green Clarke, and advertised as one of his Series of Free Galleries of Art.

Now publishing.
BAXTER'S OIL-COLOURED PORTRAITS of the MISSIONARIES, WILLIAMS and MOFFAT. Price of each portrait, in Oil Colours, 10*s.* 6*d.* each; Proofs, 15*s.*; Mezzotinto proofs, 3*s.* 6*d.*; India proofs, 5*s.* Gold Frames and Glass only 10*s.* 6*d.* each, if required.
Just before Mr. Moffat left England, to resume his arduous duties in Africa, he said—"Mr. Baxter, the portrait you have in hand is a very faithful likeness, and the scene of the Bechuana Parliament most true: indeed, I fancy myself again in Africa."
London: published by George Baxter, patentee of Oil-Coloured Printing, 3, Charterhouse-square; and to be had, by order, from every Book and Print-seller throughout the Kingdom.

Mr. Collot begs to announce the publication of the
TRANSLATION into FIFTY-FOUR DESIGNS of MILTON'S PARADISE LOST.
By T. T. FLATTERS, Sculptor.
This splendid work, the fruit of eleven years of labour, illustrates in a most striking and impressive manner the finest poem England can boast of. The vigorous and correct design of Mr. Flatters partakes of the suppleness and grace which reign in the sublime compositions of Michael Angelo, with which it can only be compared.
Every copy will be signed by the author.
Price: Imperial folio, half bound morocco, 10 Guineas.
London: published by A. G. Collot, 36, Bruton-street, Berkeley-square.

TEN THOUSAND A-YEAR. By SAMUEL WARREN, F.R.S., Author of 'Passages from the Diary of a late Physician.'

"A remarkable novel.—Superior to any novel of actual life recently produced in this country."—*Quarterly Review.*

"The characters are excellent; some of them equal to the highest efforts of the highest masters; the insight into motives is searching; the scenes display a power of reproducing on paper what experience has taught; some of the incidents are novel, startling, and of surprising power."—*Times.*

"For a length of time there has not appeared in England a work, no, not even of a style professedly higher, which contains such valuable and such striking lessons on the vain fickleness of the opinions and the infatuations of the world; on the force of example and fashion; and on the omnipotence of wealth; on the irresistible impulse which gives increase of riches to the rich, and of poverty to the poor."—*Revue des deux Mondes* (Paris).

William Blackwood & Sons, 45, George-street, Edinburgh, and 22, Pall-Mall, London.

Just published, 18mo. 5s. bound,

SIMSON'S ELEMENTS of EUCLID, viz. the first Six Books, together with the XI. and XII., carefully corrected by S. MAYNARD.

The above, with the addition of the Elements of Plane and Spherical Trigonometry; and a Treatise on the Construction of the Trigonometrical Canon. Also a concise account of Logarithms, by the Rev. A. ROBERTSON, D.D. F.R.S., Oxford. 25th edition, revised by S. MAYNARD, 8vo. 9s. bound.

Simson's Elements of Euclid, edited in the Symbolical Form. By R. BLAKELOCK, M.A. Fell. Cath. Hall, Camb. 6s. 6d. cloth.

London: Longman & Co.; T. Cadell; J. M. Richardson; Rivingtons; Hamilton & Co.; Whittaker & Co.; Sherwood & Co.; Simpkin & Co.; Souter & Law; Smith, Elder, & Co.; Harvey & Co.; B. Fellowes; Houlston & Co.; H. Washbourne; E. P. Williams; J. Templeman; and J. Van Voorst. Cambridge: J. and J. J. Deighton.

DARLEY'S SCIENTIFIC LIBRARY, for the Use of Schools, Private Students, Artists, and Mechanics.

It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics, these little works will be found particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind, and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

1. A System of Popular Geometry. Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading Truths and general Principles. By George Darley, A.B. Fourth Edition. 4s. 6d. cloth.

2. Companion to the Popular Geometry. In which the Elements of Abstract Science are familiarised, illustrated, and rendered practically useful to the various purposes of Life, with numerous Cuts. Second Edition. 4s. 6d. cloth.

3. A System of Popular Algebra, with a Section on Proportions and Progressions. Third Edition. 4s. 6d. cloth.

4. A System of Popular Trigonometry, both Plane and Spherical; with Popular Treatises on Logarithms, and the Application of Algebra to Geometry. Second Edition. 3s. 6d. cloth.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, Article 'Mechanics.'*

UNPUBLISHED LETTERS OF HORACE WALPOLE.

In the press, 3 vols. 8vo. with numerous Portraits from Original Paintings, &c.

LETTERS OF HORACE WALPOLE, EARL of ORFORD,

To SIR HORACE MANN,

H. B. M. Resident at the Court of Florence,

From the Years 1760 to 1785.

Now first Published from the Original Manuscripts.

Concluding Series.

"I sometimes think I have lived two or three lives. My thirteen months at Florence was a pleasant youth to one of them; seven months and a half at Paris, with four or five journeys thither since, was a middle age, quite different from twenty-five years in Parliament which had preceded—and an age since; besides, as I was an infant when my father became minister, I came into the world at five years old, knew half the remaining Courts of King William and Queen Anne, or heard them talked of as fresh; being the youngest and favourite child. I was carried to almost the first operas, kissed the hand of George the First, and am now hearing the fiddles of his great grandson (George Prince of Wales)—no, all this cannot have happened in one life! I have seen a mistress of James the Second (mother of the Duke of Berwick), the Duke of Marlborough's burial, three or four more, the whole career of victorious and death of Lord Chatham, the loss of America, the second condemnation of London by Lord George Gordon—and yet I am not as old as Methuselah by four or five centuries."—*Horace Walpole to Sir H. Mann.*

Richard Bentley, New Burlington-street,

(*Publisher in Ordinary to Her Majesty.*)

THE

HOME TREASURY

OF

Books, Pictures, Toys, &c.

CONDUCTED BY

FELIX SUMMERLY.

THE character of most Children's Books published during the last quarter of a century, is fairly typified in the name of Peter Parley, which the writers of some hundreds of them have assumed. The books themselves have been addressed after a narrow fashion almost entirely to the cultivation of the understanding of children. The many tales sung or said from time immemorial, which appealed to the other, and certainly not less important elements of a child's mind, its fancy, imagination, sympathies, affections, are almost all gone out of memory, and are scarcely to be obtained. The difficulty of procuring them is very great. Of our national nursery songs, some of them as old as our language, only a very common and inferior edition for children can be procured. Little Red Riding Hood and other fairy tales hallowed to children's use, are now turned into ribaldry as satires for men. As for the creation of a new fairy tale or touching ballad, such a thing is unheard of. That the influence of all this is hurtful to children, the conductor of the proposed series firmly believes. He has practical experience of it every day in his own family, and he doubts not that there are many others who entertain the same opinions as himself. He purposes at least to give some evidence of his belief, and to produce a series of Works for children, the character of which may be briefly described as anti-Peter Parleyism.

Some will be New Works, some new combinations of old materials, and some reprints carefully cleared of impurities, without deterioration to the points of the story. All will be illustrated, but not after the usual fashion of children's books, in which it seems to be assumed that the lowest kind of art is good enough to give the first impressions to a child. In the present series, though the statement may perhaps excite a smile, the illustrations will be selected from the works of Raffaelle, Titian, Hans Holbein, and other old masters. Some of the best modern Artists have kindly promised their aid in creating a taste for beauty in little children. All the illustrations will be coloured.

In addition to the printed Works, some few Toys of a novel sort, calculated to promote the same object, will from time to time be published.

The following may be specified as among the earliest productions which it is proposed to include in this series:—

1. Several ALPHABETS, beginning with one of Animals selected from the Old Masters, Paul Potter, Snyders, Cuyp, Berghem, &c.
2. BIBLE EVENTS, First Series, illustrated by Hans Holbein.

——— Second Series, with Illustrations by Raffaelle.

3. TRADITIONAL NURSERY SONGS, with entirely new Pictures by eminent Modern Artists.
4. SIR HORNBOOK, a Grammatico-Allegorical Ballad, with Designs reprinted by permission.
5. A Series of Popular OLD FAIRY TALES, each Tale illustrated by four Pictures.
6. A Series of NEW FAIRY TALES, written expressly.
7. OLD ENGLISH BALLADS, each Ballad illustrated with four Pictures.
8. A Toy to be called TESSELATED PASTIME, for Children and others, formed out of the Mosaics published by Mr. Blashfield, purposed to cultivate correct taste in ornament.
9. A Box of TERRA COTTA BRICKS geometrically proportioned, each Brick being one-eighth of the size of the Common Brick in its several measurements, and manufactured under Mr. Prosser's Patent, by Messrs. Minton, of Stoke upon Trent.

The following Works are nearly ready:

1. BIBLE EVENTS, illustrated by Hans Holbein.
2. TRADITIONAL NURSERY SONGS.
3. SIR HORNBOOK.
4. LITTLE RED RIDING HOOD.
5. THE TESSELATED PASTIME.
6. THE BOX OF BRICKS.

London: JOSEPH CUNDALL, 12, Old Bond-street.

Price 3s. 6d. in cloth.

Twelve Illustrations by Kenny Meadows.

HINTS TO SERVANTS.

"This is a Poetical Version of Swift's ever memorable advice to one of the most useful classes of society. Tinctured with the original wit of the first of English satirists, these rhymes for the kitchen overflow with humour, and whether the ready rhythmer may have lent or borrowed his fun from *Kenny Meadows*, the designs of the latter are in excellent keeping with the mirthful picture itself."—*Colonial Magazine.*

Effingham Wilson, 18, Bishopsgate-street; and T. & W. Boone, Bond-street.

CHINA AND INDIA.

This day, Parts 1, 2, 3, and 4, price 1s. each, to be continued Monthly,

Rivingtons, St. Paul's Churchyard, and Waterloo-place.

In 8vo. price 16s.

SIGHTS and THOUGHTS in FOREIGN CHURCHES and among FOREIGN PEOPLES. Book I. Paris and Avignon—II. Cisalpine Gaul—III. The Adriatic and Ægean.

By the Rev. FREDERICK W. FABER, M.A.

Fellow of University College, Oxford; Author of 'The Cherwell Water-Lily and other Poems.'

Rivingtons, St. Paul's Churchyard, and Waterloo-place.

DR. HOOK'S LENT LECTURES.

This day is published, a Fourth and Revised Edition, price 6s. cloth lettered,

THE LAST DAYS of OUR LORD'S MINISTRY; a Course of Lectures on the principal EVENTS of PASSION WEEK.

By WALTER FARQUHAR HOOK, D.D.

Vicar of Leeds, Prebendary of Lincoln, and Chaplain in Ordinary to the Queen.

Duncan & Malcolm, Paternoster-row.

NEW VOLUME OF SERMONS, BY MR. MELVILL.

In 8vo. price 10s. 6d. The First Volume of

SERMONS on SOME of the less prominent FACTS and REFERENCES in SACRED STORY.

By HENRY MELVILL, B.D.

Minister of Camden Chapel, Camberwell, and Chaplain to the Tower of London; formerly Fellow of St. Peter's College, Cambridge.

Rivingtons, St. Paul's Churchyard, and Waterloo-place.

Of whom may be had, by the same Author,

1. Sermons. Vol. I. 4th edition. 8vo. 10s. 6d.

Vol. II. 3rd edition. 8vo. 10s. 6d.

2. Sermons before the University of Cambridge in 1826, 1827, and 1828. In 3 vols. 8vo. (sold separately), price 5s. each.

NEW EDITION OF MR. PALMER'S TREATISE ON THE CHURCH.

In 2 vols. 8vo. price 1l. 1s. (dedicated, by permission, to the Archbishops of Canterbury and Armagh), the 3rd edition, revised and enlarged, of

A TREATISE on the CHURCH of CHRIST.

Designed chiefly for the Use of Students in Theology.

By the Rev. WILLIAM PALMER, M.A.

Of Worcester College, Oxford; Author of 'Origines Liturgicæ.'

*** The chief design of this Work is to supply some answer to the assertion so frequently made, that individuals are not bound to submit to any ecclesiastical authority whatever; or that if they are, they must, in consistency, accept Romanism with all its claims and errors.—*Preface.*

Rivingtons, St. Paul's Churchyard, and Waterloo-place.

FELIX SUMMERLY'S

RECREATION HAND-BOOK GUIDES,

Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business....As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."
FULLER'S HOLY AND PROFANE STATE.

"All work and no play makes Jack a duly boy."
OLD ENGLISH PROVERB.

The preceding sentences have been chosen as exemplifying, briefly and forcibly, the chief views with which this series of Hand-Books has been compiled. Whether or not any share of the growth of public interest in our National Exhibitions may be traced to these little works, it might be difficult, if not presumptuous, to attempt to determine; yet it may be allowable to instance, among the good and practical results which these Hand-Books have certainly effected for the public,—the reduction in the price of the Official Catalogue of the National Gallery, from a Shilling to Fourpence, and the greater facilities of identifying the pictures at Hampton Court Palace, which having been brought to the notice of the Commissioners of Woods and Forests, they most cheerfully assented to.

HAMPTON COURT PALACE.

(OPEN DAILY, EXCEPT FRIDAYS.)

Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey, Second edition, price 5s. and 2s. 6d.

"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator.*

"A charming specimen of a Hand-book, literally crammed with information."—*Atlas.*

FREE PICTURE GALLERIES;

Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1s. 6d. Each Gallery published separately at proportionate prices.

"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum.*

HOLIDAYS;

BEING

A Guide to London Sights.

Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6d.

WESTMINSTER ABBEY.

(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 3d.; with the Chapels, 6d.)

A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies. 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. A Cheaper Edition, 3s.

"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.

"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and testing opinions by reference to principles. As if to perfect the interest of the work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Callcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists. The work is professedly a Guide-book, and excellent in its way; but it is also a handsome volume for a drawing-room table, and worthy an honoured place on every lady's library shelves."—*Athenæum.*

ABRIDGED EDITIONS, with 4 Etchings, price 1s.; with Plan of the Abbey, 6d.

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.

With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition.

"It is a very unique combination of red and black letter printing with lithography. The description of the church is very able and complete."—*Church Magazine.*

THE NATIONAL GALLERY.

(Open daily, from Ten to Four, except Friday and Saturday.) Price 6d., 3d., and 1d.

Also, for Foreigners, 'Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres.' Prix 6d.

An Edition, with Reminiscences of the Pictures, drawn expressly from the Originals, by Messrs. John James and William Linnell. Just ready.

DAYS' EXCURSIONS OUT OF LONDON; with Engravings on Wood, by Charlotte and Laura Bond.

A HAND-BOOK for CANTERBURY; with Illustrations.

GEORGE BELL, 186, Fleet-street.

WORKS on NATURAL HISTORY, BOTANY, MEDICINE, &c.

PRINTED FOR

LONGMAN, BROWN, GREEN AND LONGMANS.

1.

LECTURES on COMPARATIVE ANATOMY, delivered at the Royal College of Surgeons, in 1843, by RICHARD OWEN, F.R.S. &c., Hunterian Professor to the College. From Notes taken by WILLIAM WHITE COOPER, M.R.C.S., and revised by Professor OWEN.

To be completed in (not exceeding) Twelve Numbers, with Woodcuts, 1s. each.—*No. 4 is published this day.*

2.

POPULAR CONCHOLOGY; or, the Shell Cabinet arranged: being an Introduction to the Modern System of Conchology; with a Sketch of the Natural History of the Animals, an account of the Formation of the Shells, and a complete Descriptive List of the Families and Genera. By AGNES CATLOW. Fcap. 8vo. with 312 Woodcuts, 10s. 6d. cl.

"A pleasant, useful, and well illustrated volume."
Prof. Jameson's Philosophical Journal.

3.

DR. TURTON'S MANUAL of the LAND and FRESH-WATER SHELLS of the BRITISH ISLANDS. A New Edition, thoroughly revised, and with considerable Additions. By JOHN EDWARD GRAY, Esq. F.R.S., Keeper of the Zoological Collection in the British Museum. Post 8vo. with Woodcuts and 12 coloured Plates, 15s. cloth.

"The most complete view of the subject that has yet appeared."—*London and Westminster Review.*

4.

THE BRITISH FLORA, Vol. 1; comprising Phænogamous or Flowering Plants, and the Ferns. By Sir WILLIAM JACKSON HOOKER, K.H. L.L.D. F.R.A. & L.S. &c. &c. Fifth Edition, with Additions and Corrections; and 173 Figures illustrative of the Umbelliferous Plants, the Composite Plants, the Grasses, and the Ferns. 8vo. with 12 Plates, 14s. plain; with the plates coloured, 24s. cloth.

Vol. 2, in Two Parts, completing the British Flora, 24s. bds.

5.

INTRODUCTION to BOTANY. By Professor LINDLEY. 3rd Edition, with Corrections and numerous Additions. 8vo. with 6 Copperplates and numerous Wood Engravings, 18s. cloth.

"We have no hesitation in pronouncing this 'Introduction to Botany' to be the most valuable and perfect in any language we are acquainted with."—*Medical Gazette.*

By the same Author,

THE THEORY of HORTICULTURE; or, an Exposition of the Physiological Principles on which the Operations of Gardening are conducted. 8vo. with numerous Illustrations on Wood, 12s. cloth.

"To all who delight in a garden, Dr. Lindley's charming volume will yield not only instruction, but endless amusement."
Athenæum.

A NATURAL SYSTEM of BOTANY. 18s.

FLORA MEDICA. 8vo. 18s. cloth.

SYNOPSIS of the BRITISH FLORA. 12mo. 10s. 6d. cloth.

6.

AN ENCYCLOPÆDIA of GARDENING. By J. C. LOUDON. New Edition, improved, with nearly 1000 Engravings on Wood, 1 large vol. 8vo. 50s. cloth.

"No gardening book so comprehensive, and containing such an immense mass of matter, has ever been submitted to the public more free from errors of the pen or the press."
Monthly Review.

By the same Author,

HORTUS BRITANNICUS: a Catalogue of all the Plants indigenous to or introduced into Britain. New Edition, 8vo. 31s. 6d. cloth.

AN ENCYCLOPÆDIA of PLANTS. 8vo. 3l. 13s. 6d. cloth.

AN ENCYCLOPÆDIA of AGRICULTURE. 8vo. 2l. 10s. cloth.

AN ENCYCLOPÆDIA of TREES and SHRUBS. 8vo. 2l. 10s. cloth.

AN ENCYCLOPÆDIA of COTTAGE, FARM, and VILLA ARCHITECTURE. 8vo. 2l. 8s. cloth.

7.

SIR HUMPHRY DAVY'S AGRICULTURAL CHEMISTRY. With Notes by Dr. JOHN DAVY. Sixth Edition, 8vo. with 10 Plates, 15s. cloth.

CONTENTS:—Introduction—The General Powers of Matter which influence Vegetation—The Organization of Plants—Soils—Nature and Constitution of the Atmosphere, and its Influence on Vegetables—Manures of Vegetable and Animal Origin—Manures of Mineral Origin or Fossil Manures—Improvement of Lands by Burning—Experiments on the nutritive qualities of different Grasses, &c.

8.

MEDICAL LECTURES,
Illustrated by Engravings on Wood,
In course of publication.

DR. ROBERT LEE on the PRINCIPLES and PRACTICE of MIDWIFERY.

DR. GOLDING BIRD on URINARY DEPOSITS.

DR. GEO. BURROWS on the PATHOLOGY of the BRAIN.

*** The above, together with the usual variety of articles on Medical topics, are contained in the LONDON MEDICAL GAZETTE, of which a New Series is now in course of publication. The First Part of the Second Volume was published on the 1st of May. Published also in Weekly Numbers.

Speedily will be published,

THE CHRONICLE of the KINGS of NORWAY, from the Earliest Period of the History of the Northern Sea-Kings to the Middle of the Twelfth Century; commonly called the Heimskringla. Translated, from the Icelandic of SNORRO STURLESON, with Notes, and a Preliminary Dissertation, by SAMUEL LAING, Author of a 'Residence in Norway,' a 'Tour in Sweden,' 'Notes of a Traveller,' &c.

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

JOHN W. PARKER, West Strand.

ARUNDINES CAMI, sive Musarum Cantabrigiensium Lusus Canori, collegit atque edidit HENRICUS DRURY, M.A. 8vo., New Edition, revised. (*Next week.*)

SERMONS preached at READING. By the Rev. FRANCIS TRENCH, M.A. 8vo. 10s. 6d.

THE SACRAMENT of BAPTISM, and the Nature of BAPTISMAL REGENERATION. By CHRISTOPHER BENSON, M.A., Master of the Temple. A New Edition, 4s.

THE WORLD of WATERS; or, RECREATIONS in HYDROLOGY. By Miss R. M. ZORNLIN. With numerous Illustrations, 6s.

Of this Series the following have been lately published,

RECREATIONS in PHYSICAL GEOGRAPHY; or, THE EARTH AS IT IS. By Miss R. M. ZORNLIN. With numerous Illustrations, 6s.

RECREATIONS in GEOLOGY. By Miss R. M. ZORNLIN. With Illustrations. 4s. 6d.

RECREATIONS in ASTRONOMY. By the Rev. L. TOMLINSON, M.A. With 50 Illustrations, 4s. 6d.

RECREATIONS in CHEMISTRY. By T. GRIFFITHS, Chemical Lecturer at St. Bartholomew's Hospital. With numerous Illustrations, 4s. 6d.

PRACTICAL BEE-KEEPER; or, Concise and Plain INSTRUCTIONS for the MANAGEMENT of BEES and HIVES. By JOHN MILTON. 4s. 6d.

PRACTICAL REMARKS ON

GOUT, RHEUMATIC FEVER, and CHRONIC INFLAMMATION of the JOINTS. Being the Croonian Lecture for 1843, delivered at the Royal College of Physicians. By R. B. TODD, M.D. F.R.S., Fellow of the College of Physicians, Physician to King's College Hospital, and Professor of Physiology in King's College, London.

SPASM, LANGUOR, PALSY, and other DISORDERS, termed NERVOUS, of the MUSCULAR SYSTEM. By JAMES ARTHUR WILSON, M.D., Fellow of the College of Physicians, and Physician to St. George's Hospital. 7s.

LIFE AND CORRESPONDENCE OF THE LATE

SIR ASTLEY PASTON COOPER, Bart. From Documents bequeathed by him for the purpose. By BRANSBY B. COOPER, Esq. F.R.S. 2 vols. 8vo. with Portrait from the Original Picture, by Sir Thomas Lawrence. 21s.

AN INTRODUCTION TO THE STUDY OF

CHEMICAL PHILOSOPHY; being a Preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN F. DANIELL, F.R.S., Prof. of Chemistry in King's College, London. With numerous Illustrations, the Second Edition, revised and much enlarged, 21s.

A THEORETICAL AND PRACTICAL SYSTEM OF

ARITHMETIC; comprising all the usual Rules, with their Proofs; Scales of Notation; the Construction and Use of Logarithms; Mensuration of Superficies and Solids; Formulæ for Calculating the Horse-power of Steam-Engines, Water-Wheels, &c., together with much useful Information never before introduced into Treatises on Arithmetic. For Schools and self-taught Students. By W. H. CRANE, Mathematical Master, St. Mark's College, Chelsea.

BY AUTHORITY.

Handsomely printed in 8vo., and Illustrated by Shaded Engravings of the Models, and numerous Woodcuts, 15s.

A MANUAL FOR TEACHING

MODEL-DRAWING from SOLID FORMS; the Models founded on those of M. DUPUIS; combined with a POPULAR VIEW OF PERSPECTIVE, and adapted to the Elementary Instruction of Classes in Schools and Public Institutions, as taught under the Sanction of the Committee of Council on Education. By BUTLER WILLIAMS, C.E. F.G.S., Director of the Drawing Classes at Exeter Hall, &c.

Also, with numerous Woodcuts, and Outline Figures of the Models, 3s.

INSTRUCTIONS in DRAWING, for the Use of Elementary Schools, abridged from the foregoing Manual. By BUTLER WILLIAMS.

*** A CATALOGUE, with Figures, of the Models and Materials used in the Drawing Classes on this Method, may be had of the Publisher on applying, post paid, and enclosing two Penny Stamps.

London: JOHN W. PARKER, West Strand.

REVIEWS

The Rambles of the Emperor Ching Tih, in Këang Nan. A Chinese Tale. Translated by Tkin Shen, Student of the Anglo-Chinese College, Malacca. 2 vols. Longman & Co.

CHINESE literature is beginning to excite much attention in France, Germany, and America; the novels and the dramas of the Celestial Empire, independent of their interest as fictions, are justly regarded as undesigned expositions of the moral principles, social rules, and habits of thought belonging to an exclusive people, whose system of civilization, if not self-generated, is certainly self-developed. Although the tale now translated is inferior as a story to the Fortunate Union and several others which have already appeared in an English dress, it surpasses them in political value, for it is devoted entirely to illustrating the court and government of China, the position of its emperor, and the nature of the intrigues by which changes are effected in its cabinet. Although literary attainments are nominally the only qualifications for office in China—Senior Wranglers being alone eligible to the government of provinces, and First-Class men to the command of armies—weak monarchs are liable to surround themselves with unworthy favourites, holding no responsible situation, but yet, under the cover of imperial despotism, able to grasp the entire management of the administration.

Ching Tih, the hero of this romance, ascended the imperial throne when just entering on manhood; his youth rendered him an easy prey to the arts of a crafty eunuch, named Lew Kin, who directed his attention to state affairs, and while the monarch wasted his time in luxuries, continued to fill the principal offices with his creatures, and exhausted the finances by his rapacity. The means used to divert the young monarch from his duties, are exactly the same as those which the old Greek historians record as employed for similar purposes by the eunuchs in the courts of the ancient Kings of Persia:—

"Lew Kin, after his return to the palace, daily contrived by the help of seven men, who composed his party, schemes of amusement with horses, buffaloes, hawks, and hounds, with dancing, mirth, and music to delight the Emperor. They succeeded in teaching dogs to speak, horses to tread on swinging ropes, buffaloes to answer to the call, and hawks to transmit messages. They certainly accomplished wonders in this line, and not the young prince only was delighted with the exhibitions, but every one in the palace who saw them pronounced them to be surprising. The eunuch also caused several beautiful ladies to present wine, and sing, and practise every sort of seduction before his majesty, so as entirely to concentrate his affections upon them, insomuch that he came to regard it unnecessary to hold a court, or to attend to the public business. Even representations, which were presented for his decision, he had neither inclination or leisure to look at."

The misgovernment of Lew Kin and his creatures provoked insurrections in various quarters of the empire. Several young men of rank became captains of bands of outlaws; they were however not regarded as common robbers, because they professed to plunder none but tyrants, and declared that they would always redress the injuries of the oppressed; neither were they looked upon as rebels, for they professed to be in arms, not against their sovereign, but against the unworthy ministers who abused his name. Che Fan, one of these insurgents, soon collected so large an army that he deemed it necessary to prepare a code of laws for his soldiers, and this code is declared to be the basis of the military discipline still maintained in the armies of China. Recent events give some interest to these Chinese "articles of war":—

"I. In an engagement the troops are to advance at the sound of the drum, and retire at that of the gong. Every soldier must keep his rank. He who disobeys shall be beheaded. II. On the march, to whatever district the troops come, if orders have been issued, they must act according to them; if no orders have been given, they must not injure the inhabitants. He who disobeys shall be beheaded. III. All weapons must be kept bright. On hearing the signal gun the troops must advance quickly. He whose heart fails him on the approach of battle, and will not meet the enemy, shall be beheaded. IV. After orders have been issued, the soldiers are not to collect in companies of three or five, and whisper together. When the enemy come to close quarters, the soldiers are not to make a noise. He who disobeys shall receive forty blows. V. No person who has taken any soldiers or people at any village on the march can let them go on his own account, but must request an order for his guidance. He who disobeys this shall receive eighty blows. VI. No soldier or officer is allowed, when he may find it convenient, to visit his relations, or lodge in people's houses. Neither is any one allowed to get drunk or commit lewdness. Whosoever disobeys shall instantly be beheaded without mercy. Military laws are like thunder. Every one must reverently obey them, in order to escape future repentance. Given in the sixth year of Ching Tih, on the fourteenth day of the fourth month."

The eunuch allowed the various insurrections to spread without making any active efforts for their suppression; he was too busily engaged in removing those ministers of the court whose abilities or integrity were likely to interfere with his ambition; he had correct likenesses taken of all the officers of state, so that when those who had incurred his resentment attempted to escape, he could send wood-engravings of their portraits as a kind of hue and cry to the various police stations of the empire. This pictorial proscription is mentioned in the novel as a regular resource usual in the search after all escaped criminals, but we do not remember to have seen it noticed in any of the works on the customs of the Chinese.

The accounts given of the several insurrections and of the various views of the parties engaged in them are a little perplexed; we find female warriors engaging in some of the most daring exploits, and not unfrequently conquering the best soldiers of the other sex; but the ladies are not treated with any of the courtesy exhibited to female bravery in the middle ages of Europe. We meet, however, with an extension of one of the most affecting institutes of chivalry, the swearing of "brotherhood in arms;"—the Chinese had not only a brotherhood but a sisterhood in arms, ratified by the solemnities of their religion:—

"They sat down in company with the two ladies, and after they had partaken of some fragrant tea, Teih recommenced the former subject by asking Fei Heung's age, who apologised for not having put a similar question to him, and added that he had vainly passed through twenty years. 'So young,' said the other, 'and yet so heroic, you make me ashamed that I am four years your elder. In sooth I am like the worthless Choo Leihkua, devoid of the least ability.' On hearing his seniority Heung paid him the respect due to an elder brother, and yielded him the upper seat. They then gave orders that the incense table should be prepared; and having both lighted the candles and burned incense, they went forth to the open air, and having paid homage to the gods, invoked their presence. They then pledged to each other the affections of brothers, and swore that nothing should be permitted to disturb their harmony. This done, they returned to their seats, when the two ladies drew near and paid their respects. Sew Chun then smiled and opened her peachy lips. 'I also,' said she, 'wish to contract a sistership with this lady, and only wait for the approbation of our brothers, and her assent to my desire.' At these words Mei Yen smiled, observing that it would be the height of her good fortune to be allowed continually to wait upon her, but as to speaking about contracting as sisters, she was ashamed that she was altogether unworthy of the honour. Jin Teih, however, interrupted her, saying, 'Young lady, don't be so modest. The events of this day must be ascribed to the overruling providence of Heaven. You must not deny my sister's proposal.' Having spoken thus, he ordered them both to burn incense, and to form their alliance in the face of heaven. The two ladies accordingly, having first knelt to the gods, asked one another's age, and Sew Chun, proving to be one year the elder, was honoured by Yen with the due observances, and the engagement contracted."

After some time the young emperor Ching Tih discovers the crimes of his unworthy favourite and resolves to punish him, but the eunuch makes his escape, and by the aid of his partisans is enabled to raise several dangerous insurrections. In the meantime the emperor resolves to visit the province of Këang-Nan in disguise, accompanied however by one of his most distinguished champions, Chow Yung, and his adventures in these rambles, all of which are more or less connected with the previous misgovernment of Lew Kin, form the staple of the romance. One of the first circumstances which requires the interference of the emperor is the complaint of one of his hosts that a wicked young man, relying on the influence of his official relatives, intended to take away and marry the old man's daughter without the consent of either. The father's account of the profligate's pretext for such an outrage is a curious illustration of Chinese modes of courtship:—

"On the day which I have mentioned, he came in this direction rambling in quest of pleasure, while my daughter happened to be looking out from a window in the gallery. The dog began to leer at her, and laugh and praise her beauty, which she no sooner perceived than she shut the window. In her hurry, however, she let her fan drop into the street, and the rascal instantly picked it up. My daughter sent out a girl to request him to return it, which he would not do. This indeed would have been but a small matter, but he moreover said that I had betrothed my daughter to him. His bad passions were aroused, and he instantly went home, and came back with some servants bearing the various ceremonial presents, and urging me at the same time to allow the marriage. I told him that my daughter was already betrothed, and that I would give him ten taels of silver to get the fan back again. On this he asserted, that when my daughter assented to his proposals, she had given him this fan as a token. When I heard this, my breast swelled with rage, and I had a long altercation with him. At last, he said, that if I was willing it was well; but if not, it was no matter, for he would come this night, and carry my daughter to his house by force. He then put down the presents, and went off, determined to send the flowery chair, and accomplish his purpose of violence."

The emperor's interference prevents this abduction and many similar acts of violence and injustice; but we pass these over to turn to what is the greatest novelty of the book, the supernatural adventures connected with the Buddhist mythology of China. A wondrous bud of a water-lily appeared in the pond of a gentleman named Han He; a genius informed him that it would expand only at the orders of the person whom his daughter was destined to marry, and that this person was the emperor. Incidentally we learn that miraculous powers are supposed to have been conceded to the emperors of the Ming dynasty:—

"Ching Tih inquired how many days it was since the flower made its appearance. 'It is now seven days, and it has not yet unfolded. I have, therefore, put up the card, saying I will give my daughter to him at whose summons it opens.' 'In that case I will let you see me order it to open.' At the same time his majesty recalled to his memory Woo How, of the Tang dynasty, who caused flowers to bloom

Digitized by Google

in winter by his proclamation, and Ming Hwang, who hastened their unfolding by the beating of a drum. If they could do so, thought he, why should not I be able to do as much. He then prayed silently, saying, 'God of the flower! God of the flower! if it is fated that I and the young lady should wed, open the flower without delay.' When the prayer was finished he pointed with his hand to the flower, saying 'Open quick! Open quick!' and hardly were the words spoken, when the threads which bound the bud gave way, and the beautiful petals stood wide displayed. All the spectators burst into a shout of wonder, and Han He knelt in confusion at his feet, exclaiming with a loud voice, 'My eyes are without eyeballs; not knowing that your imperial highness had come here, I did not meet you on my knees. Forgive my sin.'"

Whilst the emperor was celebrating his marriage with the lady of the flower, the rebellion raised by Lew Kin had become very formidable, especially as the general of the insurgents had obtained the assistance of two witches, possessing the most extraordinary powers of enchantment:—

"Their movements were light as the flying clouds, and fleet as the darting of the nimble swallow; fair they were as gems, and delicate as newly opened flowers. Their eye-brows resembled the outlines of a hill in spring, and their waists were slender as the willow. Their hair, bound up on high, seemed aiming to meet the green clouds, and their embroidered armour flowed down below their ornamented girdles. Their appearance rivalled the beauty of the fairies of the moon, and their martial spirit shone majestic as if they had belonged to those ladies who are seen in the clouds. As one looked at them his spirit became intoxicated, and his soul melted away."

By the aid of these witches the rebels formed an enchanted camp; pregnant women were sacrificed at its gates, and the reason for adopting such an extraordinary spell is thus intimated:—

"After the women had been despatched, the animals were also divided into eight bodies, of one hundred and fifty each, and slaughtered by stabbing in the back, before the separate gates. The ladies then ordered the six Ting and the six Kea, military spirits, and the spirits whose business it is to comfort mourning families, to come and guard the gates, and lead the souls of the wronged women to demand the spirits of the enemy."

The imperial forces suffered very severely in their attempts to storm the enchanted camp, but at length an old genius was brought to the emperor, who promised to put an end to the power of these witches:—

"'These,' said the old genius, 'were foxes on Princeflower Hill, and after several thousand years of refining they attained a human form. They have, however, been overcome by lewd desires so as to slaughter multitudes of people, and cruelly to put to death pregnant women. Heaven above is enraged, and cannot bear any longer with their sins, but dooms them to destruction. I will, therefore, go forth and engage them in battle, and cut them in pieces to satisfy the demands of Heaven. By so doing I violate indeed the conditions of my retirement, and must postpone the completion of my refinement for a kalpa, but I cannot hesitate to exert my strength on behalf of your majesty.'"

Here we have a clear reference to the Buddhist form of the doctrine of the metempsychosis, which singularly enough very nearly coincides with some European speculations, according to which material existence, whether vegetable, animal, or human, is capable of being refined or sublimated into a spiritual life, and invested with supernatural energies. This theory is developed at much greater length in the popular novels translated some time ago by the sinologists of Paris, and in some of these it is expanded into fables which might bear comparison with the fictions of Greek mythology. The genius Gow Yang was superior in power to the witches; he not only counteracted their charms but reduced them to their original state of foxes, and then, gave them over to the vengeance of those whose wives had been murdered to form their enchantments:—

"Gow Yang ordered the two foxes to be brought to the spot, and then told the people to take each a sharp knife, and satisfy their rage by cutting them to pieces. The men needed no second bidding, but gnashed their teeth as they advanced to the work, and in a few minutes reduced the two bodies to minute fragments. When this punishment had been inflicted, the genius drew out the flag which he had stuck in the earth, and the wronged souls immediately disappeared after the coffins, which the people carried off with many expressions of their gratitude."

We have given these specimens of a mythology which is yet little known in Europe, as something more than curious; they seem to be embodied speculations on life and death, containing in them the germs of a school of philosophy which is usually believed to have originated in Europe. But the fictions as yet translated do not enable us to determine the Chinese creed of "material-supernaturalism" as the Germans call it, for us to pronounce positively on the subject.

Memoirs of the Royal Astronomical Society: Volume XIII., containing the Catalogues of Ptolemy, Ulugh Beigh, Tycho Brahé, Halley, and Hevelius.

Though this collection forms part of the Memoirs of the Astronomical Society, it is, in fact, the private undertaking of the President, Mr. Francis Baily, and is printed at his expense. This is the third volume which Mr. Baily has produced in the same Memoirs; the others being the account of Capt. Foster's pendulum experiments, presented by the Government, and the description of the repetition of the Cavendish experiment, just completed. While this Cavendish experiment was going on, —which, we are told, took more than twelve hundred hours, expended in merely watching a torsion-pendulum, to say nothing of the time spent in construction of apparatus, calculation, and deliberation,—Mr. Baily added to the work already on hand the revision of the preceding catalogues, the collation of the various editions, the preparation of a body of notes, and the revision of the press. He had already done the same for Flamsteed's Catalogue, in his work on the life of that astronomer; so that the astronomical world has now the advantage of possessing all the catalogues of celebrity up to the end of the seventeenth century, and the results of a searching examination and comparison, made with perfect unity of plan. Such a collection of labours as those which we have mentioned—and there are various others to which we have not alluded—would be enough to make a reputation for one who had spent his life in scientific pursuits; but, it must be added, that Mr. Baily gained the leisure which he has thus employed by thirty years of application to business, and that these voluminous productions, so distinguished by research and accuracy, are the results of the *second active life* of one and the same person.

None but those who have had experience of them have the least idea of the confusion which prevails in astronomical catalogues. A common globe will show that the boundaries of the constellations are zig-zagged in all directions, and that sometimes a long strip from one constellation passes direct into the region occupied by another. This confusion is necessary to reconcile the irregular manner in which observers have registered their results, and the occasional misplacement of stars by error of calculation, or by confounding one star with another. Mr. Baily, we hear, meditates an extensive attack upon this confused system; and Sir John Herschel has already given notice, that as far as the southern hemisphere is concerned, he will attempt the utter eradication of the existing constellations. Even supposing that it would be hardly possible to remodel the northern hemisphere entirely, we should hope it might be practicable to introduce something like plain and easy boundaries; and surely no one has so good a right to make the attempt, or so fair a prospect of uniting all suffrages, as the reformer who has broken ground by revising, comparing, and reprinting, nearly all the catalogues which have been given by those who formed constellations.

The Pyrenees, with Excursions into Spain. By Lady Chatterton. 2 vols. Saunders & Otley.

There are some *journals* which, from circumstances, cannot fail to interest all the world; such, for instance, as that of Lady Sale. We dwelt with intense anxiety on the fortunes of the prisoners of whose sufferings she gave an account—of their harassing journeys, their scanty meals, the comfort or discomfort of their temporary domiciles; all, even to the minutest particulars, excited painful curiosity, because we felt that every occurrence was fraught with "matter deep and dangerous:" but why a lady, on a lady-like tour, through no very new or savage regions, should imagine that the public could feel desirous to know at what period she took her breakfast and lunch—whether she walked before or after the one or the other—whether she was able to sleep or was disturbed in her inn—whether the cooks did or did not do their duty—whether she suffered from headache or felt a degree better, is a mystery which we are unable to unravel; and we cannot but fear, that the unsympathising public will do as we did, turn over very many of the leaves of Lady Chatterton's journal with irritable impatience.

We should hardly have imagined that Lady Chatterton had "crossed the Channel *nine times*," to judge by the numberless trifles she thinks worthy of being recorded before she breaks new ground. She seems, indeed, altogether to have forgotten that most reading Englishmen have also crossed the same channel; and that those unfortunates who stay at home, by the considerate kindness of others may have done so in spirit; since assuredly there has been no lack of tourists who have felt a pleasure in imparting all their adventures and no-adventures to the public. It is true that some travellers have the art of looking at every object from a new point of view: with such, a journey from Calais to Paris, or from London to Brentford, might be invested with fresh charms; but this could not be expected from an invalid, who is so frequently laid up on her progresses, and forced at all times to consider the creature comforts of sofas, dressing-gowns, nice dinners, *petits plats*, and to observe "moonlit effects" from "the window," as she might have done at home, in her own drawing room.

But we cannot idle by the way, after the fashion of these volumes, and must therefore start at once from Paris for the Pyrenees; passing Versailles, a spot seldom visited, we presume, as nothing on the road is spared us—not even the china of Sèvres. The tourist, however, now begins in earnest, for her journal is written "in the carriage," that no moment of precious time and observation might be lost to the world. We are not altogether satisfied with the account of the beautiful town of Blois and its castle, which, if worth naming at all, was deserving of something more. Chambord, however, that fine deserted palace, the property of the Duke of Bordeaux, is better described:—

"And magnificent, indeed, is the chateau. Striking is the view of the mighty pile, with its vast assemblage

Digitized by Google

of towers, lofty roofs, points, highly ornamented chimneys, and cupolas, with the graceful pinnacle surmounting the great staircase du Lys, in the centre. It struck me as perhaps the finest specimen of a French chateau I had ever seen. The effect was dignified yet mournful, when one thought, that after all the immense sums expended there, it was impossible that the palace could ever again be turned to account, for were it to be repaired, it would not be suited to modern wants, or to the present state of things; but there it stands, a lone monument of bygone splendours, a sad possession of one now exiled, perchance for ever, from his native land and the throne of his ancestors. I am not quite certain whether the upper part is not overwrought in comparison with the severe simplicity of the basement story. I am aware that it is the usual march of buildings (as in the Coliseum and a hundred others) to rise from the substantial and solid to the light and ornamented; but still the eye should not be hurt by the least want of congruity in the parts. And very beautiful as the exterior of the main building is, with its exquisitely wrought details, the effect is, I think, much injured by the low buildings added in the time of Louis XIV. The interior, in general, presents an immense number of rooms, of no great size, and almost totally devoid of anything accordant with the date of the building; but the external staircases, at the two corners, are extremely elegant and richly worked; and the cruciform Salles des Gardes, despite the injury done them by being lopped of their height by an intervening floor, are very beautiful. They surround the famous escalier du Lys; and this floor, which so nearly spoils one of the grandest designs in architecture I ever saw, is said to have been introduced by Louis XIV. That a prince so celebrated for his taste and grandeur should have done this barbarous act, seems most wonderful. In one place, too, the beautiful balustrades of the staircase have been sacrificed to make room for the King's box, when plays were represented in one of the four rooms. Molière's comedy of the 'Bourgeois Gentilhomme' was performed for the first time here. I much admired Francis the First's decoration of the vaulted ceilings: his initial (F) and his device (the Salamander) occur in alternate compartments; they strongly reminded a friend of mine, who lately had travelled in Egypt, of the beautiful arched apartments at Abydos (Arabat el Matfoon), which are similarly ornamented with the name and the prefix of Osirei I., father of Remeses the Great. I much liked, too, the little cabinet, where the same ornament is repeated in miniature. It was in this room that Francis I., in a fit of jealousy or disappointment, caused by the fickle conduct of the fair Diane de Poitiers, wrote with the point of a diamond these well known words on a window-pane:—

Souvent femme varie,
Mal habile qui s'y fie.

Saussaye says, that Louis XIV., 'in quite a different disposition, because he was young and happy, sacrificed these lines of his ancestor to Madame de la Vallière, and broke the pane to show his high opinion of woman's constancy.' In this room, too, Madlle. de Montpensier is said to have breathed on the window, and written with her finger the name of Lauzun—a first confession of her affection for that celebrated Duke."

"Notes scribbled in the carriage" bring us to Amboise. Hence we proceed to Chenonceau, that beautiful retreat on the lonely Cher, which of course delighted our tourist and her party; thence to Tours, so often described with all its legends; and through Poitiers to Bordeaux and Bayonne.

From Bayonne, the lady started in a diligence for Spain. Here she mentions a fact of great interest: it was *the first time she had been in a diligence;* from which it may be inferred, that it was the first time she had been in Spain; for the brigands, who abound between Bayonne and Madrid, and who do not always let the public coaches pass free, are certain to levy black mail on private travellers. It was, therefore, judicious in M. W., the lady, "Frisk," and attendants, to put off their state for a time, and do as others do.

We had hoped to have heard a little more of Irun, and its magnificent Moorish architecture; nor do we learn much of St. Sebastian, except that it is a bad place at which to order a *beef-steak:* perhaps an *olla podrida* would have exhibited the cook in a better light. To such details the following scene is a relief:—

"We hastened back to see the promenade, which was very interesting; the ladies still wearing their mantillas, and the peasantry attired in their holiday costume, but contrary to the usual habits of other nations, the dress of the men was far more brilliant and varied than that of the women. Many had embroidered waistcoats, and short blue cloth jackets, ornamented with patterns of different coloured leather on the sleeves and back; the high conical-shaped hat, which gives such a picturesque, as well as aristocratic look to the Basque peasantry, was adorned with feathers, and the cloak, thrown over one shoulder, was worn with true Spanish grace. Some of the women of the lower orders had, indeed, petticoats of a bright-red, or yellow cloth; the black mantillas, however, invariably covered the neck and shoulders; and the most common colour amongst the older women was black. In several different parts of the promenade dancing was going on. Sometimes the fandango, with its lively accompaniment of castanets, was in full force; but the favourite seemed to be an old Basque dance, something resembling a gavotte I remember learning as a child, in which the graceful pas de Basque occurs constantly; and this they executed with much ease and grace. I was amused at the stately and decorous distance at which the gentlemen and ladies (of the higher orders I mean), walked from each other. The moment we returned from Passages, and approached the promenade, Mr. Y——'s pretty sisters came and took me with them, and we paraded up and down, leaving W——, and their brother, and one or two other friends, to walk up and down at a respectful distance; and this lasted during the whole evening, no words passing between the different sexes, though to judge by the eloquent language of the dark eyes which glanced from under the graceful folds of black-lace mantillas, and the gratified smile which lighted up the handsome features of some of the aristocratic-looking youths as the fair ones passed by, they were well known to each other. 'When do you ever speak to those gentlemen, who appear so delighted to see you?' I inquired of a pretty blushing young girl who had joined our party. 'Only when we dance,' she replied. 'Yonder caballero was my partner last Sunday at the ball; he is my cousin, too, but he never spoke to me till we danced together that evening, which was my first ball.'"

It was impossible here not to "pity the sorrows" of the party, who, by some accident "of a moment," were destined to an affliction which at first we trembled to read of, so heavy are the lady's bemoanings—as she observes with deep feeling "It is too painful to write or think of!" This was the loss of "Frisk," that interesting little observant companion, who watched all the movements of the pen or pencil which recorded the *notes in the carriage* all the way to Spain.

The invalid tourist, it must be admitted, displays considerable courage in having attempted and performed the ascent of the Mountain of Venasque:—

"And now our hard work began. We ascended by the side of a torrent, the young Pique, I fancy, forcing its passage through a bed of snow. The men took me in my chair over the snow bridges, being, I conclude, a more practicable mode than passing through the torrent; but this proceeding much increased my alarm, for I could not help thinking how easily the fragile bridge might be carried into the valley below. We knew that part of the snow bridge over the cascade in the Valley du Lys had been carried away the very night before we were there. We thus corkscrewed our way along, wondering by what miracle we were to get out; for never did I see a passage where the effect of enclosure is so complete; even to the last quarter of an hour, the perpendicular wall of rock seems to bar all further progress. We continued our ascent, and reached a spot which, to my surprise, was only half way: I did not see how more than another hour could be required to reach the summit, which appeared to be so close. The Pic de Sobragarde, the highest point to the right of the port, was now finely before us. 'It is not,' said our guide, 'very difficult of access, and the view from it is very fine; the top, when clear from snow, is covered with turf.' The Montaignette lies in front of the pass, and amidst the snow which lay below the point around us, are four or five small lakes, all now unfrozen, except one. The water over the snow at their edges, of a beautiful blue colour. We now had a proof of the intelligence or our horses, in getting round a projection in the path, a short but nervous path, covered with snow. After fording a torrent with some difficulty, we came to so narrow and steep a passage in the snow, that it was thought better to dismount: even on foot it was a formidable business—a false step would have carried one to a great depth, probably to the frozen lake, far, far below. Nothing could exceed the desolation of the scene; all appearance of vegetation gone—splintered rocks around us—and, below, the dreary little lakes partly frozen, and fringed with snow. We reached the rock called 'l'Homme,' which serves in winter to mark the direction of the Hospice. It appeared at an immense depth below us, yet, in winter, the guides glide from this to the bottom, over the snow, with great velocity, and in an incredibly short space of time; they direct and steady themselves with a pole, but it requires much skill to do so; for once started, there is no stopping, and any blundering would be fatal. We toiled on, the chairmen and horses astonishing us by their power and steadiness. At last, when all further advance seemed impracticable, we rounded a projection, and between its giant portals, saw the 'Port' above us. The view here is too terrific to be picturesque; but it is truly sublime: we looked back upon the track we had passed, and could scarcely comprehend how the journey had been accomplished. At a quarter to eleven, we reached the Port de Venasque. Then, after all this upward toiling, we did not even attain a platform. No, the ridge passage through the narrow 'Port' is not above a few feet level! And there we looked down—down both ways—there was no help for it—no end to the apparent danger. Nothing would have induced me to return the way we came, and yet, on looking down on the Spanish side, it appeared quite as bad. I could see nothing to prevent our slipping straight down into the deep ravine which separates the Port de Venasque from the most awful of savage mountains—the snow-clad, accursed, unclimbed, almost unlooked-upon Maledetta. It is the highest of the Pyrenees—the highest mountain in Spain or France; and yet it does not shew its giant head in, I believe, any of the distant views one gets of the Pyrenees. But there it was. We entered the Port, and though far distant, it suddenly appeared close before us. 'Port' is the term used for all the numerous passes in the mountains between France and Spain: they are, many of them, curious cuts in the gigantic wall of rock which separates the two countries, and at the Port de Venasque, so narrow is the opening, that a good pair of gates might serve as a barrier."

Our authoress's second volume takes us "excursions into Spain," but they do not appear very different from excursions anywhere else. Here is a specimen:—

"Lès is a village like the rest, and at first sight held out nothing inviting. We had passed through it, and I thought we were to go on to the next, when, to my great delight, we turned up an avenue shaded with trees, and soon found ourselves in this comfortable house. I cannot express the joy we felt at arriving in this beautiful spot, and entering the cool, shady avenue which leads through terraced gardens, full of fruit and flowers. Above all, the cool room into which we were shown, with comfortable sofas and chairs; which were once covered with brocaded velvet, but the Carlist troops, who plundered the house last year, tore the covers wantonly off, only leaving here and there a bit: the excuse was to make themselves waistcoats. The salon, in a morning like this, is delicious, so that we were fortunate, indeed. The proprietor is M. Badin, who has built the baths beyond the town, and is now constructing an hotel for its accommodation. He gave us an excellent dinner, and I afterwards dozed away an hour most delightfully."

Yet we must in plain truth confess that we would rather read the fair invalid's own account of her excursions than be handed over to "dear W,"

Digitized by Google

with his "*opera glass from Chevalier's*"—on the heights of Bergons and Gavarnie! After many pages taken up with the illness of her maid, the "taking a bath," and the dressing and eating of "dear W.," through all of which she should have run her pen before the manuscript went to press, the lady indulges us with an account of a scene in the mountains:—

"*Tuesday*, 10.—*The Lac de Gaube.*—We had a delicious day for our excursion. We started at half-past nine; I in a chaise à porteurs with four men, and W—— and the guide on foot. The cascades we passed near are the finest I have seen in the Pyrenees, and some of the scenery the most picturesque. The pines, which are here mingled with other fine trees, add their aromatic fragrance to the thousand forest perfumes, which are always delicious, and their dark hue gives more vigour to the colouring. The road runs by the side of the torrent as far as the Pont d'Espagne, and it rushes down in a succession of cascades, as if on purpose to produce beautiful pictures. The whole scene had to-day an air of fête. The spray produced numerous rainbows in all directions, sometimes peeping up through the trees, shewing where a fall more gigantic than the rest was hid beneath; and sometimes these beautiful bows ran half across the path, when I had the childish delight of passing through their lovely tints. The Pont d'Espagne is thrown across the deep and narrow passage in the rock through which the united Gaves—the Marcadan and that from the Lac de Gaube—flow. A hut, where refreshments may be had, is built on the rock above this passage. Beyond it, we crossed the Gave de Marcadan by the Pont de Joseph, and then came in sight of the finest of the falls; indeed, one of the grandest and most curious spectacles I ever saw. Three impetuous torrents here unite: the Gave du Lac du Gaube comes tumbling straight down from a great height immediately in front of us; another descends from as great a height a little to the right, but runs more playfully round the trees and rocks, forming a graceful bend before it meets the Gave de Gaube; and then they both rush down the perpendicular steep, close under the rock where we stood, and are almost lost together in the narrow and profound abyss. Turning a little to the left, but without quitting the rock, we looked towards a spot whence a thundering roar proceeded, and there we saw the meeting of those united torrents with the furious Marcadan. It is at a fearful depth below; and they clash with such force against each other as to send the spray high into the air, and the whole neighbourhood vibrates with the shock. Their rocky bed then becomes so narrow, that one cannot imagine how the three impetuous torrents can be compressed into such a narrow cleft; and the eye runs on with much curiosity to watch their exit and further progress, in the distant valley below. All this scene is wild, and yet ornamented; the trees grow very fantastically, springing straight from the sides of the precipitous rocks which form the passage, over whose extremity the Pont d'Espagne is thrown. The Valley de Geret, which we had ascended from Cauterets, here divides into two branches; that on the right is the Valley de Marcadan, which leads into Spain by the Baths of Penticosa. The 'Port' is about five hours from this spot, and is described as a good road on the French side, but has a very rapid descent on that of Spain."

After a trip to the foot of the Giant of the Valley d'Ossau, there is an account of a *comfortable* séjour at the Eaux Bonnes, and the following true remarks:—

"I think the old description of an English summer —'three days fine and then a storm'—might be very well applied to this climate; only during the first part of our visit to the Hautes Pyrenees, it might be reversed into 'three days storm, and then one fine one.' The costumes are beautiful. In these parts, the people look good and happy, and much more intelligent than in the valleys of Luchon, Luz, &c. Here, too, are many pretty girls. At Luchon, I never saw anything in the shape of a young girl: there, the whole population seemed to pass from a miserable, puny childhood, to a goitred and shrivelled old age. Oh, those goitres, how uncomfortable they looked! —what a sad pain in the throat they used to give me!"

The dancing in the Pays Basque seems somewhat peculiar as thus described:—

"One of the village dances here represents a history of the renowned Roland and his horse. The most active of the men is dressed so as to represent a horse, with iron-bound shoes on his hands and feet; he kicks and plunges to prevent the others from coming near, while they are to try and catch him. All this pantomime is danced to a wild air, and whoever succeeds in catching the formidable horse, becomes the Roland of the fête, and receives the prize."

The Basque language, that theme of contention and curiosity, has a mixture of many tongues, amongst which English is not forgotten:—

"Soon after leaving Oleron, we quitted Bearn, and entered Basque—the languages are totally different, the Basque being very peculiar. There are in it indications which would seem to point out the period when this country was occupied by the English—for instance, this morning a party of villagers were playing at ball near the house—a game at which they are expert; I was surprised to hear the player, who gave out the ball, do so precisely as in England, first saying—'Play.' I found afterwards, it is not a Basque word; and is only used to call attention to the game. It must have remained from the old time when the English possessed this part of the country. An English name is also given to a mixture which is looked upon as a restorative—the remains of the bouillon is mixed with wine, and so drank; this draught is considered very strengthening after fatigue, and is called 'good health.'"

We shall leave our tourist at Avignon enjoying her "ease in her inn," after having sacrificed much of her comfort in visiting a variety of places which we have no space to name, but her impressions of which she has taken the trouble to record for the benefit of curious travellers.

The book is illustrated with many lithographs, and some of them are excellent.

The Life of Lieut.-General Hugh Mackay. By J. Mackay, Esq. Bull.

MACKAY was a distinguished Williamite general, and made a considerable figure in the wars of the Revolution, both in Scotland and Ireland. In the former country he was Commander-in-chief of the forces in 1689 and 1690. The peculiarity of his life consisted in his being an eminently religious man—a character difficult to support in the public stations of the world, and considering the peaceful genius of Christianity, especially difficult to preserve in the camp and field of battle. War, however, may be a duty, as well as peace, and so Mackay no doubt considered a series of struggles that identified themselves with the cause of the Protestant religion and the liberties of Europe. His earliest military employments, however, had not this devout excuse, for we find him serving as Captain in Dumbarton's regiment, on the expedition of Louis XIV., against the United Provinces. We are told that "the horrors of this short but desolating campaign made a deep impression on his mind," and he entertained serious thoughts of quitting the military service and returning to his native country. But "Providence," says his biographer, "so ordered events as to remove from his mind all doubts with respect to the course he ought to follow." This is made out in the following strange manner:—

"His regiment, forming part of that division of the army which, under the orders of Turenne, took the town of Bommel, in Guelderland, it was his lot to be billeted on the house of a respectable widow lady, whose husband, the Chevalier Arnold de Bie, had been burgomaster of the town. Here the grave and serious deportment of Captain Mackay, so different from that of most of his brother officers, whether French or English, attracted the notice of Madame de Bie and her family, and gained their esteem. She had several daughters, of whom the three youngest, being unmarried, were sent, on the first rumor of the invasion, to Dort, as a place of safety, and out of the way of the French cavaliers. Louis having, however, issued a proclamation, ordering all who had fled from their habitations to return forthwith, under severe penalties, Madame de Bie recalled her daughters from Dort, as her family now enjoyed the protection of a respectable Scottish officer, their inmate. Mackay had by this time become so domesticated in the family, as to participate in all their recreations: with Madame de Bie, he played her favourite game of chess, and read with her daughters. Under such circumstances, it was not likely that the young ladies and their protector could long remain indifferent to each other; and, in fact, Clara, the eldest unmarried daughter, soon made an impression on his heart. After some further acquaintance, he made his proposals in form. Madame de Bie, unwilling to give her daughter to a man who served the enemy of her country, at first opposed his addresses, but yielded when she found he was inclined to resign his present service and enter that of the republic. Such a change, from the one service to the other, was at this time unusual, and attended with difficulties; but these being at length overcome, Mackay was transferred, with his rank of captain, from Dumbarton's regiment to the Scottish Brigade, in the service of the States General. The only obstacle in the way of his marriage being thus happily removed, he was speedily united to Clara de Bie, the object of his affection, whose country he appears, from this date, to have adopted as his own."

It would have been more satisfactory to have found in the life of a man of Mackay's reputation, that he had engaged in the service of the Protestant republic, out of high political or religious principle. We must be content, however, with the light that beamed upon him from the eyes of Clara de Bie.

Bishop Burnet speaks in high terms of General Mackay, although his biographer is far from content with the praise of the Right-Reverend historian:—

"'Mackay,' says the bishop, 'a general officer who had served long in Holland with great reputation, and who was the piousest man I ever knew in a military way, was sent down to command the army in Scotland. He was one of the best officers of the age, when he had nothing to do but to obey and execute orders, for he was both diligent, obliging, and brave, but he was not so fitted to command. His piety made him too apt to mistrust his own sense, and to be too tender, or rather fearful in any thing, where there might be a needless effusion of blood. • • Mackay was a man of such strict principles, that he would not have served in a war that he did not think lawful. He took great care of his soldiers' morals, and forced them to be both sober and just in their quarters. He spent all the time he was master of in secret prayer, and in reading of the scriptures. The king often observed, that when Mackay had full leisure for his devotions, he acted with peculiar exaltation of courage. He had one very singular quality: in councils of war he delivered his opinion freely, and maintained it with due zeal; but how positive soever he was in it, if the council of war over-ruled it, even though he was not convinced by it, yet to all others he justified it, and executed his part with the same zeal as if his own opinion had prevailed.'"

The author "cannot understand" how a military man could have been "one of the first officers of his age," without being also "fitted to command;" but Burnet's distinction is well understood, and a perfectly sound one. The same observation was made of Murat, and it requires no deep insight into martial affairs to comprehend it thoroughly; although we can pardon one of the clan Mackay for disputing so plain a point.

Mackay's greatest disaster in the field (if we may except his death), was the total rout of his army by the Highlanders at Killicrankie. The following are the reflections of the pious general after this tremendous blow:—

"'Resolution and presence of mind in battle,' he observes, 'being certainly a singular mercy of God, he denieth and giveth it when and to whom he will; for there are seasons and occasions that the most firm and stout-hearted do quake and shake for fear.' • • And the General confessed that, immediately upon this defeat, and as he was marching off the field, 'he could not cast his thoughts upon any present means to redress his breach, but recommended earnestly unto

Digitized by Google

God to direct his judgment and mind to fall upon such methods as the success should manifest him to be the chief author thereof."

He fell in the action with the French at Steinkirk. Bishop Burnet informs us that—

"'Mackay being ordered to a post which he saw could not be maintained, he sent his opinion about it, but the former orders were confirmed: so he went on, saying only, The will of the Lord be done.' And the words with which he gave utterance to his pious ejaculation, are the last which he is recorded to have spoken."

William employed Mackay a great deal, but did not favour or honour him in the same proportion. It appears that his Majesty reserved all his cordiality for the death of this remarkable soldier:—

"His Majesty attended Mackay's funeral, and so soon as his remains were laid in the grave, exclaimed, 'There he lies, and a braver or better man he has not left behind him.' Conversing some days afterwards on the subject of the battle, and the characters of the officers who had fallen, he expressed deep regret for the loss of a particular individual, whom he named. A person present ventured to observe with surprise, that his majesty did not mention his old and faithful servant, Mackay; to which the king replied, 'the individual I spoke of, served me with his soul, Mackay served a higher master, and has his reward.'"

How characteristic is the latter anecdote of the cold phlegmatic Dutchman!

Railway Making, &c. Weale.

At this moment, when the capital of the British merchant, the skill of British engineers, the enterprise of British contractors, and the energies of British workmen, are about to be diverted from the channels of British industry and national improvement, and directed to the developement of the resources and wealth of a foreign country—at this moment, when France is opening wide her arms to the capital and talent which find no profitable employment at home—it becomes of no little importance to weigh maturely the effects which flow from the investment of wealth in the public works of a foreign land. The French, having closed their markets on the productions of British industry and British commerce, are now about to open these same markets to British capital and British talent. By adopting a narrow policy in one department, she inflicts a deep wound on our national prosperity, and then, by adopting the most liberal policy in reference to money and mind, she may hit us a still deadlier blow. It is time to consider the policy which has directed our own national undertakings in matters of this description. It behoves us closely to inquire how we have developed our own national resources in our great channels of national intercourse, and how we ought to direct them for the future. Regret will not be unavailing if it lead to reform.

We set out then with this principle, that the first essential consideration in reference to any great national work is, that it should pay—that is, that thereby the nation—the community at large—should enjoy an increase of wealth and well-being. This is *our* first principle of railway economics; nor can we admit, except in some rare example, any deviation from this rule. Much is said in this country of the necessity of liberal views in such matters. We are told that a particular railway is a great national undertaking; that it is a public-spirited thing to carry it on; that it ought to be executed, and then, if it ruin the shareholders, it will at all events benefit the public; that it is merely a sacrifice of private to public welfare, and that while individuals suffer, the many will reap abundant benefit—in all of which argument there is much plausibility, abundant error, and a very little truth.

We are now to argue, that a railway or other public work, if it will not pay, is a general evil, tends to the general poverty, and injures the community at large, and that the evil is not compensated by the convenience afforded to those who use it. But we are told that the money, although a bad investment, has in the first instance done good; it has employed a multitude of hands, and fed a multitude of mouths, in the labourers and artisans it has employed. The money has passed out of the pocket of the shareholder into the pocket of the iron-master, the timber-merchant, and the land-owner, who are enriched by the change—so far the money has changed hands, and the public is, as before, *plus* a railway. Money, it is said, can never be lost unless you bury or sink it—it will circulate and it will grow; it can only change hands.

Those who argue thus are not few, and they are also not wise. They forget to ask, where was the money before it was turned into a railroad, and what was it doing?—they forget that this money was *not* idle: it was at worst in a bank; the banker was lending it to the bill-broker or the merchant; the merchant was using it in trade, was giving employment with it, was repaying the banker, remunerating himself, and dividing his profit with the original owner of this capital. Now in order to be invested in the railway it must be taken from the banker, the bill-broker, and the merchant; they at least are not gainers by the change—those whom they employ are not gainers. But let us follow this money through another step in its progress; let us see what became of the owner's share of the annual return paid to him for the use of the money—How did he expend this? He employed the baker, the confectioner, the butcher, the wine-merchant, the upholsterer, the bookseller, and the coachmaker; and so he gave to them all the employment of this additional income arising from his capital. He now invests this money in a railway—he employs all the men who make and who supply the railway, and thus far good is done. The railway opens, but its traffic falls short as much as its expense exceeds the estimate: well, it pays one per cent. per annum—the smallest remunerating return is six per cent. in railways in tolerable times, owing to the length of time for which the capital lies out at first construction—he loses five per cent. per annum. He becomes so much the poorer—he discharges several servants, he diminishes his establishment, he curtails his upholsterer's, wine-merchant's, bookseller's bills; he has become poor, and they along with him. We see therefore who have lost—these people are the public, and they have all lost.

But some have gained? Verily they have. I travel by that railway—it is a gain to me—I thank these good men for my ride. I used to take the outside of the mail, now I take the inside at the same price; I ride on luxurious cushions; I save time; and finding I ride cheaper, I go oftener, and therefore I like the railway, and applaud the spirited and liberal man whose money pays for my luxury and convenience. I used to be obliged to travel during a considerable part of the night, but now I get home in time for bed; I used to get up at five in the morning, to go the journey, which now I make after comfortably taking breakfast by my own fireside. I should not be the man to object to a railway, even though it never should pay!

Now comes a point which may serve to test the propriety or the impropriety of the investment. Surely if all the good I derive from this railway be absolute gain to me, I am the party who should pay for the railway! it is not just that you should pay for me! If the railway so greatly benefits us the passengers, the fare may be raised until the railway pays. This brings the matter to the test: the value of anything is the money it will fetch. If conveyance of the passengers be a boon worth making a railway for, the passengers can pay for the boon; or else the mails can pay, if mails be the object, or goods, if goods be the object. But if it be not true that those who reap the benefit from the railway find that benefit equal in value to such a rate as will repay the capitalist, then a luxury has been created and is used by those who cannot afford to pay for it; they benefit, but the man who supplies the luxury loses more than they have gained. Money which might have been profitably employed is unprofitably employed; the public wealth is diminished, and the public welfare sacrificed.

To bring all this to a simple conclusion, let it be observed, that money, to be well invested, must benefit two parties, the lender and the user. By this means is the country rendered wealthy, and by this alone. Money is badly invested if the owner of the money do not derive from it the full measure of profitable return, for not only is the owner impoverished, but all those among whom he spends his income are likewise impoverished. Admit that those whose labour it buys are fed, and clothed, and enriched; still if what they gain be exactly equal to what the others lose, the public has no benefit. An investment which is unprofitable to the owner of capital is therefore no benefit, even although the user gain, and the anonymous public appear to obtain advantages. But there is still a worse species of investment even than this—it is that in which there is neither a return for capital nor a benefit by its expenditure accruing to the profit of the country—a repudiated foreign loan. The capitalist loses the revenue he would have expended in the country, and the country the amount of labour to which that capital gives employment. Such an investment is a double unredeemed misfortune to the country from which this capital has been withdrawn.

Such is our plain view of railway economics. A paying railway, constructed in our country, is a triple blessing—to him who owns, him who constructs, and him who uses the railway; an investment which forms a solid addition to the wealth and prosperity of the community; and the amount which it pays to the owner beyond his former investment, together with the amount of saving to the public, and of profitable employment it has produced beyond that given in its former capacity, are additions to the wealth of the country, and are the exact measure of good achieved. If the railway pay no more than just keeps its stock permanently at par,—if it do not reduce the price of transit, inclusive of the value of time saved to the user, above the former conveyance, as will be shown by the annihilation of competition,—if it displace other profitable employment, equal in amount to the labour expended on it and spread over an equal time,—then is the public no gainer. If, again, the prices of use being as high as competition and employment will admit, the railway do not afford such a revenue as will remunerate the holder, and keep shares at par, the railway is a loss of the first degree. If the contractors and employers of labour were ruined by their contracts, it is a loss in the second degree. If the public are not better accommodated than before, it is a loss in the third degree. If the users gain as much in the third degree as the holder loses in the first degree, it is a folly, and the public is neither richer nor poorer than before, except so far as the labour has been well paid; and, in general, if the holders, users, and labourers are any one of them losers of more

Digitized by Google

than the others gain, the loss is to the country total and unredeemed.

Let us apply this to the subject of foreign and domestic railways. If a domestic railway pay well, first the owner, and second the user, and third the contractor, its construction is a public benefit, in the first, second, and third degree. If a foreign railway pay well to the English holder, it is a public benefit to this country only in the first degree, and the foreign country, in which the works are constructed and used, reaps the benefits of the second and third degree. If a domestic railway do not pay well the shareholder, but pay its expenses and the cost of construction, and give the user a cheaper conveyance (time considered), it may still be an exchange of wealth from the pocket of the holder to that of the user; and thereby we may have a public work in which the profits of the second and third degree compensate the loss in the first. The national wealth remains unimpaired. If a foreign railway do not pay well the English shareholder, the enterprise is an irreparable, unredeemed loss to this country, by which, at our expense, the foreign user and constructor may still be enriched. If, in the case of the foreign railway, the railway pay English holders well, that country pays tribute to us; if not, we have given up to it the *spolia opima* of our own country,—we have conferred on it unmingled good, on our own, unmitigated misfortune. The emigration of talent and of capital to a foreign country is thus a great national loss. The former can in no degree be compensated; the latter may by possibility benefit us in one degree, and must benefit the foreign country in the remaining two degrees. As compared with profitable investment in our our country, the loss by emigration of talent and experience is total and unmitigated; and the loss by emigration of capital is a loss of two-thirds of the available beneficial results of that wealth.

The conclusion of the whole matter is, therefore, as follows. If it be possible by any means to expend upon public works in England the capital, and labour, and talent which is about to embark in these foreign enterprises, every effort should now be made by the English people and the government of this country to retain them at home, and apply them to the developement of native industry and the increase of our national wealth.

Then we come to the question *how?*—where is there promising investment for money in this country?—is not capital a drug, for which we have no domestic sale?—is not money superabundant?—is it not true that investments are not to be had; and if so, should not our capital seek the best market the railway world may offer?

Is it then true, we ask in reply, that all our railways are complete? that we need no more? can afford no more? Let us look at our map—at England, at Ireland, at Scotland. Is the railway system of Great Britain finally completed?

Along with this question comes another: is not this a suitable time for the construction of railways, if it be found that such works are still anywhere wanting? Is not employment for our labourers required at this moment, and to be had at a more moderate rate than for many years past? Are not our iron-masters, and iron-manufacturers, and machinists, and engineers, in need of such employment as the construction of railways would give them? Are not our timber-merchants and coach-builders, and all the train of traders who profit by such works, in need of assistance? Could not all the materials and machinery of a railway be had now at an astonishingly cheap rate? Is not the iron, which cost 12*l.* some time ago, to be had now at 7*l.*? Surely, in such circumstances as these, it is no ordinary cause that should prevent our own works from proceeding, and our own resources from being applied to the alleviation of our present anomalous position, instead of being alienated from our native soil. Surely we should know by this time that the benefit to the capitalist, and to him alone, by foreign investment, is not always unmixed. Where is now our Biddle's Bank stock? Where our American state loans? where our Mexican loan? where our Spanish stock? our Greek loan? Let the Stock List answer the question.

But it is said, people will not invest in railways at home, so let them follow the market; let them go where investment is profitable. But how is it made profitable abroad more than at home? For this simple reason—the same means are not employed here to make it so. Railways in France are *not* so good investments as our own! How so? it is easily shown. The French minister complained that after lying twelve months before the public, nobody would undertake them! What then? simply, that the government of that country, with enlightened views of the common weal, came forward, and said,—We, for the sake of our country's prosperity, will make them pay you; we will make the investment profitable. It is not difficult to see how this policy affects the question. France does not fight us; she simply outbids us in our own market of enterprise and talent, and, of course, beats us with our own weapons. Meanwhile, our artisans starve, our population is idle, our trades stand still, and the march of internal improvements halts; our capital and talent emigrate, and we sit down and talk of helping our surplus population to emigrate also! But let us back to our economics.

But what can we do? Our governors say first of all, what can *we* do? Why simply this: M. Guizot is said to follow English policy; borrow, for once, a leaf out of his book. Like him, say that you will make the railways that are wanted at home *pay*, which you can easily do, and keep these wandering millions at home to feed our starving but industrious community.

But what can our governors do? Do as the governor of the steam-engine does. The ingenious piece of mechanism called a governor performs this function to the great machine, whose working its duty is to regulate. The governor has at its disposal a certain amount of steam: when the machine is overloaded, and cannot move along, the governor opens the valve, and lets out a more liberal supply of steam—a temporary supply, which is repaid when the temporary pressure has passed away. Let our governors do likewise; let such railways as the next ten years may require be begun now; let government grant a temporary assistance; let us have no more gratuities to pauperism, no more gratuitous emigration; let the government employ the idle energies of the country in storing up the present labour, which is running to waste, on some of those vast cuttings and embankments which our arduous works require; let it put on a little steam now, and it will soon be amply repaid. But the exchequer cannot afford any millions now! We do not want them. Let government simply say to the districts that want railways, we insure five per cent. for five years on so many miles of such and such railways, which we plainly see will be required within ten years, and we shall be able to keep at home the money now going abroad, and to improve materially the present condition of the lower orders.

Look at France: what does she say? She says make us a railway and work it; we will buy all the land for you, we will build all your bridges, make all your cuttings and fillings, and build all your stations; you shall furnish the rails and other utensils, and we will let you have all the profits for the next thirty years! The railway would not, you say, pay of itself; therefore we present you with as much as must make it pay; so now proceed. Accordingly, Mr. Stephenson and Mr. Locke, their monied friends and enterprising contractors, are becoming the property of the French. And mark this—the whole materials must be of French manufacture. Meanwhile we are sitting with our hands crossed, and our Board of Trade, by way of advancing railway interests, is busy with what? with traffic tables, and the superintendence of experiments on railway axles, under the sanction of the military inspector of British railways!

The following bill of fare will serve as a specimen of the entertainment to strangers which the French government are prepared to offer:

Paris and Lyons Railway.

Conformably to the law of the 11th June last, French railways are to be partly constructed at the expense of the State. The lines are to be granted to and worked by private companies.

The government delivers to the companies free the land required for the whole line, builds stations and termini, and undertakes to make the embankments, tunnels, cuttings, bridges, viaducts, &c. at its own expense.

The companies will therefore only have to defray the cost and laying down of the rails, and finding the locomotives, carriages, and other means necessary for the working of the railroad. They will merely have to lay down rails on a road constructed and levelled at the expense of the State.

The line from Paris to Lyons, by Dijon and Chalons, runs through the centre of France, a distance of about 330 English miles (531 kilom.); it connects the north with the south, joins Paris to Lyons, its sister metropolis; it is the high road to Marseilles, to Italy, to Spain, to Switzerland, and to the East. The line from Paris to Strasburg will also branch off from it; and, in fact, it may be considered as the Grand Junction Railway of France, as the Strasburg or German traffic will run on it for nearly 120 miles.

In the actual state of roads and communications, travellers and goods are very considerable on this route, where transit and traffic of every description are yearly increasing. Now it is an incontestible fact, that the immediate result of the establishment of a railway, is a large increase of travellers, in some instances four or five fold. For the present purpose let us take for data the figures as put down in the annexed notes, (in which the actual number of travellers is only multiplied by 2½) and we shall find as follows:

One thousand travellers a day, say at 10 cts. per kilometre each, which is under the average charge by diligences	F. 19,381,500 or	£ 775,260
70,000 tons of goods is the quantity at present conveyed by land,		
40,000 more is the smallest quantity that may be expected by railway, out of 230,000 tons conveyed up and down the river.		
110,000 tons, say at 20 cts. per kilometre, (which is the actual charge by waggons on common roads)	11,682,000 ,,	467,280
	F. 31,063,500 ,,	1,242,540
Adopting at the same time, the calculations demonstrated in the said notes, the expenses will be F. 25,600 per annum and per kilom. making on 531 kilometres..	13,600,000 ,,	544,000
Remain.....F.	17,463,500 ,,	£ 698,540

Being a net dividend of more than 20 per cent. on the capital of the projected company.

It is considered that the net proceeds will be found considerably more from the first year of the opening of the railroad.

The amount of capital required is made out on the following basis:

Cost of the land (granted by the State)	nil.	nil.
Construction of the road (for which the government will contract with the company)	nil.	nil.
Building of stations and termini ditto.....	nil.	nil.
Cost and laying down of rails, sleepers, chairs, bolts, & gravel,	F. 52,275,000 or	£2,091,000
Direction, and other expenses during the progress of the works ..	4,800,000 ,,	192,000
Locomotives, waggons, &c.	13,275,000 ,,	531,000
Fixtures and furniture of stations, workshops, houses, sheds, warehouses	4,000,000 ,,	160,000
	F. 74,350,000	£2,974,000

The French government will grant a lease of the line for a given period, at the expiration of which government is to take possession of the railway, and will reimburse to the company its outlay, subject to what allowance for wear and tear may be deemed fair; the valuation is to be settled by

Digitized by Google

competent surveyors, named on each side. This condition of reimbursement holds out a very substantial advantage to the shareholders, as only a very trifling reserve will be needed to cover the difference between the first outlay and the actual value to be received at the expiration of the lease.

It is to Be remarked, that there is no limit by the law of France to the dividends that may be derived from the concern.

Such is a leaf out of the Guizot code, which we think in these unhappy times our rulers might do well to study. It requires no metaphysical argument, no profound political economy, to see that if there exist in Great Britain any lines of railway which are to be of service to the community, and which are likely to be required within the next ten years, the present is the fitting opportunity for the government to step forward and accelerate the improvement of our own country rather than assist that of our rival. Thus much is undoubted, that the prices of labour and material are now the lowest possible, and that employment of that labour, and a market for that material, are the great wants of the country at the present moment.

The principle of the non-interference of the government in the direction and regulation of commercial and mercantile interests, is good, and, had it been always consistently acted on, might have produced much benefit to the country. One of its results would have been, that we should neither at this moment have enjoyed the privileges of a corn law, nor the advantages of the tariff. But the *laissez faire* system, so good in itself, may be carried so far as to degenerate into the *sauve qui peut*, and then government would simply become resolved into a general taxation office, leaving the country to do the best it could for its own advantage. But the so-much-talked-of *laissez faire* system is an idle theory, and is never in practice sincerely acted on; it is principally used as an apology for indolence or ignorance on the part of men who are called on to legislate in matters which they do not sufficiently appreciate or understand. A clever move in politics, or a smart speech in parliament, are easier strokes of party than profound national legislation.

These remarks are apropos to the railway legislation of this country. Look at a railway map of Britain. We undertake to prove that anomalous legislation, or want of legislation, never was more execrably displayed than as exhibited in that map. Never were national resources more completely squandered than as they are laid down in that map. Had it been asked how a given amount of money could have been expended on railways most profitably to the community and the holders of stock, the system actually adopted would have been the last thought of by any wise legislature. To gain the greatest amount of good by the smallest amount of expenditure is the theory. To gain the least amount of good with the greatest expenditure has too often been the practical result.

We will not stop to inquire whether bad legislation, or no legislation at all, has placed us in the present position: but with a view to the future, let us glance at the facts as they now stare us in the face.

In the first place, look at the vicinity of London—two railways, the Northern and Eastern, and the Eastern Counties, are carried into the same district—both are unsuccessful; one might have served all the purposes of both, and perhaps neither is the line that should have been adopted; at all events one of the two is useless—total loss, say 1,000,000*l*. Next, to the westward, it is plain that one line should have served for the Great Western and the South-Western, as far as Basingstoke and Reading — total loss, say 1,000,000*l*. Then, going north, we have two lines parallel with each other, the Birmingham and Derby, and the Midland Counties, the latter of which should never have existed—total loss, 1,000,000*l*. Then Chester and Crewe, Manchester and Crewe, and Newton and Crewe, and Chester and Birkenhead, three of them unprofitable, a total loss (without any advantage) amounting to 1,500,000*l*. That the Manchester and Preston, and the Newton and Preston, and the Leigh and Bolton, should co-exist in the same district, is a further absurdity, costing at least an unnecessary 500,000*l*. No one acquainted with the country can for a moment admit that both the Manchester and Leeds, and Manchester and Sheffield should have been made as separate railways, at a loss of 1,500,000*l*. Thus might good legislation have rendered to the country two essential services. The whole traffic at present existing might have been concentrated on the remaining lines by a judicious selection, so that they would have been rendered more profitable to the country, while these six millions would have remained for investment. With this money at its disposal, our government might now have had the following lines for conveyance of mails, which it eminently wants: viz. a mail line from Exeter to Plymouth, and its continuation, for the same purpose, to Falmouth —a mail line to Ireland by way of Chester and Holyhead, and a mail line north to Scotland. These great lines would have been feeders to those which already exist, would have conferred great benefits on the country, and would have cost no more than has been already paid for partial communication. But how was the government to have done this? just as it does many things less worth doing. Had there been the will, the way was not difficult. But we are speaking only of the past: now for the present and the future. It is in the power of a judicious government *now* to aid very much the progress of the country, and relieve its distress by promoting the great lines of communication with the more distant parts of the country—let it begin at once, and it is not too late to do much good. Government has before it, Reports of Commissioners on these great lines of communication; it has only to act on the advice of its own Commissioners. There never was a country that required more the care and concern of a judicious legislator than Great Britain at the present moment. There never was a time when so little assistance could achieve so much good, or avert so much distress!

For the purpose of our instruction in the systematic extension of the railway system, let us look at the Belgian system of government legislation. From that we find the following important facts,—first, that at an expense not greater than that of the London and Birmingham Railway, the whole of Belgium was simultaneously covered with a uniform system of railways, without the co-existence of duplicate lines; secondly, that these lines would never have been constructed by private enterprise, from the inequality of the difficulties encountered, and of the returns obtained from the different lines; third, that in the hands of the government, the railways, as a whole, are remunerative, while they would not have been sufficiently attractive to allure the private speculator.

We extract from an Appendix to the work at the head of this article, the following illustrations of the Belgian system, which may at the present moment, when the subject of foreign railways excites so much interest, deserve the attention of our readers:—

"Taking Brussels as the starting point for the northern and southern, and Mechlin as that for the eastern and western lines, the routes and lengths for the several lines are as follows:—

	Miles.	Chains.
North line—to Mechlin and Antwerp ..	28	71
East line—(with a branch line from Landen to St. Trond) to Louvain, Tirlemont, Landen, Waremme, Liége, Chenée, Chaudfontaine, Pepinster, Verviers and Dolhain-Limbourg, to unite at Welkenraedt (on the Prussian frontier) with the Rhenish railway, running from the Belgian frontier to Aix-la-Chapelle and Cologne, whence it is proposed to unite it by way of Minden (for which the surveys are in a forward state) with the numerous German railways which will soon be opened between Berlin and Vienna, thus uniting the North Sea at once with the Danube and the Baltic	91	52
West line—to Ostend, by Termonde, Ghent, and Bruges, with a branch line from Ghent towards the French frontier at Mouscron, by Deynze-Peteghem and Courtray (to unite at Courtray with the French railway to Lille and Paris), and from Mouscron to Tournay	125	66
South line—to Halle, Braine-le-Comte, Soignes and Mons, to join at Quiévrain the French railway from Paris to Valenciennes and the Belgian frontier, (with a branch from Braine-le-Comte to Charleroy and Namur)....	102	42
Total length	348	71

These 350 miles of Belgium railway have been constructed, furnished with locomotives, carriages, and everything necessary for their full operation, at a cost of about six millions—the cost of the London and Birmingham. Many of the districts are by no means favourable to railway construction, as appears by the following description:—

"The northern and southern provinces of Belgium present features of a very opposite character. The provinces of Antwerp, Eastern and Western Flanders, are a series of rich polders intersected by numerous canals and dykes, and so teeming with population that this part of Belgium has been compared to an immense village, to which the numerous hamlets and chateaux give it no small resemblance. The provinces of Hainault, Namur, Liége and Luxembourg on the contrary have a very different character, consisting principally of a rugged district of mountains covered with dense forests still harbouring the bear and the wolf, intersected by rapid streams and scantily peopled by a hardy race, different in both character and language from the inhabitants of the Flemish provinces. It will be seen from the above remarks how varied are the conditions under which the railway system of Belgium has been established. The northern and western lines placed but a few feet above the level of the sea, with gentle curves and almost on a dead level, presenting few engineering difficulties, the principal point of importance being to avoid interference with the drainage of the districts through which the lines pass; whilst the eastern and southern lines carried across mountain ridges upwards of eight hundred feet above the level of the sea, and through valleys in one instance four hundred feet in depth, have required works of art which from their magnitude and the difficulty of their execution will bear comparison with any of those of the present day. By reference to the map of Belgium it will be seen that the great central line, from Ostend to Liége, crosses nearly all the principal valleys at right angles, presenting in the hilly districts a rapid succession of heavy cutting and embankment; whilst the eastern and southern lines, viz., from Ghent to Tournay, Brussels to Quiévrain, Braine le Comte, to Namur and Liége and from the latter place to the Prussian frontier, have been laid out for the greater part of their several lengths, along the sides of, or parallel to the valleys watered respectively by the rivers Lys, Senne, Sambre, Meuse and Vesdre; from the numerous works of art required for the crossings of the several rivers and the lateral valleys, as well as for maintaining uninterrupted the existing communications with the numerous manufacturing establishments on the banks

Digitized by Google

of the Meuse and Sambre, are of a much more expensive character than the former."

Nothing in the history of railway transport is more surprising than the extent to which they have created traffic for themselves, in many instances wholly without interference with existing systems of conveyance. In Belgium this is well illustrated:—

"The self-creating nature of railway traffic has perhaps never been so fully displayed as on the Belgian railways; let us take as an example the line from Brussels to Mechlin. A short time before the revolution, the Dutch Government caused returns to be made of the number of passengers carried annually by the public conveyances between the towns of Brussels, Mechlin, Liége and Antwerp. These returns showed the average number of passengers conveyed annually between Brussels and Mechlin to be about 75,000, and it is calculated that this would be about three-fourths of the number of passengers who would avail themselves of the railway. But at the close of the year 1836, after the railway had been open eight months, it was found that the number of passengers carried between these towns amounted to no less than 421,439, or upwards of eight times the number conveyed in the same number of months previous to the establishment of the railway. The number of persons conveyed on the railways from the 1st of May, 1835, up to the 31st of December, 1841, amounts to upwards of eleven millions. The total receipts from the carriage of merchandise for 1838, amounted to 2,343*l.* 15*s.* 7*d.*, and for 1841, to 79,395*l.* 9*s.* 4*d.* The regular progression of the traffic, month by month during 1839, is very remarkable, the receipts for February under this head amounting to 286*l.* 7*s.* 7*d.* and for October to 2,991*l.* 12*s.* 7*d.*, showing a tenfold increase during eight months only. In the face of this extraordinary traffic that on the common roads has progressively increased; a fact which illustrates most forcibly the benefit which has resulted to the commercial interests of the country from the increased facility of communication afforded by the establishment of the railways. The following table of the *péage des barrières*, answering to the English turnpike tolls, from 1831 to 1839, may be interesting. The produce of the tolls let to the highest bidder was in

1831	2,390,882 francs.	
1832	2,195,343	
1833	2,360,416	
1834	2,415,769	year of first opening of the railways.
1835	2,385,430	
1836	2,447,985	
1837	2,584,791	
1838	2,759,548	
1839	2,749,301	

We have not on the railways of this country as yet developed all their resources, and especially the virtues of low fares, which have never been resorted to without success:—

"Perhaps the most striking feature of the railway system of Belgium, is the extension of the benefit of rapid communication to the humblest equally with the highest rank of society. It will be seen by reference to the returns that the amount received from waggon passengers, is greater than that derived from those either of the first or second classes, and no one who has not travelled on the Belgian lines can form an idea of the extent to which the peasantry avail themselves of the facilities of transit afforded by the railways. The very poorest are hardly so poor but that the saving of time counterbalances the expense of railway conveyance: let us illustrate this by a practical example. An agricultural labourer will earn about 15*d.* per diem, so that the value of his time may be considered to be about 1½*d.* per hour: if he has to travel a distance of three miles, this journey, if taken on foot, will not occupy less than an hour, which will occasion a loss of 1½*d.*; the fare on the railway will be 1½*d.*, and the journey will not occupy more than twelve minutes; making a total loss of 1½*d.*, while the time saved is equal to 1*d.*, so that a saving of ½*d.* is effected by the use of the railway."

It would appear, however, that the Belgian railways have not been attended with such success as to justify very sanguine views of the ultimate success of continental railways unaided by government assistance:—

"The question here naturally arises, will the working of the Belgian railways pay the interest of the capital expended on their construction? By reference to the returns given it will be seen that the net revenue for 1842, is estimated at 4½ per cent. on the capital engaged in the construction of the lines from the working of which this profit is to be derived. We may assume the *average* cost per mile of the lines at present open to be about 12,000*l.*, their *actual* cost ranging from about 8000*l.* to 16,000*l.* per mile. It is therefore evident that whilst some lines are yielding a large profit, others are hardly paying their working expenses; a conclusion which is confirmed by the fact that the net receipts of 1841 were less than those of 1840, by upwards of 5000*l.*, whilst the number of miles run by trains was considerably greater. The following is a comparison of the working of these two years:—

	Excess of Receipts over Expenditure.	No. of Miles run by Trains.	Net Receipt per Mile per Train.
	£. s. d.		s. d.
1840....	83,226 4 6½	733,879	2 3
1841....	78,133 6 11¼	900,106	1 8¾

Although, from the progressive increase of the traffic since the first opening of the railways, there appears little reason to doubt that the net receipts will ultimately cover the interest of the six millions of capital to be sunk in the undertaking, it seems very questionable whether some of the lines will not always be worked at a loss; for example the line from Liége to the Prussian frontier, which will have cost, by the time it is completed, little less than 50,000*l.* per mile, not including the furnishing of the line, can hardly be expected even by the most sanguine to realize, under the present tariff, more than 1½ or 2 per cent. on the capital; whilst it is yet doubtful whether the steepness of the gradients will not even cause the working expenses to exceed the receipts. The result of our inquiry therefore amounts to this—that although, taken as a whole, the traffic on the several lines will probably fully cover the interest of the capital, the net revenue will be much less than it would have been, had the Government confined itself to the construction of some particular lines; whence we may conclude that had the construction of the railways been left to private enterprise, either one-half of the present lines would have remained unexecuted, or an increased tariff would have neutralized the benefits which Belgium is now reaping from increased facilities of communication."

The work from which we have made these extracts is so strange and heterogeneous a production, that we are unwilling to enter fully upon its [de-]merits. It is a rare specimen of book-making. The Book-proper, is an account of the Utica and Syracuse railroad, an American work by Messrs. O. H. Lee and C. B. Stuart, American engineers. This account is comprised in 64 pages, and, with 14 plates, forms a *brochure* which, in a convenient and cheap form, we should have reckoned a benefit to the profession. We think the public works on this railway display great invention and constructive talent, and do credit to Messrs. Lee and Stuart; but the account of them should have formed part of a book on the Public Works of America, which, on a former occasion, we noticed favourably: the drawings, by Mr. Isherwood, are very excellent specimens of projection. But will not our readers be a little astonished to hear, that out of so small a matter, the ingenuity of the publisher has managed to construct a volume of the thickness of 620 pages of our copy of Lord Bacon? Thick paper, and nearly *an inch of fly-leaf*, no doubt may go a good way to form the appearance of a volume, but the reader, on examining it, must be allowed to ask, "What! only one hap'orth of bread to all this monstrous quantity of sack?" To be sure there is the Appendix on Belgian railways, by Mr. Dobson, which could easily have been put in a very few leaves, and there is the preface by Mr. Weale himself, which amounts to 42 pages! We regret to say severe things about the work of any man, especially when obliged to him, as we are to the publisher of Messrs. Lee and Stuart's works; but we assure Mr. Weale that it is not every publisher who should, after the example of Mr. Knight, turn author. Mr. Weale is a spirited publisher, and that is enough. He will complain, we suppose, of our severity; but we assure him, that when he next publishes a good book, by an eminent author, on moderately thin paper, at a tolerably fair price, with his usually well got up plates, we shall give him unmingled praise.

Elegiac Poems. Moxon.

In spite of much that may be said—and has been said—on the other side of the question, we have never been able to satisfy ourselves that such poems as compose this volume are fitted for publication. There are few of the modern schools of poetry with which we have less sympathy than that of the class of sentimentalists who have arrogated to themselves the title of "Domestic poets"—who make an ostentatious parade of their home-pangs, and let the public in, at the few shillings a-head which are the price of their volume, to gaze on the crowned sorrow that sits by the hearth. There is something about this weeping in public—this "sighing like furnace, with a woful ballad"—this making a gossip of the grief that where it is most deep is voiceless—from which we turn with a dislike, that throws a portion of its discredit even over such sweet and natural expression of a real suffering as the poems before us contain. There are none of the affectations which the soul more surely resents than the affectation of excessive sensibility, of any kind,—and there is scarcely any one of them which more certainly denounces itself: but the ostentation of the heart which makes a playground for the reading-public of its "Holy of Holies," lays all its dead affections out, in state, and holds up to the common gaze the shadowy and majestic Presence over which the Greek painter, in a moment of passionate (and most happy) inspiration, flung the veil, is an affectation which has long needed a public rebuke. Let us, however, not be misunderstood:—these remarks of ours have no application whatever to the passionate expressions, or unconscious revelations, which the poetic mood *will* wring, at times, from the bruised spirit—still less to that often mournful tone of the harp which betrays that the thoughts have been learnt "in suffering" that are uttered "in song." From the fulness of the heart, the mouth will speak—as echo must be true to the note which gave it birth. Our objection is, as we have said, to the school of deliberate sentimentalists—Pharisees of the heart, who make its offerings and repeat its prayers, in the market-place, calling all the world to the ceremonial;—men who believe that the thoughts which lie "too deep for tears" are, yet, not too deep for words—who read Malcolm's injunction to "give sorrow words" in a sense of their own, and walk continually abroad "wearing" a breaking "heart upon their sleeve, for daws to peck at." To such men domestic suffering has its bright side—other than that which the Divine and Moralist teach:—a home calamity they turn, as a beggar does his sores, to profit, and, for a family death, come abroad, wearing exaggerated poetical weepers,—and hoping, for such display, to extract out of their proper bereavement a benefit of the kind which they share with the undertaker! That there is such a school our readers are aware; and this has seemed to us a fitting opportunity to denounce it, because the distaste which its proceedings inspire, affects the cordiality of our welcome to the little volume before us,—a collection, as we have intimated, of poems, originating in a domestic affliction, yet being the simple and unaffected utterances of a poet who sings, "leaning his breast upon a" real "thorn."

The author is, himself, not unaware of the objection which there may be to a publication of this nature; but he has an argument in its favour, which has satisfied his own mind, and will many of our readers. He says, in a poetical dedication to ——, (evidently his wife), that he is induced to place these poems before other eyes than those for whom, alone, they were first designed, in the hope that they may carry to other wounded hearts—

Hearts that are bleeding now, or once have bled,

some portion of the comfort which he found they had been to her. The same thing has been said by Coleridge, at greater length, and in more general terms: and, for ourselves, we are free to admit, that we have tasted the sweetness of these verses by our own fire-side,—to which, of course, they would not have found their way without publication. The poetry is a low, sad, thoughtful music, healthy in tone and simple in expression, and rendering, beyond any mistaking, the author's heart. The first poem which we shall quote will let the reader into the secret of the writer's sorrow:—

Half unbelieving doth my heart remain
Of its great woe;
I waken, and a dull dead sense of pain
Is all I know.

Then dimly in the darkness of my mind
I feel about,
To know what 'tis that troubles me, and find
My sorrow out.

And hardly with long pains my heart I bring
Its loss to own:
Still seems it so impossible a thing
That thou art gone—

That not in all my life I evermore
With pleased ear
Thy quick light feet advancing to my door
Again shall hear—

That thou not ever with inquiring looks
Or subtle talk
Shalt bring to me sweet hindrance 'mid my books
Or studious walk—

That whatsoever else of good for me
In store remain,
This lieth out of hope, my child, to see
Thy face again.

There are few households in which the following simple thought is not instantly recognized.—

That name! how often every day
We spake it and we heard;
It was to us, 'mid tasks or play,
A common household word.

'Tis breathèd yet, that name—but oh
How solemn now the sound!
One of the sanctities which throw
Such awe our homes around.

As we have said, all these poems have reference to the same one sorrow; and are so many natural utterances of it—wherein consists their beauty. The sentiment is unpremeditated, and the publication obviously an after-thought. The Poet has made no vain attempt to give variety to a theme, one of whose most expressive characters is that very haunting sameness and fond iteration. Nowhere has he gone out of his own heart for imagery; and, consequently, what he has found is all appropriate. The thoughts that he embodies are all such as would naturally—

Fill the room up of *an* absent child,—
Lie in his bed, walk up and down with *us*,
Put on his pretty looks, repeat his words,
Remember *us* of all his gracious parts,
Stuff out his vacant garments with his form.

The following example will be welcome:—

Yonder on that wall displayed,
Children three behold pourtrayed,
The resemblances of life,
With the truth of nature rife:
See one gentle girl is there,
And of boys a jocund pair;
And by God's good grace, the three
Round about our hearths we see,
Filling still our home with glee.

But that loved one, who has left
Us of so much joy bereft,
Whom our yearning hearts require,
Whom our aching eyes desire,
We, alas! have not of him
Even this poor memorial dim.

Oh unhappy chance! the three
Whom around us still we see,
That do with their presence bright
Ever make us pure delight,
Whom at any hour we may—
Every hour of every day—
To our bosoms fold and press,
Visions of delight that bless
Daily our glad eyes, and still
With their living voices fill
Full of joyfulness our bowers,
Triad sweet, that still are ours;
We may on their portraits feed,
In this richer than we need,
Hardly needing these, the while
They themselves upon us smile.
But that loved one, loved and lost,
Who has left our life's bleak coast,
After whom our eyes we strain,
Whom we listen for in vain,
For he comes, he comes not back,
Well-a-day! of him we lack
Rudest effort that should trace
The dear features of his face;
Which if it had truly caught,
Though by artless limner wrought,
It had still been in our eyes
Dearer relic, costlier prize,
Than great work of master's hand,
By far-famèd artist planned,
Looking calmly from the wall
Of some old ancestral hall.

And already, when I strive
That lost image to revive,
And his very self to paint
On my mind's eye, dim and faint
Come those features, indistinct,
Or with that last suffering linked;
Or if they distinct and clear
For a moment may appear,
Soon they fade anew, and seem
Like the picture of a dream,
Or cloud vision, which the breath
Of the light wind scattereth.

Years will roll, and dim and dimmer,
Through their mists, will faintly glimmer
That loved image, which e'en now
Comes not freely to my vow,
Which already memory's wand
Is not potent to command
At its bidding.—Let it be,
Let me lose all trace of thee,—
Of the earthly casket, which
Once an heavenly gem made rich,—
Of that shape which in my sight
Glanced an apparition bright;
So that fresh in me I find
The dear features of thy mind,
So that these continue still,
And the haunts of memory fill—
Thy unerring keen delight,
In all lovely things and bright,
And the largeness of thy heart,
Ever planning to impart
To thy brothers, to the poor,
Far beyond thy little store,
And thy tears which any woe,
Heard or seen, would cause to flow—
So that I do not forget
What in thee so freely met,
To thy mother manly love—
And thy years so far above
And beyond a childish mind,
All the pleasure thou couldst find
In whate'er I might design,
In whatever tasks were mine—
If I may remember still
How our inborn stain of ill
Did in thee break seldom forth,
Seldom came unto the birth;
(So the holy waters laved,
With their grace so truly saved;)
While with a delighted ear
Of thy Lord and Saviour dear
Thou didst ever love to hear;
If these memories with me stay,
If these do not fade away,
I with unrepining heart
Will those other see depart.

Here is another touching thought, having a low, sad echo in many and many a heart:—

Heart's brother, hast thou ever known
What meaneth that "No more?"
Hast thou the bitterness outdrawn,
Close hidden at its core?

Oh, no—draw from it worlds of pain,
And thou art doomed to find,
That in that word there doth remain
A bitterer drop behind.

We must find room for an Apologue, which finely moralizes (as indeed most of these poems do) the poet's sorrow:—

In schools of wisdom all the day was spent:
His steps at eve the Rabbi homeward bent,
With homeward thoughts which dwelt upon the wife
And two fair children who consoled his life.
She, meeting at the threshold, led him in,
And with these words, preventing, did begin:
"Ever rejoicing at your wished return,
Yet do I most so now: for since this morn
I have been much perplexed and sorely tried
Upon one point which you shall now decide.
Some years ago, a friend into my care
Some jewels gave, rich precious gems they were;
But having given them in my charge, this friend
Did afterward nor come for them, nor send,
But left them in my keeping for so long,
That now it almost seems to me a wrong
That he should suddenly arrive to-day,
To take those jewels which he left, away.
What think you? Shall I freely yield them back,
And with no murmuring?—so henceforth to lack
Those gems myself, which I had learned to see
Almost as mine for ever, mine in fee."

"What question can be here? Your own true heart
Must needs advise you of the only part;
That may be claimed again which was but lent,
And should be yielded with no discontent.
Nor surely can we find herein a wrong,
That it was left us to enjoy it long."

"Good is the word," she answered; "may we now
And evermore that it is good allow!"
And, rising, to an inner chamber led,
And there she showed him, stretched upon one bed
Two children pale, and he the jewels knew,
Which God had lent him and resumed anew.

Who is the author of this little volume we know not, and we think he was right to publish it without his name. Half the objection to such a publication is removed by that circumstance—which, in a great measure, keeps out of sight the personality,—and, for the general public, almost raises the little volume itself, in its entirety, into the dignity and abstraction of an Apologue.

OUR LIBRARY TABLE.

The Young Milliner, by Mrs. Stone.—The novelist has, of late, too largely become the abuse-monger. The *unsatis*-Factory Boy of Mrs. Trollope was the natural sequel, we fear, to the 'Oliver Twist' of Dickens; since then we have had poor laws, Puseyism, and other vexed questions done into fiction; and now Mrs. Stone, following the lead of the Report of the Children's Employment Commission, and the indignant and earnest protest it has excited, puts forth her statement of the case in a rather maudlin story. It cannot for an instant be supposed, that we reject the humanity of any sincere intention to assist "the desolate and the oppressed:" our columns have long borne witness, we hope, on the side of the enlarged and tolerant charities; but we no more like to see the grievance-trade intruding itself into the literature of leisure, than the rags and sores of a hospital taken as subjects for pictures. Moreover, in the present instance, Mrs. Stone has been anticipated. There appeared, some six months ago, in *Tait's Magazine*, 'A Dress-maker's Diary,' one of the most ghastly realities ever put on paper, to haunt the reader amid the comforts of his fireside. There we saw the mind of the victim, yielding week by week to the ceaseless labour, to the dismal monotony of her calling—there, the hideous contrast between the robe for the bridal or ball and the skeleton (the word is not too forcible) giving it the last seductive touches of airy grace—there, natural and innocent yearnings for home and green trees, growing fainter and fainter, till all becomes dark! It was a revelation of remarkable power in these exhausted days of magazine-writing; whereas this is merely a sentimental tale of a very virtuous young milliner, who turns out to be "come of good family," and dies, of her labour, the discovery coming too late, with another love-episode intertwined, to interest boudoir-readers in characters of "their own order." The 'Young Milliner' will neither travel very far, nor do much good or harm.

Day Dreams, by Charles Knox.—We have heard a pleasant saying attributed to a well known writer and preacher of the present day, which amused us at the time, and which we have had occasion to remember often since. Speaking with a brother-critic on the subject of reviewing, and in answer to some remark of the latter, which implied that certain books which had been under his notice had been carefully perused, "What!" said he, "do you *read* books before you notice them?" "Certainly!" was the reply; "do not *you?*" "I find it better," said the Reverend Dr., "*not* to read them: *it creates a prejudice!*" Now the volume before us is one having many elements of popularity, and many claims to be considered an ornament to the drawing-room table. Handsome type on fine paper, luxurious margins, copious embellishments, and delicate binding, are all in its

Digitized by Google

favour; and whatever *prejudice* we have against the book arises from having *read* it. Had we even bestowed upon the author so much of indifference as to be satisfied with a hasty glance at the contents, it would have fared better with his poetry, so far as our judgment on it is concerned, for there is a determined air of *thought* about it which does not, at the first glance, betray the exceedingly threadbare character of the writer's speculations, and an assumption of the poetical costumes which to a momentary view, offers not a bad imitation. Captain Knox is, as usual, pleasant and clever: but we would advise him that his pleasantness and cleverness are of a kind which will do better service in prose than in poetry. Amid the incidents of a novel the very decided commonplace of his profundities is taken at once at its real value, and set fairly against the amusement furnished by the author; but in the array and circumstance of the poetical accompaniments, the expectation arises of an intellectual presence which it may be worth some trouble to get at, and the unsatisfactory result is counted more heavily against the writer, because of the disappointment. In prose and in verse Captain Knox is one of a numerous class, whose qualification and bane are *one* and the same—facility.

The Man of the People, by C. F. Rosenberg, author of the 'Prince-Duke and the Page.'—The time has not yet arrived when the great French revolution, with its strange *phantasmagoria* of actors, will be a field of history, in which the novelist can profitably exercise his art. More than one of our cleverest artists, attracted by the contrasts presented, has bestowed labour upon the epoch in vain: we need only instance Mrs. Gore, whose 'Tuileries' has thrice the amount of stuff in it which any of her fashionable novels contains, and Sir E. L. Bulwer, the most intelligible portions of whose 'Zanoni' are its Parisian scenes. Where writers so distinguished have but partially succeeded, it can be no discredit to Mr. Rosenberg to have failed. There are clever things in his novel, but the skill is neutralized by affectation of style. Of course the 'Man of the People' could not do Mr. Rosenberg's bidding, without becoming entangled in a love story, but the web is feebly woven; and the misfortunes of the hero, Karl Elsenheim, and his beloved Blanche, are overdrawn and melo-dramatic. If Mr. Rosenberg will trust more to himself and less to the humours and fashions of other noveilsts, he may write well, since he has a power over the picturesque above the average.

ROYAL ACADEMY.

Sir R. Westmacott's Lectures on Sculpture.

CONCLUDING LECTURE.—THE ROMAN PERIOD.

THE early history of Rome leaves us in no great surprise that a people who were soldiers from necessity, and dependent at first solely on their personal courage and vigilance for their safety, and who were surrounded by neighbours as rude and unpolished as themselves, should have had neither the inclination, nor, for a long period, the means of cultivating gentle or elegant pursuits. Marcellus, who sacked Syracuse 212 years B.C., introduced among his countrymen some slight taste for the Fine Arts, but more particularly for Grecian elegance, by transporting the statues and pictures of Syracuse to Rome: and Mummius, 147 years B.C., extended their influence by taking to Rome the spoils of Corinth; while Sylla, still later, by the dismemberment of Athens, Delphi, and Elis, filled Rome with the rarest productions of Grecian art. It is from this period, which may be considered that of the total subjugation of Greece to the Roman power, that we may date the decline of Sculpture in that country.

On the full establishment of the Roman dominion, the elevation of Julius Cæsar, and subsequently of Augustus, to the supreme power, was auspicious to the preservation of Sculpture, for it appears that an inclination towards the Arts was superadded to the policy which directed those emperors in the increase of the splendour and magnificence of Rome. Nor was this confined to the capital; the fixed authority of the emperors, and the general security of the country, afforded leisure for the cultivation of elegant pursuits, and a desire of improvement pervaded all ranks, and extended itself throughout every province of that vast empire. Under Tiberius, Caligula, Claudius, and Nero, the character of Art which prevailed at Rome does not, however, appear to have been sufficiently influenced by the authority of the fine examples which they had been at so great pains to collect from every part of Greece. Tiberius corrupted the taste, and Caligula caused many of the ancient statues to be mutilated by removing the original heads, and substituting his own portrait in their place. Sculpture, during the reigns of these emperors, was, unfortunately, fettered by the caprice of its employers, or was too often degraded by being made the vehicle of depraved sentiment,—a personal, rather than a national demand for his talent, directed the practice of the artist to individual personification, and even in this the simplicity of the art was invaded by the gorgeous apparel which the vitiated taste of his employers required in the admixture of the marbles of Egypt and the East, which had now become objects of attraction. The same departure from simplicity pervaded their architecture, every member of their temples or public edifices being encumbered with a profusion of ornament. Notwithstanding the great quantity of sculpture that was produced in the time, the reigns of these princes passed away without having produced a single Roman sculptor of original genius, nor can we refer to any very remarkable work in heroic composition. The fact of there being no native artists may be inferred from the circumstance that all the names recorded by Pliny of eminent men of those periods, are Greek. In intaglio and the more delicate productions in metal, Dioscorides, Agathopus, Possidonius of Ephesus, Lædus, Pithias, and Zopyrus, held a high rank. In Sculpture, Craterus and Pythodorus, Polydectes and Hermoläus, with Aphrodisias of Tralles, are named with honour. The group of Hæmon and Antigone has been ascribed to this age, but on doubtful authority.

Under Trajan Sculpture again acquired some strength. In the preceding reign, indeed, some talent appeared in that which we may presume to consider Roman Art, as is evinced in the relievi in the Arch of Titus; but they do not approach, either in spirit or completion, the productions of even the last ages of Grecian art; they attract by their general combinations, and excite our interest rather from the eventful triumph they were intended to record, than by any great merit they possess as works of art.

This age—namely, of Trajan—may be considered the most characteristic of Roman art, and the sculpture round the column erected in honour of that emperor's victories over the Dacians, affords the best example we have, in connected composition, of their power of invention and execution. It is to be regretted, that there is no work amongst the Greek relievi which can be referred to as a just parallel with this work. The Phigalian frieze, though in the same class of relievo, is opposite in principle and design, being wholly a work of fiction; and the Panathenaic frieze, though nearest in its application as an historical design from its recording an immediate fact, is most distinct in the treatment and quality of its relief.

Hadrian had a peculiar claim to the title of Patron of the Arts. He not only contributed to the restoration of many of the temples in Greece, and to the preservation of whatever was excellent in ancient Art, but he was a munificent encourager of living merit. Many of the productions of his reign were not unworthy the purest times of Attic Art; and are such close imitations of the school of Praxiteles and Lysippus, as not unfrequently to be mistaken for the works of those sculptors or their scholars. Generally speaking, however, they must be considered as mere imitations—the effects of practice, skill, and industry, rather than the result of original genius; their production was evidently an effort, and though Art was encouraged by the patronage and protection of the prince, the works which had been extracted from Ætolia and Epirus had neither inspired the imagination of the Romans, nor kindled a rival spirit in their artists. Even in this age, we find no mention of any distinguished Roman sculptor; those of the time on record, as Aristæus, Zeno, and some others, being evidently Greeks.

From the death of Hadrian we may date the decline, and from the Antonines may see in the works that have reached us the rapid decay, of Sculpture.

Marcus Aurelius felt favourably towards the Arts, but the equestrian statue of that emperor is perhaps the only distinguished work of the age. The peculiarities of this and the following reigns are particularly observable in the treatment of the hair and draperies of their works in Sculpture. In the hair, especially, after the masses were laid in, nearly the whole was worked with the drill.

Although the Severi were well disposed to advance the cultivation of the arts, Sculpture, under Commodus and his successors, fell with surprising rapidity. In the relievi of that period the incidents were accumulated to a degree which left no room for the display of character. Ideal Art had descended from its lofty station, and common reality had usurped its place. But, on the decline,—nay, on the very brink of its extinction,—it is interesting to find, that the features of good Art are still discernible; and occasionally there appeared works, which, for justness of expression, tenderness of feeling, and vigour of execution, would have done honour to the happier periods of ancient genius; but they were few, and in no regular course, and can be considered only as samples or fragments of a mighty fabric fallen to decay.

In one branch of Art, however, they produced works which will bear comparison with the best of any school or period, and the fine bust of Lucius Verus, formerly in the Borghese Collection, the bust of Commodus, at Castle Howard, and many others, are remarkable examples of the consummate ability that was displayed in portrait sculpture.

Under Pertinax, S. Severus, the Gordians, and the two first Valerians, down to Diocletian, Sculpture gradually declined. The reign of the last prince was, indeed, memorable for its productions in architecture, as in the baths which he built at Rome and his palace at Spalatro; but that era was marked by innovation and a profusion of ornament, and the growing connexion with the East affected and injured Sculpture in even a greater degree than the sister art. In the third century this evil increased; during the fourth every branch of Art approached its fall; until, in the fifth century after Christ, we may date the consummation of its ruin.

We owe the revival of the arts wholly to religion; but Christianity, which had made great progress in the third century, notwithstanding its persecution, had scarcely ascended the throne of the Cæsars, when the Christians, in their turn, became the persecutors. The altars of the Pagans were insulted, their votaries harassed, and the severest penal statutes enacted against the ancient worship; and the cross was now erected in place of those triumphant ensigns under which the world had been conquered.

Sculpture is much indebted to that pious regard which all nations have shown to the dead. And the early Christians exhibited, as others had done, their good feeling in this respect by the records they placed over the remains of their departed brethren. The crypts of the older churches in Italy, and especially that of St. Sebastian, at Rome, abound with these memorials, which almost always have upon them some illustration of, or allusion to, a Christian doctrine.

The subjects most usually treated in these early monuments, were Christ as the 'Good Shepherd,' the 'Ascent of Elijah,' 'Christ giving his commands to the Apostles,' and the 'Sacrifice of Abraham.' Some of these works were by good artists, and were well composed, and executed with much freedom. Many of the subjects are evidently applications of profane compositions to Christian purposes; and it may not be irrelevant to observe, with reference to this fact, that the early Christians,—perhaps to avoid the constant persecutions directed against them,—symbolized many of their religious rites, borrowing for that purpose such of those usages of the Pagan mysteries as they found admissible.

The clergy, from the sixth to the tenth century, were the only persons who possessed any knowledge of letters, and they still maintained an extraordinary influence, not only over the people, but their princes. The struggle of the Church for secular power was daily advancing, and to the establishment of the Pope as a temporal prince may chiefly be ascribed the restoration of Art. Alfred and Charlemagne gave a temporary lustre to the eighth century, but both Sculpture and Painting remained in a most neglected state. Towards the eleventh century the clouds began to disperse, and a few who had studied from the Arabs, in Spain, undertook the instruction of youth, and while they inspired them with a taste for polite literature, assisted in producing a more favourable feeling towards Art.

The history of the arts of design at Pisa, from the tenth to the fourteenth century, supplies the best information on the state of Sculpture and Architecture of the whole of Italy. Pisa may be considered the cradle of the restoration. What the exact state of the Arts was in other countries is very difficult to ascertain, but the most immediately beneficial effects on them in England, and, indeed, throughout Europe generally, may be considered to have been produced by that event which had agitated and given an impulse to every northern nation; namely, the Crusades.

The passions of men generally, but more particularly of the nobility, whose only employment was war, had been much excited by the promoters of the rescue of the Holy Sepulchre; they readily enlisted under the banner of the cross in the hope of those spiritual rewards offered them through the Church, and which, doubtless, assisted by their communication with the East, at that period the chief seat of arts and commerce, induced on their return an attention to the improvement of sacred buildings. It is a curious and interesting fact, that we may date from the second to the sixth Crusade, or from 1144 to 1228 the establishment, in this country, of nearly six hundred religious foundations. Their intercourse with the more polished people with whom the Crusaders had mixed, had attracted attention also to the sister Arts, and Painting and Sculpture were called in to assist in the embellishment of these pious edifices.

It may appear extraordinary, notwithstanding the contemporaneous contrast of customs, habits, and manners of different countries, that all, with very slight deviations, adopted the same style of architecture for religious purposes, and which, from the most rude and simple forms of the tenth and eleventh centuries, reached, in the fourteenth, the most surprising grandeur and beauty. But Sculpture, both in England and in France, was still of the most puerile character. Of this we have many examples in this country, in early fonts and tombs, and little improvement took place in ecclesiastical Sculpture, to which the art appears to have been exclusively applied, for nearly two centuries, as may be judged by the still rude specimens existing in Edward the Confessor's chapel screen at Westminster, executed in the reign of Henry III., or about 1269. These sculptures illustrate some of the legends of that sainted prince,

Digitized by Google

They were most probably by English artists, but we find from many examples which might be quoted—(amongst which is the sculpture of the screen discovered behind the altar of New College, Oxford, which was built by William of Wickham, nearly fifty years later than the above period)—that although the art had not advanced greatly in execution, there is strong evidence that those works were directed by very superior men, as they display not only great knowledge of arrangement, but also exhibit touches of very beautiful feeling.

The Professor said, he considered that the sculptors employed in building the Church at Milan contributed greatly to disseminate a taste for the art. After leaving Milan, they distributed themselves about the country, and they not only improved their own style by studying the works of Arnolfo and Nicola Pisano, but it appears that several Lombards and Germans were employed in assisting Nicola both at Orvietto and Florence. These artists, seeking employment, subsequently spread themselves over the more northern countries, and the Professor thought the result of this communication between the Italian and German sculptors might be traced in England in four statues (drawings of which he exhibited), which were removed about forty years since from Guildhall, having been originally discovered at Devereux House, the residence of the celebrated Earl of Essex. The union of styles is evident, not only in these works, but in the far greater proportion of the sculpture practised all over the North of Europe during the thirteenth, fourteenth, and fifteenth centuries. The emigrants from Italy most probably established the style of English sculpture which lasted in this country down to the time of the Tudors.

Several fine specimens of die-sinking were produced in the age of Elizabeth, but the Fine Arts can scarcely be said to have received royal patronage until the reign of Charles I. Examples of sculpture were few, and those which had any pretensions to excellence, were chiefly by foreigners, and, with the exception of the patronnge given by the Earls of Pembroke, Arundel and Burlington, the Arts had little attention bestowed upon them in this country till the reign of George the Third.

PUBLIC GALLERY FOR WORKS OF LIVING BRITISH ARTISTS.

We have received several letters on this subject, but can only find room for such as are suggestive of improvement or the extension of the project.

Athenæum, 22nd April, 1843.

I rejoice to see in the *Athenæum* the project of a Society for the formation of a Public Gallery for the works of living British Artists. I have repeatedly, in the course of the last twenty years, spoken to the lovers of Art with whom I am acquainted, on the subject, and proposed the formation of a fund by subscription, the annual interest accruing from which should be applied in the purchase of works by living Artists. It was in this spirit, and in furtherance of these views as an ulterior object, that a rule was introduced, on the formation of the Society for the Encouragement of British Art, by which a part of the subscription was set aside as a reserved fund for the purchase of a picture or pictures annually, to be placed in some public building. This Society, it is well known, failed, having been superseded by the more popular plan of the Art-Union. Some time after, a distinguished patron of Art proposed to me a scheme for decorating this house [the Athenæum Club House] with pictures. It was to the effect, that a certain number of members should subscribe a sum annually, to be expended in the purchase of a picture painted by a British Artist, to be hung in such part of the house as might be agreed on between the Subscribers and General Committee. I at once entered zealously into the scheme, but the death of my friend put an end to the project. I should be glad to obtain the earliest information of the organization of the Society, that as far as my means extend I may promote my favourite object of advancing native talent and the highest talent. M.

Our Club-houses would be excellent depositories for such works, and a sum of money might easily be raised by subscription among the more wealthy members, which would do good in itself, and be still more serviceable as an example. We should like to see the Athenæum Club take the lead in such a project—it would be becoming its high character. The United Service Club has some good modern pictures: the Reform Club a few, but they are portraits. The Garrick has a very interesting collection, but the Club is not rich enough, we fear, to add to the collection.

You deserve an "Athenæum Testimonial" for the good service you have done in setting the public right in regard to the Art-Union system, and showing its pernicious influence on Art; and you deserve another Testimonial for this noble project of 'A Gallery for the works of living British Artists!' This indeed would be to encourage Art! I shall be curious to see how many of the Art-Union subscribers will become contributors! I have benefited by the Art-Unions in the vulgar sense of the word, that is to say, pocketed a few pounds of their money. I may never attain the honour of having a work deposited in this truly "National" Gallery. No matter—the hope, the possibility, is a stimulant, greater than all the coin ever disbursed by all the Art-Unions together. That there are difficulties is obvious. It has been said that there is no gallery in which to deposit the pictures, and that if you build a gallery there are no pictures to fill it. Could not the Academy lend a room as a depository? Could not one be appropriated at the National Gallery? Could not the prize pictures be exhibited in Guildhall or Westminster Hall? There are a hundred difficulties, of course, and a hundred ways of overcoming them. The thing wanting is the spirit to set about it.

Yours, &c. An Artist.

Guildhall, Westminster Hall, and the City Halls are available for other and even higher purposes. Why are they not themselves lit up with works of art? If one of our wealthy corporate bodies would set an example, there are whole acres of naked wall that would, in the next half-century, be adorned with works of art, if only in honourable rivalry. This would be working in the spirit of the age. It is idle to call on the Government and the Church to patronize Art, because they were its patrons in the Middle Ages. The Government has now to fight for every shilling in its Estimates, and the Church cannot keep the rain from pouring down on the altar without a three-halfpenny or twopenny rate, and that is often refused. But even in the Middle Ages these Merchant Guilds were among the patrons of Art, and their Halls are among the glories which those ages have left for the admiration of posterity.

Few disinterested readers of the *Athenæum* can have perused with more lively satisfaction than myself your very laudable efforts to expose the unhealthy tendency of "Art-Unions;" and none, I think, can have welcomed with more pleasure the encouraging notice in your Journal, of an attempt to establish a Public Gallery for the works of living Artists. May I, however, hazard an opinion, that philanthropy is a lean excitement now-a-days: we all want something for our money. Allow me to suggest, that this Society offer the same stimulus as the Art-Unions—present an engraving for each subscription—and let the surplus be expended in the formation of this Public Gallery, and so follow out the successful portion of the Union scheme without leading it to its debasing issue.

I remain, &c. L. R.

It is, we believe, the intention of the projectors of The Gallery that the finest works shall be engraved, and a copy presented to each of the Subscribers; but it was not thought advisable in the first instance to enter further into details.

Respecting the following advertisement, which appeared in the *Times* of Monday last, and is indirectly connected with our subject, we have received at least a dozen letters.

Art-Union of London.—The advertiser having become entitled to a Prize of 80*l.* in the above Institution, is willing to dispose of it for 60*l.* Address to H. B., at Mr. John Clark's, 153, Tottenham-court-road.

This advertisement is thought by most of our Correspondents to speak trumpet-tongued in proof of the mere gambling support given to Art-Unions. Be that as it may, we can assure them, that whenever a history of these Unions shall be written, we can illustrate it with cases quite as much to the point, and far more amusing. After all, be it remembered, the 80*l.* prize thus *purchased*, will probably be better invested for the encouragement of Art than any sum obtained by a chance prize-holder. The purchaser has at least a love for, and therefore, it is fair to assume, *some* knowledge of art.

NEW HOUSES OF PARLIAMENT.

We shall now give the conclusion of Mr. Barry's Report. With reference to the completion of the exterior, he observes—

"It has ever been considered by me a great defect in my design for the new Houses of Parliament that it does not comprise a front of a sufficient length towards the Abbey, particularly as the building will be better, and more generally, seen on that side than any other. This was impossible, owing to the broken-out line of the site with which I had to deal. I propose, therefore, that an addition should be made to the building for the purpose of enclosing New Palace-yard, and thus obtaining the desired front. This addition would be in accordance with the plan of the ancient Palace of Westminster, in which the hall was formerly placed in a quadrangle, where, in consequence of its low level, it must have been seen and approached, as it would be under such circumstances, to the best advantage. The proposed addition would, in my opinion, be of considerable importance as regards the increased accommodation and convenience that it would afford, in addition to what is already provided for in the new building, as hitherto proposed. * *

"Of the several local improvements suggested, none in my opinion is of greater or more pressing importance than that which I have to suggest in respect to Westminster Bridge. The anomaly of the size, outline, and character of that bridge, considered as it ever must be from its proximity as an adjunct to the new Houses of Parliament, must have forcibly struck every one who has passed over or under it since the new building has risen into importance; and the steep and dangerous acclivities of the roadway, as well as its want of width for the traffic that passes over it, have constantly been a subject of public complaint.

"In order, therefore, to remove these serious objections, I propose that the superstructure of the bridge should be rebuilt upon the old foundations, which are now in course of being repaired and extended, under the able superintendence of Messrs. Walker and Burgess. As it is, in my opinion, of the utmost importance, both as regards the effect of the new Houses of Parliament, when viewed from the bridge, and the convenience of the public in passing over it, that the roadway should be made on the *lowest possible level*, I would recommend that the form of the arches of the new bridge should be pointed, by which great facility would be afforded for accomplishing that very important object, namely, by materially reducing the thickness of the crown of the arches, within what is considered necessary for arches of the circular form. I am induced also to recommend this form of arch, on account of another very important practical advantage which it offers, namely, the elevation of its springing above the level of high water, by which the water-way through the bridge will be the same at all times of tide; whereas, at present, the spandrils of the arches offer an impediment to the water-way at high water, nearly equal to one-twentieth of its sectional area, occasioning rapid currents with a considerable fall, and sometimes much danger to craft in passing through the bridge, under the influence of high winds. I consider it, also, of the greatest importance, in an artistic point of view, not only that the bridge should be materially lowered, but that it should be made to accord with the architecture of the new Houses of Parliament, in order that, both in composition as well as style, the *ensemble* should be harmonious and effective. Upon a rough estimate which I have formed of the cost of the new superstructure, I am satisfied it could be erected for about 120,000*l.*, beyond the cost it will be necessary to incur to carry out Messrs. Walker and Burgess's design for widening the present bridge to the extent proposed."

Mr. Barry considers the embankment on both sides of the river, from Vauxhall-bridge to London-bridge, next in importance to the rebuilding of the superstructure of Westminster-bridge. He says—

"As there would doubtless be serious objections to a public road upon the embankment on the north side of the river, I confine my observations to the southern side of the river, where, if a road could be obtained, it would afford a succession of fine views of London, and the best situation for views of the new Houses of Parliament. Having maturely considered the subject, I think it would be practicable to obtain a public road of ample width upon arches, from the termini of the South-Eastern and Dover and the Brighton Railroads, at the foot of London-bridge, to the terminus of the South-Western Railway at Vauxhall. The road might be raised upon arches to a level that would coincide with the levels of the roadways of the several bridges which it would intersect, by which means the water-side frontages of the several wharfs need not be interfered with in any material degree; indeed, the extent of such frontages might, by the means of docks of convenient form and size, be very considerably increased, and the archways might, to a great extent, be appropriated, if desired, to warehouses and other purposes of trade. By extending the archways to a

Digitized by Google

sufficient depth to the south of this road, a frontage for building might also be obtained, particularly opposite Privy-gardens and the new Houses of Parliament, where, if the houses were designed in masses, in reference to architectural effect, they would form an agreeable and striking view from the north side of the river, and effectually screen the present low and mean display of unpicturesque buildings on the Surrey side. The proposed houses, from being raised to a considerable elevation, would have a fine command of the river and the principal public buildings of the metropolis, and having, in addition to these advantages, a southern aspect, would form very agreeable residences, such as would probably be eagerly sought for by the owners of adjoining wharfs, either for their own occupation or that of their principal agents. Taking into consideration the private accommodation to the several wharfs, and the value of the new building frontage, the proposed work would probably yield a very considerable return for the capital expended upon it, and when effected would not only form one of the most striking improvements of an ornamental character of which the metropolis is susceptible, but would materially conduce to the convenience, the comfort, and recreation of the public. It would also perhaps render unnecessary the line of road that has been projected from the termini of the railroads at the foot of London-bridge, through Southwark, to the foot of Westminster-bridge for the convenience of the west end of the town, as the distance to that part of London would be materially shortened by taking the proposed embankment road and passing over Waterloo-bridge."

Of the local improvements immediately contiguous to the new Houses of Parliament and the approaches, Mr. Barry remarks:—

"Old Palace-yard is proposed to be considerably increased in size by the demolition of the houses which now occupy that site, as well as the houses on both sides of Abingdon-street, by which means a fine area for the convenience of state processions, and the carriages of peers and others attending the House of Lords, as well as a spacious landing-place adjoining the river, would be obtained. The Victoria Tower, as well as the south and west fronts of the building, would thus be displayed to the best advantage. The Chapter-house would be laid open to public view, and if restored, would form a striking feature in conjunction with the Abbey; and a considerable extent of new building frontage that would be obtained by this alteration might be occupied by houses of importance, in a style of architecture in harmony with the Abbey and the new Houses of Parliament, by which a grand and imposing effect, as a whole, would be produced. As one means of improving the approaches, I propose that the noble width of street at Whitehall should be extended southwards, by the removal of the houses between Parliament-street and King-street, by which the Abbey would be wholly exposed to view as far as Whitehall-chapel. The houses on the north side of King-street should be removed, for the purposes of substituting houses or public buildings, if required, of an imposing style of architecture. Millbank-street is proposed to be widened and improved, in order to make it a convenient and effective approach from Millbank-road to the Victoria Tower and Old Palace-yard. Tothill-street is also proposed to be widened and improved, in order that it may be made an equally convenient and striking approach to the Abbey, the Houses of Parliament, and Whitehall, from the west end of the town. St. Margaret's Church, if suffered to remain in its present position, should be improved in its external decoration, in order that it may not disgrace, as it now does, the noble pile of the Abbey which rises above it."

Mr. Barry concludes with expressing a hope that although some of his suggestions may be considered impracticable, that at no distant period the embankments of the river, the enclosure of New Palace-yard, and the enlargement of Old Palace-yard, may be accomplished as "improvements of the utmost importance whether as regards the beauty of the metropolis, the effect of the new Houses of Parliament, or the convenience as well as the enjoyment of the public."

OUR WEEKLY GOSSIP.

THE daily papers announce the death, on Sunday last, at Brighton, of Mr. W. Stewart Rose, a man of rare accomplishments, lively wit, fine fancy, kind heart, and unassuming manners; and a delightful companion, till bodily afflictions compelled him to retire altogether from society. He was a son of the Right Hon. George Rose, and educated at Eton. His literary tendencies soon manifested themselves, and at the suggestion, we believe, of his father, altogether a practical man, he began his literary career with 'A Naval History of the late War,' the first volume of which was published in 1802. With a first volume, as might have been foreseen, the work concluded. The next year he was following the bent of his own fancies, and published a translation of 'Amadis de Gaul;' subsequently of 'Partenopex de Blois,' both from the French—of the 'Court and Parliament of Beasts,' from the *Animali Parlanti* of Casti—the 'Orlando Furioso,' from Ariosto, the 'Innamorato,' from Berni, 'Letters from the North of Italy,' 'The Crusade of St. Louis and King Edward the Martyr,' and probably other works. He contributed, also, we believe, to both the *Edinburgh* and *Quarterly Reviews*.

A plan of considerable magnitude has been set on foot, and will soon be carried out on the Birmingham Railway, for the improvement of the men employed upon it. A library is being formed, consisting of works of a moral, historical, and religious nature, for the use of the porters, policemen, &c. upon that extensive line. There are about twenty-two stations, and forty volumes will be assigned to each station, to be changed as soon as they have been read through. The plan has been made, and is being carried into execution, by the Company's chaplain at Wolverton, the central station of the line, where a great number of workmen are congregated, and where considerable improvement has already been effected. This is the more interesting, as it will probably be followed by other railway companies, and public bodies employing many labourers. The Directors of the Grand Junction Railway have already appointed a chaplain at their station at Crewe, and may be induced, in this respect, to follow so good an example. We hear, too, that a library has been established in the workhouse of St. Matthew, Bethnal Green. The relieving officer, from a desire to afford instruction as well as amusement to the inmates, has succeeded in inducing the Board of Guardians to allow a small circulating library to be placed in the institution, consisting of such books as are approved of by the Guardians. There are at present 500 volumes, consisting of books upon religious subjects, history, &c., the reading of which by the aged and infirm has afforded to them great relief during their abode in the workhouse. We also announced, some time since, (*ante*, p. 221,) that libraries had been established at the several London police stations; the works either to be read at the station-houses, or taken home under restrictions: also among the servants at the Athenæum Club. The considerate attention to the amusement and instruction of the humbler classes, which has marked the last few years, has already borne its good fruits, which will become daily more manifest.

The Anniversary Meeting of the Camden Society, was held on Tuesday, Lord Braybrooke in the chair. It appears from the reports of the council and auditors, that the society is going on prosperously—that the receipts last year were 1,620*l.*, and the balance in hand 437*l.*—and that the society, limited to 1,200 members, is full, and that there are many candidates for admission. Of works now in the press, the more important are the 'Promptorium,' the 'Dispatches of the French Ambassadors resident in England,' and 'A Collection of Letters relating to the Dissolution of the Monasteries.' It was also announced, that in consequence of the state of his health, and the pressure of public business, Lord Francis Egerton had resigned the office of President. After a special vote of thanks to his Lordship, not only for his past services, but for the liberal kindness with which he had placed his private collection, printed and MS., at the service of the society, Lord Braybrooke was elected President.

We must remind our readers that the Anniversary Dinner of the Literary Fund Society will take place on Wednesday next, his Grace the Duke of Sutherland in the chair, and express a hope that there will be a strong muster of the friends of that excellent Institution.

Some few pictures by the farmer's favourite painter, *George Morland*, were disposed of last Wednesday at Messrs. Christie & Manson's. The best, 'A Snow Scene,' was not of his best time, but somewhat after it, when he painted as he lived, rather too fast;—when, like Pope's rhyming parson, he was "be-mused with beer," not filled with the Muse's genuine inspiration,—when English burgundy, at fourpence a quart, had so fattened his brain, that it could make little energetic exertion. Yet, from this very cause, his hand, always quick, became active to a fault: like the Rump orator's tongue,

> His *painting-brush* ran on, the less
> Of weight it bore, with greater ease.

Nothing can be more facile and free than the workmanship of the 'Snow Scene,' nothing more slight and superficial; it is the perfection of dexterous *dish-dash*—all blotch and splotch, where every tint, though laid on with the carelessness of a trowel, hits the true place, and produces admirable effect at a distance. Clever imitation of reality, the cheap substitute for invention, characterizes the composition, as it does most of this painter's landscapes, which may be called literal plagiarisms from the book of Nature: Morland, after Mr. Bayes's plan, when he caught a good idea in that wide-spread volume, "pop! he slapped it down, and made it his own." This merits praise, to be sure; for another person, had he as many eyes as bespeckle a peacock's tail, would perhaps see with them as undiscerningly as those do; but still it denotes a passive rather than an active kind of mental intelligence. The 'Snow Scene' brought 51 guineas. 'A Heath Scene,' 19 guineas: mere surface-work—earth seems to have no solidity in such landscapes. 'A Donkey and Goats,' 13 guineas; earlier and sounder, if not of stupendous excellence: Morland was so much of a pig-fancier, that his donkey resembles a hog nuzzling among garbage. Two other specimens—'A little Girl at her Book,' and 'Horses at a Stable Door'—both small, brought proportional prices,—5½ and 8½ guineas.

On Wednesday last, an injunction was obtained against a man of the name of "Henry Green Clarke, of No. 66, Old Bailey," for various acts of literary piracy. This is the first proceeding under the Bill of last Session, and if it be followed up with energy, will soon put a stop to those disgraceful practices. As we said some time since, (No. 787,) when we gave an outline of such a Society as we thought ought to be formed by authors and publishers, for mutual protection—the *certainty* that the law will be enforced, would in twelve months save all further necessity for enforcing it; it is the chance of impunity, that holds out the temptation; and, therefore, we have been pleased to see, that so influential a house as that of Messrs. Longman & Co. have affixed a notice to all works lately published by them, stating "that it is copyright, and that in case of infringement, they will avail themselves of the protection now granted by parliament." What is the publishing history of this man Clarke? He it is that was alluded to by the American publishers, Messrs. Wiley & Putnam, when they flung in the face of the *Foreign Quarterly*, their proofs that literary piracy was not confined to the other side of the Atlantic, and adverted to the 'Young Maiden' and 'Young Wife,' of their countryman Mr. Muzzy, which had been not only reprinted in England, but *translated* into 'The *English* Maiden' and '*English* Wife;' and as a further blind, the "AUTHOR" of the former, in the piratical edition, expresses "a hope that the volume will be acceptable to the maidens *of England*." These "Old Bailey" pirates, be it observed, started into existence only last year; at first, the firm was "Talboys & Co."—in a few weeks it became "Talboys, Clarke, & Co."—shortly after expanded into "Talboys, Clarke, and Wilson"—then "Talboys" was dropped, and the firm figured as "Clarke & Wilson"—this lasted only a few weeks, and it became "H. G. Clarke & Co."—so that in less than a twelvemonth, this "Old Bailey" establishment has carried on its piracies under five different flags.

The Emperor of Russia has honoured Mr. Hullmandel, the lithographer, with a massive gold medal of merit, inscribed "Præmia Digno," in approbation of his invention of lithotint.

Digitized by Google

The King of the French having sent M. Charles Jourdain, the architect, to Africa, for the purpose of executing some further buildings, in connexion with the Chapel of Saint-Louis, recently erected in the neighbourhood of the ancient Carthage, the Civil List has put funds at his disposal, to promote the search after buried marbles, inscriptions, or other objects interesting to art and science, in the soil of the old city. M. Jourdain will remain to direct the excavations; and it is hoped, from his acquaintance with the localities, that they may yield results of value.

Amongst publications forthcoming, we perceive the announcement of one which is looked for with some interest by the Parisian lovers of gossip. The Baron Meneval, private secretary to Napoleon as consul and emperor, and subsequently secretary to the Empress-Regent, is about to publish a work entitled *Napoléon et Marie Louise; Souvenirs Historiques*—which, it is expected, will contain revelations, at once authentic and interesting, of the inner life of the great actor in the great drama of the century.

The Pastoral Symphony of Beethoven, the overtures to 'Euryanthe' and to the 'Isles of Fingal,' and some selections from 'Judas Maccabeus' and 'Armida' (see our notice of the Ancient Concerts), were performed at the closing concert of the Parisian *Conservatoire*. We have heard, from a source to be relied on, that Mr. Balfe's opera is not likely to stand its ground at the *Opéra Comique*; the composer, in his resolution to be French and piquant, having *out-quadrilled* the quadrille school of composers, while his instrumentation is wanting in finish. Halévy's 'Charles Six,' on the same authority, is but a heavy piece of splendour—and the voice of Duprez, alas! sadly out of order. M. Roger, the favourite tenor of the *Opéra Comique*, has announced his intention of essaying the grander and more serious style of French musical drama; but we should fear, from recollection, that the voice of this clever and ambitious artist will not readily lend itself to his promotion. The Parisian musical season is now rapidly drawing to a close.—At Frankfort, a new opera by M. Ferdinand Hiller, 'The Miller and his Child,' is in preparation;—and at Vienna, M. Nicolai, the composer of 'Il Templario,' one of the worthiest of modern Italian operas, has been producing some compositions in the severe style of Palestrina, and after the old German pattern of fugue-writing, which have succeeded.—We should be beginning to hear of autumnal musical festivals at home—but it is to be feared that the Income Tax has devoured the taste for them!

We must announce the death of Herr Lanner, the celebrated German waltz director, the most popular throughout Europe of all contemporary composers—his rival, Strauss, perhaps, excepted. So much beloved was he by the public of Vienna, that a procession of upwards of *one hundred and twenty thousand* persons is said to have followed his body to the grave, including the principal craftsmen's guilds and the orchestra, headed by Strauss, of two hundred performers.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.

Notice is hereby given, that the EXHIBITION WILL OPEN on MONDAY NEXT, the 8th instant, at 12 o'Clock. Admission, 1s. Catalogue, 1s. HENRY HOWARD, R.A., Sec.

Exhibitors and Students may receive their Tickets and Catalogues by applying at the Academy on Monday, after Twelve.

BRITISH INSTITUTION, PALL-MALL.

Closing of the present Exhibition.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS IS OPEN DAILY, from Ten in the Morning till Five in the Evening, and WILL BE CLOSED on SATURDAY, the 13th Instant. Admission, 1s.; Catalogue, 1s.

WILLIAM BARNARD, Keeper.

N.B. The Gallery will be reopened early in June, with one room by Sir Joshua Reynolds, one by other deceased British Artists, and one by Ancient Masters.

The THIRTY-NINTH ANNUAL EXHIBITION of the SOCIETY of PAINTERS in WATER COLOURS at their GALLERY, PALL MALL EAST, is NOW OPEN. Open each day from Nine till Dusk. Admittance, 1s.; Catalogue, 6d.

R. HILLS, Secretary.

The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1s. Catalogue, 6d.

JAMES FAHEY, Secretary.

DIORAMA, REGENT'S PARK.

JUST OPENED, with a NEW EXHIBITION, representing, the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.

ROYAL POLYTECHNIC INSTITUTION.

A complete arrangement of COTTON SPINNING MACHINERY, consisting of a CARDING, ROVING, and SPINNING FRAME. Cary's NEW MICROSCOPE, magnifying SEVENTY-FOUR MILLION TIMES. A NEW SERIES of DISSOLVING VIEWS. The SCIENCE of ELECTRICITY demonstrated by the COLOSSAL ELECTRICAL MACHINE at a Quarter to Three Daily, and at Eight in the Evenings. Models of STEAM ENGINES and various kinds of MACHINERY IN MOTION. Lectures Daily on CHEMISTRY and NATURAL PHILOSOPHY, including the Steam Engine, by Dr. Ryan and Professor Bachhoffner. The CLASS LECTURES are continued as usual. Admission, 1s. Schools, half-price.—Not open on Saturday Evenings.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 223 feet in length, and is crowded with rare and interesting specimens of birth. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2s. 6d. Children under 12 years, 1s.

CROWDED! CROWDED!! MORE THAN EVER CROWDED!! is the ADELPHI THEATRE in every part with most Brilliant and Fashionable Audiences, who witness with Astonishment and Delight the Mighty and seeming Superhuman Wonders of the GREAT WIZARD of the NORTH; listening with rapture at the soul-delighting strains of the CAMPANOLOGIAN BAND. On Monday and every evening, the Great AMBIDEXTEROUS-PRESTIGITATOR will perform his Feats of Modern Scientific and Natural Magic, which have no parallel in the World. The Campanologian Band will pour forth their Melodious Strains. They are nightly received with unbounded approbation. Visitors and strangers in London should not fail to visit the Great Wizard, who will make their eyes the fools o' the other senses. His is the Cheapest, and the most Scientific and Wonderful Exhibition in London. (Strictly Moral.)

Boxes, 3s. Pit, 1s. 6d. Gallery, 6d. Second Price at Nine O'Clock, Boxes, 1s. 6d. Pit, 1s.—Doors open at Seven, the Entertainments commence at Half-past, concluding by Eleven. Carriages in attendance at quarter before Eleven. Private Boxes, (containing six *l.* 11*s.* 6*d.*, to be had at the Box-office, from Ten till Five. As the Theatre is almost nightly crowded, it is advisable for parties visiting the Boxes to secure their places. The front Circle is the Dress.) The Wizard intends to give a series of MORNING PERFORMANCES, the first on Monday, the 15th; places can only be had in the Boxes, as the Pit will be filled by the Children of a public Institution, notice of which will be given next week. To all who wish to become Amateurs in the Mystic Science Instruction will be derived from the Wizard's HAND-BOOK OF PARLOUR MAGIC, price 1s. to be had at the Box-office.

SCIENTIFIC AND LITERARY

GEOGRAPHICAL SOCIETY.

April 24.—Sir Charles Malcolm, V.P., in the chair. Resumed and concluded, the reading of Mr. Bollaert's paper on Texas. Mr. B. made several excursions from Galveston—southward as far as Matagorda Bay, and eastward to the mouth of the Mississippi; and he describes the features of the country over which he travelled. Of Texas he says, it is divided into three great natural divisions—the level, the undulating, and the mountainous; to which is sometimes added the smallest division, consisting of low and level land, contiguous to the sea, in the north-eastern portion of the Republic. All along the coast lie narrow islets, formed of sand, driven up by the winds, currents, and tides, and cemented by oyster-shells, drift-wood, and sea-weed; and behind them are marine and fluvial lagoons. The prevalent wind is from the S.E.; but sometimes it veers suddenly to the north, when the land in the neighbourhood of the lagoons becomes flooded. These lagoons harbour a great quantity of alligators. The published maps of the coast are very defective, but Commodore Moore has lately made good surveys of Galveston and Matagorda Bays. The shoals and passages over the bars vary considerably, but the pilots are intelligent, and, with the lead going, there ought to be no accidents. The greatest danger is from the indrawing currents in calm weather. Galveston harbour is about thirty miles long, with no water drinkable but rain-water, collected in large vats; boring, to the depth of sixty feet, has been tried without success. In the Bay of Aransas, further south, fish is abundant, and the land around affords good pasture. The bay is full of islets, and can only be navigated by boats drawing but little water. At Corpus Christi, still further south, a trifling trade with the Mexicans from the Rio Grande has been carried on, but has been almost put a stop to by the unsettled state of affairs. From hence Mr. Bollaert returned to Galveston, and, on a second excursion, visited Passo Gabello, which he describes. At Tres Palacios the water is deep, and the *Ironsides*, of 260 tons, took in a full cargo of cotton here. As to the Colorado, the chief difficulty of its navigation is the raft. This, however, will probably be removed, a company having been formed for that purpose; the expense is estimated at 30,000 dollars. Matagorda is pleasantly situated and healthy; the shores of the bay and the banks of the Colorado are well timbered, and the quality of the land excellent for cotton. Near Caney Creek the land is very fine for cotton, sugar, tobacco, and other tropical plants, and maize grows to great perfection. Mr. B. having returned to Galveston, started again for Matagorda, passing by St. Louis, Velasco, Quintana, and crossing the River St. Bernard, which has a bad bar and is of no width. On his way back the traveller passed through Brazoria. The River Brazos here is deep, and the banks steep; the land is well timbered, and there are many cotton plantations. The next excursion was to the Mississippi; the coast to which, from the Sabine River, is even lower than that of Texas. Mr. Bollaert ascended the mighty stream for a few miles, and then returned. His description of the Delta is much the same as that which has so frequently been given. The last trip mentioned was from Houston, the present seat of government, to Schwartwout, passing through Montgomery. Houston, Mr. Bollaert says, is well situated for commercial purposes, but he does not deem it so healthy as Galveston. The country round Schwartwout, on the Trinidad River, is comparatively well settled with plantations and farms: the produce is sent down the river to Galveston; but the river cannot be depended on all the year round. The low lands of Texas are not healthy, and the cultivation of cotton should be left to Negroes. Of the population of Texas, Mr. B. calculates that there are 60,000 Whites, 80,000 Indians, and 12,000 Negroes; total 152,000. The mean temperature of the day from the 1st of July to the end of August, was 80° Fahren. The paper goes on to give commercial details, and concludes with an account of the late expedition to Santa Fé.

ASTRONOMICAL SOCIETY.—*April*.—F. Baily, Esq., President, in the chair.—W. Gravatt, Esq., was elected a Fellow. The following communications were read: Extract of a letter from M. Bessel, dated Nov. 14, 1842; and letters from Lieutenant G. B. G. Downes, Royal Engineers (Barbadoes), Professor Henderson (Edinburgh), Mr. Forster (Bruges), Mr. Nasmyth (Manchester), M. Littrow (Vienna), and Professor Schumacher, relating to the great comet of 1843. A Memoir on Astronomical Drawing, by P. Smyth, Esq., was partly read, and will be concluded at the next meeting.

ZOOLOGICAL SOCIETY.—*April* 30.—The Anniversary Meeting was held at Willis's Rooms, Admiral Bowles in the chair.—The honorary secretary read the reports of the council and the auditors. They stated that it was the intention to increase the attraction of the gardens in the Regent's Park, by building a new house for the exhibition of the carnivorous animals, where they could be seen to greater advantage, and to erect an edifice for the reception of the preserved specimens. The council, taking into consideration the circumstance that the number of visitors had decreased, had resolved upon engaging a military band to perform in the gardens every Saturday during the summer, and had determined to allow Fellows to enter, and, under certain restrictions, introduce two friends on Sundays. The donations during the year had been unusually valuable. The number of Fellows now amounted to 2,483, and the corresponding members remained the same as last year. The visitors to the gardens had been 27,626 privileged, and 107,459 of the public. The receipts during the year amounted to 10,087*l.*, 18*s.* 10*d.*, being less than the former year by 1,523*l.*, and the expenditure 8,482*l.* 1*s.* 6*d.*—The Earl of Derby was elected President, and the following gentlemen added to the council:—Col. Baker, the Right Hon. W. S. Bourne, H. Gamble, M.D., R. C. Griffith, Esq., and M. Truman, M.D.

MEDICO-BOTANICAL SOCIETY.—*April* 27.—Earl Stanhope in the chair.—A communication, from Mr. Foote, on the *Aconitum ferox* was read. This plant, the most virulent vegetable poison of India, was first described by Dr. Wallich. It grows in elevated situations in the Himalayan chain, and in the provinces of Surmour, Kumaon, and Nepaul. Richard has never met with it much lower than those places where the barometer was at 19 inches. The effects it produces are those of a narcotico-acrid poison, inducing inflammation of the alimentary canal, and acting remotely on the brain and spinal cord.—Dr. Cooke drew the attention to the subject of *Cocculus Indicus*. This article, which is scarcely ever used in medicine, and of no importance in the arts, is extensively imported for the purpose of adulterating beer. To such an

Digitized by Google

extent is this the case that writers on brewing openly acknowledge the fact, and give regular formulæ for its employment. One author states that it is impossible to brew a strong-bodied porter from malt and hops alone, and almost all concur in deliberately recommending it, on the ground that it "increases the apparent strength of the beer, and improves its intoxicating properties." About 1818 numerous prosecutions were instituted by the Excise against parties for selling or employing this substance. In many instances convictions were obtained, the persons pleading guilty with the view of escaping any investigation into the more serious charge of selling or using nux vomica for the same purpose. There can be no doubt that the latter is still employed to a certain extent, but it is beyond dispute that the cocculus is used to an extent totally unsuspected by the public or the Government. Unfortunately no separate account of the quantity on which duty is paid is kept at the Custom House, but it is believed, for reasons hereafter given, to be extremely small, and in many years *nil.* In 1832 duty was paid on 12,000 lb., and in 1834 Dr. Pereira states that a single druggist sold 2,500 bags. *Cocculus Indicus*, in doses of two or three grains, will produce nausea, vomitings, and alarming prostration. In ten or twelve-grain doses it kills strong dogs by tetanic spasms and convulsions. In still larger doses, death, both in man and animals, is speedily produced. The drug also kills plants. In small doses it causes symptoms resembling intoxication, and is believed to be the substance used in cases of what is called hocussing. Opium, which has been thought to be what is employed, will not produce the effects experienced by parties who have been hocussed. Taking the known deleterious powers of the substance into account, and the proved fact of its being very extensively used by brewers, it would be evident that the public health must be injured by the practice of drugging beer. Indeed it is probable that the disease and death, often sudden, said to result from beer drinking, ought in many cases to be ascribed to the drugs with which it is impregnated. Mr. Mowbray stated that the *Cocculus Indicus* was principally used by the small brewers, to whom it was supplied by a class of druggists styled brewers' druggists; one of these told him he sold about half a ton weekly. It was sent to the brewers packed up in casks, and covered over with soda, a part of the latter being used in brewing, to assist the solution of the cocculus. A very small portion of this drug paid the Customs duty; it was passed as merchandise, and occasionally in the form of powder, under the name of linseed meal. The proper mode of discovering it in the adulterated liquid would be by the tests for its active principle, picrotoxine, the chief difficulty depending on the small quantity that would be present.

SOCIETY OF ANTIQUARIES.—*April* 24.—At the Annual Meeting, held this day, the Earl of Aberdeen was re-elected President, T. Amyot, Esq., Treasurer, A. Way, Esq., Director, N. Carlisle, Esq., and Sir H. Ellis, Secretaries, with the following Council:—H. Gurney, Esq., H. Hallam, Esq., W. R. Hamilton, Esq., Viscount Mahon, T. Stapleton, Esq., (new Members) *J. Y. Akerman, Esq., E. Blore, Esq., Dean of Peterborough, E. Hawkins, Esq., Rev. J. Hunter, Sir R. H. Inglis, Bart., Lord Monteagle, Captain W. H. Smyth, W. J. Thomas, Esq.*, and *Sir C. G. Young*. In consequence of the death of the Duke of Sussex, the anniversary festival was postponed.

INSTITUTION OF CIVIL ENGINEERS.—*May* 2.—The President in the chair. No papers were read, and the evening was occupied by a renewed discussion on brick-making: a model of Mr. Hunt's machine for making bricks and tiles was exhibited, with specimens of its produce.

A description was also given of the process invented by Mr. Prosser for forming tiles, tesseræ, &c. (see *ante* p. 266.)

The monthly ballot took place, when the following candidates were elected: Messrs. A. Greeve and John Chisholm, as Members; Messrs. J. A. V. Barrieros, A. Upward, G. B. Maule, and H. S. Lindsay, as Associates.

MEETINGS FOR THE ENSUING WEEK.

MON. Geographical Society, half-past 8, P.M.
TUES. Institution of Civil Engineers, 8.—'Observations on the Periodical Drainage and Replenishment of the Subterraneous Reservoir in the Chalk Basin of London.' Continuation of the paper read at the Institution, May 31st, 1842, by Rev. J. C. Clutterbuck.—'Description of a Water Meteor,' by P. Carmichael.—'Description of Machines for raising and lowering Miners,' by J. Taylor.
— Zoological Society, 8.—Scientific Business.
— Meteorological Society, 8.
WED. Geological Society, half-past 8.
— Literary Fund, 3.—Annual Dinner, 6.
— Society of Arts, 8.—Mr. H. Fardon 'On the Improvement of the Art of Agriculture.'
— Medico-Botanical Society, 8.
THURS. Royal Society, half-past 8.
— Royal Society of Literature, 4.
— Society of Antiquaries, 8.
FRI. Royal Institution, half-past 8.—Mr. B. Williams 'On Drawing from Models and Practical Perspective.'
— Astronomical Society, 8.
— Philological Society, 8.

FINE ARTS

THE WATER-COLOUR EXHIBITIONS.

WITHOUT the least intention of making the elder of the tribe jealous, by praises bestowed on the younger, or *vice versâ*, we shall consider the exhibitions of the *Society* and of the *New Society of Water-Colour Painters* in company: passing from Pall Mall East to Pall Mall, and back again, as the humour seizes us. Indeed, there seems no reason, intelligible to the by-stander, why the two bodies of painters should not unite, the art being hardly so unlimited in its effects, or so numerous in its professors, as to make the present division reasonable.

We are pleased with both these exhibitions: not pleased to miss, from the rooms of the elder Society, the drawings of Mr. Lewis; but it is something to find there another first-class exhibitor in high force, and —what is better—attempting a new order of subjects. Not only does Mr. Cattermole give us, in his scene (123) from *Peveril of the Peak*, one of those baronial interiors in which he is unrivalled—not only one of his most forcible and picturesque studies of armour in (138) *Hamilton of Bothwellhaugh*, the stern and stealthy avenger of Scott's ballad—not only another *Monastery Door* (148), this time excellent in its quaint humour,—but he has also made a raid into the domains of Landscape, and with great success. A pair of small subjects, (162) *The Syren's Turret*, and (172) *The Faithful Minstrel*, are composed in the true ballad spirit, though each contains little more than a fragment of turret, and moat, and tree, with a troubadour figure or two, suitable to the scene. The freedom of hand with which these are touched, is admirable: the tone of colour rich, and, though conventional, entirely free from the reproach of blackness, which clings to some of the artist's interiors, and which would appear to be a temptation besetting water-colour art, if we are to judge from certain clever landscapes in this collection, by Mr. Bentley and Mr. Callow. But the most remarkable of Mr. Cattermole's new contributions is his park scene at Donnington Castle, (333) *After the Second Battle at Newbury*: an encampment of the Royalist army, with the keep of the royalist stronghold in the distance; and the full moon struggling out from a mass of clouds, touching here and there the gigantic trees, and glimmering upon the morions and the cannon of the troopers. The design of this bold and clever drawing calls up remembrances of Macaulay's ballads—the technical execution deserves even more praise. As a piece of effect, the work is excellent: here and there a point may be *forced*, it is true, but the freedom of hand is admirable; especially in the attitudes and foliage of the trees, which have the vigour of some of the grand old landscape painters.

Those curious to observe the different manner in which two clever men will treat natural phenomena of the same order, are referred from Mr. Cattermole's landscape to the *Moonrise*, by Mr. Bright (364) the best landscape in the Exhibition Room of the *New Society*. Here, however, we have no historical association, nothing of romance, save what must belong to the hour in the quietest home-scene: yet out of a combination of tree and sward unmarked by any striking feature, Mr. Bright has contrived to give us repose in all its solemnity, in all its sweetness—and this without a single artifice. The depth of his colouring is only equalled by its richness—his freedom of hand is united with a due regard to finish. Mr. Bright exhibits other landscapes, *A Scene in North Devon* (73) being the largest—we may add, the most general favourite—parts of which deserve the high praise due to the work from which we have just parted. A certain flatness, however, and want of texture, are observable in the foreground: for the cure of this, we know not a better prescription than study of Copley Fielding—who is in nothing more felicitous than in the force and richness of this portion of his drawings. We need but instance his view from *Tilgate Forest* (152), one of the most attractive landscapes in Pall Mall East, altogether clear of a certain papery flimsiness, which (under pretext of transparency and aërial effect) has crept into more than one of the artist's larger landscapes.

Neither Society is rich in historical compositions, the *New* water-colourists, however, are the more ambitious. Mr. E. Corbould and Mr. Warren fly at high game in their scriptural subjects: for the first has essayed a *Christ and the Woman of Samaria* (391) and the second *Christ's Sermon* (106). It may seem sarcastic to say that both works are incurably *pretty:* but such is the truth. The expression which Mr. E. Corbould approached last year, in his drawing from the New Testament, has forsaken him on the present occasion. There is a certain grace in his work,—but the thing which will most strike the eye is a coquetry with delicate and gay colours, only sufferable in *boudoir*-art. In Mr. Warren's 'Sermon' we are not so much attracted by the Preacher come to deliver the most momentous message ever vouchsafed to mankind, nor by the Twelve, who are his chosen ministers, as by one or two costumes, rigorously correct, and obtrusively prominent, and one or two Egyptian heads, in which Mr. Warren turns his intimate acquaintance with Oriental life and character to good account. While looking at this clever display of mechanical skill, it was impossible not to recollect that to the fallacy, here somewhat flagrantly illustrated, Wilkie sacrificed his valuable life! It is true that Mr. Warren has not the invention of the painter of 'The Rent-day;' that he is not absorbed by the story in hand as earnestly as that conscientious and truth-loving man; but the principle is a wrong one, even though it fell into the hands of a Raphael, and the young Germans, with all their pedantic quietism, disdain of *ad captandum* ornament, and attachment to what is formally antique, are nearer to the root of the matter, because more spiritual. The true field of employment for Mr. Warren's peculiar talent is in such a composition as his *Arabs of the Bishereen Desert* (7), an impressive work, cleverly touched. —Mr. Corbould's elegance and tenderness find their best occupation in such subjects as *The Page* (92) or some of the fair ladies here exhibited, to whose smiles and satins he gives such a fascinating notoriety. In this popular style, however, he will find a formidable rival in Mr. Stone, whose *Ce n'est que le premier pas qui coûte* (269) is as nice a version of a Cymon's unreadiness and an Iphigenia's impatience as Art has recently afforded. Mr. Wright, too, may enter the lists with Mr. Corbould, in right of some half-score of elegant conversation pieces, which adorn the walls and the screens in Pall Mall East. Should foils be wanted, Mr. Richter's blue-eyed and cherry-lipped charmers will tell our beauty-painter whereabouts those *desiderata* abound.

Beside Messrs. Corbould's and Warren's drawings, the *New Society* has other figure-pieces of some pretension. In one of these (343) by Mr. Wehnert, Martin Luther is the hero: the redoubtable Doctor is disclosed to us reading one of his counterblasts against Papistry to a chosen circle of friends and fellow dissentients. This is but an ambitious failure: the preponderance of heavy red flesh-tints, and heavier black shadows, would drag down the composition were it twice as forcibly conceived. This is no longer water-colour art, but a clumsy attempt after oil, from which nothing can result but failure—the want of success holding proportion with the elaboration.

Better, after its kind, than the above, though more flagrant in its tones than we like, is the *Cinderella* (252, *New Soc.*) of Miss F. Corbaux. The spirit of the sweet old faëry tale must have been with the lady when she devised a *Clorinda* and *Tisbe* so spiteful—a heroine so innocent and graceful as are here before us. The swelling vanity of one sister, the bony shrewdness of the other, are capitally hit off: and inasmuch as caricature is easier than artless beauty, they are, after their ugly kind, much "worthier" than the oppressed sitter in the chimney-corner. Yet worse Cinderellas have been exhibited by men whose names, too, are graced by two magical initials. We naturally think of Miss Sharpe and Miss Corbaux in company:—the more so, since the

Digitized by Google

former, by one of the largest groups, contributed to the elder Water-colour Exhibition, seems ambitious of filling the void created by the death of her sister, Mrs. Seyffarth. And both (as Mrs. Jameson once expressed it, meaning praise the while) are essentially *womanly* artists. But Miss Sharpe's *Little Dunce* (110) is calculated seriously to disappoint those who have admired her talent, and hoped for its progress. Prettiness of feature and humour of expression, but imperfectly compensate for want of clearness in telling the story, for a glossy meretriciousness of colour, and, least of all, for more than negligent drawing. We might have been content, however, to overlook these faults, did not a certain *Una* (241), and a certain *Domestic Scene* (284) force upon us the impression that they are habitual, not exceptional. How good intentions can have become so bewildered, and merits so vitiated, it were a waste of time to imagine—the thing is now to sound an alarm, if, indeed, a chance of cure and return yet remain.

Turning to the works of the sterner sex, we must pause for a moment before Mr. Tayler's scene from 'The Vicar of Wakefield' (167), that often-painted crisis, when Vanity on horseback encountered meek Rebuke a-foot, returning from church. We have not yet forgotten Mr. Mulready's charming design of the redoubtable Sunday procession; but Mr. Tayler's arrangement of the figures is so totally different, that any comparison between the two groups would be absurd; and thus it is not from pre-occupation that we cannot forgive the artist for his version of the dear Vicar's wife. Complacent she was, we know—proud of herself, and prouder of her daughters—but then, she had the innocence (forgive the poor play upon words) of a *primrose!* Who, more readily than her mature self, fell into the snares of Lady Blarney and the Honourable Miss Skeggs? Now, here, she resembles one of those well experienced ladies far more strongly than she ought to do. Here, too, we miss the rural bloom of Olivia and Sophia: they are pretty and fresh-coloured coquettes—nothing more; Mr. Burchell and Moses have received ampler justice. There is a want of concentration in the whole group, which detracts from its effect; but Mr. Tayler improves, year by year, in firmness of hand.

The New Society has, of course, *its* scene from Goldsmith's ever green tale;—Mr. Absolon having chosen the moment of distress, when the Vicar is taken to gaol, accompanied by his family. Though this is the artist's most ambitious drawing, it is by no means his best. The painter's character lags behind the novelist's words—for pathos we have affectation; and we denounce this all the more unsparingly, believing Mr. Absolon capable of far better things. At all events, his simple figure (226) of *Mercy at the Gate*, from the 'Pilgrim's Progress,' though possibly a work of slight labour, is worth twenty such drawings as the above, being good enough in its graceful purity to make us ask for more illustrations of John Bunyan from the same source.

We had hoped, seeing that the Royal Academy doors open on Monday, to have this week completed our report on the Water-colour Exhibitions; but this is rendered impossible by the number of drawings still claiming honourable mention; the rest, therefore, another day.

MUSIC AND THE DRAMA

MADAME CARADORI ALLAN has the honour to acquaint the nobility, her friends, and the public that her GRAND MORNING CONCERT will take place, under the patronage of Her Majesty the Queen Dowager, in the Concert Room of Her Majesty's Theatre on FRIDAY, May 19. Principal Performers:—Mesdames Grisi, Persiani, Caradori Allan, Brambilla, and Alfred Shaw:—Signors Mario, Lablache, Fornasari, Brizzi, and F. Lablache. Pianoforte Solo, M. Dreyschock. Violin Solo, Signor Camillo Sivori. Conductor, M. Benedict. Arrangements are pending with other distinguished artistes.—Boxes, for Six Persons, 3l and 4 guineas; Stalls, 1 guinea; Single Tickets, 10s. 6d. To be had at the principal Music-sellers, and at the residence of Madame Caradori Allan.

UNDER ROYAL AND DISTINGUISHED PATRONAGE.—MISS DOLBY and MISS ORGER beg to announce their CONCERT will take place at the Hanover Square Rooms, on THURSDAY EVENING, May 18, 1843, to commence at Eight O'Clock precisely. Tickets, 7s. each, Reserved Seats, 10s. 6d., to be had of Miss Dolby, 34, Berners-street, Miss Orger, 10, Southampton-street, Bloomsbury, and at the Principal Music Shops.
